

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

 read "Minot" read "Minot" throughout
 the paragraph.

The Nation.

NEW YORK, THURSDAY, JANUARY 2, 1896.

The Week.

PRESIDENT CLEVELAND's friends were pointing on the following Wednesday and Thursday to popular approval of his war message as its sufficient justification. They have since learned a thing or two about the real popular sentiment of the country, and are now quite ready to drop that argument. But even if the blare of the first week had kept up, it would but have intensified the President's guilt. His vast powers were put in his hands, as Burke said of the war powers of the ministers of the Crown, "as a sacred deposit, to secure us against popular rashness in plunging into wars." Thus the yell of the mob is itself the condemnation of the ruler who evokes it. As Burke adds: "It is no excuse at all for a minister who, at our desire, takes a measure contrary to our safety, that it is our own act. He who does not stay the hand of suicide is guilty of murder." Sir Robert Walpole was forced, against his better judgment, into the war with Spain, in 1739, by popular clamor. That was an immensely popular war. Yet what was the testimony, a few years later, of the men who had excited that clamor and compelled Walpole to go to war?

"None of them," says Burke, "no, not one, did in the least defend the measure, or attempt to justify their conduct. They condemned it as freely as they would have done in commenting upon any proceeding in history in which they were totally unconcerned. Thus it will be. They who stir up the people to improper desires, whether of peace or war, will be condemned by themselves. They who weakly yield to them will be condemned by history."

The anti-war meeting at Cooper Union last week was as large as the great hall could hold, and as enthusiastic for peace and as full of indignation over the war-dance at Washington as it is possible to conceive. Not over 10 per cent. of those present were out of harmony with the speakers. The Jingo press, and especially the *Tribune*, gave mendacious reports of it in order to magnify the numbers of those who came to create a disturbance. They sought to belittle the demonstration, which was here given in an impromptu way, of the Christian spirit and sound sense of New York. This meeting was called suddenly. The hall was not secured until a late hour on Saturday evening. There were no posters and no bands of music. There had been no time to collect a crowd in the usual way. Scarcely any notice of it had been given in the newspapers. Yet the people came in larger numbers than the hall could contain, and they cheered the speakers to the echo, and fairly drowned with applause the few dissenters who came to make a

row. The latter were tolerated in a good-natured way, but they ought to have been expelled by the police, and the ringleaders ought to have been lodged in the Tombs. It was not their meeting. They can hold a meeting of their own. They have a perfect right to do so. They had no right to come and disturb Henry George's meeting. Mr. George is entitled to the greatest credit for this demonstration. He hired the hall, obtained the speakers, and procured the little advertising that it had, and himself made a powerful and effective speech in the interest of peace and common sense. The slow coaches of the Chamber of Commerce might well take pattern from him.

Mr. George asked the question, how many of the people knew a month ago where British Guiana was. The answer was an outburst of laughter all over the house, which was equivalent to saying that none of them or very few of them did know. Mr. George frankly acknowledged that, a month ago, he did not know himself. There was no more reason a month ago, or even a week ago, why people should know where British Guiana is, than where Griqualand is, or the Transvaal Republic. How many people know to-day where the Rand gold mines are? The newspapers have teemed with accounts of these mines, and of the "Kaffir circus," for a whole year, yet if a map of Africa were laid before the audience that filled the hall of Cooper Institute, or any other mixed audience, not one in fifty could put their fingers within a thousand miles of the place; and no blame to them for that. Richard Cobden once said that not one in ten of the fellows of Oxford University, if they had a map of the United States before them, could tell where Chicago was, or come within a thousand miles of it, although 25 per cent. of the inhabitants of Great Britain obtained their food from that place. Now, if Mr. George was right in saying that the average American citizen did not know a month ago where British Guiana is, is it likely that he knew whether the Monroe Doctrine applied to it or not? The question answers itself. Mr. Cleveland must have presumed upon this ignorance when he sent in his threatening message. He assumed that people would take his word for it that the Monroe Doctrine was infringed. This they have done to a very large and dangerous extent.

The General of the Army, Nelson A. Miles, made a speech at the New England dinner in Philadelphia on Monday week which is described by those who heard it as a most impressive protest against the barbarity of war. Like most men who have done their fighting in the

field, not on paper, he has only words of reprobation for those who are crying, "On to war! Any kind of a war so long as we have a war!" Gen. Miles spoke with great earnestness of the absolute need of a general conviction that a war was just, before the possibility of the American people's going into it or succeeding in it could be thought of. It was a needful warning, too, which he gave the citizens of Philadelphia, with their commerce of \$400,000,000 a year, when he reminded them that not a single modern gun stood between them and the sea. Of course, Gen. Miles could say nothing of current war alarms, but his significant plea for peace and moderation, coming from such a source, is most timely and welcome. A fortnight ago, though, the Jingo would have been clamoring for his instant dismissal.

The South has cut a very creditable figure during the past fortnight. Like every other section, it has suffered from the too frequent lapse of its newspapers into the control of men who have no proper appreciation of the editor's obligation to take a calm view of events, and quiet rather than intensify an unreasoning popular excitement. Then, too, the South has felt a special obligation to manifest its entire readiness to support the national authorities loyally if a crisis should come, in view of the fact that the last time the Federal Government was engaged in war it was with the Southern States. Under these circumstances it was inevitable that there should have been a good deal of wild talk in that part of the country; but a number of the leading editors did not lose their heads, and the tone of the Southern press now compares favorably with that of Northern newspapers. The *Charleston News and Courier*, which has been on the right side throughout, expresses the not unjustifiable opinion that "the good sense and cool judgment displayed by the Southern press in this time of unusual and unnecessary excitement will be of lasting benefit to the South, and contribute vastly to the commercial and industrial development of this part of the country."

The inborn and intense hatred which Americans and Englishmen have for each other has had some curious manifestations during the past ten days. At the very moment that third-term organs of hate, like the *Sun*, were declaring that nothing would be so popular in this country as a war with England, and while the President was being made to believe that nine-tenths of the people were of his mind, the real feelings of sympathy and solidarity between the two nations began to stir, and have led to some of the most remarkable interchanges of international

greetings ever recorded. Messages of peace have passed between churches, chambers of commerce, and trade associations. The appeal from English men of letters to their American brethren to do their best to prevent a civil war in English literature, was perhaps couched in somewhat hysterical terms, but spoke, after all, for a strong and genuine sentiment on both sides of the ocean. It was but an echo of Tennyson's message, an expression of the real continuity of life that still binds this country to England, and a conviction that our best civil life and ideals are due to "that deep chord which Hampden smote."

The reports of the committee on ways and means on the financial situation are as petty as the conduct of both House and Senate in rushing madly at the President's heels when he sent his war scare to Congress. The committee assumes first that the trouble with the finances is a lack of revenue, although the Treasury holds a hundred millions of surplus of the kinds of money it *does not want*; being the very kind that this sapient committee proposes to give it some more of. In order to do this, it proposes a tariff on wool, not to furnish revenue for the Government, but to favor special interests at the expense of the consumers of woollen goods. An increased duty on sugar would really give the Government more revenue if more were needed, as it is not. All the tariff talk is a mere blind. Those who voted for the committee's bill, accordingly, know that its effects, even if it should pass the Senate and be signed by the President, would not be felt in the revenue returns of the Government for a whole year. Moreover, the declared purpose of the bill is to curtail importations. Since revenue is collected from goods which come in, and not from goods which are kept out, the result must be a still further shrinkage of the public receipts. Therefore the tariff bill is a game of false pretences. Probably those who voted for it do not expect that it will become a law.

The debate on the bond bill showed clearly that the Republicans are getting ready to jump on the President with both feet when the terms of the new loan are announced. They say that a 3 per cent. bond can easily be sold at par if offered as "a popular loan." They have fixed that rate in the bill, and have provided that all loans made hereafter shall be negotiated in pursuance of advertisement. Nearly two years ago the Government tried to sell \$50,000,000 of bonds for gold in that way. The "popular" part of the loan panned out at something less than two millions. The Government's credit was better then than it is now, yet the loan would have been a total failure had not the bankers come in at the very last day and subscribed for all that was left—that is, for all except the two millions. A po-

pular loan at 3 per cent. now would bring nothing. If the Senate should pass this bill in time, it might be worth while to try the effect of such an advertisement for the purpose of demonstrating its futility. There is not the least probability, however, that the Senate will pass it at all. There was only thirty-four majority for it in the House, and the elements of opposition to it in the Senate are relatively much greater, especially the Republican opposition. This is composed of men who want the country brought to a silver basis or a paper basis. The men who want a depreciated currency are much stronger in the Senate than in the House, and they have the further advantage that there is no rule in the Senate for terminating debate. In this matter the Senate is as badly off as it was in 1893, when the Sherman repeal bill was pending. The situation of the Government, however, is such that it cannot wait. It can hardly wait for ordinary debate. Its demand notes must be met. They must be met, too, in such a way as to give assurance that they will be paid regularly and continuously, since otherwise there will be a panic like that of last February, when gold was drawn largely for private hoarding. The upshot of the whole matter is that the bond bill, as passed by the House, is worthless, but that it will be stopped in the Senate because it is not bad enough. The Government will then resort to the same legislation that it used when the bond-syndicate transaction was made. The rate of interest will be high, corresponding to the needs of the borrower, and then the Republicans will turn all their batteries on the President.

Speaker Reed finds that he, too, has a team of wild horses on his hands, as Mr. Harrison said that President Cleveland would find that he had when the last Congress met. When the Maine man was Speaker before, the Republicans had only a bare majority of the House, and it was simply necessary to decide upon a course of party action in order to bring an irresistible pressure to bear upon any member who was inclined to be recalcitrant. But it is a very different thing to warn a Representative that he must surrender his own convictions or wreck the prospects of the party when he can see that his vote may turn the scales, and to "bring him into line" when there is a Republican majority of over 130 to draw upon. The crack of the party whip even by a czar who had just taken the reins in hand had no effect upon nearly fifty Republican Representatives on Saturday, and the Speaker had a narrow escape from defeat at the very opening of the session.

Mr. Reed suffers seriously now from the lack of that quality which made him so powerful six years ago. Then he was bold to the verge of rashness, and defiant of all opposition in the party ranks. His very audacity made him irresistible, and

Republican Representatives who did not agree with him had to support him, however much against their will. But now he is hampered by his Presidential ambition, and his consequent unwillingness to run the risk of offending members who may control the choice of delegates from their districts to the Republican national convention. He wants support from the States that believe in greenbacks and free silver coinage, as well as from those that are outspoken for sound money. Moreover, he knows that McKinley and Harrison have friends and supporters on the Republican side of the House who would like to see him tripped up, and he therefore feels that he must pick his way with great caution. The effect of all this is that the Thomas B. Reed of 1895-'96 is a very different personality from the Thomas B. Reed of 1889-'90, and the indications are that he will be a much less forceful Speaker during this session than he was six years ago, without, however, making up for his losses from this source by an accession of popular confidence on the ground of his conservatism.

The State of Maine has now a record for unbroken service, in one or other branch of Congress, on the part of all of her delegation, which it is safe to say that no other commonwealth has ever equalled in the history of the country. Frye entered the House of Representatives in 1871 and served there continuously until 1881, when he was promoted to the Senate as Blaine's successor, and recently began a term that will end in 1901. At the same time Eugene Hale entered the Senate as Hamlin's successor, and he has been twice re-elected. Mr. Reed entered the House in 1877, and has now entered upon his tenth consecutive term. Mr. Dingley joined him in 1881, and Messrs. Boutelle and Milliken in 1883, and each of these three has been re-elected every two years since he entered. Until 1883 Maine had five Representatives; since then only four. Beginning with 1883 and ending with 1897, the entire delegation in both Senate and House will have gone without a single change for a period of fourteen years. The result is that Maine has carried off an extraordinary proportion of congressional honors: Mr. Reed is Speaker of the House, Mr. Frye is to be President pro tem. of the Senate when the Republicans come into control of the upper branch, Mr. Dingley is chairman of the ways and means committee, and Mr. Boutelle has an important chairmanship.

The new Republican Governor of Kentucky has made a very unfortunate start. After uttering in his inaugural brave and sound words against lynching and in favor of maintaining the laws, his first official act was to pardon, in advance even of his conviction or trial, a man who had been arrested on election day for violation of the law against carrying concealed weapons. Worse still, the object of executive

favor was a man whose occupation makes him a daily violator of the laws—a man engaged in the lottery business, which is a felony in Kentucky. The exercise of the pardoning power in advance of conviction has always been exceedingly rare, and is never justified save in those very exceptional cases where malice or accident or popular feeling has plainly subjected a good citizen to the unmerited odium of an arrest. That it should be used in behalf of a professional lawbreaker, and apparently for political reasons, is disgraceful. That it should save such a law-breaker from even so much as a fine for the offence of carrying a concealed weapon, is a fresh threat to the safety of life in a community where every official is bound to use all his influence against a return to barbarism.

Chief-Justice Snodgrass of the Tennessee Supreme Court is not without defenders. One of them writes to the *Nashville Banner*, which had condemned him for shooting a lawyer who had criticised one of his decisions, to say that "the Judge did exactly right," and that "he could not have done otherwise without disgracing the State and the high position which he occupies." Nor does the *Banner's* correspondent stop with justifying Snodgrass in this particular case. He carries the argument to its logical conclusion, and boldly maintains that it is the lack of Snodgrasses that is ruining the judiciary of this country. Upon this point he says:

"No man is fit to be on the Supreme bench or hold any other high public trust in this great republic who is not the personification of chivalry and honor, and the trouble with the country now is that there are too many of the white-livered fellows occupying high positions. The degrading crusade against the manhood of the citizen by the white-livered moral censors since the war has well nigh degraded our people."

This is no mere matter of theory. The *Banner's* correspondent appeals to history, and asks the world to "compare the men of that chivalric age that gave birth to our Declaration of Independence and our Constitution with the present generation, and behold the difference." It is well for a degenerate age thus to be reminded how often George Washington used to draw his revolver on any editor who ventured to criticise him, how frequently Thomas Jefferson would leave his desk in the State Department in order to call to account some politician who questioned the purity of his motives, and what a common occurrence it was for Chief-Justice Jay, when he left the Supreme Court room, to shoot down some upstart of a lawyer who had expressed doubt as to his being the greatest jurist in the history of the world.

Ohio has a prison-labor problem for the new Legislature to solve. The last body of lawmakers enacted a statute which restricts the output of convict-made goods to 10 per cent. of the product of the free labor of the State in the same line of ma-

nufacture. This law was due to an agitation on the part of workmen in certain industries, who claimed that they were being ruined by the cheap goods put on the market by contractors for prison labor. It has proved even more effective than was anticipated. The restriction of output to one-tenth of the total product outside of the penitentiary has rendered it impossible for the State to secure enough contracts in any industry to keep the prisoners at work. The result is that 500 men who have been sentenced by the courts to hard labor sit in idleness, and suffer all the demoralizing consequences of inactivity which we have seen under similar circumstances in this State. The frequent recurrence of such a state of things in our penal institutions is a reproach to the modern capacity for government.

The recent strike among the street-car men in Philadelphia has served incidentally to show one advantage of the high-license system that prevails in Pennsylvania. It has always been held that the large sum demanded for the privilege of conducting a saloon not only must incline the holders of licenses to obey the law when its violation threatened so heavy a loss as the withdrawal of the privilege, but also would secure a higher order of men as saloon-keepers than when anybody can get the chance to sell liquor for a petty sum. This theory has been demonstrated to be correct in Philadelphia. Appreciating the danger to the public peace involved in keeping the saloons open evenings while many thousands of idle and desperate men were abroad, the Director of Public Safety requested the holders of licenses to close their places at the end of the afternoon. He could only ask this, not require it, as the law gives no city official the right to close saloons except during the hours required by the State law; and yet the mere request was universally complied with throughout the city. Such action would hardly be possible in a city of low license, and the incident furnishes a fresh argument in favor of demanding a large sum for the privilege of liquor-selling.

The burning issue in the State of Washington week before last was not whether there should be a war with England, but whether a citizen of Tacoma should be allowed to keep a Chinese cook. Some years ago the Chinese were "run out" of the city, and until recently they have understood that their treaty rights did not entitle them to residence in Tacoma. Not long ago, however, a prominent citizen engaged a Chinese cook and another household servant of the same race. The greatest excitement ensued, and a strong element favored driving the two Chinamen out of town immediately. One of the two concluded that the safest plan was to leave of his own accord, but the other stood his ground. It was finally

agreed to refer the question whether he should be allowed to remain to the Chamber of Commerce, and "the largest and most representative gathering of business men held in a long time" responded to the call for the meeting. Fortunately for the reputation of the city, after full consideration, a report presented by the trustees of the Chamber was adopted, advising that the Chinese agitation be speedily dropped, and declaring that it has no place in Tacoma; that the city, being a seaport town, is necessarily cosmopolitan, and that all nationalities should be given equal rights in the community. The report held that it was entirely improbable that any considerable number of Chinese would come, and concluded:

"The members of the Chamber of Commerce pledge themselves here and now, as law-abiding citizens, to sustain and uphold the Mayor of this city in any effort he may be called upon to make to suppress lawlessness or disorder growing out of the agitation of the so-called Chinese question."

Thursday's *Wool and Cotton Reporter* said of the year just closing, that in the wool business 1895 has been "signally eventful," having "broken all previous records in the volume of sales." As compared with 1894, the increase of foreign and domestic wool sold has been 86,000,000 pounds. The year has also been "memorable," adds the *Reporter*, for "an unprecedented development of the worsted industry," and for "some tardy recovery in values of the staple from the depression of two years ago" (McKinley-tariff times). It quotes the prices of several lines of domestic wool to show the advance scored under free wool. If the new Republican wool-tax ever reaches the President, this leading organ of the wool trade and woollen manufacture will furnish him all the reasons he needs to veto it.

War-talk as a partisan trick is something about which the German Conservatives have little to learn. Whenever they find themselves too hard pressed politically, they get up a great row over the army estimates, or navy enlargement, and come out strong in behalf of the fatherland. They are just now trying, by a little diversion of this kind, to rally from the severe check they received in the Reichstag by the defeat of the anti-revolution bill and the loss of prestige involved in the forced resignation of Von Koller, the great *lèse-majesté* prosecutor. The occasion seized is the proposal to make full battalions out of half-battalions; and as the Reichstag must vote the money required for this increase of the army, a great deal has had to be heard about being "true to the Kaiser from head to foot," protecting the frontiers against the foe, and all that. The thing may succeed, as similar tricks have so many times succeeded, but at least nobody in Germany is imposed upon by it at this time of day.

THE DEVELOPMENT OF THE MONROE DOCTRINE.

ONE of the best passages in Dr. Huntington's sermon on Sunday week was what follows:

"One point, however, it may not be amiss to make, seeing how much talk there is just now of 'Doctrine,' and seeing also that doctrine is a matter well within the lines of the pulpit's liberties. I remark, then, that in all questions where a 'doctrine' is involved, nothing is more important than that we should distinguish between husk and kernel, bark and pith, shell and substance. The letter of the doctrine is one thing, the spirit of it is another. What were the framers of a doctrine driving at when they set it forth, what was the conviction that lay behind their words, what was the end at which they aimed, the thought they labored to express? That is the way in which large-minded theologians look at and interpret the doctrines of religion: would it be amiss on the part of statesmen if they were to scan and sift political doctrine after the same fashion? And if we were to subject to that sort of analysis the particular doctrine which is now so hotly discussed, should we not find the essence of it to be in our resolve that there shall be on this side of the Atlantic no subverting of that form of government which we call free?"

If our politicians had any resemblance to "large-minded theologians," they would of course have sought out the original intention of the framers of the Monroe Doctrine, and have examined it from generation to generation in the light of that intention. Any one who examined it in that light would have found that the kernel and spirit of it was the fear that European monarchies would do what the Spaniards were then trying to do in South and Central America, and what the French tried to do afterwards in 1863 in Mexico—impose governments on the people by the use of foreign force—and that a set of such governments on this continent would then endanger our republican institutions here.

This was a perfectly rational view. The talk of the Holy Alliance, and the invasion of Spain by the French, all lent color to it. Canning believed it, and expressed his belief in a proposal to resist European aggression of this sort in America, in combination with the United States. Had this view been adhered to, the Monroe Doctrine would have become every year of less importance to us, and have received less mention, as we grew stronger and the European Powers more liberal and less aggressive. Since the Monroe Doctrine was propounded, France, which was one of the members of the Holy Alliance, has become a republic; Austria and Germany, other members of it, have become, as has Italy, which they were holding in bondage, parliamentary monarchies. England has become a trading republic in all but in name, and we have risen from a nation of 10,000,000 to one of 70,000,000. The sole attempt ever made since Monroe's time—that in Mexico—ended in most tragical defeat. The death of Maximilian and the overthrow of the French Empire were as solemn warnings against any other attempt to Europeanize any American state as history contains on any subject.

But, strange to say, the more the Monroe Doctrine lost its importance the more eagerly our politicians went to work to "develop it." There is nothing in the history of Christian doctrine which can compare with the unrolling which Mr. Monroe has undergone at the hands of his disciples. Abyssinian Christianity is considered a good way off from the New Testament Gospel, but it is not nearly so far from it as the Monroeism of Olney and Lodge and Chandler, and the general Jingo multitude, from the Monroeism of Monroe. In reading Mr. Olney's despatch the other day, we were, in fact, irresistibly reminded of the things a clever juggler extracts from a hat. First will come a photograph, then some baby-linen, then a flower, then a pair of drawers, and then a sausage, and then an endless ribbon.

Although there has been much hammering out of the doctrine by the newspaper youths and by the politicians, the real work of development did not begin until last year. In the early part of 1895 we were simply lending "good offices" to bring about a settlement of the dispute by mediation, just as Mr. Monroe himself might have done before the birth of the Doctrine; just as any Power might do to-day. The first article that comes out of the hat is an "admitted canon of international law" that any nation may interfere, if it pleases, in any quarrel between any other two nations. To call this a "canon of international law" is almost funny, because it is as old as the Aryan race, being neither more nor less than the right of every nation to go to war if it pleases. The next is a prohibition, directed to European Powers, to make a canal across the Isthmus of Panama. Next a prohibition against Cuba being transferred to any other European Power. Next, inability of the United States to act as mediator jointly with European Powers in a dispute between two American states. Next, that "any permanent political union between a European and American state is unnatural and inexpedient," and that any such union is dangerous to the United States. Next, that the United States and the Spanish American states are by "geographical proximity, natural sympathy, and similarity of governmental constitutions our friends and allies commercially and politically." This is the most marvellous of the developments, and corresponds to the baby-linen in the juggler's hat. Next is the doctrine that if the European Powers were now allowed "to convert American states into provinces or colonies of their own," "the struggle now going on for the acquisition of Africa might be transferred to South America," and the "partition of all South America between the various European Powers" would soon take place. Next, that "suggestions of the friendliness of the European Powers, and their good will towards us, and their dispositions, should they be our neighbors, to dwell with us in peace and harmony," are of no

value. All this, Mr. Olney says, is "American public law, founded on principle and abundantly sanctioned by precedent."

Next comes the "development" that the Monroe message, in sanctioning "European colonies or dependencies then existing on this continent," meant, "then existing with their limits then existing," and, of course, that, where the limits were not defined, the American state was to draw the boundary line to please itself, and that the United States might decide in what manner the boundary line should be determined. Next, that strong European states must always submit to arbitration any claim made by weak American states, and that it is the duty and privilege of the United States to chastise the strong states if they refuse. Next, that Great Britain's refusal to arbitrate is injurious "to the interests of the people of the United States, as well as oppressive in itself," and will justify war. After this the last and greatest development of all, that the United States is "sovereign on this continent" and actually rules it, will excite no surprise.

We are sure that Dr. Huntington will agree with us that not only in no one year, but in no one century, of the Christian church, was one-tenth part as much ever got out of any one Christian doctrine by the most industrious theologian as Mr. Olney has got out of the Monroe Doctrine within the present year. What makes the performance all the more extraordinary is, that although the European Powers have never formally accepted the original Monroe Doctrine, they have practically accepted it in its original purity. None of them would now attempt to oppress, or encroach on, or impose a foreign government on, an American state. But they had not accepted it as "a canon of international law," and probably will never be got to do so, any more than the Olney developments. The reason is very simple. Any nation can hold any doctrines it pleases as to its own hopes, aims, or duties in this world, just as a private man can hold what the Catholics call "pious opinions." But if it produces a doctrine that brings it in contact with foreigners, and is to govern its conduct towards them, the doctrine is simply a sort of declaration of war which sleeps until the occasion for its application arises. The doctrine has no place in international law until all other nations agree to it. It owes all its importance to the threat which backs it. If Mr. Olney had any proper conception of what he was arguing about, he might have disposed of the whole matter in half a column. All he need have said to Lord Salisbury was, "If you don't arbitrate that boundary line with Venezuela, we shall go to war with you as soon as we hear from you." His argumentative discussion is really not only contradictory and difficult of comprehension, but unnecessary. As he and the President have left the doctrine to-day, it is simply a challenge to the world to fight the United

States, and has no more law in it than Napoleon's invasion of Russia.

VENEZUELA AS A SISTER REPUBLIC.

It is a remarkable example of the power of words to take the place of ideas that our Government should now revert to the Monroe Doctrine and call upon us to stand by Venezuela, as a republic, against Great Britain—our ally in the previous controversy—as a monarchy. Of course, Venezuela is called a republic, as Great Britain is called a monarchy; but if we go behind the names and consider the facts, what do we find? Are the institutions of Venezuela republican? Is its government popular? It is notorious that in Latin America the majority of the so-called republics are military dictatorships, tempered by periodical revolutions. In the intermediate periods between successive dictatorships their condition is one of anarchy. During the reign of each military tyrant the forms of republican government are observed; elections are held; but the "purity of the ballot" is protected by troops, and the success of the governmental candidates is assured by the show of armed force. During the periods of revolutionary anarchy all traces of republicanism disappear. There is no security for life or property except in the case of foreigners, who are protected by the war-vessels of their respective countries.

Nowhere did Mr. Olney have his eye more off the fact than when, in his horror at the idea of "monarchical" England getting 33,000 more square miles in South America, he enlarged upon "the opposite principle"—"the inalienable right of self-government"—which Venezuela so happily illustrates. Not only by "geographical proximity," but by "natural sympathy" and "similarity of governmental constitution," she is our "friend and ally." How then could we, with our "vital interest in the cause of popular self-government," allow the "subjugation" of this model and sister republic by any European power committed to the "monarchical principle"? Our Secretary, it is true, seems aware that there have been "frequent internal revolutions" in Venezuela, but these are for him only a good reason why she had not more constantly opposed the aggression of Great Britain—not at all an impeachment of her pure republicanism. Yet it needs but a glance at Venezuelan history, a slight acquaintance with the writings of travellers, and a reference to our own diplomatic dealings with Venezuela, to show the true nature of the "popular self-government" in which Mr. Olney displays so vital an interest. Venezuelan independence was not conceded by Spain till 1845. From 1846 to 1870 the country rushed from one revolution into another, stable government of any sort being practically unknown during all that period. From 1870 to 1873 Guzman Blanco was Dictator, and from the latter year on was Dictator under the name of President.

He adopted the convenient custom of having himself declared President for four years, then of going as Minister to France and England for four years, leaving one of his creatures in the Presidential chair, and then returning to be President again himself. The present President, Gen. Crespo, got his office by a revolution, held it two years as Dictator, meanwhile confiscating the property of all who had opposed him, and then went through the form of being elected President by a Congress elected by himself.

Venezuelan devotion to the inalienable right of self-government is finely illustrated by events that took place no longer ago than 1892. In that year there was a dispute as to the validity of the title of President Palacio, pending the election of a successor under a new constitution. The opinion of the Supreme Court was invoked. The judges found against the President. He promptly threw all of them into jail—except the ones that ran away. Then the President asked Congress to pass a resolution affirming his title. When it refused to do so, he had it closed by troops, and had all the members who voted against him arrested. Every member of the federal council was also imprisoned. All the newspapers except the Government organ were suppressed. Martial law was declared, and the President issued a proclamation asserting, in the most patriotic terms, his earnest purpose to "safeguard the liberties of the people." He went on to say that, as "guardian of the Constitution and the law," it would be necessary for him to become Dictator, though this did not mean "a personal government, which I in my strict republican convictions abhor." Mr. Olney himself could not be more emphatic on that point.

Venezuela's record as a staunch friend and ally of this country is fully up to her shining example of republicanism. The volumes of our foreign correspondence reveal a succession of embarrassments and embroilments with her Government. Two late instances of her extreme friendliness to us should appeal with especial force to our Republican friends. She rejected the Blaine-McKinley proffer of reciprocity, and did it in offensive terms. Her Congress resolved that, in the first place, they did not want to abate any of their customs duties, and, furthermore, that they did not want to discriminate in favor of the manufacturers of the United States as against those of Europe, with whom they were, and desired to continue, on the best of terms. This from our "natural, commercial, and political ally"!

In 1871 three American steamers were seized by Venezuelan belligerents, and a claim for damages was, in consequence, taken up and pushed by our State Department. Venezuela promised indemnity again and again, but would never pay up. Negotiations dragged along for twenty years till, finally, in 1890, Congress passed a joint resolution "authoriz-

ing and empowering the President of the United States to take such measures as in his judgment may be necessary to promptly obtain indemnity from the Venezuelan Government; . . . and to secure this end he is authorized to employ such means or *exercise such power* as may be necessary." This resolution became a law without President Harrison's signature. But oh the diffidence to Mr. Olney if it had been England and Lord Salisbury proposing such violence against our friend, ally, and sister republic!

In a word, the American Secretary of State's references to Venezuelan republicanism and friendship and English monarchy and hostility have no more to do with the facts than with the planet Jupiter. Hundreds of Americans in the Turkish Empire, many of them from Mr. Olney's own State, pray God every day that England may take Syria or Armenia and give the natives and American residents alike justice, liberty, and protection to life and property. At the same moment the head of their own Government is asserting that if Great Britain should retain English law and representative government over 33,000 square miles in South America, where it now exists, the people of the United States would be compelled to arm themselves to the teeth and rush into a bloody war to undo the outrage.

THE MANOA COMPANY.

THE London *Times*, on the very day of receiving the President's war message, spoke significantly of "the American concession-hunters who swarm in Caracas and are responsible for much of the excitement in Venezuela." We have received several letters since the message was sent to Congress, requesting us to look into the matter of the Manoa Company, with a view to seeing whether any American capitalists or adventurers were privately interested in getting up a war between this country and Great Britain. An allusion was made in one of Lord Salisbury's despatches to concessions granted by Venezuela in the disputed territory *after* an agreement had been reached by the two governments to treat it as neutral ground pending the negotiation. He used the following language:

"While, however, the Venezuelan Minister constantly stated that the matter was under active consideration, it was found that in the same year a concession had been given by his Government to Gen. Pulgar, which included a large portion of the territory in dispute. This was the third breach by Venezuela of the agreement of 1850.

"Early in 1884, news arrived of a fourth breach by Venezuela of the agreement of 1850 through two different grants, which covered the whole of the territory in dispute, and as this was followed by actual attempts to settle on the disputed territory, the British Government could no longer remain inactive.

"Warning was, therefore, given to the Venezuelan Government and to the concessionaires, and a British magistrate was sent into the threatened district to assert the British rights."

Lord Salisbury mentioned no names or

nationalities, any more than he did in his quiet little remark to Mr. Olney, apropos of arbitration, that "the task of insuring compliance with the award when it is made is not exempt from difficulty." It was quite evident, however, that he knew as well who the concessionaries were as he did what country it was that had refused to pay up after the Bering Sea arbitration had gone against it. The Manoa Company may not come to take its place in diplomatic history alongside the Shepherd claims, the Landrau claims, and the Balmaceda nitrate-beds, but it will be just as well to keep an eye on it.

The *Evening Post* of March 8, 1888, printed a letter from a correspondent on the subject of the concession to the Manoa Company, which it now reprints for its present interest. One fact of some importance is, that in 1888 Congressman McAdoo of New Jersey appeared as a champion of the Manoa Company. This individual is now Assistant Secretary of the Navy. An investigation of the volume of official correspondence between the British and Venezuelan governments printed by the latter, at Caracas, in 1887, discloses the following facts: An agreement had been reached in 1850 to consider the disputed territory, for the present, as no-man's land; that is, each party was to keep hands off until a settlement of some kind should be reached. The correspondence was continued in a very amicable tone until 1884, when the fact became known that Venezuela had conceded this very territory to an American concern called the Manoa Company, of which a certain Thomas A. Kelly was acting President, and that Mr. Kelly had taken possession of it to the extent of sending men on it to cut timber and erect a sawmill. It appears, also, that Kelly was invested with some kind of powers as a functionary of Venezuela. When the authorities of British Guiana learned these facts, the Superintendent of Crown Lands and Forests, Mr. McTurk, sent the following letter to Kelly:

"Thomas A. Kelly, President Manager of Manoa Company:

"I have the honor to inform you that you are now within the limits of British Guiana, and those of the district under my jurisdiction as one of the special magistrates and superintendents of crown lands and forests of this colony, and therefore you are outside your jurisdiction as a functionary of Venezuela. Whatever notification you should make to the inhabitants will be void, and all persons in this or any part of the colony, or visiting it, will have to conduct themselves in accordance with its laws. I must likewise call your attention to the notifications put upon the trees on the banks of this river as also on the rivers Waini and Barima. These notifications were fixed where they are by order of the Government of British Guiana."

The fixing of these notices was at once complained of by the Venezuelan Government as a violation of the agreement of 1850 to consider the territory neutral for the time being, the grant to the Manoa Company and the partial occupation of it by Kelly being absolutely ignored. Thus, on the 28th of July, 1886, Guzman Blanco, who was then the Venezuelan

Minister in London, had the effrontery to write to Lord Rosebery complaining of the placing of the notices in the disputed territory, and even of the letters sent to Kelly by the authorities of British Guiana. Kelly or his underlings promptly removed the notices from the trees on which they were posted and sent them to Caracas. They made so complete a job of it that Mr. McTurk, the officer of British Guiana in charge of the district, could not find one there in April, 1885. Guzman Blanco coolly ignored the infringement of the bargain which was involved in the concession to the Manoa Company.

One of the letters in this correspondence is addressed by the Secretary of British Guiana to C. C. FitzGerald, Phoenix Building, No. 16 Court Street, Brooklyn, N. Y. It is dated October 25, 1884. It acknowledges receipt of documents from FitzGerald which were apparently intended to exhibit the title of the Manoa Company to the territory in question, and it notifies him that anybody trespassing on said territory will be prosecuted according to the laws of the colony. From FitzGerald's communication to the *Evening Post* on Saturday it appears that the Manoa Company, a New York corporation, hitherto unknown, holds a grant from the Venezuelan Government comprising a territory "almost as large as New England." Mr. FitzGerald contends that no part of it is within the limits of British Guiana, because the terms of the grant carry it only "to the limit of British Guiana." The naïveté of this argument is charming when we remember that the boundary line of the two countries has been a matter of dispute for half a century. The assumption of FitzGerald that he and Kelly and the other Manoaans know where that boundary runs, while the authorities of British Guiana do not, shows that he holds a clue which the civilized world might give millions to possess. Possessing this secret, the Manoaans went boldly forward and "properly removed" the notices posted by the authorities of British Guiana as warnings against trespassers. The trespassing, according to FitzGerald, was on the part of the British Government against "an American company" which, but for this interference with its rights, "would be in full operation to-day, giving employment to thousands of American citizens." Moreover, he tells us that, "thanks to the attitude of President Cleveland, it will now be possible to do business under the American flag in Venezuela without fear of future encroachment"; implying that this territory, almost as large as New England, has already been annexed to the United States by the determined action of President Cleveland and in virtue of Mr. Olney's views of the "sovereignty" of this country on the American continent. If this is the case, we shall expect FitzGerald and Kelly to be the first Senators from

the State of Manoa, and we are glad to be assured that "they have no Populist or free-silver cranks and have no difficulty in maintaining a solid gold basis." We shall have more facts to present on this subject hereafter. Meanwhile we commend Mr. FitzGerald's letter to public attention in connection with "President Cleveland's attitude" and Olney's arguments on sovereignty, and the unanimous support given to all three by the American Congress.

THE JINGO AND THE MONEY MARKET.

Nothing was to us more startling in Mr. Cleveland's last two messages than his remark, which we quoted last week, that patriotism was no substitute for a sound currency. Whether this was a conviction which had been forced on him by the events of the past few days, or whether he felt it necessary to remind Congress of it as a great financial truth, makes little difference. He really addressed himself to one of the most remarkable branches of Jingo insanity, namely, that which sees in the fall in the value of securities and the general disturbance of the money market, under the threat of war, the result either of a plot of foreign enemies against the republic or want of patriotism on the part of brokers. The Jingo's state of mind as regards foreign investors is by no means a product of his own experience of human nature. He would never himself think of selling his stocks and bonds at a heavy loss in order to spite some foreign nation. If you proposed to him, for instance, to go down to Wall Street and let his property go at seventy-five or fifty cents on the dollar in order to "bring England to her knees," he would treat it as a merry conceit. But when you suggest that this is what Englishmen are doing to annoy us, he sees nothing wonderful, much less incredible, in it. In fact, in all matters connected with patriotism he is as simple and credulous as a mediæval monk. When you begin to tell him marvellous stories of what the British financiers or the gold-bugs are capable of in the way of plots against America, or against silver or the greenbacks, far from crying, "Oh, come now," or "Hold on there," he says, "Tell me some more; what did they do next?" His view of the Wall Street brokers is somewhat different. Everything bad which occurs in Wall Street he thinks is due to either the timidity or want of patriotism of the brokers. When prices fall, he thinks either the brokers did it, or wickedly let it be done. It would take Dean Swift to deal adequately with the exhortations he addresses to them under these circumstances.

The fact is, that Wall Street is but the dial-plate on which the condition of the business of the country, especially in times of disaster, is recorded. Of course, the machine does not work this way every day; simple speculation often deranges it.

But as a rule, and especially, as we have said, in seasons of depression, Wall Street records either the view which careful observers take of our financial future, or the fears and anxieties or distresses of those whose savings are invested in stocks and bonds of various descriptions. For what the brokers deal in is other people's property. Their action reflects the fears and hopes of these people—generally, in times like this, their fears. In fact, this dial-plate might in days of alarm fairly be called an agony-plate. Thousands sell because they fear prices are going still lower; others, because they fear a stoppage of dividends. But the real misery of a panic is to be found among the multitude who look on in silence, and see the value of their savings rapidly diminish without any earthly means of preventing it, and who know that their credit and everybody's credit is being affected by it, that their bankers will call for more margin on their loans, or will refuse to make them any loans at all on any security they can offer, or among the dealers who hoped to get their bills renewed and know now that it will be impossible, or among the manufacturers who do not know now where the money for the next pay-day is to come from. So minute, and delicate, and far-reaching, in fact, is the machinery of modern trade and commerce that a general fall of securities in the Stock Exchange is sooner or later felt in every corner of the country and every branch of industry, however humble. Either people find they are no longer trusted as they were, or that they can afford less. In the one case they restrict their producing activity; in the other they restrict their purchases.

There has not been a panic here since 1857 the blame of which foolish people did not lay on "the brokers," and pronounce a "Wall Street flurry," which would be confined to Wall Street and would soon blow over. But not one of them has failed to search out all owners of property in every corner of the land. The waters of calamity flow silently into every creek and inlet, and bring home to everybody who has saved, and everybody who produces anything to sell, full knowledge of what destruction the folly or wickedness of rulers has wrought. Worst of all, the disaster does not pass by as an inundation. Confidence is a plant of slow growth, and confidence means credit, and, if shaken or cut down, it takes a good while to grow up again. Credit is the most wonderful invention of modern civilization. It means the belief of each man in the civilized world that the rest of the civilized world will keep its promises to do certain things on certain days. Of course, in order to build up this belief, a comparatively long period of experience is necessary. It has to be based on the testimony of years as to the ability and willingness of each man's neighbors and customers to do what they said they would do. Even when it is strongest and most secure, it is the most delicate and

sensitive of human instruments. The slightest shock impairs it; the slightest sign of calamity or peril makes it melt away; but as long as it lasts it literally moves mountains. The statesman or ruler who does not think of this when shaping his policy or announcing his intentions, is and ought to be anathema. To disturb credit in the modern world without good cause is to declare one's self an enemy of mankind.

America is the one happy country in the world whose workable resources far surpass its disposable capital. We have not a quarter enough capital of our own to develop them. We are, therefore, compelled as a condition of material progress to get all we can from Europe. In sending her millions of emigrants here, she has also to send the money to employ them. Any one, therefore, who arrests this flow of European capital, or who frightens it away, is as much an enemy of the country as the invader who should block our railroads, trample down our wheat fields, and close our mines. Let him also be anathema. There is a class of Jingoes among us who have been and are to-day the curse of the Old World and a blot on our civilization, who maintain that the poor man ought to be glad to be out of work and see his children starving if his wages can be used in slaughtering the natives of some other country in defence of something which a small knot of gentlemen at the national capital choose to consider the "national honor." To hear much of the current talk which precedes a war, one would imagine that "national honor" was something that we could handle, taste, or cut in slices, whereas in nine cases out of ten it is nothing but a notion of the Bill Chandlers or Cabot Lodges, to which no one would listen for a moment if it related to his private affairs. Most wars originate in some concoction of a not very respectable brain. Hundreds of thousands perish that some stupid or wicked politician may be glorified.

THE COMMISSION.

On the 17th of December last the President sent in a message to Congress containing the following passage apropos of the Venezuela boundary:

"In order that such an examination should be prosecuted in a thorough and satisfactory manner, I suggest that the Congress make an adequate appropriation for the expenses of a commission to be appointed by the Executive, who shall make the necessary investigation and report upon the matter with the least possible delay. When such report is made and accepted, it will, in my opinion, be the duty of the United States to resist by every means in its power, as a wilful aggression upon its rights and interests, the appropriation by Great Britain of any lands, or the exercise of governmental jurisdiction over any territory, which, after investigation, we have determined of right belong to Venezuela."

And he added:

"In making these recommendations I am fully alive to the responsibility incurred, and keenly realize all the consequences that may follow."

This is as plain a declaration that war will follow the occurrence of certain contingencies as has ever been made by a ruler. It is a proposal to trace the boundary line between Great Britain and Venezuela, with or without British coöperation, and impose our finding on Great Britain by force. On its face it leaves Great Britain only one alternative, acceptance of a condition cast in the most insulting form, or war. Congress acted promptly on the President's suggestion, and passed the following act practically without discussion:

"Be it enacted by the Senate and the House of Representatives of the United States of America, in Congress assembled, that the sum of \$100,000, or so much thereof as may be necessary, be and the same is hereby appropriated for the expenses of a commission to be appointed by the President to investigate and report upon the true divisional line between the republic of Venezuela and British Guiana."

This is authority to the President to do what he proposed to do in the message, without modification.

As soon as this message was made public there was something like a panic in the money markets, and American securities were sold out in great quantities, and the business men, clergy, and professors, and thinking persons generally made a great outcry. The noisy Jingoes were frightened by the effect of their uproar on the finances, and ceased their applause of the President and ceased to talk of war as imminent. The word was passed around that "there would be no war"—some said because Great Britain would not fight, and others because "we should get out of it in some way"; and offers of service in the field ceased to come in.

Quiet having been in a measure restored on both sides of the water, the Jingoes and demi-Jingoes have, within a few days, begun to pick up courage, and to maintain that although "there will be no war," the President was right, etc. One of the most marked characteristics of the Jingo is that he lives in a fool's paradise, and he is consequently always astonished by the natural and inevitable consequences of his own folly. The only opinion he ever pays much attention to is that of his brother Jingoes. The world outside does not exist for him. In our belief he is now entering another period of false security, probably to be followed by another rude awakening, and we believe it for reasons that are not far to seek. In the first place, the President's message is a standing and very insulting threat to a first-class Power, which Lord Salisbury can overlook or pass over in silence as long as nothing is done under it. He may even ignore the creation of the Commission and ignore its work. But it is impossible that Great Britain will appear before it, or even furnish it with evidence, as long as the terms of its appointment remain unchanged. No ministry would dare to face the House of Commons which allowed a foreign Power to trace a boundary for it, under a threat, in territory which did not belong to the threatener. Conse-

quently, unless we write another polite and therefore humiliating despatch abandoning the position taken in the message, the Commission will have before it only the mess of lies and braggadocio with which half-civilized States like Venezuela usually carry on controversies. If its members are first-class men, fit for such work, they will refuse to make any finding under such conditions. Supposing, however, they go on and decide that the British line is the correct one, the reflection on the President and Mr. Olney, and on the people who have been backing them up in this quarrel, ought to be too severe to be borne; and we trust it will be followed by a period of moral anguish such as is known only to the repentant sinner.

But supposing the Commission finds that Great Britain has been encroaching on Venezuela, and that the Venezuelan line is the true one, then we shall be bound, under the message, to fight Great Britain in all parts of the world, and to offer up our seaboard cities, our foreign and coasting trade, our customs revenue, and our currency as a sacrifice to Crespo, his cabinet, and his concessionaires, besides tens of thousands of lives, and to sow the seeds of fresh and endless international hates and animosities. Now we wish to warn the Jingoese, demi-Jingoese, and business men of the community, that they must not be talked into false security because the Jingoese have stopped "hollering," and are now shouting that "there will be no war." As long as this Commission exists, with the functions and consequences defined in the President's message, it will act as a cloud on the relations of the two countries, and as more than a cloud on the money market. There will be no return of confidence as long as it is at work, because the things dependent on its decision are too serious. If, however, experience—even their own—had any influence on Jingoese, we should remind them that they were all ready in 1892 to kill Chilians and bombard their cities for an offence which was disposed of by a few words of written apology. But suppose the Chilians had proposed on behalf of Great Britain to come up and trace the Alaskan boundary for us, and to compel us to arbitrate it with a threat of force, would a few words of apology have disposed of the matter? Why, even the Presbyterian Elder who at that time filled the Presidential chair would have taken the field in person.

Human nature in Great Britain is much what it is here. Our diplomacy is carried on so much by persons who are not trained in the use of diplomatic phrases and methods, and is so often mixed up with domestic politics, that European diplomatists usually pass by without notice expressions which between European nations would be considered highly offensive. What is peculiar about the present situation is that Messrs. Cleveland and Olney have, for the first time since 1812, injected into an international controversy

what the diplomatists call a "mise en demeure," or a peremptory requisition to do a certain thing by a certain day or take the consequences. This is something which the diplomatists of the Old World avoid till the last moment—that is, until they have determined on war, and are quite ready for it. A European diplomatist who should resort to it with a first-class Power, and then keep saying, "Oh, there will be no war," would be run out of the country like Louis Napoleon or Émile Ollivier, and he would be served right. Nothing is more demoralizing to man or nation than the habitual use of empty threats. If the Jingoese want to preserve the respect of mankind, they will now face the consequences of their own conduct like men. They must not continue to applaud the President and at the same time assure us that there is no danger of war. As long as their Commission is in the field, there is danger of war which no prudent business man will overlook. The situation is too serious for any more jocosse lying and "hollering." It ought to be faced with calm, and mended, if it can be mended now, before we have waded too far ever to go back. An explanatory despatch of some kind could still set matters right.

A DOOMSDAY BOOK DOOMED.

ITALY, December 11, 1895.

THE year 1895 seemed destined to close peacefully for Italy. With a large majority for the ministry, a decided disinclination to rake up old grievances or to exhume decayed scandals, a languid interest in the social reforms proposed for poor Sicily, a cheerful assent to the prolongation of the extra-legal coercion laws, approval of such ecclesiastical policy as shall prevent the Pope from infringing on the civil power, confidence that in Africa Baratieri will hold his own against Negus, Ras and Mahdista, satisfaction that the Italian fleet takes its place with England for the restraint of the unspeakable Turk—there seemed no cause that could produce excitement, still less agitation, in the country during the winter, which promises to be a most rigid one. But, on the 25th of November, when the Minister of the Treasury made his annual statement in the curt, dry manner which is Sonnino's own, he announced that the *catasto*, or stock-taking of the quantity, nature, and value of land in Italy, with the names of the present proprietors thereof, must be suspended, as 182,000,000 lire would be needed to complete it during the next thirty years, and, when completed, it would not answer any of the objects for which it was originally designed. Had a bomb fallen into each city, town, and village of northern and central Italy, the alarm could not have been greater or more general, and yet Sonnino had only expressed the private belief of a large portion of the Italians who have watched the process of compiling a new Domesday Book ever since it commenced in 1886. That it is necessary to ascertain the amount and quality of land held by individuals, for the purposes of taxation and for adjusting its incidence, all admit theoretically, and the "how to do it" has been a moot question ever since Italy agitated and revolted in order to secure an independent national existence. In 1848

the Ligurians demanded a revision of the land-tax, and in 1860 the Lombards strenuously insisted on being delivered from the enormous burdens laid on the land by their Austrian oppressors; Venetia joining in the demand as soon as the Austrians quitted her territory. The exhaustive Agrarian Inquiry initiated by Bertani, and carried out *con amore* by individuals qualified for the task, proved the inequality of the taxes paid not only in the different provinces, but also in different, though adjacent, communes of the same province.

The system of land surveys is as old as the hills in Italy. Servius Tullus introduced it into Rome, Gelon into Syracuse. Ulpian has handed down a fragment of the old Roman Domesday Book where the size of an estate, its product and value, are recorded on the reports of the proprietors. When Italy was united, it was found that there were twenty-two registers compiled for the purposes of taxation, all different. The survey of the Milanese territory was made more than a hundred years ago; it shows the state of culture at that time, and the land-tax has been imposed from then till now on the data then furnished. The others were made for the most part at the commencement of the century, the latest thirty years ago. Still, half the surface of the country remains without a land survey of any kind. As the 25th article of the Constitution ordains that "all citizens shall contribute to the maintenance of the state in proportion to their property (real or personal)," Minghetti opined that no new tax could be equitably laid, or existing tax increased, until the land-tax had been equalized throughout the new kingdom. In 1860 the minister Vegezzi formally pledged the Government to adjust the incidence of land imposts in the following year, and in 1861 a commission was nominated to apply the speediest and most economical methods of ascertaining the value of the land and to equalize taxation. Various bills were presented, but the war of 1866 and the agitation for Rome during the following years prevented the completion of any such projects.

After the entry into Rome, Cambray-Digny and Sella applied themselves to the task; new bills were presented and all were shelved. When the Left came to power, the "perequazione" (equalization of the land-tax) formed a prominent feature of Depretis's Stradella programme. He proposed that the state, and not the communes, should bear the burden of the surveys. The examination, per province, of the taxes levied on land brought to light the enormous disproportion of the burdens; e. g., the province of Leghorn paid .83 lire per head; Cremona 10.99, Lodi 11.99. The produce of the tax per hectare proves little, but when you come to the rate for every 100 lire of income derived from land, the glaring injustice is evident. The Sardinians paid 18.76, Venetian Lombardy 44.27, Sicily 17.12, the Modenese 79.29! At last, in 1885 '6, when Depretis and Magliani, who seemed to think Italy's pecuniary resources inexhaustible, and who framed the colossal railway network which has nearly suffocated the people in its meshes, were masters of the two houses, a law for the reorganization of the land-tax passed the Chamber of Deputies and the Senate and received the King's sanction. Throughout the kingdom a uniform cadastral estimative *catasto*, showing the quantity and quality, measure and value of every portion of land held, was to be made to ascertain the real estate and to equalize the land-tax; the property of each commune and of every individual was to

be shown on separate maps. A special department dependent on the Finance Minister created technical and judicial commissions, and instituted central and provincial commissions; a regular hierarchy set to work on a task to which that of Sisypheus was a trifle. In valuing the land, no account was to be taken of special culture or high farming, or of partial or total neglect. The value of the land was to be estimated according to its actual production, each product being rated at its minimum price during three years between 1874 and 1885, and the difference between specie and paper money being taken into account. The revision of the land-tax was to take effect in thirty years. The provinces were to pay the expenses of the technical boards and of the provincial commissions, to furnish house-room, furniture, and fuel for the necessary offices; the communes to pay the cost of measuring and defining the boundaries of their respective territories, and to pay their local officers and agents for the publication and notifications necessary; the proprietors to pay the cost of measuring and defining the boundaries of their several estates. All the other expenses were to be borne by the Government. Such were the chief features of the famous bill, the framers not hesitating to fix 7 per cent. as the land tax to be levied on the net income derived. It was provided that any province wishing to accelerate the operations and advancing half the expenses, should be allowed to do so, and, if the task was completed in seven years, should be allowed to apply the 7 per cent. rate provisionally. The Government would reimburse the provinces for their advances.

The debate on the bill was serious and animated. Venetian Lombardy, Modena, and other heavily taxed territories instructed their Deputies to support it, and at once demanded accelerated operations; but the opposition of the lightly taxed provinces was strong and cogent. Perfectly impartial persons maintained that while a land survey was necessary to ascertain the actual quantity under cultivation and the incidence of taxation, it was imprudent then and there to fix the rate to be applied. Agriculture, especially in Sicily and some of the Neapolitan provinces, was progressing; the low price of wheat, the enormous competition of America and Russia in those days when protection was heresy, had led many proprietors and even peasant farmers to plough up their fields and plant vines, especially when the phylloxera had destroyed so large a portion of the French vineyards, and the treaty of commerce with France was so favorable. Others declaimed against the injustice of estimating the value of the land by the actual produce, so that a landowner who had spent time, money, and intelligence in draining, manuring, and tilling his land would be highly taxed, whereas absentee owners of latifundia, or feckless farmers who had let their land run to waste and neglected its culture altogether, would come off lightly in direct ratio to their negligence. The members of the advanced Left opposed the whole project on financial grounds. Cairoli, Baccarini, and Crispi demonstrated that the bill as it stood would entail on the country hundreds of millions, and would occupy half a century, so that when the object was attained, when the quantity of land possessed by each individual with its net income in 1886 should be ascertained, such would be the transformation of agriculture—owing to scientific culture, amelioration of agricultural appliances, the variations in the nature and demand of foreign

markets—that the rate of taxation paid in 1886 would be unjust and insupportable in the next century. The Marquis di Rudini, a large landowner of Sicily, then a pillar of the moderate church, joined in with the dissenters, prophesying that instead of equalizing the burdens the bill would double the inequalities, and produce a fatal regional agitation between the northern and southern provinces.

Crispi, on December 7, 1885, demonstrated the fallacy of the estimative *catasto*, admitting the wisdom of "taking stock of the true state of the great factor, land." The estimative operations, he said, will not result in equalizing the land tax, and, reviving painful memories, will arouse such distrust in the country as will prevent their being brought to a successful conclusion. The estimates as to the productive value of land will always be hypothetical, will never be able to fix the actual income subject to taxation; and when the operations are concluded, the real income from land will differ essentially from the official estimates. He returned to the charge in January, 1886:

"If, letting the value of produce and the estimate of income alone, confining yourselves to a cadastral survey of the land, you ascertain the amount of cultivable soil and the present owners thereof, you will have data which will enable you to arrive by other methods at an approximate system of equitable taxation."

So ardent was the discussion that a yea-and-nay vote was insisted on, the Opposition being determined that their hostility to the bill should pass down to posterity. The majority voted for the Depretis-Magliani bill; the chief Liberals voted for Crispi's amendment. Operations were commenced with alacrity, and millions have been lavished during the last nine years. The project was modified in 1894, but it was clearly seen that the wheels were clogged and the machine would not work. Sonnino, on the 25th of November, quietly observed that, without taking into account the expenses devolving on the provinces and the communes, the state would have to spend 182 millions more, provided the work continued at its present slow rate, whereas the transformation of agriculture is so great that the estimates of 1886 no longer apply, so that the whole work ought to be accelerated to avoid further injustice. This the finances of the country do not permit. More than 7 millions have to be repaid to the provinces which have accelerated the cadastral survey; other 10½ millions for the estimates of value. The application of the fixed rate of 7 per cent. already reduces the land tax by more than 10 millions; *ergo*, increased expense, decreased income. Can we, he asks, continue on this perilous path? In some provinces the reform of the land tax will be effected in a few years; in others, thirty or thirty-five years may pass before it can be completed.

"Already," he continued, "the agricultural conditions of the country are transformed; the vine culture is in a deplorable state, owing to the cessation of the French market; wheat is again grown on a large scale, owing to the protective duties on foreign grain. Moreover, in the application of the law of 1886 entrusted to local bodies, the estimates presented by neighboring provinces are so diverse that it is evident they are neither true nor just. We must halt while there is yet time on this path that leads to ruin. The Minister of Finance will present a bill for the continuation of the cadastral survey, for the cessation of the estimative *catasto*, for the reimbursement to the provinces of the sums expended with 5 per cent. interest from the date of the advances. These sums amount to fourteen millions, the interest to two millions, which will be paid in seven years. The annual sum of three millions

will be set aside for the cadastral survey; no term for its completion can be fixed."

Boselli, Minister of Finance, presented the draft of his bill in conformity with the speech of his colleague of the Treasury. Its provisions are, that the cadastral survey shall be completed first in the provinces which demand acceleration in the proceedings; in the Modenese territory the provinces will not be called upon to advance further sums, but will be repaid for all outlays in the past—the land tax to remain at its present incidence until another bill for estimating the actual value of product and the net income derived from it shall become law. All estimative valuations are to cease; those already made to have no immediate effect.

The sudden, violent agitation produced by this bomb raged for about a week, threatening to sunder the ministerial majority. Out of the nine offices, or committees, whose duty it is to examine ministerial or private bills, six rejected it *in toto*. The *Economista* of Florence had a furious article on the "iniquitous project." But already the agitation is calming down, and to this have contributed not a little some of the few survivors of the old Radical party, who have ever sought the true interests of the country, and not their own aggrandizement.

The suggestions for arriving by economical and expeditious methods at a general idea of the land-tax now paid on every 100 lire of net income are numerous. Two seem to us rational, if not original. G. B. of Ravenna proposes that the Government fix the sum to be exacted from the land in the form of a tax, nominate a commission to apportion the quota among the various agrarian regions, taking its data from the reports of the Agrarian inquiry; then, that the provincial and communal authorities proceed to the distribution of the sum total among the landed proprietors within the given districts, who must supply the details of their net income. The writer is of opinion that the work can be accomplished in two years. At present all the collectors of the land-tax have an approximate roll of the actual incomes of each landowner, which they take care to rectify if understated, so that to apportion the contribution of each with a view to make up the sum total does not seem an impossible achievement. Deputy Canzi, well versed in agricultural matters, who from the first opposed the estimative valuation, proposes to base the land-tax on the declarations of the respective landowners, after due examination and rectification. The venerable patriot Gabriele Rosa approves this proposal. The *Sole*, the best Milanese commercial and industrial newspaper, says that this system is gradually gaining the approval of landowners in Venetian Lombardy. Meanwhile, the parliamentary commission, with Luigi Lusatti for President, is in daily communication with Sonnino and Boselli, whose latest proposals are to repay the sums advanced, to lessen by two millions the land-tax at present paid by the provinces which accepted the accelerated survey, to augment by 10 centimes the duty on the importations of foreign grain. As yet the ministers and the commission have not come to terms; but it is certain that Sonnino will resign rather than recede from his abolition bill, nor do we believe that any other ministers of the Treasury or of finance could be found who would dare to burden the country with the payment of 180 unproductive millions. The debate on the bill by the Chamber of Deputies will scarcely be entered on during the present year.

J. W. M.

THE THOMAS PAINE EXHIBITION IN LONDON.

LONDON, December 17, 1895.

IN following for five years the thread of Thomas Paine's life I found so many interesting relics strung on it, even through efforts to snap the thread as well as others to weave with it, that the idea of an exhibition occurred to me. After due consultation with men well informed in such studies—such as Edward Smith (biographer of Cobbett), Clair J. Grece, LL.D., George Jacob Holyoake, G. Julian Harney, Edward Truelove—a good working committee was formed and the exhibition occurred in South Place Chapel last week. It was successful beyond our expectations, the catalogue enumerating 485 exhibits and really representing more than 600; many tokens, manuscripts, etc., being included under one or another single label. In the evenings the exhibition took the form of a *soirée*; there were addresses from eminent men, and songs of the old period, some composed by Paine, were sung. Among the exhibitors were some eminent Conservatives; and among the exhibits were pamphlets, caricatures, and tokens hostile to Paine. On entering, there was seen on the platform Vago's large bust of Paine, and on either side death-masks of the chief antagonists, Burke and Paine. The fifty years extending from the publication of 'Common Sense' in 1776 to the last imprisonments for selling the 'Age of Reason' was represented by portraits of warriors whose swords were unsheathed to establish or to resist the 'Rights of Man,' and of writers whose pens were unsheathed for or against the 'Age of Reason.' The aim of the exhibition was purely historical, and entirely without any purpose of propagandism. It was recognized by all parties as a striking illustration of the distance England has travelled from the terrors and intolerance of the Georgian era. Survivals of ancient prejudices are so few that out of fifty exhibitors only one, in a remote corner of Cumberland, asked to be anonymous, "not knowing how far the arm of bigotry may reach," and we tried in vain to get a contemporary tract against Paine. After the exhibition was over, a dingy leaflet was sent, not as a curiosity but for pious admonition to those in danger of believing with "Paine and other Infidels that there is no God," the rest of the single page being occupied with arguments for the divine existence, of which every one is taken from Paine's 'Discourse on the Existence of God.' Such are the microscopic remnants of a period when the attempt to hold any such display as this of last week would have ended in the whole crowd finding accommodation in Newgate.

South Place Chapel was a good point from which to get historical perspective of the hundred years' history. In 1795 the Society's founder, Rev. Elhanan Winchester, replied to Paine's 'Age of Reason,' but politely; in 1796 his ministerial successor wrote an introduction to Winchester's reply, but made a large concession to Paine's position; in 1819 Vidler's successor, W. J. Fox, denounced the imprisonment of Carline for selling the 'Age of Reason' (the only minister who did so); and now the Society built up by those men has given an exhibition which displays them all, agitators and antagonists, prisoners and prisoners, as performers in a drama now memorable as an experience and an instruction in the laws of political and ethical evolution.

The literary exhibition was large. Except that there was no first edition of Paine's pamphlet 'Dissertations on Government, the Af-

fairs of the Bank, and Paper Money' (Philadelphia, 1786), and only the second 'Crisis' (original), which was given me by Mr. Horace White of New York, all of Paine's first editions were exhibited. There was a sermon on the Existence of Deity, headed with a text and ending with a prayer, made up with slight alterations from the 'Age of Reason' (Paine's name removed, of course), which was circulated in England as a religious tract at the very time that booksellers were in prison for selling the book with Paine's name on it. Another tract is made out of his address to the Theophilanthropists in Paris (1797), with nothing removed but the names of the society and Paine. The many answers to Paine (Watson, Wakefield, Tytler, Levi, Priestley, and a score of others) showed that the 'Age of Reason' was taken very seriously by the scholars and scientists of his time. Among the autographs was a letter of Paine's describing his being shot at in his house at New Rochelle (exhibited by Dr. Grece), and a number (including the memorial to Monroe written in Luxembourg prison) exhibited by Mr. Alfred Morrison, whose collection is of almost corresponding value in European history to that of Mr. W. F. Havemeyer of New York in Americana. A very interesting letter was exhibited by our anonymous "Friend," written to his grandfather (England) by the widow of Elihu Palmer, under date, "New York, Sept. 3, 1806." After speaking of her husband's sudden death, she says:

"Of course, I am left poor indeed. I have been exceedingly distressed for the means of living. I had to sell my furniture to pay my rent the first of May, was in very bad health, and really tired of my life. But my prospects and condition are now altered for the better. Mr. Thomas Paine had a fit of apoplexy on the 27th of last July, and as soon as he recovered his senses he sent for me, and I have been with him ever since. And I expect if I outlive him to be heir to part of his property. He says I must never leave him while he lives. He is now comfortable, but so lame he cannot walk nor get into bed without the help of two men. He stays at Mr. Carver's. Mr. Paine sends his best respects to you and all your family."

This was written to Robert Taylor of Manchester, and with it was shown a silhouette of Paine, no doubt sent by Mrs. Palmer, as it is in the same paper frame with one of her husband. It represents Paine in extreme age, and shows the great length of his head. The portrait of Palmer is the original (colored) of that engraved in Fellows's sketch of his life, along with Palmer's 'Principles of Nature.' He holds a staff, used after he became blind, and over the picture is engraved a quatrain, of which I could make out only two lines:

"Though shades and darkness cloud his visual ray,
The mind unclouded feels no loss of day;
In Reason's —"

Eleven different portraits of Paine were shown (one on a tea-tray with Washington, Franklin, a printing-press, and an eagle), and a large screen was covered with portraits of his friends and opponents in America, England, and France, Franklin and Lafayette being well represented, through the assistance of Mr. B. F. Stevens. Manchester College, Oxford, loaned Price and Priestley, and their librarian, Miss Toulmin Smith, a fine portrait of Gilbert Wakefield, who, in his reply to Paine, paid a warm tribute to his personal character. Mr. Henry Willett of Arnold House, whose collection of pottery is deposited in the Brighton Museum, sent interesting specimens of political pottery, among them a quart jug with a flattering figure of Paine on one side, and on the other (in allusion to Burke's phrase, "the swinish multitude")

Paine as one of a herd of swine to which he says:

"Ye pigs that never went to college,
You must not pass for pigs of knowledge."

A large number of political coin-tokens were exhibited by Mr. Edward Snelling, and still more by Mr. A. W. Waters, a young butcher in Old Kent Road, who is one of the most learned men in London in historical tokens. These coins (pence, halfpence, farthings) were struck by private persons, the Government not issuing enough for trade needs. Under George II. and III. no copper coin was issued between 1754 and 1770, or between 1775 and 1797. During the latter interval these coins were utilized as political tokens, some showing Paine on the gibbet, others Pitt in the same predicament. The Federalist cry in America of "the two Toms" (Paine and Jefferson) seems to have been borrowed from "the three Toms" of some of these tokens. These were Tom Paine, Tom Spence (a Radical bookseller who coined anti-Tory tokens), and Sir Thomas More. It appears to me so curious that the Tories of Paine's time should go back to the early sixteenth century for a typical rebel against royalty, that I incline to believe their third "Tom" was an Anglicized rendering of Thomas Muir. Muir was an Edinburgh barrister who, when the French Convention was formed, and before the Reign of Terror, got up in Edinburgh a convention in imitation of it (but opened with prayer). He was banished for fourteen years, but escaped from Botany Bay and found his way to Paine (in Paris), who helped to support him.

There were photographs of Paine's birth-house in Thetford, of his residence in Lewes, and of his house in New Rochelle. There was also a photograph of No. 7 Upper Marylebone Street, London, which has been identified by the vestry clerk of Marylebone as the house in which Paine resided with his friend and publisher, "Clio" Rickman, in 1792. This house is unchanged; the old bookshelves are still in the walls, and the bookbinding part of Rickman's business has steadily continued in it, there having been, I believe, only one binder (Howe) between Rickman and the present aged Mr. Thomas. Thirty of the first editions which I exhibited, mostly of Paine's works, were bound in this house, where many of them were originally printed, and where several of them were written. The venerable bookseller, Edward Truelove, recently retired from business, brought to the exhibition a little mahogany table, in the centre of which was the following: "This Plate is inscribed by Thomas (Clio) Rickman in Remembrance of his dear Friend, Thomas Paine, who on this table, in the year 1792, wrote several of his invaluable Works." This table, of which an engraving with other articles of the exhibition appears in the *Sketch* of last week, seemed to bring us very close to Paine in England, while the Diaries of John Hall, who resided with Paine at Bordentown, brought us entries of his daily life in America. (These were sent by Dr. Dutton Steele of Philadelphia, Hall's relative.)

Amid all these things was a little dried substance shown under glass by Mr. Louis Breeze, beside it a little certificate of authenticity from B. Tilly, William Cobbett's secretary. It is a part of Paine's brain. This bit of the "imperial Cæsar" of last-century radicalism, "dead and turned to clay," quaint relic of that brain whose every word a hundred years ago made thrones tremble, stirred one of the speakers (Allanson Picton, ex-M. P.) to eloquence.

But I must remember the importance of your space to the latter part of the nineteenth cen-

tury, and not ask your readers to ramble with me farther among these relics of the eighteenth century, even though under the breath of intelligence these dry bones regain life and significance in the present time.

MONCURE D. CONWAY.

Correspondence.

THE MAIN QUESTION.

TO THE EDITOR OF THE NATION:

SIR: In your excellent issue of December 19 you say:

"For what do obedience to the law and reliance on the law mean if not the surrender of one's own will, the concession to others of the power of deciding disputes in which one knows one is right?"

Very true; and at this particular juncture many people will apply it to Lord Salisbury's refusal to submit his case to the decision of others, even though he may be absolutely sure that within the Schomburgk line he is clearly within his irrefutable rights. True, he is not herein amenable to courts that can enforce their decrees; but there is the forum of enlightened and Christian opinion, which we trust will make war more and more impossible between civilized countries. I am not arguing that he ought to have submitted the matter to arbitration—especially to a nation that came at him with bristles up—but your weighty sentence will be applied to this case by very many of your readers.

As to the President's motives. Has he not shown his sturdy integrity and unfaltering courage too often for us to assume that all this was done as a political scheme for a renomination? Has he not deserved too well of the republic to be arraigned on such a terrible charge? It seems to me that he has. And while very many of his enthusiastic admirers have to cut loose from him now on this policy, we need not go to the extreme of accusing him of a crime so heinous.

The best we can say for him is bad enough; but that need go no further than to dissent from and strenuously oppose his new doctrine. The writer had sincerely hoped to vote for him as our next President; but all that is gone now. Moreover, he has, I take it, lost the support of the *Herald*; for it can hardly continue to favor his renomination after saying in its editorial of Friday, December 20, that the Monroe Doctrine applies to the present case only by the most "mischievous and violent stretching."—Yours respectfully,

SOUTHERNER.

[There can, in international dealings, be no obedience to a law which does not exist, and the nations have never yet agreed to formulate the cases in which they will rely on arbitration to the exclusion of the very thought of war. To promote such an agreement in the existing state of civilization, efforts to secure arbitration in any given instance must be limited to friendly advice with purely moral insistence. No nation, by its behavior after arbitration had imposed definite obligations upon it, has more disqualified itself for thus helping on the cause of arbitration than has the United States; and this is what makes the present situation a tragedy-comedy.]

Mr. Cleveland's motives we leave for time to reveal. His political opponents in Congress notoriously regarded his action as a partisan manoeuvre, which they could foil only by rushing madly to the support of it. In other words, the Republican Congress, like the nation at large, did not really want war with England. This explanation, strange to say, does something to redeem the national character. But then, what did Mr. Cleveland really want? Was it war buncombe which the House is now following up with tariff-for-revenue buncombe?—ED. NATION.]

TO THE EDITOR OF THE NATION:

SIR: Although I esteem the *Nation* very much, I cannot refrain from telling you that your paper, in my opinion, has done more to necessitate a war with England than all our Jingoos combined.

The influence of the *Nation* is far greater in England than in this country. Being read exclusively by very intelligent and highly educated people, the English statesmen are compelled to presume that the opinions and judgments published by it are those held by the American people. For, in England, the classes of society corresponding to the circle of your readers control the Government. They will, therefore, think that all steps taken by the American Government, the message of Cleveland, etc., concerning the Venezuelan controversy are but campaign tricks, especially as they are used to similar manoeuvres in their own elections. Consequently, they will treat the demands of the United States in such a way as suddenly to be confronted with the necessity either of sacrificing their personal and national honor and prestige or going to war.

As a matter of fact, as soon as the question of war—and of war against England—arises, you are perfectly powerless. Since we have waged, during the first century of our national existence, four wars, our history is a history of war. Young America leaves school and enters life with two impressions, that England is our hereditary foe, and that the greatest thing a man can do is to fight for one's country. Besides, a very considerable portion of our people, almost one-third, is of Irish descent and looks upon a war with England as a holy war. The greatest inducement, however, is that war brings not only honor, but also pensions. For these reasons more than nine-tenths of all Americans, women included, will seize with the greatest enthusiasm the first pretext for a war against England.

We may be sorry for this state of affairs, but we have to recognize it if we try to preserve peace. Whoever strengthens and confirms Great Britain in her resistance to fair and just demands on the part of the United States unchains the dogs of war.

In the Venezuelan controversy you not only represented the people of the United States as a peace-loving nation, but also did everything to convince the Englishmen of the justice of their claims against Venezuela. They must say: "Why should we submit to arbitration? All intelligent Americans are with us. They tell us that, even if the land occupied by us originally belonged to Venezuela and not to us, we nevertheless ought to hold it, because we enjoy a higher state of civilization than the Venezuelans." That such presumptions and ideas will not render the British statesmen more fair and engaging in their responses to the notes of our Government goes without

saying. As a kind of umpire you might have shown from the beginning the weakness and the danger of the English position. By weakness I mean the apparent injustice in their dealings with Venezuela. The danger consists in the awakening of the war spirit in America—for it is certain that England in such a war has nothing to gain, but much to lose.

Yours respectfully, WM. WEBER.

BELLEVILLE, ILL., December 24, 1895.

[We commend our correspondent's portrait of the American people to whom it may concern.—ED. NATION.]

TO THE EDITOR OF THE NATION:

SIR: I have read every number of the *Nation* since I first subscribed for it in 1872, but it has never elicited my esteem and admiration more than it has done by its righteous indignation and protest against the war "craze" now possessing the American people and their rulers. I heartily sympathized with the contempt the *Nation* expressed for the political prayer of the new Congressional chaplain, and with the wish of your correspondent, Rev. A. A. Berle, that the chaplaincy be abolished as a sacrilegious nuisance.

It has pleased Providence to teach some nations only in the bitter school of experience the lessons of righteousness and common sense; and it may be that the "bumptious" conceit of Americanism will be relieved, and its foolish delusions dispelled, by the disastrous consequences of a war with England, in which we should lose far more than England, and gain nothing. Egyptian and Indian cotton would more than ever supplant our Southern staple in European countries; their planters would get from ten to fifty cents for their cotton, our planters could not get more than three or four cents for theirs. Our exports of all kinds would cease, for they are mostly carried in English vessels. We should be helpless to prevent England supplying itself with all the cereals it needed from Argentina, Russia, and Hungary, not to speak of Canada. By the time one of our "commerce-destroyers" (the very name indicative of mediæval barbarism) crossed the Atlantic to attack England's commerce, her bunkers would be depleted of coal and she would lie, a helpless hulk, at the mercy of her enemies. England has coaling-stations and war-vessels everywhere; we have no coaling-stations, and our few war-vessels would have to protect our own exposed coasts. So clearly in the wrong are we that we could not count upon the sympathy or coöperation of a single European nation. The more we consider the numerous questions raised by the possibility of war between Great Britain and ourselves, the more are we astonished at the fatuity of those who are egging it on.

The sentiments expressed by the *Nation* in discussing this question seem so like those I expressed in an impromptu speech made in the session of the National Educational Association at Toronto in 1891, that I take the liberty of cutting them out of the *Journal of Proceedings* and sending them to you. The question discussed was whether we teachers should celebrate a "Patriots' Day" and encourage Jingoism:

"True patriotism is the endeavor to elevate my country's standard of honor up to that which is right and true, and I should love my country for that in her which is devoted to righteousness. I should love the truth and righteousness which God has given us, and seek to bring my country up to it. I am not to make patriotism, therefore, the end, but rather the means by which I may hope to

bring the nation to a love of truth, to a love of righteousness. I do not think the observance of any Patriots' Day will ever attain that result. The time wasted or spent in that could be better spent in educating the young men in those moral truths and principles which will make the citizen seek that which will be for his country's highest good; hence it is not patriotism in itself we are striving to attain, but it is love of truth, of right and righteousness. Patriotism is nothing more than this; that is the highest patriotism."

WM. R. ATKINSON.

S. C. COLLEGE FOR WOMEN, COLUMBIA, S. C.

NEGRO FOLK-LORE.

TO THE EDITOR OF THE NATION :

SIR: In your recent review of Prof. Edwards's 'Bahama Songs and Stories,' I was interested in seeing the persistence of an old formula for closing a story,

"E bo ban, my story's en'."

which is, with apparent probability, traced back to an ancient English form,

"Be bow bended, my story's ended."

I may add to this that, when a boy in Virginia, I was familiar with a similar expression, invariably used in stories partaking of the marvellous, which ran, in atrocious rhyme,

"Be bo bum, my story's done."

C. DE K.

ROLLA, MO., December 27, 1895.

Notes.

MACMILLAN & CO. have in press 'The King's Peace,' by Mr. Inderwick, Q.C., in the Social England Series, 'The Spraying of Plants,' by E. G. Lodeman of Cornell University, 'Alternating Currents and Alternating Current Machinery,' by Prof. Dugald C. Jackson of the University of Wisconsin, and 'Brown Heath and Blue Bells,' by William Winter; and in preparation a translation, by Dr. W. B. Shober of Lehigh University, of Dr. Ludwig Gattermann's 'Die Praxis des Organischen Chemikers,' and a new edition of Sir Thomas Browne's 'Hydriotaphia, and the Garden of Cyrus,' edited by the late Dr. Greenhill.

David Nutt, London, announces 'Greek Folk-Poetry,' being annotated translations from the whole cycle of Romaic folk-verse and folk-prose, edited by J. S. Stuart-Glennie, who also contributes an introduction on the science of folk-lore, and a conclusion on the survival of paganism. There will be two volumes, for the prose and verse respectively.

'Old Faiths and New Facts,' by W. W. Kinsley, will shortly be published by D. Appleton & Co.

W. B. Clive, 65 Fifth Avenue, is about to issue 'Inductive Logic,' by J. Welton, M.A., lecturer on Education in the Victoria University.

That dialectical differences in the language of a nation may lead to practical difficulties, is illustrated by the circumstances which have induced the Allgemeiner Deutscher Sprachverein to offer two prizes for essays on the naming of plants. Some of the common plants of Germany bear more than a hundred different names in the various parts of the country, and the want of a generally recognized popular denomination has made itself felt in the schools, where botany forms an important and attractive branch of study. A thorough discussion of the whole subject, and especially of the principles according to which names

should be selected, is to be the task of the essayists.

The *Almanach de Gotha* for 1896 (Gotha: Perthes; New York: Westermann) has been kept within bounds, partly by the ingenious device of omitting from the genealogical portion such families as have been slack in returning their proofs to the editor. This rod will regularly be held over the delinquent hereafter. On the other hand, the editor enlists in his behalf as purveyors of information the attachés of embassy or legation, who have never before been honored by being named in the diplomatic lists, though in the European service at least their turn is assured of ultimately becoming secretaries and chiefs. The colonial world has been yet more carefully described, as one may see by reference to Italy's African possessions, now in so much peril. The four portraits embrace President Faure, Prince Hohenlohe-Schillingfürst, Chancellor of the German Empire, and the Duke and Duchess of Aosta—she that was the Princess of Orleans.

'Hazell's Annual' for 1896 (London: Hazell, Watson & Viney) deserves the customary commendation for its useful contents, arranged both on the dictionary plan and to a certain extent in classes; see, for example, the more than fourteen pages given under Engineering to railways, canals, sewers, harbors, dams, bridges—the Boston subway, the Bournemouth Undercliff Drive, the Niagara utilization, the Manchester water-supply, the Simplon Tunnel, etc. The personal and statistical information displayed in this "cyclopaedic record of men and topics of the day" is of the most extensive and varied character, and will supplement any book of reference of its kind. There are several new maps possessing timely interest.

Mr. William Tallack, the Secretary of the Howard Association of Great Britain, has prepared an enlarged edition of his well-known work, 'Penological and Preventive Principles,' which is published in London by Wertheimer, Lea & Co. For thirty-seven years Mr. Tallack has, through his connection with the Howard Association, been in a position to observe not only the opinions of those accustomed to deal with criminals, but also the practical working of many different systems and theories of reformation and punishment. While the differences, both practical and theoretical, that prevail in these matters are notorious, there has been much progress made toward unity of methods, and in some directions practical unanimity has been attained. Certain readers, as Mr. Tallack admits, will deem his frequent references to the influence of Christianity to be irrelevant. We do not find ourselves of this number, but at all events such references may be omitted by readers who dislike them, and the chief substance of the book will remain unaffected. On the whole, we are not acquainted with any book better adapted to the use of those who are interested in the study of the modern methods of repressing crime.

We are glad to see that Dr. William Smart of the University of Glasgow has published (through Macmillan) a collection of his essays; the title of the volume being 'Studies in Economics.' The author is perhaps best known by his work in translating and expounding the theories of the Austrian economists, but these essays show that his own capacity as a thinker is of a high order. Whatever opinion we may entertain of the Austrian theory of value, we can say that it has no particular effect on the discussion of the problems here considered, which are in the main of a practical nature. The chief topics are the problem of wages in various aspects, the relation of prices to gene-

ral production and to that of gold, and the economic results of different modes of consumption. We have not recently had the pleasure of examining any economic treatise in which the reasoning was more consecutive or more exempt from fallacy; and the spirit in which contentious matter is handled is worthy of the science developed by Smith and Ricardo and Mill.

Prof. Ewald Flügel of the Stanford University has just issued the first volume of his 'Neuenglisches Lesebuch' (Halle: Niemeyer; New York: Westermann). The volume is devoted to the time of Henry VIII., and contains about 350 large pages of text and some 250 pages of notes and indexes. The contents are selected on the basis of a remarkably thorough knowledge of the period and with excellent judgment. They embrace every kind of literature, religious and secular, in prose and in verse. When extracts only have been printed, these are usually long enough to give the student a good idea of the style and character of the whole work. In this respect the editor has followed the excellent example of Mätzner's highly esteemed 'Altenglische Sprachproben.' The texts of the manuscripts or of early printed editions are reproduced with scrupulous accuracy. The notes, though necessarily uneven, contain much valuable information. No one who understands the importance of this transition period of English literature—a period commonly neglected on account of the inaccessibility of the materials for its study—can fail to feel profound satisfaction that so competent a scholar as Prof. Flügel has been willing to subject himself to the great labor of making such a book. The 'Reader' will at once take its place as an indispensable part of the outfit of every student of our language or literature.

A translation of the third German edition of Prof. Menshutkin's 'Analytical Chemistry' has been made by Mr. James Locke, and is published by Macmillan & Co. The work which is thus made available to American and English students of chemistry is entirely worthy of their attention. It covers both qualitative and quantitative analysis, including under the latter short sections on volumetric and organic analysis. The treatment differs from that of many works on this subject in possessing a distinct pedagogic value. It is not a "cook-book." Discussion of the methods of analysis and of the theory of the reactions which are involved, and the absence of analytical tables, stimulate independent thought and work, and lead the student to a broader understanding of chemistry. Analytical chemistry has been (and is still) too often taught in colleges as if it were an end in itself, to the neglect of its larger educational possibilities. A certain degree of accuracy in manipulation and ability to execute correctly a certain range of analytical work according to set schemes is acquired; but too little stress is laid on the development of power to grapple with new problems. Menshutkin's point of view is indicated by this extract from his introduction: "Analytical chemistry teaches the art of *chemical thought*, which is the most important object of practical work. . . . Mechanical study affords no benefit whatever." We heartily recommend this book to the careful examination of all teachers of analytical chemistry. Mr. Locke's translation is fairly good.

We have already reviewed in these columns Prof. George L. Raymond's 'Art in Theory,' and commented, not very favorably, on his doctrines. In 'Painting, Sculpture, and Architecture as Representative Arts' (Putnam),

he develops these doctrines more in detail, but it cannot be said that he strengthens his presentation of them. Of course, many things stated here are true, but there are as many more that are untrue, and the reasons given for the true things do not commend themselves as just. The author's knowledge of art is evidently purely theoretical and derived from reading only, and he makes blunders that are truly amazing. A single one must serve as an example. On page 41 is to be found this statement: "In drawing and painting, shading is usually produced through the use of lines either in black or in color, which, for this purpose, are either abruptly or gradually lessened in number or intensity." This is so completely wrong, and shows such entire ignorance of the arts under discussion, that it dispenses the serious critic from the necessity of further consideration of the writer. The book is lavishly illustrated with 200 odd cuts, raked together from all sorts of sources and nearly all bad.

The *Portfolio* for November is devoted, for once, to a purely modern subject, the recent 'Renaissance of Sculpture in Belgium.' Its author, Georges Destrée, is, we take it, himself a Belgian, and, for a guess, a Walloon, and patriotic impulses are perhaps discernible in his enthusiasm; but whether or not modern Belgian sculpture is, as he would seem to intimate, the modern school of sculpture *par excellence*, it is only necessary to glance at the excellent illustrations he gives us to convince one's self that it has produced a series of most vital and interesting works. Here are half-a-score of artists whose very names will be new to most of us, and every one of them is a man of power and originality, whose work one may conceivably dislike, but must surely admire. Mr. Destrée writes in French, and the translation, seemingly excellent, has been done by Miss Florence Simmons.

Mr. F. Adolphus has put together his reminiscences of life in the French capital for more than forty years in a pleasant little volume, which he has entitled 'Some Memories of Paris' (Henry Holt & Co.). The most noteworthy chapters deal with the agony of the great city in 1870-71. A vivid description is given of the last day of the Second Empire, together with the account of the distribution of the English gifts of food to the Parisians after the siege, the narrative of an eye-witness of the entry of the Germans into the conquered city, and a record of personal experiences during the Commune. Mr. Adolphus seems to have had excellent opportunities for observing what was going on during these critical months, and to have kept his eyes open to the dramatic possibilities of his surroundings. He was with Laurence Oliphant, at that time correspondent of the *Times*, when the Germans entered Paris, and seems to have been on intimate terms with that erratic man of genius. Oliphant left Paris, so Mr. Adolphus tells us, after a narrow escape from a bullet on the day of the outbreak of the Commune, in the belief that the bullet brought him a message from Prophet Harris that he was to return at once to America. But in the middle of June, 1871, Oliphant returned, accompanied by Harris, who described the Commune as "a yell from the lower man; an up-seeing from the turbid sources; a snatch at the impossible and the undefined; a failure where success would have meant a nation's shame" (p. 177).

'Europe in Africa in the Nineteenth Century,' by Elizabeth W. Latimer (Chicago: A. C. McClurg & Co.), is an account, both too diffuse

and too brief at times, of the events which have led to the partition of Africa. It is illustrated by a number of portraits and some rude but serviceable maps.

'The Fishes of Sinaloa,' by Prof. D. S. Jordan of Stanford University, is a reprint of 187 pages and 28 plates from vol. v. (second series) of the Proceedings of the California Academy of Science. The paper will be very useful in the study of our West Coast fishes. A large number of species are described and figured. The work would be much more convenient and helpful for reference if the date and place of publication had been added to the name of the describer of each species. These slight additions cost a writer but little trouble, and in saving the time and labor of investigators contribute greatly to the advancement of science.

The Report of the United States National Museum for the year ending June 30, 1893, is a bulky octavo of nearly 800 pages, with a large number of plates and other drawings. It contains the report of Prof. G. Brown Goode, and reports and special papers by a number of his assistants. Prof. Goode's report is an able presentation of the history, present status, and possibilities of the Museum, and of museum development in general. The numerous illustrations give a good idea of the cases, mountings, labels, arrangement, etc., accepted at the time as best adapted to their purposes. The majority of the special papers are ethnological, the most extensive being "Notes on the Ethnology of Thibet," by W. W. Rockhill, profusely illustrated. A paper of much interest to the ornithologist is that of Maj. Charles Bendire on the "Cow Birds." "The Poisonous Snakes of North America," by Leonhard Stejneger, is a work of great general as well as special interest. The author has gone deeply into the literature of the subject in all its bearings. His summaries of what is known of habits, distribution, anatomy, venom, remedies, etc., are comprehensive, the average of the many illustrations is good, and his descriptions and comparisons from the Museum's collections are admirable. It is matter of regret that in a work of so much excellence the synonymy is not entirely complete, and that apparently several of the snakes are not mentioned.

M. Paul Verlaine has given to the world, through the publishing department of the *Fin du Siècle*, a small volume of 'Confessions,' which cover the period of his life from his birth, at Metz, in 1844, to his meeting with Arthur Rimbaud, at the end of 1871. They are not very startling, and are pleasantly written. His description of his college life and examinations for the *baccalauréat*, and his account of his early poetic efforts, are interesting; but the real Verlaine is, after all, to be sought for in his works.

M. E. Lintilhac has put into book form, under the title 'Les Félibres—à travers leur monde et leur poésie' (Paris: Lemerre), the articles he wrote on this subject for the *Temps*. They are well worth preserving, and in their present form are infinitely more useful. The literature which is here treated of has an interest and value of its own, apart from the attention which it merits as a revival of a once rich and flourishing branch of the national literature of France. The work of Aubanel is studied most fully by M. Lintilhac.

M. René Doumic has already made a name for himself as a critic of weight. His latest book is not up to his former productions, however, and is rather ephemeral in character. 'La Vie et les mœurs au jour le jour' (Paris: Perrin & Cie.) is simply a collection of articles,

very bright and vivacious, and nearly all based upon a thought, occasionally a serious one, but scarcely worth putting together into more permanent form. They are witty, sarcastic, keen, and help to pass an hour enjoyably. This much praise may freely be given.

The *Paris Journal des Débats* announces that, beginning with the new year, its two editions, of morning and evening, adopted three years ago, will be abandoned. Hereafter there will be but one edition, in the evening, with the familiar pink color retained. The dimensions of the paper will be enlarged to rival the greatest yet adopted by the French press. In all other respects the character of this sober and civilizing journal will remain unchanged.

When Edmond Biré was engaged upon his volumes on Victor Hugo, he had access to the manuscript of Adolphe Jullien's 'Le Romantisme et l'Éditeur Renduel,' to which, as some readers may remember, he refers in several of his foot-notes. Out of consideration for persons still living, this work has hitherto been withheld from publication. But now the *Revue des Deux Mondes* (December 1) publishes a first instalment from it under the above title and the sub-title, "Eugène Renduel et Victor Hugo." The pages are interesting, but contain nothing important concerning the literature of the epoch. Hugo's character appears here in much the same light as that to which Biré has accustomed us. Renduel was the publisher and friend of many of the most noted writers of the Romantic period, and, as all his papers and books have fallen into M. Jullien's hands, we may expect much from the latter's divulgence.

Several astronomical articles of interest appear in recent numbers of *Knowledge*. Variable red stars are treated by Dr. Brester of Delft, and the question "What is a nebula?" is again raised, this time by Mr. E. W. Maunder of the Royal Observatory, who gives answers as satisfactory as possible in the present state of information on this significant subject. The second and third of Mr. Stewart's articles on spectrum analysis appear, and an account of new stars by Dr. Brester, as well as a very interesting article by Miss Clerke on the exterior nebulosities of the Pleiades, followed by a note upon the same subject by Prof. Barnard, late of the Lick Observatory. With the beginning of the new volume for 1896, *Knowledge* will revert to its original title, "An Illustrated Magazine of Science, Literature, and Art," which it bore when Mr. Proctor founded it fifteen years ago. Although this implies a wide field, it is hoped that the magazine will not fail of filling it, and of affording its readers even greater interest in the future than in the past.

Some interesting facts as to the recent progress of Bolivia in building railways, post-roads, and telegraph lines, taken from the Chilean Minister's report to his Government, are given in *Petermann's Mitteilungen* for November. It contains also a discussion of the proper position for the provisional boundary-stone between Chili and the Argentine Republic, a question in which Bolivia and Peru are likewise interested. The distribution and religion of the various non-German races in the German Empire are shown upon an admirably colored and shaded map.

Capt. Lugard's account of his Borgu expedition, in the *Scottish Geographical Magazine* for December, is noteworthy for its vigorous denunciation of the liquor traffic in West Africa and his hearty advocacy of the Hausa Association. This has been formed to promote the study of the Hausa language, which is used

largely by the Moslems of the western Sudan. It is taught in their schools—the Arabic alphabet being used in writing it—and it has the rudiments of a literature. A grammar and dictionary of the language has been compiled, and a translation of a part of the Gospel of St. Matthew is already in print. The magazine also contains some notes, historical and geological, on Vancouver Island.

Signor Anderson (Rome: Spithöver) has been of late greatly increasing the debt owed him by all students of Italian art. He has made a reproduction approaching the original in size of Giorgione's "Soldier and Gypsy"; a reproduction the more valuable now that, thanks to the ridiculous pretensions upon private art-property made by the Italian Government, the Giovanelli Palace is absolutely inaccessible. At Parma, Signor Anderson has photographed everything of interest. We need not speak of Parma's greatest treasures, its many Correggios; but the gallery contains unrivalled Cimbas as well, and one of Sebastiano del Piombo's grandest works, a portrait of Clement VII., in itself worth all the biographies of that astute and fascinating Medici. In or near Parma are also to be found some of the finest works of Parmigiano, the most genuine and therefore the most lovable of decadents.

The Gallery of Modena was for twenty years unburg. At last it has been admirably arranged, and Signor Anderson has photographed its many interesting works. There, better than anywhere else, the Ferrara-Bolognese school can be studied; but the glory of Modena is its many masterpieces by Dosso Dossi, a most fascinating artist, hitherto almost undiscovered. Symonds is the only writer of note who has made so much as a passing mention of Dosso, whose "Jester" he greatly admired. This "Jester," even in the photograph, reveals its quality of Shaksperian humor.

—The annual report of the State Geologist for New Jersey for 1894 (only recently printed) is again to be remarked for Prof. R. D. Salisbury's report of progress in the study of surface geology. This novel survey continues to throw an unexpected light on the glacial and pre-glacial history of the State, as, in the influence of stagnant ice on the deposition of stratified drift, the evidences of submergence, etc. The study proceeds from the Schooley peneplain, and may be recommended to pedestrians and bicyclists whose excursions have a more substantial motive than mere exercise. To one who understands the topography of northwestern New Jersey, says Prof. Salisbury, "the long, even crest of Kittatinny Mountain, stretching away for miles to the north, and the almost equally even crest line of the Highlands, seen in the distance across the valley to the east, tell of a lapse of time and of an amount of erosion beside which the gorge of the [Delaware] Water Gap seems paltry and mean. . . . As a geographic feature, the Kittatinny Mountain cannot be said to have been greatly modified by the ice of the glacial period." The chapter on the abundance and direction of glacial striae is extremely interesting, and so are those on the changes in drainage, on the nature and variety of the lakes of northern New Jersey, on the gravels and sands south of the terminal moraine, etc. "If the ice which coöperated with water in the deposition of the Pensauken [formation] was berg ice—emanating from glaciers—it is believed that it belonged to a glacial epoch antedating any which has heretofore been recognized in America." Of great practical value are the remarks on road material,

of which the Pensauken furnishes an abundant supply. The report is accompanied by plates and a large colored map of the surface formations of the Passaic valley and its surroundings. Mr. Lewis Woolman extends his annual record of artesian wells in Southern New Jersey, and enumerates the several diatom clay beds involved in the borings; No. 3, which extends to North Carolina, being the most remarkable and extensive in the world. The report on forestry, by Mr. C. C. Vermeule, reveals an unbroken tract of forest of 11,000 acres on the top of the Palisades. This is shown on a tinted map of the whole State. Finally, Mr. John Gifford makes a preliminary report on the forest conditions of South Jersey, which possesses a curious interest on account of its particularity, and especially for its information respecting forest fires, which there is urgent need of controlling by State regulation.

—At the founding of the American Ornithologists' Union in 1883, a committee, consisting of Messrs. Coues, Allen, Ridgway, Brewster, and Henshaw, was appointed to prepare certain canons of nomenclature and apply these to a revision of the list of North American birds. The code followed up to that time, tacitly and in the main, was the Stricklandian of 1844, which in its time formulated the consensus of opinion or general practice of ornithologists since the Linnean period. The committee prepared a more elaborate and more precise code, some main features of which were the recognition of priority as a cast-iron principle of nomenclature, the taking of Linneus at 1758 instead of 1766, and the rejection of homonyms in face of whatever sanction by usage, and thereupon drew up their list of native birds with a degree of consistency which had never before been witnessed in any department of zoölogy. This list acquired such authority that every name not on it went out of use. The code itself found great favor among other naturalists, particularly those working in other departments of vertebrates and in conchology and entomology; and many who found fault with particular provisions preferred to waive their objections and take it in *en bloc*, as being on the whole most conducive to that stability of nomenclature for which they yearned. The same ichor in due course infected the botanists; and the present eruption in their nomenclature, with all its "burning questions," which had never been allowed to ignite during Asa Gray's lifetime, is mainly due to the influence of the ornithological ordinances. The original committee has remained the same, with one exception, and has never found occasion to revise its code in a single particular, but has just issued what may be called its first decennial revision of the list, mainly for the purpose of formally including the additions to our bird-fauna made during the past few years. These are more numerous than they ever were before in the same space of years; but of changes in names from some unexpected bearing of a canon in this or that case the instances are very few. We could not state the present total of species and subspecies recognized without actual count, as the committee use *a*, *b*, *c*, etc., for subspecies, and interpolate new species with a decimal point in order that the numbers originally affixed may be permanent; we suppose the total to be upward of 900. Names relegated to the "hypothetical list," which is the Union's waste-basket, are only 22—a surprisingly small amount of refuse or refractory material after sifting and identifying several thousand names and synonyms. The list of fossil birds is 64—1 Jurassic, 28 Creta-

ceous, the rest Tertiary. The names are printed in very heavy type, without synonymy excepting two references (to the original name and to the name adopted), and four others (by number only), to the prior lists of Baird, 1858, Coues, 1873 and 1882, and Ridgway, 1880; and a statement of habitat is made in every case. The book makes a sizable octavo of pp. viii, 372, and will doubtless remain the only recognized authority in classification and nomenclature until its next revision, which is expected to be another decennial one.

—Occasionally a scientific observation is made which gives a wide glimpse into the vast unexplored region of ignorance by which we are surrounded, and which will doubtless for ever save the scientist from the pain of being obliged to sit down with all his work accomplished. A German investigator has just made out the very curious fact that if the long, thread-like pseudopodia of certain low animals (foraminifera) are touched by the threads of another individual, they contract, shrivel up, and even break up into separate drops of protoplasm, but that if the threads which touch are those of the same individual, nothing of this sort occurs. The threads may even be cut off, and this same sensitiveness to the difference between the *Me* and the *not-Me* continues. There is, of course, absolutely no difference of structure—nothing in the organic world can be more alike so far as our powers of observation can be extended by all the appliances at our command, than these undifferentiated threads of naked protoplasm. And this still more curious fact is to be added—the pseudopodia of young individuals of the same brood do not cause this mutual contraction when brought into contact with each other; this difference in the protoplasm of different individuals, whatever may be its nature, is developed in the course of the life of the individual. If little things like orbitolites have such profound differences in structure as this would indicate, what deep physical bases may there not be for the antipathies and sympathies of highly organized human beings?

—The career of Antonio Gallenga, who died a fortnight ago in England, illustrated the boundless possibilities of romance which our miscalled commonplace century has furnished. He was born in Parma in 1810, and was swept into the whirl of Italian conspiracy by the abortive revolutions of 1831. Thenceforth he became an exile. Visiting this country, he was cordially received by, and for a time lived on intimate terms with, Longfellow, Prescott, Ticknor, and the older literary society in Boston and Cambridge. Returning to Europe, he made England his abode, if any one who travelled continuously could be said to have an abode. At any rate, his chief works, "Marratti's Italy," "Italy in 1848," "A History of Piedmont," etc., were written in English and published in London. From 1859 till about twelve years ago, Gallenga was the Italian correspondent of the London *Times*, a position in which he exerted an influence that his character hardly justified, for Gallenga may fairly be regarded as an excellent specimen of the modern type of versatile, clever, and irresponsible journalist, and the ease with which he changed his political principles to suit the taste of his employer is further evidence of his fitness for journalism. His works, which we have mentioned, are still worth reading by any one who wishes to get a contemporary look at Italy fifty years ago. He writes with much vivacity—like Ruffini, he quickly mastered

English—and he has unusual ability in interweaving statistics, events, and aspirations. But probably he will be remembered longest as having been, in his youth, under the alias "Luigi Mariotti," engaged in an attempt to assassinate Charles Albert, King of Piedmont. According to his story, Mazzini gave him a dagger with which to commit regicide. Mazzini denied complicity in the proposed crime, but for years his enemies used the insinuation, as if it had been proof, against him. Mazzini, it may easily be imagined, were not disposed to construe charitably Mariotti-Gallenga's conversion into a courtier of the King whose father he had wished to kill.

BAIRD'S HUGUENOTS.

The Huguenots and the Revocation of the Edict of Nantes. By Henry M. Baird. Charles Scribner's Sons. 1895. 2 vols., pp. xxviii, 566; xix, 604.

PROF. BAIRD may well be congratulated on the completion of a great undertaking. The two volumes before us round out the story of the Huguenots already traced through its earlier course in his 'Rise of the Huguenots' (1879) and 'Huguenots and Henry of Navarre' (1886); and the hearty commendation expressed in our notices of the preceding sections of this series is deserved by these volumes also. They exhibit the same characteristics—lucidity of style, patient investigation, guarded statement, and repression of partisan extravagance in praise or blame—that mark the other portions of his work. Prof. Baird's sympathies are never in doubt, and his aversion to the dishonesties of Louis XIII. and XIV., of Louvois, of Bossuet, or their servants and associates, is as manifest as his revulsion from the cruelties of Marillac or Foucault; but he carries the stamp of fairness and of willingness to see good wherever it may be found. Prof. Baird's recent volumes have the same limitations, also—largely self-imposed, we judge—which characterize his earlier narratives, and have already been pointed out by us. So entirely is his work the history of a party that contemporary political and intellectual development is given a subordination that is almost exclusion. Not infrequently this neglect seems a real loss. It would certainly be germane to the story of the Huguenots to develop with some fulness the policy of Richelieu which led to the downfall of La Rochelle in 1636. That policy is outlined, indeed, but with the utmost brevity. Even more desirable would be a sketch of the growth of the philosophic spirit in France during the eighteenth century, for, assuredly, it was not increased love for Protestantism that gave toleration to the Huguenots in 1787.

Prof. Baird's two volumes under consideration cover nearly two centuries—from 1610 to 1803. In them, as he tells the reader,

"I have treated of the attempt to undo the work of the great Henry, from the gradual encroachments under Louis the Thirteenth to the more rapid and more violent measures that prepared the way for the formal Revocation of the Edict by Louis the Fourteenth. I have also pointed out the consequences of the recall in the great emigration, the suppression of Protestant worship save in the proscribed conventicles of the Desert, and the war of the Camisards, into which fanaticism was driven by cruel intolerance. Finally, I have delineated the gradual recovery by the oppressed Huguenots of their ecclesiastical organization and of the civil and religious rights from which they had been long debarred, until, after being barely tolerated, they were at last fully recognized by the civil government."

Only a few points of interest in this long story, so voluminously told, can even be glanced at in the limits of this review. One feature of Huguenot development, then, that strikes the reader of Prof. Baird's volumes is the change that came over the party after the establishment of the Bourbon House. Though granted a large measure of privilege by the Edict of Nantes, the termination of the struggles which had torn France under the Valois Kings, and the opening of new avenues to advancement to the Huguenot chiefs under Henry IV., cost the party that active leadership of great representatives of the nobility which had been largely its source of political strength. Sully did much for France, but little for his fellow-Protestants. Bouillon preferred his own interests to theirs. Henry of Rohan, the last great Protestant leader, is esteemed by Prof. Baird "as generous as Admiral Coligny, whom he probably excelled in military genius"; but his unavailing attempts to support the political power of the Huguenot party by arms from 1621 to 1629 met with "a divided support from his fellow-believers," because it was "an age of inferior devotion and less ardent enthusiasm, an age in which the ideas of the royal prerogative had reached an exaggeration unknown in the preceding century."

Prof. Baird points out many instances of this zeal for royal absolutism among the French Protestants of the seventeenth century, remarking "that as the toleration of the Reformed religion became more and more precarious, . . . the Huguenots, in their endeavor to prove themselves to be, what in reality they were, the most obedient and trustworthy subjects of the crown, were tempted to rear with their own hands that formidable structure of the absolute authority of the King, which, when once erected, was destined to prove the ruin of their hopes of quiet." Prof. Baird holds the address of Pierre Hespérien to Louis XIII., in the name of the National Synod of 1617, to be representative of the views of the party generally: "After God, we recognize your Majesty to be our only sovereign; and it is an article of our creed that there is no intermediate power between God and kings. It is among us a damnable heresy to call it into question." Daniel Tilenus, the honored theologian of Sedan, writing to his fellow-Huguenots in 1621, went so far as to say: "You wish him [Louis XIII.] to be bound to observe his predecessor's Edict in every point; but you do not consider that you owe him all obedience by an obligation divine, natural, and civil. Bear in mind that no king is bound by the ordinances of his predecessors, nor even by his own. . . . By the laws of God and of nature he is undeniably bound; nevertheless, should he chance to contravene them, he has no other judge but God." Certainly the contrast between these views and those of their fellow-Calvinists across the English Channel is instructive, and a suggestive light is thrown on the later experiences of the Huguenots themselves.

The loss of La Rochelle in 1636 signified the passing away of Huguenot political power; but though a statesman like Richelieu could hardly have done otherwise than oppose that *imperium in imperio* which the Edict of Nantes had sanctioned in the assignment of hostage cities to Huguenot control, Prof. Baird shows that the Protestants found the great Cardinal an honorable master; and he deems the years from 1639 to 1660 the most prosperous in Huguenot story. Counting "somewhat over one-fifteenth, never more than one-tenth part," of

the population of France, they yet possessed over 850 places of worship, served by upwards of 700 ministers, and a share in the commerce and manufactures of the land out of all proportion to their numbers. Prof. Baird attributes the superior prosperity of the Huguenots of the middle classes to their high average of moral character, but he also gives weight to their non-observance of the ecclesiastical holidays—a neglect which he estimates as yielding an advantage of twenty per cent. in working time to the Protestants.

From the beginning of the personal reign of Louis XIV. the situation of the Huguenots grew rapidly worse. Yet the policy of the King seems to have looked towards the conversion of his Protestant subjects by Catholic missionary effort, by unfriendly interpretation of existing laws and the creation of new legal annoyances, and by the employment of bribery, rather than to have contemplated a revocation of the Edict of Nantes. Thus the King regulated the times of weddings and funerals, the duration of pastorates, and the dress and visitation of ministers; abolished the mixed courts of justice; deprived the Huguenots (between 1660 and 1684) of two-thirds of their houses of worship by a variety of legal devices; and finally (1681) made the expression of a preference for Catholic worship by Huguenot children who had reached the age of seven an irrevocable renunciation of their parents' faith.

Naturally, such unscrupulous royal zeal for the conversion of Protestants was emulated by those who wished to stand high in the graces of the King; and Prof. Baird shows that the notorious *dragonnades* originated in 1681 through the inventiveness of Michel de Marillac, intendant of Poitou, who turned the troops he had been using to collect unpaid taxes to the work of persuading Huguenots, with such apparent success as to win the approval of Louvois and Louis XIV. Public opinion did indeed force Louvois eventually to remove Marillac from office; but it was Marillac's system which Foucault revived in the spring of 1685, in Béarn, with the countenance of Louvois, and which, a few months later, when Foucault reported 21,000 "conversions" in his district as its result, Louvois applied widely, though officially disclaiming the violence which he and Louis XIV. must well have known was being exercised. These measures undoubtedly produced a nominal change of faith in great numbers, and to the sanguine thought of the King it seemed as if Protestantism was about to disappear. Prof. Baird shows that the Revocation of the Edict in October, 1685, was due to a somewhat sudden determination on the King's part, "based upon a false opinion that Protestantism, thanks to the measures put into operation for that end, had almost, if not quite, ceased to exist." He assigns the chief influence in the royal deliberations to Harlay, archbishop of Paris, to Père de la Chaise, the King's confessor, and to Louvois; to Mme. de Maintenon, so often charged with being a chief instrument in the Revocation, he ascribes no weight in swaying the King's decision, though she undoubtedly sympathized with the step.

Prof. Baird depicts the consequences of the Revocation with graphic minuteness. Of the Huguenot ministry, on whom the blow fell most severely, and to whom great inducements to conversion were offered, only about one-eighth abjured Protestantism. Of their flocks Prof. Baird estimates that not far from four hundred thousand (though exact figures are impossible) left France, in spite of the perils which the King put in their way, to the

lasting advantage of England, Holland, and Germany. With interesting fulness he traces the efforts to preserve Protestant worship, now officially non-existent. He concludes that at least fifty of the exiled pastors revisited their flocks before 1700, and the fate of such of these returned ministers as fell into the hands of the Government shows that the secrecy observed regarding the Man of the Iron Mask was no unique feature of the vengeance of Louis XIV. Sent to prisons like those of the Île Ste.-Marguerite or of Vincennes without public trial and with every precaution to avoid communication with the outside world, they disappeared no less completely than apparently mysteriously from sight, and friends inquired in vain for years for the secret of a fate which modern publication of records has revealed.

Of the Camisard war Prof. Baird has much to say, and the picturesqueness of the struggle makes the story of the efforts of these peasants one of interest, though the evident hopelessness of their task, and the fanatical spirit of so-called prophecy which they exhibited, made the rising the work of only a fragment of the Protestant population of France. It demonstrated, however, in the sight of all Europe the absurdity of any governmental claim that, since the Revocation, Protestantism had ceased to exist in the dominions of Louis XIV.

Of more value for the permanent interest of the land was the restoration of organized French Protestantism effected by Antoine Court in 1715, with its reestablishment of the synods and regular ministry. The story of these churches of the "Desert," as they styled themselves in language borrowed from Scripture and conveniently indefinite as to their habitat, is told from their beginnings in the Cévennes to their ultimate recognition by the French Government. In spite of life-imprisonment and galley-slavery for attendance on their services, they continued to grow, aided by the theological school which Court established at Lausanne about 1730. As the eighteenth century wore on, this opposition declined, so that though the last execution of a minister was as late as February 19, 1762 (François Rochette at Toulouse), the Protestants attempted to build church-edifices by 1755, and a year later could count 48 pastors—a number which had increased, when the memorable year 1787 arrived, to about 125. Yet the case of Calas, which Prof. Baird narrates at length, together with the efforts of Voltaire to right a great injustice, shows the popular and legal hostility to which Protestants were still liable. So far, however, did enlightened opinion outrun the slow processes of legal revision that the Government, speaking through its Comptroller-General, Turgot, in 1775, gave a recognition to the still proscribed Protestant bodies by invoking the services of their ministers in suppressing the bread riots. Such an act was natural from one who had written in favor of religious tolerance as early as 1753. It was Lafayette, however, who, on May 23, 1787, presented to the Assembly of Notables the resolution which that body transmitted without opposition to Louis XVI. praying that Protestant proscription might cease. The result was the Edict of Toleration, which did not, indeed, grant legal permission to Protestant worship, but relieved the Protestants from the worst of their disabilities. From this Edict the tide of the Revolution swung the cause of Protestant freedom rapidly onward to the law of April 7, 1802, by which the Reformed and Lutheran churches of France were given full rights, and placed under the controlling and supporting

supervision of the state—a law with which Prof. Baird closes his history.

Altogether the volumes under review are scarcely less suggestive to the student of general history than to the investigator of ecclesiastical story in their demonstration of the difficulty and costliness of crushing opinion by force; and one application of this lesson to events of our own age is pointed out by Prof. Baird in his preface, when he remarks: "As history repeats itself, the close of the nineteenth century is even now beholding the counterpart, or the copy, of the legislation by means of which Louis the Fourteenth undertook to crush out the Huguenot religion from France, in laws remarkably similar, menacing the existence of Protestantism in the Baltic provinces of a great empire of our own times."

BENJAMIN'S HISTORY OF ELECTRICITY.

The Intellectual Rise in Electricity: A History.
By Park Benjamin. Appletons. 1895.

THE present history is, in its two halves (the first down to Gilbert inclusive, and the second from Gilbert's successors to Franklin, inclusive), of very different orders of merit; the last part being much the more valuable. In the first part, in which we miss any reference to the graceful, useful, and beautifully printed translation by our countryman, Dr. Mottelay, of Gilbert on the Magnet, which we reviewed some months ago, every scrap of information has been diligently collected; but our comments will show that the work has its blemishes. In the second half, this work comes into competition with Dr. Priestley's 'History and Present State of Electricity,' which, besides being a thorough and full account of the matter, is also a particularly well-arranged account, which can hardly be said of Mr. Benjamin's. Priestley's is also entirely free from the sensational tone of our *fin-de-siècle* style. But there is enough, both of fact and of well-executed general sketches of historical situations, in the volume before us to establish it as the leading work on the subject in any language.

In the period antecedent to the death of Bacon there is much baseless conjecture. Thus, Mr. Benjamin guesses that Gilbert lived in London in Linacre's house. But he could easily have ascertained that Dr. Gilbert lived in the lane called Peter's Hill, south of Little Knight-riding Street, while the Linacre house was No. 5 of Knight-riding Street proper, and, we believe, on the north side. While thorough scholarship was not an indispensable qualification for Mr. Benjamin's task, we could wish there were fewer indications of the lack of it. On the second page of the first chapter we read that Homer ('Iliad, Z. 513: T. 898') calls the sun *ἥλιος*. A proof-reader familiar with the looks of Greek words would have challenged that. Boesius is the name which Mr. Benjamin gives to the philosopher Boetius. We are familiar with Boethius and even Boecius, but do not remember Boesius. Under the reign of "Aelfred," Mr. Benjamin informs us that Scotus Erigena "began the assertion of the scholastic philosophy." There are three errors here. In the first place, Erigena (whom it is no longer permissible to confound with another Irishman at the court of the Mercian King) was not a subject of Alfred. In the second place, the scholastic philosophy did not consist in any assertion. It was the philosophy taught in the lecture-rooms (*scholæ*) of the mediæval universities. The only philosophical proposi-

tion concerning which the scholastic doctors were agreed was the practical infallibility of Aristotle. What marked their teaching was, first, its general form (it was usually either a commentary or a disputation, or both), and, second, the algebra-like formality of its statements. Scotus Erigena was not a scholastic; for, first, he lived over three centuries before the regular organization of the universities, and in a deeply dissimilar civilization (or want of civilization); second, he is not an Aristotelean; third, the 'De Divisione Naturæ' is neither a commentary nor a disputation; fourth, it is not marked by great formality of statement; fifth, it is in no sense a school-book. The university of Alexandria, according to Benjamin, was "begun by Alexander." We apprehend it will be necessary to take the will for the deed, to make that out. As ornaments of that university are mentioned Archimedes and Hipparchus. The former did study and the latter may have studied there; but Archimedes did the work of his life in Syracuse, and Hipparchus at Rhodes and elsewhere. He did not observe in Alexandria.

Mr. Benjamin's references are not seldom inaccurate. The following is a single specimen: "Vincenti Bellovacensis: Speculi Naturales, etc., tom. ii., lib. ix., c. 19." On one of the first pages there is a faulty reference to a passage in Pliny, which is all the worse because Pliny is not quite accurately reported. Even the scientific statements are often careless. Thus, we are told that the orientation of the Great Pyramid is in error by 19' 58", and that a surveyor "with the best modern compass" could hardly do better. Now, to begin with, the error of orientation is only about 1¼', which, being the *minimum visibile*, is as small as the probable error of the best possible naked-eye observation. No modern surveyor, when he wants to do nice work, dreams of employing a compass; and, for that reason, there has been no attempt to develop a compass of precision. But in all magnetical surveys the deviation of the needle is ascertained far more closely than the figure given.

But let us come to the substance of the work. The author has unfortunately a theory. If it were a very broad and instructive theory, especially if it were very solidly founded, this would be no misfortune. But it is neither broad nor solid. It is that the knowledge of the earliest form of mariner's compass came from the Baltic town of Wisby, that it came to Wisby from the Finns, and that it had been, perhaps, an ancient heritage of the great "Turanian" race. Apparently because that theory is sadly in need of support, the author accepts without the slightest reserve the theory of Mr. Terrien de Lacouperie of the Elamite origin of the earliest Chinese civilization. Singularly enough, however, when it comes to accounts of the Chinese possessing compasses before the Europeans, he becomes unexpectedly sceptical. The letter of Klaproth of 1835 is generally supposed to have proved the proposition that the Chinese, some time before A. D. 400, at latest—that is, many ages before the Europeans—knew that a needle could receive directive force from a lodestone. As for the Egyptians, Dr. Benjamin reaches the same conclusion that they knew nothing about magnets, though the process by which he reaches that result is open to some objection. As for knowledge of the magnet on the part of the Greeks and Romans, it is easily stated. Dr. Benjamin drags in irrelevant matter from Rossignol's essay on the mythology of Greek miners; but, for the matter in hand, the well-known passage in the 'Ion' of Plato gives all

the information there is. Namely, the Greeks knew that a lodestone would lift an iron ring, and that another, and so on; but they knew nothing of the polarity of the magnet.

It is next to impossible to prove the negative proposition, that the mariner's compass (in some crude form) was not known at a given date. Such is the stupidity of man that it would be known for a very long time before it came much into use. On an Arabian vessel we first hear of it, Mr. Benjamin assures us, in A. D. 1240. Since the needle was floated on water, and was magnetized then and there (only soft iron being at hand), it would be used only on cloudy nights when the sea was pretty calm. It might go a long time unrecorded in a book; and it might be recorded in numbers of books before it was recorded in one which Western scholars have read. To show how slow progress was in those days, the compass is mentioned (as Klaproth shows) as a familiar thing in the laws of Alfonso X. of Castile dated A. D. 1263; and yet the evidence seems to be (we are indebted to Mr. Benjamin for this) that Spanish galleys were never supplied with it before 1408. The rational conclusion seems to us to be that it was probably known in the Mediterranean before A. D. 1200; but, owing to the choppy sea, it was little used in these waters until it was balanced on a point.

We now turn to northern waters. The Norsemen used to follow the method of Noah, except that they sent out ravens instead of doves. The earliest description of the mariner's compass (in precisely the same form as that of the Arabians of A. D. 1240) which Mr. Benjamin finds is in Neckam's book 'De Natura Rerum,' written about 1180. He gives a flattering portrait of Neckam, and compares his book with the 'Origines' of St. Isidorus. But surely the two greatest merits of an encyclopedia are to be full and to be compressed. The work of St. Isidorus in twenty books has both those merits in an eminent degree. Considered as an encyclopedia, the work of Neckam is contemptible, being both small and garrulous. Within a few years after Neckam, notices of the compass in northern waters multiply. M. Paulin Paris gave in 1842 some verses by Guyot de Provins and some others by another poet. Dr. Benjamin has very prettily translated several of these; but the originals would have been quite worth giving, too. Within fifty years of the first passage in Neckam we know of near a dozen passages referring to the compass. The contrast between this state of things and the single Arabian passage may be attributed to the thorough overhauling of early European literature. The inference is, that the compass could have been very little known, if at all, in Normandy much before the earliest of these quickly succeeding notices. Therefore, although the balance of evidence inclines toward the supposition that the compass was known in the north before it was known in the Mediterranean, it inclines only slightly that way. As far as investigation has gone, there is no evidence whatever of the compass having been known in those early days in the Baltic. True, it is mentioned as of great importance in the laws of Wisby; but it is probable that that law was a late insertion. We should expect that the compass would in its early shape have been used in the Baltic, owing to the fog and the smooth sea; but positive evidence is altogether wanting.

Mr. Benjamin seems to regard the invention of the early mariner's compass as an exceedingly difficult one. If that be just, then decidedly the probable hypothesis about its production is that of Klaproth, that the Arabs

got it from the Chinese, and that from them the knowledge was carried through, or crept round, Europe to the north. But it may be doubted whether the invention is so difficult that it might not, without improbability, be supposed to have been independently invented in different places. Is it incredible that a man playing with two lodestones should find out their polarity, and then magnetization, and then the directive virtue of the needle?

The latter half of Mr. Benjamin's history, after taking leave of Gilbert, is, on the whole, much the more interesting. To be sure, no startling discovery was here possible. The succession of discoverers was Von Guericke (Hauksbee?), Gray, Du Fay, Watson, and Franklin. Mr. Benjamin modifies a little here and there our notions of what each did. It appears that that Sagredo who takes the leading part in Galileo's dialogues, not only was a living person, like the personages of Aretino's dialogues, but also probably discovered the secular change in the variation of the compass. He mounted a lodestone of five pounds so that it would support twenty pounds. It was in experimenting with that lodestone that Galileo found out the effect of the armature in causing the magnet to grow in strength. The Jesuit Nicolaus Cabeus is another old physicist whose achievements, as Mr. Benjamin states them, are of quite another order of importance from what we had supposed. To make our meaning clear, let us say that there are five departments of work in any branch of pure physics, like electricity; namely, (1), the phenomena have to be brought out and seen; (2), suitable instruments have to be invented for their study; (3), the process of experimental analysis, or cross-questioning of Nature, must be applied so as to produce statements of the laws of the phenomena; (4), measurements have to be made (though, of course, there was little of this in the pre-Franklinian ages); and (5), hypotheses, mechanical or other, must be constructed and experimentally verified to show the inward nature of the phenomena. What we have hitherto been told about Cabeus was that he extended the list of electrics; that is, he slightly increased the range of a known phenomenon. But it now appears that he observed that when little bodies are attracted to an electrified body and strike it, they are at once thrown off from it. Now this observation was the first step necessary in the experimental analysis of the phenomenon, ultimately leading to a knowledge of its laws. Nor was that all. For it seems that Cabeus was the first to plunge a lodestone into a mass of iron filings and notice the result; and, further, that he made an analogous experiment by plunging electrified amber into a quantity of sawdust. Here he took a step of the second kind, in our enumeration; for these things were instruments of observation of high importance.

In many places, Mr. Benjamin fills up the gaps of history in this way. Nor does he neglect the historian's more difficult tasks. He pictures the fad for experimentation that was caused by Charles II.'s interest in it. He shows that that interest was pretty deep, too, and that it had a most stimulating effect upon experimental science in England. In France, on the other hand, the hollowiness of Louis XIV.'s endeavor to interest himself in science, combined with the total absence of interest on the part of Louvois, are fully proved to have had a very unfortunate effect on French science. All such general sketches have been executed by Mr. Benjamin upon a basis of thorough study.

There are few contested points in the history of electricity from Gilbert to Franklin. One of these is whether Cuneus, a gentleman of Leyden, had any hand in the discovery of the Leyden jar. In the first printed account of it by the Abbé Nollet, in the 'Mémoires de l'Académie Royale des Sciences' for 1744, it is said that Cuneus had seen some of the experiments upon which the celebrated Muschenbroek of Leyden was then engaged, to ascertain whether the effects of electricity would not be increased by enclosing the electrified body in glass, and that Cuneus undertook to repeat one of them at his home. But instead of leaving the flask in which the conductor to be electrified was placed, on the table, he held it in his hand, and thus got a strong shock. It was afterwards said that Cuneus had nothing to do with it; that that was a story got up to detract from Muschenbroek's credit. But Dr. Priestley, writing his history only twenty years later, was in a condition to collect testimony. He says: "The views which led to this discovery in Holland were, as I have been informed, as follows." He states that Cuneus accidentally made the experiment in repeating an experiment by Muschenbroek; but he does not say, as the Abbé Nollet does, that to Cuneus belongs the credit. As Cuneus never made any reclamation, the inference is that he immediately communicated his experience to Muschenbroek, and that the analysis of the phenomenon was completed by the latter. Perhaps Cuneus did not of himself find out that the shock depended on his holding the bottle in his hand. Mr. Benjamin inclines to disbelieve entirely in any share in the discovery by Cuneus.

Mr. Benjamin is quite wrong in speaking, as in one place he does, as if the use of experimentation as an instrument of discovery was at variance with the Cartesian philosophy. We will also venture to doubt his confident assertion that Sir Kenelm Digby, in his 'Two Treatises, in the one of which the Nature of Bodies, in the other the Nature of Man's Soule is looked into in the way of Immortality,' plagiarizes extensively from the 'Principia' of Descartes. The latter work appeared from the press of L. Elzevir in Amsterdam on July 10, 1644. Descartes had set out from the Hoef in May for Paris; for the censure (we presume) would not in those days permit "author's corrections" of the proofs. He arrived in Paris at some time between September 27 and October 1, inclusive, and there first received copies of his book. Digby had been in Paris all along. There is evidence that his book (a folio of medium thickness) had been substantially written in the previous spring. The dedication is dated in August. The last imprimatur was affixed September 26. Now, there could hardly have been time for extensive plagiarisms (for every hypothesis, if plagiarized, is modified) between the date at which Digby could have seen the 'Principia' and the date of the imprimatur. Descartes remained in Paris ten or twelve days, during which, though much pressed for time, he had several prolonged interviews with Digby. He never made the least reclamation, though he hinted that Digby was a bold theorist, for he says to the Princess Elizabeth, "Pour ce qui est de l'état de l'âme après cette vie, j'en ay biens moins de connoissance que Monsieur d'Igby." Digby and Descartes never corresponded, and Descartes was a cautious man in the matter of communicating unpublished ideas, while Digby, on the other hand, was a talker. Finally, although no man ever more widely missed the style of Nature than Digby did in his physical hypotheses, yet those hypotheses have a strong-

ly marked style of their own. They have nothing of the flavor of eclecticism. Nor can we admit that any hypothesis of the 'Two Treatises' is so precisely accordant with that of the 'Principia' that it is necessary to attribute them to one author. Digby, by the way, is a better psychologist than physicist. He treats of the association of ideas, and even proposes a physical hypothesis to account for it.

We find it very difficult to let this interesting work go without saying anything more about it. An excellent present for a scientifically minded young person would be Motteley's translation of Gilbert on the Magnet (Wiley) and Benjamin's 'Intellectual Rise' (Appleton).

The Herschels and Modern Astronomy. By Agnes M. Clerke. [The Century Science Series.] Macmillan. 1895.

LITTLE could Dr. (afterwards Sir William) Watson, as he strolled through Walcot Turnpike, Bath, late in an evening about Christmas time, 1779, have thought that his stopping in the street to look through the telescope of a "moon-struck musician" was to lead the way to the immediate inception of one of the most remarkable careers in the history of astronomy. Such, however, was the fact. Frederick William Herschel, born at Hanover, November 15, 1738, into a family possessed of an irresistible instinct and aptitude for music, having landed as a lad at Dover with but a French crown-piece in his pocket, drifted through a series of ably filled engagements as a professional musician until, in 1776, he had become Director of the public concerts at Bath. But while all this time a musician in body, he was an astronomer in spirit, at no time losing sight of the vision of the skies; and it was in the latter capacity that he had the good fortune to attract an able and willing patron, whose friendship provided precisely that opportunity which was needed for full development of his powers. All the while that, in his official capacity, he had "to engage performers, to appease discontents, to supply casual failures, to write glees and catches expressly adapted to the voices of his executants, and frequently to come forward himself as a soloist on the hautboy or the harpsichord," he was absorbingly occupied with a self-imposed task of minutely reviewing all the heavenly bodies and every spot of the celestial vault. During the progress of this unprecedented task it was that the above incident happened; for young Herschel, then engaged in a series of observations on the lunar mountains, had brought his seven-foot reflector into the street in front of his house, and was gazing diligently when Dr. Watson chanced to pass by. Fortunately he did not rest with merely expressing great satisfaction at the view of the moon courteously afforded by the young German; he called the next morning to make his further acquaintance. Instantly this led to an introduction to a local philosophical society, then to the Royal Society of London, and in little more than two years to an audience with his Majesty George III. Thenceforward the great Herschel's life and work are the common knowledge of every astronomer—and it is a little singular that a century should have elapsed with no thoroughly competent history of that life and work, and no republication of Herschel's unsurpassed volume of technical papers, which have still to be sought in the original editions of the 'Philosophical Transactions.'

No less astonishing is it that his equally fa-

mous son, Sir John Herschel, now dead nearly a quarter of a century, has thus far experienced a like fate. Miss Clerke's 'The Herschels and Modern Astronomy' is almost the sole attempt to acquaint the lay reader with these great names. Sir William's sister, Caroline, has been more fortunate, and her accurate 'Journals and Recollections' form the chief authority for her brother's eminent life. Indeed, he often referred to her for the dates of events in his earlier years. Collateral information about him is meagre; but in the case of Sir John Herschel there is this important difference, that his long and intimate friendship with Sir William Rowan Hamilton led his conscientious biographer, the late Dean Graves, to make ample inclusions of Herschel's letters. Still, his life, as Miss Clerke modestly says, has yet to be written; and, as we are at liberty to judge from her excellent success with the little volume now before us, no one could tell the fascinating story of that life more entertainingly than Miss Clerke herself. Her evident sympathy with the breadth of his aims in physical investigation, her accurate knowledge of methods, and her singular felicity of expression all fit her worthily for this noble task.

But to return to Sir William. Miss Clerke has admirably told the authentic anecdote of the odd old German organ-builder, Schnetzler, who, exasperated at the staccato performance of Herschel's rival, became wild with delight when, on ascending to the loft, Herschel took from his pocket two leaden weights with which he held down an octave, all the while improvising a majestic counterpoint. "I vil luf dis man," cried Schnetzler, "because he gif my pipes time for to shpeak." And here is her crisp description of the very beginnings of Herschel's building of his own telescopes (page 15):

"In June, 1773, when fine folk had mostly deserted Bath for summer resorts, work was begun in earnest. The house was turned topsy-turvy; the two brothers attacked the novel enterprise with boyish glee. Alexander, a born mechanic, set up a huge lathe in one of the bed rooms; a cabinet-maker was installed in the drawing-room; Caroline, in spite of secret dismay at such unruly proceedings, lent a hand, and kept meals going; William directed, inspired, toiled, with the ardor of a man who had staked his life on the issue. Meanwhile, music could not be neglected. Practising and choir-training went on; novelties for the ensuing season were prepared, compositions written and parts copied. Then the winter brought the usual round of tuitions and performances, while all the time mirrors were being ground and polished, tried and rejected, without intermission. At last, after two hundred failures, a tolerable reflecting telescope was produced, about five inches in aperture; . . . but those two hundred failures made the Octagon Chapel organist an expert, unapproached and unapproachable, in the construction of specula."

It was with this new instrument that, in the following March, Herschel began his astronomical work by an observation of the great nebula in Orion, the record of which is still preserved by the Royal Society.

Herschel married at fifty Mary Baldwin, only daughter of a London merchant, and widow of Mr. John Pitt. Her jointure, we are told, relieved him from pecuniary care, and her sweetness of disposition secured his domestic happiness. Miss Burney records in her diary a tea at Mr. De Luc's, adding, of the newly married wife, "She was rich, too! And astronomers are as able as other men to discern that gold can glister as well as stars." Their only child was John Frederick William, born 1792, and his biography is here presented for the first

time by Miss Clerke with some approach to suitable fulness. The wider sympathies of the son make his life of greater general interest than his father's, and not a single phase of his beautiful character escapes that careful touch which marks the perfect biographer.

Astronomy, before the Herschels, had been mostly dry formulas and drier figures, and the irresistible momentum imparted to modern physical astronomy by the elder Herschel received a marked accession of impulse from the life and work of his brilliant son. Before their day, astronomers had mainly been content with inquiry as to precisely *where* the heavenly bodies had been and would be; anything beyond the crudest speculation as to *what* these orbs might themselves be, rarely occurred. Not only has the older astronomy not been neglected, but the new astronomy of the nineteenth century has made uninterrupted progress with every decade; and this broad movement, begun by the Herschels in England, was ably promoted by Arago in France, nor has America failed to lend a hand. Not only was a "knowledge of the construction of the heavens" the ultimate object of the elder Herschel's observations, but his conception of the sun, as ruler, fire, light, and life of our planetary system, was more than a half century in advance of his time, and no less prophetic. As early as 1801 he wrote: "The influence of this eminent body on the globe we inhabit is so great, and so widely diffused, that it becomes almost a duty to study the operations which are carried on upon the solar surface." In our day many great observatories are charged with almost the sole duty of that study. Neither to the younger Herschel was astronomy merely a matter of right ascension and declination; of poising, clamping, and reading off; of cataloguing and correcting—a mere "inventory of God's property," as Thoreau has aptly said. "It was his peculiar privilege," remarked Dean Stanley in his funeral sermon, "to combine with those more special studies such a width of view and such a power of expression as to make him an interpreter, a poet of science, even beyond his immediate sphere."

Unintentionally we have left little space for Miss Clerke's chapter on Caroline Herschel—probably the best of all the brief treatments of her life extant. Traits of modest simplicity and singular self-effacement were preëminently hers, and the story of her self denial for her brother's sake will never grow old. Miss Clerke's welcome book is one which no philosophic student of modern astronomy can pass over, and its importance as pure biography places it in the first rank among the lives of famous pioneers in science.

The Oxford Church Movement: Sketches and Recollections. By the late G. Wakeling. With an Introduction by Earl Nelson. London: Swan Sonnenschein & Co.; New York: Macmillan. 1895.

In the great variety of books that have grown up about the Oxford Movement there have been many degrees of interest. Mr. Wakeling's place is near the bottom of the scale. It comes very near to being a *lucus a non lucendo*, there is so little in it about the Oxford Movement, speaking carefully. Dean Church, in his admirable history of the Movement, dates its conclusion from the condemnation of Ward in 1845. Certainly its influence upon the church for good or ill went on for a long time after that, but, though nearly related to the Ritualistic Movement, it was quite a differ-

ent thing. To read Pusey's 'Life and Correspondence' is to learn that he did not know the alphabet of that language of ceremonial observance which has too frequently been called "Puseyism." The spirit of Newman and Keble and Pusey in the early days of the Movement had its best representative after 1845 in Dean Church, and his indifference to the Ritualistic Movement is a striking feature of his beautiful biography. But it is of the Ritualistic Movement that Mr. Wakeling writes almost exclusively.

One of his earliest recollections as a boy was of some mention of the Tractarians in 1840. It follows that he was still a boy when the Movement collapsed five years later, and consequently all we have here concerning the Tractarians proper must be a matter of reading or mere hearsay. This fact is much disguised, we trust not wilfully, by the manner in which the matter of the book is presented. Everything in the arrangement is helter-skelter, and we pass back and forth across the line which divides the writer's personal knowledge from his second-hand material without a hint of the transition. Matters which occurred before his birth are produced as if he had sketched them on the spot. There is very little, however, about the Tractarians that we have not had before in better shape. The real interest and value of the book, so far as it has any, lies in its exhibition of the development of Ritualism. Even here, so wide is the field from which the facts are grubbed, only a small part can go to justify the "Recollections" of the title-page, and the whole is like the primitive chaos, without form and void. Only occasionally does a date emerge for us to cling to in the wide inundation of incidents and names.

The names are generally so unfamiliar that they go far to justify the complaint which has been made of the lack of conspicuous personality in the Ritualistic Movement. The incidents are trivial only to the unritualized mind, and there is something very entertaining in the naïve enthusiasm with which, page after page, such things are set down as these: "The choir were not in surplices till Advent, 1846." "The altar was the only part that there was a hope of making decent, and this, with the aid of dorel and flowers at festivals, cross and candlesticks, was all that for some years was attempted." Many are the congratulations on the splendor of the later vestments, decorations, and observances, in comparison with the weak beginnings. Every change in this direction is recorded with the enthusiasm of one reporting moral victories. Here and there the triviality verges upon silliness, and, to make it more conspicuous, it is frequently injected into the body of a paragraph with which it has little or no connection, as if too good to lose. How incidents of such slight importance could have been remembered by anybody of good sound intelligence, it is difficult to conceive.

There is abundant evidence of improvement in the taste and decency of religious services. The parish clerk does not inform the rector nowadays between the prayers that the bear for the bear-baiting has arrived and that he is a fine animal. Daily service and weekly communion are the rule, and we should seek in vain for "the old country rector who, without the least conscious profanity, at the monthly celebration would consecrate nearly half a loaf, giving it at the end of the service to the poorer communicants who flocked to the altar rails." The heinousness of this, of course, depends somewhat upon the point of view. One habit, not distinctly moral, seemed rather to

increase than to diminish under the new dispensation. "Mr. Keble mentions a saying of Justice Coleridge, 'If you want to propagate your opinions you should lend your sermons; the clergy would then preach them and adopt your opinions,' and this has really been the effect of the Plain and other Sermons. It seems a pity that the price of the volumes was so high." "What a boon these sermons must have been to hard-working parish priests who certainly could not secure the leisure to write more than one good sermon a week!" This sermon-stealing sometimes led to painful situations, and a sickly gleam of humor plays for a moment across Mr. Wakeling's solemn page when he tells of a few sermons, printed with a memoir, which the subject of the memoir had not written. Mr. Wakeling has not exaggerated the triumph of ritualism in the English church. Ward was condemned and disgraced because, in his 'Ideal Church,' he insisted on the right of the Anglican to the free use of the entire Roman ritual and doctrine. That was just fifty years ago. Now there are hundreds of Anglicans making good his claim, with no one to molest or make them afraid. The Church of England has given the Church of Rome an effectual check in England by the encouragement of home manufactures as nearly as may be resembling those of the Eternal City.

The Life of John Livingston Nevius. By Helen S. Coan Nevius. Fleming H. Revell Co.

It sometimes happens that the best works accomplished by a man during his life are left out of his posthumous biography. We are not sure but that something like this has happened in the present instance. Dr. Nevius was for nearly forty years a missionary in China, and the story of his life as told by his wife is one of great moral and spiritual beauty. He entered Shan Tung, the holy land of the Chinese, the birthplace and tomb of Confucius, when the people handed back the tracts and books of the missionaries, saying, "We neither approve nor desire them." He died after having, with his colleagues, planted Christian churches throughout the peninsula. This biography pictures him as husband, friend, teacher, author, and preacher. Yet, unless the reviewer mistake the impression left on his own mind by the Chinese themselves and by non-clerical and non-professional English-speaking people in China, Dr. Nevius was equally powerful and influential in other ways. His practical common sense, his knowledge of manual expedients, his power and willingness to aid the Chinese in applying the arts and sciences of the West, his willingness to meet them on their own ground and to respect their traditions and their sensibilities, were not least among the secrets of his power. These made him everybody's friend, and kept his influence ever potent. Without belittling "the power of the Gospel" or the ordinary means used to spread it, it is none the less true that the quality of manhood in the messenger is, at first, even more potent than the message. Among the hundreds sent out as missionaries to China there is still much room where Dr. Nevius dwelt when on earth—at the top.

John Nevius was born in the beautiful region of the "finger lakes" in central New York, spending his boyhood between those named Seneca and Cayuga. The name Nevius, from the French Neve but Latinized, proves, along with well-supported traditional and documentary evidence, that the ancestral stock was Huguenot and Netherlandish. His

first venture in early manhood, after graduation from Union College, was as a school-teacher in Georgia. After a year of pedagogy he decided to enter the ministry, and went to study in Princeton Seminary. He married Miss Helen S. Coan (who survives him as biographer), and, after a six months' voyage, reached Ningpo in 1854, where Dr. D. Beathune McCartee had come as pioneer. In Ningpo, as a well-equipped speaker and writer of Chinese, he was finely prepared for his main life work in the province of Confucius. He died at his post and in his own home, in presence of his wife and among his books, after only a few hours of illness. His grave is at Chefoo. He visited Korea once and Japan several times. One is not surprised to have Mrs. Nevius write:

"As to the people of Japan, the opinion we formed of them so long ago [1860] has never changed. There is a certain shrewdness and vivacity and readiness to learn of others, in which they undoubtedly are superior to the Chinese; but in most respects I think the inhabitants of the 'Middle Kingdom' are fully their equals."

Rather above the average of missionary biography in piquancy of style, liveliness of narrative, and quality of details, this literary picture of an American gentleman who so grandly combined the ideal and the practical, deserves the study of young men as it will command the delighted attention of Dr. Nevius's old friends. There are illustrations, a map, and a good portrait, but no index.

Side Talks with Girls. By Ruth Ashmore. Charles Scribner's Sons.

MISS ASHMORE speaks to girls with the wisdom of experience. This is just the sort of wisdom which, unless displayed with much discretion, girls are little disposed to profit by. The book is very discreet, the author putting herself easily on terms of equality with her audience, imparting advice tactfully, and, in every way, doing her best not to excite that rebellious spirit which prompts the daughters of each generation to think themselves wiser than their mothers. The most valuable chapters (for they discuss matters beyond the experience of many mothers) are those addressed to girls who leave comfortable homes in order to seek fortune in large cities. The descriptions of the life of the average actress, artist, and shop-girl are unexaggerated statement of fact. Any error is in understatement of the hardship and discouragement which the homeless working-girl must face, and of the demoralization which frequently ensues. For the girl whom actual necessity drives to scramble for a living as best she may, there are useful hints and suggestions of employment not leading to glory or fortune, but fairly remunerative and quite compatible with preservation of bodily health and personal decency.

In her comments the author emphasizes the joy of being a good girl at home, rather ignoring the sometimes besetting temptations to be a bad one. Fathers, mothers, and occasionally brothers, are not always compact of good temper, justice, and love; if they were, Miss Ashmore's talks would be largely superfluous, and the "Advanced Woman" whom she scourges might possibly never have come into existence.

BOOKS OF THE WEEK.

Almanach de Gotha, 1896. Gotha: Justus Perthes.
New York: Westermann.
Chambers, R. W. The Red Republic: A Romance of the Commune. Putnam. \$1.25.

The Nation.

NEW YORK, THURSDAY, JANUARY 9, 1896.

The Week.

ONE effect of the Venezuelan business has been to open the way for a short session of Congress. Before the end of the first month the House had passed both a revenue bill and a bond bill, each of which measures, in the natural course of things, would have taken some weeks. The Senate, of course, may use up a great deal of time over the two bills, but at any rate the upper branch has them in hand months before anybody expected it would when Congress met. The House can now devote itself to the appropriation bills, and should easily be able to dispose of all the routine business before the end of spring. It seems to be taken for granted that no other tariff bill will be brought forward in the House, even if the one recently passed should go through the Senate and be vetoed by the President. This alone would mean a great saving of time, and Speaker Reed can be trusted to do all in his power to get Congress off his hands before the Republican national convention meets. He understands that he could not do a more popular thing than to secure adjournment before the opening of summer. But he cannot "run" the Senate, and the old rules, under which time can be wasted by wholesale, still govern the upper branch.

The House bond bill for the relief of the Treasury was a very inadequate measure. It was not at all adapted to the situation, since it provided only for the issue of bonds at a lower rate of interest than could be sold under present conditions—that is, with a threat of war hanging over the country—and provided that these should be sold only by what is termed a "popular loan"—a method that has no existence in this country. Worse than this, the House bill provided that no future bond sales, under any law or laws, should be made except on the "popular" plan. This bad bill was not nearly bad enough for the Senate. Yet the imagination of man could hardly have conceived the kind of substitute that body is about to offer, namely, the free coinage of silver. To call this a substitute for a bond bill is clownish in the extreme. It would be dangerous but for the fact that it will not be accepted by the House and cannot possibly become a law. The majority there, though not composed of sound financiers, is at least anti-silver. Whatever happens in the Senate, and whether the Speaker interferes or not, the chances are all against a free-coinage bill going to the President by a vote of the House. To that extent the public mind may feel more composed now than six years ago.

It was undoubtedly an apprehension in the President's mind that the Elkins resolution would pass Congress that led to a change in the plan of the new \$100,000,000 gold loan. That resolution provides that no bonds of the United States shall be sold by private contract, but that all shall be advertised and sold to the highest bidder. A Senate resolution does not possess the force of law, yet if it should alarm capitalists and break up the bond syndicate, it would have all the effect of a law. Undoubtedly it would drive all foreign participants out of the field and scare away all but the most intrepid of our financiers. Hence the change of plan announced in Mr. Carlisle's circular is forced upon the Administration. They could not take a step which might be interrupted at any time by a joint resolution of Congress. The new gold loan has now been advertised, and we shall see the result. If the public come forward and take the bonds and furnish the gold without first withdrawing it from the Treasury, so much the better. But how will the public get the gold to pay for them? There is no law to prevent subscribers for the new bonds from drawing the gold to pay for them out of the Treasury itself. The syndicate could prevent that operation by agreement among themselves: it was only necessary to send notice to all concerned that no subscriptions would be received which were to be paid with gold drawn from the Treasury. "The public" cannot be controlled.

Senator Sherman, by his speech on Friday, added as much confusion to the national finances as it was possible for one man to do. Most of his old misrepresentations were repeated. These it is not necessary to notice again. He has furnished some new ones, however, that possess a curious kind of interest. For example, he chides the Administration for not withholding all appropriations not made mandatory by Congress. "All appropriations which are not provided to carry into effect existing laws," he says, "are permissive, but not mandatory." Mr. Sherman holds that if the Secretary of the Treasury had refused to pay any appropriations that were not mandatory in form, "there would have been no difficulty about the gold reserve." This will be an invaluable guide for future Secretaries, until Congress impeaches one of them for following it. Mr. Sherman's next discovery is that although there is an actual surplus in the Treasury of \$178,000,000, the deficiency of revenue is the cause of the decline of the gold reserve, and that all that is needed to bring it up to its normal figure is to increase the revenues by a tariff on wool and some other things. It is humiliating, he says, to read that the Government is negotiating for money with

associated bankers, and that gold has been offered to it by a friendly power (which is officially denied), as though it were tottering on the verge of bankruptcy. To avoid this humiliation it is only necessary to increase the taxes, and meanwhile to borrow what you need from the people of the United States; Mr. Morgan and the associated bankers being, in Mr. Sherman's view, foreigners.

There are indeed many humiliating things nowadays. Among them must be counted a speech from an ex-Secretary of the Treasury abounding in such nonsense as this. But we have not come to the end of it, or anywhere near it; for Mr. Sherman makes a new suggestion for protecting the Treasury gold, and that is to require the national banks to keep their reserves in legal-tender notes exclusively. In other words, they should not be allowed to count their gold as a part of their legal reserve. These banks, he says, are the creation and instruments of the Government, and they should not be allowed to discredit the greenbacks by showing a preference for gold. Nor should the Government itself pay out gold for current expenses, because that tends to weaken the confidence of the people in the greenbacks. Immediate action should be taken by Congress to prevent this, he exclaims. A bill to embody these ideas would provide that no national bank shall be allowed to hold gold or to draw gold from the Treasury, and that the Treasury shall not be allowed to pay gold to anybody but exporters. A more efficient and intelligible measure, we submit, would be an act to fix the gold reserve at \$100,000,000, and then prohibit all public officers from paying any out, and all private persons from drawing or attempting to draw any, under pain of instant death. In this way the reserve would be kept intact. Mr. Sherman is reported to have said lately that the root of the political and financial trouble is in those eight far Western States whose entire population and wealth does not equal that of New York, because in the Senate they cast sixteen votes to New York's two. What a vast improvement would follow if these sixteen Senators were all like Mr. Sherman!

Nobody at Washington expects the wool tax to become law, and the general opinion of the trade seems to be that it will fail either in the Senate or in the White House. To get it through the Senate unamended is sure to be a hard job, if for no other reason, on account of the desire of so many Senators to make friends of the mammon of protection in their own States by at least offering amendments and discoursing loudly upon the needs of their constituents. The most serious

difficulty of all is reported by the Washington correspondent of the *Dry Goods Economist*. He says that Senator Burrows is fully persuaded that the bill as it passed the House is absolutely unworkable, as it leaves rates conflicting in various schedules. So firmly convinced is he "that it would be impossible to administer the Dingley bill" that he says its form must surely be changed, even if its aim and substance are left untouched. As all depends, in tariff bills, upon their being susceptible of "administering," Senator Burrows's objection is certainly fatal. But it does show what a genius and superior capacity for legislation the Republicans possess, as they themselves admit.

Naval authorities—especially naval contractors and naval Congressmen—agree that more ships are likely to be voted by this Congress than have been authorized in some years. The Venezuelan war is good for large appropriations, they think, if for nothing else. The Chilean war scare was thought to have frightened two extra ships out of a reluctant Congress, and the Venezuelan business ought to mean at least half-a-dozen. Very likely it may. But it must be remembered that building a modern navy is one of the slowest jobs known to man. It is considered little short of a marvel that the two latest battleships to be added to the British fleet were turned out in two years' time. This means a vast change since the day when Pitt could demand the creation of a fleet in three months' time, and threaten to impeach the First Lord of the Admiralty if he did not produce it on the day fixed. But the two years necessary to build a new ship is often enough to antique two already in commission, and thus leave the fleet where it was before. Often, in fact, as in the case of our own *Texas*, just through with her trial trip, it is found that a ship is no sooner off the ways than her turrets "work badly," it takes her two hours to discharge a gun, her bottom is "shaky," and she must at once go out of commission for "extensive repairs."

The further one goes west from the Atlantic seaboard, the greater is the readiness for war with England over the Venezuelan boundary. An excellent authority in Indiana informs us that public sentiment in that State is substantially unanimous in support of President Cleveland's position. Still further towards the Pacific the feeling appears to be even stronger in favor of a fight. The Portland *Oregonian*, which recently pointed out that any backwardness in supporting extreme measures on the Atlantic Coast should count for nothing because this section was equally unpatriotic in the last war with England, gives prominence to a letter from "American," who argues at length that a war with England would be a good thing and would benefit the United

States. As an index to a good deal of public feeling, this letter is worth summarizing. The correspondent urges that such a war "would unite all Americans and do away with all party feeling," and "would unite all South and North America, and make of them one of the greatest nations on the earth"; that the American people want a war, because "they all know that the wealth of the world has got into the hands of a few and that there is no relief for the masses," because "business is at a standstill and will remain so until something happens," and because "war is our only salvation," since "we are at the mercy of England as far as our finances go, and that is our only way out"; and, finally, because

"War would be a good thing in many ways. It would set every idle man to work, either in the army or helping to supply the army. It would give men a chance to become famous who are unknown to-day. Too much peace brings strikes, idleness, and all kinds of crimes. Give the American people a chance, and they will drive the British flag into the sea, capture Canada and all England's possessions, and make America the greatest nation on earth. Then for another generation business will boom and confidence will be restored."

There could be no surer indication of the scatter-brained condition of the Jingo as regards the Venezuelan controversy than the vast amount of comfort they extract out of the London *Chronicle's* Washington despatches. That paper's correspondent is engaged in reading the published documents, apparently for the first time, and his discoveries are so novel and startling to himself that he at once cables them as momentous to the civilized world. Then they are cabled back as evidence that England is at last "getting at the facts." Mr. Norman has now pushed his studies up to the time of the removal of the posts set up by Schomburgk, and wags his head gravely at finding no evidence for Salisbury's assertion that, when the posts were removed, "the concession was made on the distinct understanding that Great Britain did not thereby in any way abandon her claim." This may comfort the Jingo and fool the *Chronicle*, but it will not deceive the Venezuelans. They know that what Salisbury said is strictly true, for in their own statement of their case they summarize the letter of Lord Aberdeen, dated March 30, 1844, as follows:

"He says, in the first place, that the Government of her Majesty, in consenting to the removal of the marks, did not cede any of the rights which it might consider itself authorized to claim in the future, and that it had been moved solely by friendly deference to the requests of the Government of Venezuela."

Moreover, in Senate Document No. 226, dated July 26, 1888, containing "the correspondence relating to the pending dispute between the Government of Venezuela and the Government of Great Britain concerning the boundaries between British Guiana and Venezuela" (this correspondence begins in 1876 and runs on to 1888), there are no fewer than twenty-two references to the matter.

The *Evening Post* of Thursday printed two despatches which appeared in the San Francisco *Chronicle* of April last, and which throw a flood of light on the use which Venezuela expects to make of the territory over which she is disputing with Great Britain. It explains, too, in part, the prodigious Jingo racket about Venezuela which began early last year, and to which we unceasingly called the attention of the American public, as well as the "hollering" for a more "vigorous foreign policy" which the *Tribune's* old pensioner in Washington emitted three or four times a week. The speculators, as we see, expected a more vigorous foreign policy about this time. We have reason to believe that some of them, including United States Senators who are to sit on these questions of peace or war, waited on Secretary Gresham, not long before his death, to urge this policy on him; but, being a clear-headed man of peace, he not only declined their proposals, but took the liberty of pointing out to them the impropriety of their having anything to do with an affair which was likely to become a matter of international controversy. We are far from insinuating that they ever made any similar application to Mr. Olney, but he certainly did just what they wanted. The Jingo poison prepares a man's system for the speculative bacillus. It weakens his sense of propriety. It clouds his understanding and destroys his foresight, as we see in the havoc which Mr. Cleveland played with his own financial plans. In short, it often makes Americans fifty years old as thoughtless and rash and unreflecting as lads of twelve. Mr. Cleveland's discovery that patriotism could not be made to take the place of a sound currency shows the awful effects, even on strong characters, of this painful malady.

Even stranger "developments" of the Monroe Doctrine than those with which Mr. Olney has astonished us may yet be brought out. As far back as 1826 and the Panama Congress, the Southern Senators were invoking the Doctrine as a bulwark for slavery. Senator Berrien of Georgia said that it was all very well to brave the wrath of European Powers, but that "we must hold a language equally decisive to the South American states. We cannot allow their principle of universal emancipation to be called into activity in a situation where its contagion, 'from our neighborhood, would be dangerous to our quiet and safety'." . . . Will he [the President] quail before the new republics of the south when a dearer interest is at stake? This shows how easy it is to get queer things out of the Monroe Doctrine when you let your logical faculty run riot without regard to the facts. We may yet see the Doctrine called into play to prevent the incursions of the gold standard in South America, or to demand the abandonment of the Catholic religion, the adoption of an eight-hours'

day and the English language, the buying of our newspapers in enormous editions, and the acceptance of many other of our peculiar institutions. When you begin to argue about what other people are bound to do in the interests of your peace and safety, you never know where you may fetch up.

An analysis of the occupations of members of the new Congress shows that more than one-half of the Senators and Representatives are lawyers. This does not vary materially from the usual proportion. A great preponderance of lawyers is also the rule in the State legislatures, except in the purely agricultural commonwealths. In other words, our legislation is largely, as it always has been, in the hands of lawyers. The character of the legal profession is therefore a matter of vital importance as regards the character of our law-making bodies. Is the standard among lawyers rising or falling? Is the tone of the profession higher or lower now than it used to be? Chief-Justice Field of the Massachusetts Supreme Court made some remarks before the alumni of the Boston Institute of Technology, the other day, which answered these questions, and answered them in a discouraging way. Among other things he said:

"When I look upon this audience and think of the great progress which has been made in the sciences and arts in this generation, I cannot but feel some shame to confess that no similar triumph or progress has been made in the profession to which I belong. The cause of legal education has been advanced; the mode of the profession in Massachusetts has been improved; but the leaders in the profession of the present generation, I should hesitate to say, were much in advance of the leaders of the last generation or of the generation before that. I doubt whether there has been much advance in civil government in Massachusetts in the last generation or two. I shall not inquire into the causes. I doubt very much if the men in public life to-day are wiser than our fathers or grandfathers."

The "doubt" and "hesitation" here expressed seem plainly to be only a courteous method of expressing a conviction that neither the legal profession nor the standard of public life in New England now is as high as it was a generation or two ago. Considering the inbred repugnance of every lawyer to making an admission which reflects upon his brethren, the opinions expressed by the Massachusetts Chief Justice seem very significant.

Utah is now a State in the Union. The State officers were installed on Monday, and the Legislature met, its most important duty being the choice of two United States Senators. The Republicans control the body by a vote of more than two to one, but, so far as the financial issue is concerned, the partisan complexion of the Legislature is a matter of no consequence. The two Republican Senators will be "red hot" for free coinage; and if the men chosen were Democrats, they would be of the same mind on this question. The sound-money cause will thus be put at a fur-

ther disadvantage in the Senate, where its representatives are already in a minority. The next thing to be expected is a strong movement for the admission of Arizona, New Mexico, and Oklahoma, and the consequent strengthening of the free-coinage element in the upper branch by six more votes.

The newly elected Legislature of Massachusetts has begun the new year brilliantly. A caucus of Republican members was held, in which all the other officers of the last General Court were renominated by acclamation except the Clerk, Mr. Edward McLaughlin, who has served fifteen years—longer than any of his predecessors, and to the entire satisfaction of everybody. He was defeated for renomination by some ten votes, in favor of an unknown and inexperienced person. The operation was understood to be conducted by A. P. A. influence, Mr. McLaughlin being a Democrat and a Catholic. Some of the most distinguished Republicans protested in the caucus, but others declared that the whole country had its eyes fixed on the Massachusetts Legislature, to see if the Republicans would stand true. One member declared he needed time to rub his eyes, as it seemed that he was not in a Republican caucus, but one controlled by Democrats or Mugwumps; and another characterized those who proposed to keep Mr. McLaughlin in office by the elegant name of "snivel-service reformers." The attempt barely succeeded in the House itself, the raw recruit having only 122 votes out of 232. Mr. McLaughlin himself pointed out that, if the dominant party were bound to make a change, they might have promoted the Assistant Clerk, who was of the right party. But no; the same influence that trampled on all law and decency in the veterans' preference bill of last year, prevailed to violate precedent, reason, sense, and good feeling to turn out a fit man from a place with which politics, race, and religion have nothing on earth to do, and put in an untried man of the right sort. When Massachusetts is determined to disgrace herself, she certainly knows how.

Mr. Olney informed Lord Salisbury that it would be "preposterous" for any American state to involve itself in a contest over "the fate of Turkey." Nothing can be more certain, however, than that his threatening letter and the President's talk of war have involved us most closely with the Turkish question. We may not have meant to have anything to do with the fate of Turkey, but we have, the best European authorities agree, sealed the fate of the Armenians. Their rescue and salvation depended upon a perfect concert among the Powers and an unyielding and threatening front all along the line, especially on the part of England. These things we have done our best to destroy, and have, in a measure, already destroyed. The Sultan's desperate play against time,

his waiting for some European nation to blunder, would all have been in vain had not the blunder come from the great Christian nation of the West. Just after protesting and appealing in the name of humanity, just after holding great public meetings and organizing associations in behalf of the smitten Armenians, we struck at their stoutest protector and strongest hope, and left them, so far as in us lay, helpless. Mr. Cleveland's war message could nowhere have been greeted with such rapture as when, done into choice Turkish, it was read in the Yildiz Palace. We are glad to see that a sense of the enormous mischief thus wrought is beginning to get into the American mind. The Baptist preachers of this city have resolved that, if we must have a war, we should cut a much better figure fighting to save the Armenians than to kill Englishmen. Of all the hollow petitions ever laid before Congress, those praying for prompt interposition in behalf of the Armenians are the hollowest. The American Congress has already acted on the Armenian question, and its unanimous vote has been that the Turkish butcheries may go on.

The Cuban insurgents are evidently doing some pretty effective raiding, and the Spanish troops are active, but neither side is waging war with anything like the fury of the newspaper correspondents. How much their rivalry (which is often little more than a rivalry in lying) tends to befog all foreign news, especially any news connected with war or rumors of war, the general public is but dimly aware. Some three weeks ago one of the associations had Havana all but captured, and on Saturday its fall was only a question of days. But on Monday that news agency withdrew for a time from the war, admitting that there was no likelihood of the insurgents making a serious attack upon Havana. This left its competitor a clear field, and accordingly it, in its turn, was undertaking on Tuesday to capture Havana out of hand. Now it may be that the Spanish generals have gone utterly daft, or that their men won't fight, or that the insurgents have invented a new art of war. But if not, the chances that Havana will be taken, in the present stage of the conflict, are too small to be worthy of consideration. Admitting the highest claims of the insurgents, the Spanish troops outnumber them three or five to one. The one great aim of the Spanish generals has been to protect commerce, to hold the cities, especially the seaports, meanwhile praying heaven that the elusive insurgents might be caught where they would have to deliver battle. To guess, therefore, from what is probably only a daring raid of flying guerillas near Havana, that a regular and successful assault is to be made upon that city, only betrays the nervous strain to which the news-gatherers are subjected in their determination to let no "scoop" escape.

THE VENEZUELAN COMMISSION.

JUDGE BREWER of the Supreme Court is a man of solid reputation for learning and impartiality. It is believed by those who know him that Judge Alvey possesses similar qualifications. President Gilman of Johns Hopkins University and ex-President White of Cornell are too well known to need description. Mr. Coudert was one of the American counsel in the Bering Sea arbitration, and is understood to be a supporter of the President's contentions in the Venezuela dispute. Looking at the character of the commission as a whole, it seems to portend peace.

These commissioners are to "investigate and report upon the true divisional line between the republic of Venezuela and British Guiana." They are not to be envied. The task set for them is not to consider the actual condition of affairs, past and present, and suggest a fair and reasonable boundary, with a view to reconciling the conflicting interests of the British colonists and the Venezuelans. They are to find the "true divisional line." They might as well search for the true boundaries of Lilliput; for there never has been such a line. If they could go as mediators, for the purpose of bringing both sides to agree on a compromise, their going would at least have a humane and rational motive. Unfortunately, our Government, by its mismanagement of the whole matter, has condemned them to go with an attitude of threatening and hostility towards one of the parties, and has limited their function to a very narrow scope.

As regards the basin of the Essequibo and its tributaries, an impartial commission would probably have no hesitation in pronouncing the English claim well founded. The old and generally accepted rule that, in the occupation of new regions, possession of a river at its lower course carries with it the sovereignty of its upper waters and tributaries, gives a clear principle for the decision of the Cuyuni question. So conscious are the Venezuelans of the weakness of their case at this point, that they have felt themselves compelled to maintain the obviously untenable contention that the Dutch did not really hold the Essequibo—that they only held "up to it." Now nothing can be clearer than that the Dutch held both sides of the river. No reasonable man can read even the Venezuelan case without seeing that very clearly. As to the title to the wilderness of the Essequibo basin, then, there can hardly be much difficulty. A boundary based on this principle would undoubtedly be awkward for Venezuela; but that our commissioners are not to consider.

Unfortunately, the possession of the upper basin of the Essequibo is not the burning part of the controversy. The real difficulty arises as to the line of division on the coast. The Venezuelans adduce a variety of treaties and records, with a labored and declamatory effort to

show that they prove something in their favor; but the result falls lamentably short of a demonstration that the Venezuela claim is good. Their argument rests on an assumption for which they can hardly expect much favor in the United States—the assumption that the whole continent of South America belonged to the Spaniards, and that no other people could acquire a legitimate title to any part of it except by cession from Spain. By a constant use of this assumption, they ask us to hold that Venezuela, as the heir of Spain, has a just title to everything in the region of the Essequibo and the Orinoco which Spain cannot be shown to have ceded to the Dutch. Strike out this fundamental assumption, and their whole case is gone. If the contestants stand on equal terms, if we adopt the just principle that proof of occupation is as necessary for Venezuela as it is for British Guiana, in order to make good a claim, then we are forced to the conclusion that Venezuela's contention is as empty as it well could be.

Evidence of occupation by Spain of any post or place between the Orinoco and the Essequibo is wholly lacking in their voluminous case. Such evidence of occupation as this supplies goes in favor of the Dutch. Their papers make it clear that the Dutch had a fort on the Pomeroon, a small river of the disputed coast, and that they used the interior passages between that point and the Orinoco. Further, it is pretty clear, even from the Venezuelan evidence, that the Dutch had a hold of some sort on the mouth of the Orinoco. The Venezuelans endeavor to meet these facts by asserting that whatever the Dutch held between the Essequibo and the Orinoco was "usurped"; that their occupation therefore gave no title in the absence of cession by the original owners, the Spanish. Fancy the smile of an old Dutch skipper at the suggestion that the Dutch must humbly ask leave of Spain before occupying wild lands in America. If the English and the Dutch had proceeded on that principle, America would have been a very different country to-day.

The two treaties on which the Venezuelans rest so much have simply nothing to help our commissioners in fixing the "true divisional line," because neither of them says anything about a line. The treaty of Munster of 1648 was primarily a very tardy acknowledgment by Spain that her rebellious Dutch subjects had made themselves an independent nation. It further provided that both parties should keep whatever territories they possessed in America at the date of the treaty. But it makes no mention of the limits between their possessions, has not a word about boundaries. It pledges Holland not to take any more land from Spain, but it leaves Holland free to acquire any lands not occupied by Spain. To say that it binds Holland not to extend over the wild lands between the Essequibo and the Orinoco is to beg the whole question, for it is to assume that

Spain was occupying that territory, and for such occupation not a tittle of evidence has been produced.

The other treaty on which Venezuelans place chief reliance, the one which they say has "insuperable probatory force" in their favor, is that of Aranjuez, made between Spain and Holland in 1791. This was simply an extradition treaty in which mutual return of fugitives is agreed on, between the Spanish settlements on the Orinoco and the Dutch settlement on the Essequibo. But it tells us nothing as to boundary between these settlements. The Venezuelans profess to see in it insuperable proof that the Essequibo was the boundary; and in this their patron, Senator Lodge, seems disposed to follow them. But the treaty is quite as favorable to the conclusion that the Orinoco was the boundary. A case that needs such inferences for its support must be in desperate need of materials.

One important piece of evidence as to actual boundary seems to have escaped both the Venezuelans, who offer it, and Senator Lodge, who avows his impartial study of the whole matter. It is found at page 26 of the Venezuelan case, as published in volume ii., Senate documents for 1888. We will add that it is the only clear bit of evidence as to the old boundary that is to be found in the whole mass of papers submitted. The document in which it occurs is a Spanish royal order of the year 1780, "in which were established rules to people the province of Guiana and to occupy lands." Here is the opening sentence of the Venezuelan account of this royal order:

"It is there declared, in the first place, that it was of the most importance to secure the limits of the said province, which commenced at the windward of the fall of the river Orinoco into the sea, on the border of the Dutch colony of Essequibo."

This, we repeat, is the only clear bit of evidence as to the old boundary between Dutch and Spanish that can be found in the whole collection of papers. It is therefore somewhat precious, both as to its date and the source from which it comes. It leaves no doubt that in 1780 the Spanish Government admitted the extension of the Dutch possessions to the mouth of the Orinoco. We commend the extract to Mr. Lodge's attention.

There is one trick of the Venezuelan spokesmen in which Mr. Olney and Mr. Lodge diligently copy them. This is the device of representing every offer of compromise made by England at any time as her "extreme claim." We are not at all concerned to justify England, but we think she is entitled to have her case truthfully represented. We owe it to ourselves, if not to her, to state the case as it actually stands and has stood. England's claim, as a claim, has always been just what it is now. Her claim as of right has always been that she was entitled to the basin of the Essequibo and to the coast as far as the Orinoco. Lord Aberdeen appears to have stated it so to For-

tique in 1844. It is true that, in his effort to make a peaceful settlement with Venezuela, he offered concessions in order to fix a boundary of mutual convenience. His offer was open to Venezuela for six years, and, not having been accepted, was withdrawn in 1850. At the time of making it, notice was given that it implied no abandonment of the larger claim of right. The same was true of every later offer of a compromise line. To represent these offers as identical with the whole claim, and to say that "the claim" has been enlarged, or "developed" from stage to stage, is only the trick of the pettifogger. Mr. Olney ought to have left it to the Venezuelans.

DE DOCTRINÁ AND DE FACTO.

We have no doubt many a simple-minded Jingo will be surprised to hear that in the negotiations for the only application of the Monroe Doctrine to Spanish-American affairs which we have ever made—the expulsion of the French from Mexico—there was no mention of the Monroe Doctrine at all. Neither Mr. Seward, who was in the State Department, nor Mr. John Bigelow, who conducted the correspondence in Paris, said a word about the Doctrine. They approached the situation from the *de-facto* side solely. A foreign army was imposing on the Mexican people a foreign ruler and a new form of government by force. Mr. Seward said he did not undertake to dictate to the Mexican people what kind of government they should have. They might have Maximilian if they pleased, but they must be free to choose, and therefore the French troops should be withdrawn. In this Mr. Seward was adhering strictly to the ground taken by Calhoun in 1848 in the Senate, when, contesting the very use now made of the Monroe Doctrine, he said:

"It goes infinitely and dangerously beyond Mr. Monroe's declaration. It puts it in the power of other countries on this continent to make us a party to all their wars; and hence I say, if this broad interpretation be given to these declarations, we shall for ever be involved in war. But no general rule can be laid down to guide us in such a question. Every case must speak for itself. Every case must be decided on its own merits. Whether you will resist or not, and the measure of your resistance—whether it shall be by negotiation, remonstrance, or some intermediate measure, or by a resort to arms—all this must be determined and decided on the merits of the question itself. This is the only wise course. We are not to have quoted on us on every occasion general declarations to which any and every meaning may be attached."

This is exactly what is now happening. Everybody who has the handling of the Doctrine is "developing" it to suit himself.

Now there is nothing more dangerous, not to say disastrous, for any nation than attempting to live *de doctrinâ* instead of *de facto*. Doctrinal government has all the inconveniences of theocratic government, because doctrines do not change with circumstances or make allowance for human necessities. The Government of

Turkey is a doctrinal government, that is, is ruled by a "sacred law," which makes all reforms in the state impossible and has led to the ruin of the Ottoman Empire. Doctrinal government, too, was tried by the Puritans in England and here, and perforce abandoned as unsuitable to modern societies. Its leading characteristic is an *a-priori* rule of conduct which leaves no room for the play of convenience or policy, or considerations of time or place, and takes no note of facts. The Monroe Doctrine, for instance, assumes that now, as in 1823, the Spanish-American states are in imminent danger of conquest at the hands of European Powers. The changes of seventy years both here and abroad make no more impression upon it than on the Koran. When the President hears of a dispute between a European Power and a Spanish-American state, it compels him to assume sinister designs on the part of the former, and make his preparations for war accordingly in advance of any inquiry as to facts. Under *de-facto* government, the first thing he would do would be to ascertain the facts and be guided by the result in his subsequent action. Under the Doctrine, Great Britain is a *glaour*, whose designs are always, under the sacred law, open to suspicion, and he pronounces her guilty before investigation. The Doctrine in like manner produced Secretary Olney's despatch, which was really a sermon, not treating of actual facts—in truth, full of statements which were not facts at all, but developments of a sort of divine law, such as one hears in the pulpit, and which, while full of edification, is totally unsuited to the needs and risks of actual life.

If any one thinks we are overstating, in this description of the position which the Monroe Doctrine has come to occupy in the mental furniture of the average Jingo, we advise him to read the articles in the country papers, and the occasional speeches of politicians, and the resolutions of Jingo clubs called out by the present crisis. He will find the Monroe Doctrine treated very much like the Ten Commandments, as part of the foundation of national life, behind which no one can go in tracing out our foreign policy. Not one in one hundred knows what it is, or what it means, or how or where it should be applied. But all agree that it imposes on all rulers an attitude of hostility to foreign Powers and calls for what is termed "a vigorous foreign policy." Asking a Jingo whether the Monroe Doctrine was a good thing to live under, and whether it would not be better to live under the facts of each year, would be very like asking the Sheikh-ul-Islam whether the English common law would not be a good substitute for the Koran. It marks you as a "bad American," a paid emissary of some foreign Power. And yet, seeing the use that has been made of it by one of the most conservative of our Presidents and by a corporation lawyer from Boston, one of the most cautious of types, is it rash

to say that it contains in it the seeds of endless misery and turmoil for the American people? As now used and interpreted, it might do for a conquering horde like the Ottomans, or a strictly pastoral people like the Paraguayans, but for a people with vast commerce and a huge edifice of credit, it contains the sure seeds of decline and destruction.

Daniel Webster's test of the necessity of interference in Spanish-American affairs was "manifest and imminent danger to our essential rights and our essential interests." The notion that we cannot perceive this when it arises, and act accordingly, without a "doctrine" behind us, would be diverting if its consequences were not likely to be so grave. What these consequences are likely to be, was well pointed out by Calhoun, in speaking of the interpretation then (1848) put on the Doctrine by some, and now adopted by many of us, when he said:

"And if it should ever become so to the wide extent to which these declarations have been interpreted to go, our peace would ever be destroyed; the gates of our Janus would ever stand open. Wars would never cease."

THE AFRICAN TROUBLE.

ALTHOUGH the news of Dr. Jameson's filibustering expedition against the Boers of the South African Republic has taken the world by surprise, it is very much what one might have expected from the history of that region during the past six or seven years. The Boers have a restricted suffrage—that is, it is confined to males resident in the Republic before 1876, or who took an active part in the war of 1881 with the British, and their children from the age of sixteen. These form a class apart, of "first-class burghers," and elect the President and the commandant of the militia. The "second-class burghers" are a class composed of naturalized aliens, who can become first-class burghers only by a special resolution of the Chamber after twelve years' residence. Two years' residence and the payment of \$10 are necessary to naturalization. The total population, native and naturalized, in 1894 was 370,148, about equally divided between the sexes; but no very reliable census has been taken. Now, these first-class burghers being mainly Dutch Calvinists, and excellent fighting men of the type of Joshua and Gideon, it can be readily imagined that they do not smile upon the 30,000 or 40,000 adventurers, mostly English, who have swarmed into the gold and diamond fields which, unfortunately for the Boers, have been discovered in the territory of the Republic. These men, who have done great work in developing the resources of the country, and have filled its treasury to overflowing with their taxes, are, however, shut out from all share in the government, and are not provided by it with police, schools, roads, or any of the ordinary instrumentalities of civilization. Moreover, they are

regarded by the Boers with great contempt, which is but ill concealed.

The case is, in fact, somewhat like our settlement of Texas—a sudden influx of foreigners into a state held by a weak government, and which the foreigners after a while determine to seize, and fight for it, as their numbers increase and their discontent grows. Moreover, the antecedents of the foreigners are distinctly bellicose. Dr. Jameson, the leader, organized and successfully led the first armed expedition against the colored natives of the South African Company, whose organization and operation up to this point recall the early history of the East India Company, the only other fighting corporation Great Britain has ever sent out. The members of this expedition were very proud of their exploits, and they have naturally fired the imagination of the more recent arrivals, who are generally adventurous spirits; so that it might almost be said to be "on the cards" that the "Jameson crowd," as we should say, would eventually swallow up the Republic. Indeed, in the ordinary course of events nothing was more certain than the ousting of the Dutch from power by the mere growth of the aliens, so that there has been no excuse for fighting. But the truth is, that Jameson has been reinforced during the past two years by a very large number of younger sons and scions of aristocratic families, who find nothing to do at home, and much prefer fighting to mining and agriculture. They were as eager for an encounter with somebody as our Jingo here, with this difference, that they were ready to serve in the field, while our Jingo mostly intended to confine themselves, in case of war, to reading the "extras." The imagination of this class in England is kept in a blaze from childhood up by the stories of Clive and Rajah Brooke, and the exploits of Wellington and other Indian heroes against inferior races. If they could have ousted the Boers, they would all have become rulers of the Republic, and their fame, like that of Rhodes and Jameson, would have filled all the land at home, and especially the football teams in the public schools. The Boers were an unfortunate selection, however, as materials for fame and dominion. They are probably as tough fighting-men as ever took the field, and will probably be hereafter avoided by amateur empire-builders.

The latest advices show that the expedition has been defeated and the survivors locked up. They will probably be treated leniently or kindly, for it would be very foolish for so small a community as the Boers to embitter the rising foreign host which stands behind these men. Their only salvation would lie in the prohibition of immigration, but this is no longer possible. The flood of English adventurers is rising higher every day in the Transvaal. If the Boers continue to deny them representation and a fair share in the govern-

ment, attempts like Jameson's will be repeated on a greater scale than ever, and the Boer domination be certainly overthrown. If, on the other hand, the Boers admit the foreigners to the franchises on equal terms, they will soon be outvoted and ousted from the administration of their own country, and annexation to the Cape Colony would speedily follow. In fact, there is only too much reason for believing that Jameson's attempt was secretly instigated by Rhodes. It is difficult to account for his making it in any other way. This attempt was probably made only by the more adventurous spirits. In the next a large number of the more sober-minded "uitlanders" would probably participate. The disappearance of the Boers as a community would be very regrettable, for they are a race with great qualities and a splendid history, though archaic and non-progressive in their ways; but their doom was sealed when gold was discovered in their territory. Neither thrones, principalities, nor powers can stand up against a rush of Anglo-Saxon gold-hunters.

The German Emperor has sent a despatch to the Boers over the heads of the British authorities, who, by the convention of 1884, are the sole representatives of the Transvaal in foreign affairs, congratulating them on the repulse of a band of British malefactors. This in England is, excusably enough, considered insulting, and might cause a war between him and his grandmother, in which he would unquestionably get the worst of it. In the first place, his little navy would either have to venture out to sea and fight—in which case, it would be promptly destroyed—or it would have to shut itself up in port. In either case the German ports would be all blockaded, and their foreign commerce destroyed, except what could reach the sea through other countries. In the next place, he could not bring a regiment of his fine army into play against the British anywhere, and could not get within two thousand miles of the Boers. In the third, he would promptly lose all the German colonies abroad, including the principal one, New Guinea, which the Australians are only too ready to seize. He would be unable to defend his colonies in Africa, which Rhodes and his men would be too happy to appropriate. The only contingency in which he could make even a decent struggle would be through an alliance with France, but to get this he would have to surrender Alsace and Lorraine. France is the only Power in Europe which has a navy that could successfully stand up against that of Great Britain, but in the next naval war most of the ships engaged will probably be sunk on the spot, leaving the Power with most ships mistress of the seas, and that Power will probably be Great Britain, who would, after a general war, in all likelihood occupy the position in Europe she occupied after Trafalgar. All persons proposing to attack her ought to consider all these things serious-

ly. She is never such a dangerous enemy as in the face of a combination against her.

LAUREATES AND POETS.

THE general sense of disappointment at the choice of Mr. Alfred Austin as Poet Laureate is not wholly personal to himself. If better men were passed over, it must be remembered that some of them at least were not eligible to the office. Swinburne and Morris are not the sort of men to be moved to lyrics by a Queen's great-grandchild; certainly neither of them could be expected to burst into unpremeditated song, as Mr. Eric Mackay did, over the Duke of York's marriage, apropos of which heroic feat he wrote:

"He has fulfilled new duties, not set down,
But done for pride of Country and of Crown!"

Among the eligibles, Mr. Austin was perhaps as well qualified as any. He had serious disqualifications in his political and journalistic relations to Lord Salisbury (he is the principal leader-writer of the *Standard*), but the impropriety of overlooking these is the Premier's, not Mr. Austin's. The slight shock of surprise which his appointment caused was partly due to the rude ending of the hope which had come to be generally cherished that no appointment at all would be made. It was partly due, no doubt, to the revived sense of Tennyson's loss, which the choice of a new Laureate will make vivid in many minds. But this is not the whole of it—not that Mr. Austin takes the laurel greener from the brows of him who uttered nothing banal. A good part of the dissatisfaction arises from an enlarged conception of poetry in the modern world, from the more exacting demands made upon it, and from a feeling that a man who might have done well enough as Laureate fifty or a hundred years ago is no longer of the stature required. If Scott lived to say that it was lucky for him that he had written his poetry in a time when poetical taste was unformed, if Southey and N. P. Willis could be ranked among the immortals on the strength of poems which are now almost absolutely unreadable, it can scarcely be denied that the standards have become higher, the demands severer.

That we should demand the best in poetry, and be content with nothing less, was Matthew Arnold's frequent word of exhortation. But what it meant, as a poet, to produce his best, he tells us in a striking passage in his 'Letters.'

"People do not understand," he writes to his sister, "what a temptation there is, if you cannot bear anything not *very good*, to transfer your operations to a region where form is everything. Perfection of a certain kind may there be attained, or at least approached, without knocking yourself to pieces; but to attain or approach perfection in the region of thought and feeling, and to unite this with perfection of form, demands not merely an effort and a labor, but an actual tearing of one's self to pieces, which one does not readily consent to (although one is sometimes forced to it) unless one can devote one's whole life to poetry. Wordsworth could give his whole life to it, Shelley

and Byron both could, and were besides driven by their demon to do so. Tennyson, a far inferior natural power to either of the three, can; but, of the moderns, Goethe is the only one, I think, of those who have had an *existence assujettie*, who has thrown himself with a great result into poetry."

Now, it is altogether certain that such a standard, accepted as it is doubtless coming more and more to be, is giving a new meaning to the phrase, "*poésie oblige*," and is proving fatal to at least two types of poetry and poets. One of them is what we may call the business poet, who produces his poems in the spirit of the Englishman who said to Canova's son that he supposed he would carry on his father's "business." Southey is perhaps the best example of the plodding, industrious poet, doing his daily stint with the conscientiousness and set face of a bicyclist completing his "century." He always gave good measure—not a line scamped, his butter-woman's jog trot never easing down into a walk for twelve thousand verses. He would lay out his Roderick the Goth or his Madoc the Celt with the precision of a military engineer, and would plough his way through to the bitter end without remorse. Seizing his pen before breakfast (as if, as Bagehot says, any man could write poetry before breakfast!), he would go on for hours turning out a good, sound, honest, perfectly business-like, and deadly dull article of poetry. If we have not changed all that, we have at least made it impossible that such a man should longer be called a great poet. Not of such a poet or such poetry was Matthew Arnold thinking when he asserted that the future of poetry is immense.

Nor was he thinking of another and larger class of poets, more numerous and assertively with us. We mean those of a certain natural poetic sensitiveness, who often charm us in their youth with their fine perception, their responsiveness to nature and art, and who lure us on to expect great things of their maturer powers. But this early promise they never fulfil. They remain at forty or fifty essentially immature, always in search of external sensations, of novel and taking themes, singing not because they must, but because they want to. Nowhere in their verse do we find the "breath and finer spirit of knowledge." All too seriously as they take themselves, they fail because they do not take the poetic calling seriously enough. They imagine that good intentions may do in place of strenuous thought and self-discipline, that poems to uplift and sustain may be struck off extempore, or in the intervals of restless activities, professional, social, or philanthropic.

Mr. Austin appears to be a union of both types. He has written a lot of long poems of good marketable texture, but you have to rummage the dictionary, not your memory, to find even their titles. In the course of a long *existence assujettie* he has produced much descriptive and mildly exclamatory verse. Of the tearing himself to pieces in order to unite perfection of thought and feeling with perfec-

tion of form, of being "happy in the toil that ends with song," of poetry as a criticism of life, he appears to be innocent. It is something, then, to find from his appointment as Laureate that the public taste has advanced so far as to see that the appointment should not have been made.

THE EASTERN QUESTION.

ROME, December 22, 1895.

THE sudden halt in the English action in the Armenian redemption has surprised every one, and irritated some of the political agencies which had hoped, for various and different reasons, to see England plunge into the solution of the interminable and insoluble Eastern question, and are correspondingly either dismayed or disappointed by the sudden and hitherto unaccountable recoil from the advanced position Lord Salisbury had taken. It is well known that Russia had at all times opposed the English plans, because they promised a solution of the problem of what to do with the Sick Man, by eliminating the cause of the malady, viz., the gangrene of Mussulman misrule—deposing the Sultan and imposing a ruler who would have to admit the right of Europe to dictate the conditions of government where it had the duty and the charge of protection; or of finally dividing the country according to the general interests of the protecting Powers and of the populations. I suppose that it may be taken as indisputable that there were those among the powerful, if not among the Powers, who desired that England should precipitate the eternally impending conflict in Europe, to give them a chance to settle some outstanding accounts of their own; and others who really desired the final regulation of the Eastern question in the real interests of European tranquillity. Others there were who fully expected, without any especial interest, that England, having put her hand to the plough, would go through the furrow. All were alike surprised at the sudden halt. Writing to an esteemed correspondent in London, one of the oldest and best informed journalists of England, I had expressed some of these feelings as entertained here and by myself, as warmly interested, through past experiences, in the Turkish problem, and was surprised to receive from him the following reply:

"It is never of much use to prophesy in politics, but I venture to differ with you about Turkey. It is the old story. England is always defeated, as she was about Egypt, until suddenly she strikes some tremendous stroke, and then the world says, Who would have thought it? Of course if Mr. Cleveland is seeking war with us, all calculations are vain; but if not, I venture to say that nothing but the removal of this Sultan can save Turkey from partition. Very slowly and very silently the English are getting to their white heat. However, it is useless arguing about the future. At present the only thing certain is that we are going to add two millions a year to the grant for the navy."

Not having been looking westward for some time, absorbed in Eastern questions, I had no knowledge of the controversy, rather than negotiations, going on between the United States of America and England with regard to Venezuela, and I replied, supposing I knew something of public opinion in America, that there could be no danger of such a fire in the rear, and that nothing in the Venezuelan question justified a fear that the United States would provoke a quarrel when this so important question was pending of the existence of mil-

lions of Christians in Turkey, whose only hope was in the efficacy of English intervention. I could not believe that Cleveland could so far melt into the Jingo as to join in the bullabuloo of the shallow-pated crowd whose highest ambition seems to be to "twist the lion's tail."

It seems that I was mistaken, and now I recur to an earlier letter of the same respected correspondent, written in November, in which occurs the following passage:

"If you will read attentively the latter part of the speech of Lord Salisbury at the Mansion House, you will see that in his own mind he has doomed the Ottoman Empire, and he has a majority of 152. I dare say you know, better than I do, that the confidential reports to this Government represent the massacres in a much worse light than the papers do.* The Sultan has resolved on the extermination of the Armenian people. I expect some 'incident' hourly which will bring matters to a head—perhaps a great massacre of American missionaries, in which case we should act instantaneously, even if all Europe opposed and threatened us. Inferior Turks know nothing of America, and are furious with the missionaries."

The writer of the above is an eminent Liberal, not a partisan of Salisbury, a consistent and devoted Christian, and, like the greater part of the English people, interested in the work of our missionaries and in the pure humanity of the Turkish problem. The position of the English nation was greatly controlled by this sentiment, and perhaps, of all the late great movements of English public opinion, this was the least selfish and profoundest in its appeal to the best part of the English nature. Adequately supported, it must have settled the question of how long Christian Europe would let the slaughter of unoffending Christians be carried on by a fanatic Sultan, served by a bloodthirsty mob and an equally bloodthirsty and fanatical soldiery, under the protection of the Christian Powers. From Russia nothing was to be hoped for, as the Russian (people or Government) detests the Armenian only less than does the Turk; and as the Armenian is the most civilized and teachable of the many races in Asia Minor, he is that one who will most easily be brought to the work of putting in order the reformed Empire—which does not suit the schemes of Russia.

Thanks to President Cleveland and his fire in the rear, England has been stopped in her benefaction, and it is Christianity, not English interests, which must pay the bill; for, with this nefarious attack at such a critical moment, it is out of the question that England could allow herself to be engaged in any difficulty on the other side of the Atlantic. England has only to do her best that the attempted solution shall not lose ground and human interests go backward, and hope in the spring to be able to resume the action where it was left off, with the tide perhaps at the ebb, while it was before at the flood, with Russia thoroughly prepared and her ascendancy over the Sultan assured beyond any contest. The missionaries are not murdered because the Power that could have protected the Armenians, and would not, would have the missionaries protected for fear of the intervention becoming more prompt and effectual; but the murdering and outrage go on as steadily if not as multitudinously as before, and the extermination of a Christian people goes on from day to day systematically and deliberately, though in such a way as to permit the great Powers not to be driven, despite themselves, to recognize the fact that nothing has been done to redeem the situation.

* This I did know. The confidential reports received in Rome far exceed all that the governments have allowed to appear in print.

and that when the spring comes with the Russian intervention ready, there will be the new pretext that the remnant of the Armenian population is not large enough to justify the chance of war on their behalf.

This is the triumph of Mr. Cleveland. It is hardly necessary to say that throughout Italy, where there are no enemies of the United States, but mostly warm friends, the voice of condemnation for this unprovoked and unnecessary crisis, which disturbs the best intentions of Italy as well as England, is universal. Not a single journal or public man speaks otherwise than in condemnation of the course of our Government; and in a land where constitutional law has a special study, not a constitutional lawyer can frame an excuse for the same.

X.

SUDERMANN'S "LOVE IN A COTTAGE."

LEIPZIG, December 16, 1895.

SUDERMANN'S latest play, now running with fair success in several German theatres, is a matrimonial drama which is saved from a tragic ending by the forbearance of the husband; a forbearance which some will call Christian, others Philistine.

Imagine a handsome girl, of passionate but noble nature, left a penniless orphan in the hands of aristocratic relations. She is passed about from one to the other like an ownerless commodity, until she longs for a home and—an owner. She becomes the guest of her friend Bettina, Baroness von Röcknitz, a dullish woman, who is neglected by her horsey libertine of a husband and seeks nepenthe in sleep. While Bettina dozes out the long summer evenings, Elizabeth talks intelligently with the Baron of his plans. The pair fall in love with each other, and presently the inflammable Baron makes advances which cause her to run away from him in alarm. As she is weeping alone in the castle garden, she is found by the Baron's old tutor, Wiedemann, an elderly widower with three children. Wiedemann comforts her and asks her to be his wife. She accepts, and they are married. This much is presupposition. The play opens three years later.

The humdrum schoolmaster and his whilom aristocratic wife are living happily together in their humble cottage. At least they call themselves happy, and look with sovereign contempt upon the busybodies who have not yet ceased to wonder how such a woman could be content with such a lot. Wiedemann teaches a common school with devotion, and Elizabeth looks after the little garden and makes things meet at the butcher's and grocer's. She is idolized by her stepdaughter. In secret, however, Wiedemann has his misgivings. Then, one day, Röcknitz and his wife come and quarter themselves upon the schoolmaster for a visit. The Baron blurts out his opinion that Wiedemann is much too good for the life he is leading, and that Elizabeth cannot be happy in such a place. In short, he is going to Parliament, and he would like a good and trusty man like Wiedemann—man of ability and character—for manager of his estates. The schoolmaster sees a chance of bettering his position and nibbles at the bait, but—he must consult his wife. The Baron asks that, after a preparatory hint, the task of persuading her be left to himself. Then comes the great scene of the play. Received coldly by Elizabeth, the Baron remonstrates and recalls their pleasant acquaintance at his castle. She asks him bluntly why he had wished to make her his mistress,

her of all women in the world. He demurs; for two years he had been madly in love with her, but had understood her perfectly, had known that dishonor would be death to her. At last he had brought himself to the point of "sending his good wife to the devil," but she, Elizabeth, had misunderstood him, refused to see him, and returned his letters unopened. Now he implores her to save him from himself. Without her he has been growing mean and rough. He works hard, but his life signifies nothing. He promises with a solemn oath never to speak to her of love; he only wishes to see her now and then, to have her near him as an inspiration to better living. Elizabeth replies with desperate calmness that this is all very alluring, but out of the question, because she—still loves him. Losing control of herself for an instant, she throws herself into his arms with expressions of passionate endearment, and then recoils with horror when she realizes what she has done. The Baron thinks he has her in his power, and urges his proposal with fierce, almost brutal, importunity. There shall be no more resistance; he will have her, and what he wills he puts through. Finally, he gives her until evening to decide "yes or no," and leaves her with a vague threat of awful revenge if she refuses.

The third act opens upon an evening party given by the Wiedemanns in honor of their guests. The Baron is present, and takes occasion to press his brutal "yes or no" as Elizabeth is pouring his coffee. She has resolved to drown herself, and asks him to wait until morning for an answer. The manner of her leave-taking alarms Assistant Dangel, who communicates to Wiedemann his suspicion that she is about to run away. Wiedemann sits up alone after the guests are gone. As Elizabeth emerges from her room he receives her, of course not aware of her suicidal purpose, with infinite sadness, but without a word of reproach. If she has tired of him she shall go—the door is open. But why creep away in the night without a word of farewell, when they have lived so happily together? This recalls the night of his wooing, and she tells him that she is fleeing now from the same man who had frightened her then. "Then this house should be your best protection," he urges. "That protection I have forfeited," she answers. Then she confesses her indiscretion, and tells the story of her long pent-up love for Röcknitz which had burst forth in one moment of uncontrollable passion. "Now drive me from the house," she says. The answer is: "Will you stay with us?" "How can I," she asks, "with this stain upon my soul?" Then it is his turn to confess—that he had married her fully believing that she had been betrayed by some member of her aristocratic circle. The play ends with the exclamation of Elizabeth: "It is as if I saw you now for the first time."

The German title, *Das Glück im Winkel*, literally "Happiness in a Corner," invites us to suppose, apparently, that, after the confessions of the final scene, the clouds that have lowered over the house are to vanish, and the happiness of the ill-mated pair is to enter upon a new and better era. Can we easily suppose this? The German critics are just now asking. The question has an ethical and an artistic aspect. In a common-sense view of the matter there is no reason why the heroine should drown herself, or leave her home in the style of Ibsen's Nora. To be sure, her husband has misunderstood her character in a rather humiliating way, but for all that he has treated her with unvarying tenderness. It will be so

in the future. What is she to do if she leaves him? As a "dutiful nature," she can have nothing to do with the Baron, whose character she has now come to understand, without a triple treachery that would make existence unbearable. If she leaves her home and avoids Röcknitz, she returns to a worse *misère* than that from which she has been glad to escape. And, finally, the river is a gruesome bed or a young wife who has for three years been finding life quite livable in spite of the blighted buds. What wonder, then, if she is won by the gentle appeal of her husband, who says, as he caresses her: "My youth, indeed, I cannot give back to you. But your youth, too, will slowly pass away. The wishes will become more quiet, the longing will fall asleep. Every one, even the happiest, must learn resignation. And perhaps there may yet be happiness in our familiar nook." It is the old problem of Goethe's "Prometheus": "Shall I hate life because the dream-blossoms do not all ripen?" The distracted wife answers wisely.

But how about the husband? one asks. Is it probable that a humble schoolmaster, commonplace, but not sordid, would marry a poor aristocrat of whose purity he had doubts? This rather delicate point, which is vital to the dénouement, is managed by Sudermann with a skill of portraiture which all but carries the day. Wiedemann has been unable to get on in the world, and is beset by a gnawing consciousness of mediocrity. His friends look upon him as a man of ability. They tell of others, he sees others, who have outstripped him on less of intellectual capital. But it is of no use. After a youth spent as private tutor, he secures a position where he can earn his bread as teacher of a common school, and there he stops. He has not even been able to pass the examinations which would admit him to teach in a gymnasium. He appears at the Röcknitz house as a tolerated guest, the master's old tutor. He becomes acquainted with Elizabeth and looks up to her as to a madonna. As he finds her weeping alone one night, the suspicion that she has been betrayed seems to bring her nearer to him, and to make it possible to win her for a wife. He too has something to conceal. His failure to rise off-sets in his mind her supposed fall. And so they marry under a mutual pledge of silence in regard to the past.

As I intimated a moment ago, the drawing almost saves the dénouement from the appearance of an inartistic concession to the popular preference for happy endings. The play is interesting to the very end. The small realism is cleverly managed, and the characters of Röcknitz and Elizabeth are noteworthy additions to the repertory of the German theatres, although neither of them quite equals in dramatic interest the superb figure of Magda in Sudermann's "Home"—the most powerful creation known to me in the recent dramatic literature of Germany. When all has been said, however, this last play does not leave a perfectly satisfactory impression. Melpomene presides austere over the first two acts, and then turns over her sceptre to Common Sense, who had no reputation as a dramatic muse. Röcknitz, the real hero, is not well disposed of. Just before the end, Wiedemann rises to heroic height and exclaims: "To-morrow our house shall be purified; trust me for that." That is, Röcknitz is to be choked off as a baffled villain. But nothing has prepared us for this sudden exhibition of manly vigor on the part of the schoolmaster. It sounds stagey and hollow. One does not "trust" him, but feels that he will be overborne by the stronger nature and

will not so easily get rid of the imperious and self-willed Baron—at least not without the aid of the police.

It is too early for a judgment of the work as literature, since it has not yet appeared on the book-market. But this much seems to be certain: it must put an end to the notion that Sudermann is nothing unless a preacher and a social reformer. In a last year's book by Prof. Litzmann of Bonn, which lies before me as I write, he is described as "a born satirist, not one of the tame sort who only tickle and scratch, but one of the stamp of Juvenal, who swings his scourge with fierce satisfaction so that the blood starts from the soft voluptuous flesh," etc. The first plays of Sudermann gave, perhaps, a little color to this characterization, though it is much too strong even for them. "Honor" is directed against conventional ideas of that subject. "The Destruction of Sodom," which the Berlin wits mistakenly thought would be the destruction of Sudermann, is the tragedy of genius ruined by a vicious social environment. "Home" has for heroine a young woman who runs away from her father's tyranny, rises through sin and shame to great distinction as a singer, and then returns, "greater than her sin," to assert her imperious personality with tragic results in her narrow provincial home. In all of those one can see a little of the preacher, perhaps, but nothing of the bloody scourge. But the next play, "The Battle of the Butterflies," was a comparatively good-natured portrait of the vulgar mamma with marriageable daughters, while in this latest of all one can find no trace whatever of the war against society. Sudermann is a man of the world, a psychologist, and an artist, not a voice crying in the wilderness. The immortality of Juvenal or Jeremiah would not be to his taste. He has learned some things from Ibsen, but has a more genial artistic temper, and thinks the influence of Ibsen upon German literature has been upon the whole baneful. CALVIN THOMAS.

THE FRENCH ACADEMY.—II.

PARIS, December 19, 1895.

As soon as the States-General met in 1789, the French Academy was attacked as an oligarchical institution. On the 16th of August, 1790, Lebrun, speaking in the Finance Committee, proposed to continue for the current year the appropriation of 25,217 livres allotted for the expenses of the Academy. He proposed also to assign a sum of 1,200 livres for an annual prize. Lanjuinais attacked the proposition. "Privileged academies," said he, "are centres of a literary aristocracy." Mirabeau was charged with the mission of making a report on the academies (there were other academies than the so-called French Academy), and he charged Chamfort with the preparation of his report. Mirabeau died before he could use this report. Chamfort published it, and though he had been for ten years a member of the French Academy, he denounced that body in the most sarcastic manner, as a school of flattery, of servitude, speaking of "the struggle of small interests, of low rivalries, of the play of all those motley vanities between *lettrés, mitrés, titrés*." Chamfort added that the work of the Academy was simply nil. He finally proposed its suppression. The last meeting of the Academy took place on the 5th of August, 1798. Very few Academicians were present; the great majority were out of France or in hiding. The Convention had already suppressed all the academies, and this last meeting

was informal. In November, 1793, one of the Academicians, Bailly, was guillotined. Malesherbes and Nicolai soon followed him. Condorcet poisoned himself. Vicq d'Asy died of terror. Several other Academicians, the Duke de Nivernais, the Bishop of Senlis, Loménie de Brienne, Roquelaure, the Abbé Barthélemy, La Harpe, were thrown in prison.

The Constitution of the year III. created a "National Institute." This Institute was organized by the law of the third Brumaire, year IV. It was divided, and the division still subsists, into classes, though the denominations and objects of the classes have been altered. The first class, with its many sections, was assigned to the mathematical and physical sciences; the second to political and moral sciences (analysis of sensations and ideas, morals, social science, legislation, political economy, history, geography); the third class was dedicated to literature, and was at the same time the class of the fine arts. The old French Academy had not yet revived with its actual name of Academy of Letters, but it had reappeared in the various sections of Class II. and Class III. The work of the Convention was founded upon a classification of all human knowledge, and, with some changes, it has survived; the representation of letters has become more homogeneous, but the moral and political sciences have preserved their special representations.

The executive power chose the first members of the new academies. Article 8 of the law of the third Brumaire confided to the Directory the nomination of 48 members, two in each section, who should elect 96 other members, as the Institute was to be composed of 144 members. The Directory did not choose a single living member of the old French Academy; it chose, in the section of poetry, Chénier (not André, his brother Marie-Joseph) and Lebrun; in the section of grammar, two men now forgotten. In the class of moral and political sciences we find Volney, Bernardin de St. Pierre, author of "Paul and Virginia," Cambacérès, Sieyès. I have said that the Institute had to complete itself by the election of ninety-six members. Curiously enough, the definitive choice was to be made by the whole Institute—a very bad system, as the judges had not all the special knowledge which would have been a proper guide; the *littérateurs* did not know the scientists nor the archaeologists. This incongruity distinctly appeared in the first solemn meeting of the Institute; a memoir on chemistry followed an "Ode on Enthusiasm."

Carnot was elected to the section of Mechanics, and in 1797 occurred the election of Gen. Bonaparte. He appeared for the first time on the 5th of January, 1798; he entered in a simple gray coat, and took his place between the two famous mathematicians Lagrange and Laplace. When Bonaparte soon afterwards started for Egypt, he took with him several savants—mathematicians, geographers, artists; he signed his letters of the time "Bonaparte, Member of the National Institute, General." During the campaign of Marengo, Lucien Bonaparte, who was Home Minister, proposed a reorganization of the Institute and the reestablishment of the French Academy. Napoleon on his return did not show himself very favorable to the idea. The transformation took place only when Bonaparte, under the name of First Consul, became a real sovereign.

"Déjà Napoléon perçait sous Bonaparte."

On the 23d of January, 1803, appeared the de-

cree of the Consuls which organized a new Institute. The system of the classes was changed; the class of the moral and political sciences was suppressed. The second class, without being exactly the old French Academy, and without bearing its name, was almost the counterfeit of it. The elections were to be made by the classes, not by the whole body of the Institute; this last innovation was of the highest importance.

The second class soon considered itself the legitimate heir of the old French Academy, and resumed all its traditions; but Napoleon would not tolerate the old name of French Academy. There were four classes instead of three; the physical and mathematical sciences formed the first, the French language and literature the second, history and ancient literature the third, the fine arts the fourth. All the members of the new Institute were appointed by the Government. The Academy of the Empire did not compare well with the old French Academy; it had no great *illustrations* in its ranks. Its principal function seems to have been to sing the praises of "the great genius who presided over the destinies of France." The eulogy of the sovereign became a necessary part of all the speeches of the Academicians. The new master would be placed above Alexander, Cæsar, and Charlemagne. "Quis deus nobis hæc otia fecit?" asked one in Virgil's phraseology, in his reception speech. Adulation never went further than Cardinal Maury, when he spoke of "something greater than nature, which does not seem to belong to time, as it is neither uncertain nor inconstant."

Napoleon kept his eye on the Academy, even during his campaigns. He disliked the allusions made to the events of the Revolution, and wrote to Fouché from Finkenstein: "Don't allow any reaction. Mirabeau ought to be well spoken of. There are many things in this session of the Academy which don't please me [this was after the reception of Maury]. When shall we be wise? When shall we abstain from reviving painful memories?" Chateaubriand read, as usual, his reception speech before a committee of the Academy; he tells, in his "Mémoires d'Outre-Tombe," how his speech displeased the majority of the committee: "Liberty," said Chateaubriand, "is so naturally the friend of science and of letters that it takes refuge with them when it is banished from the midst of the people." Napoleon asked to read the speech; he declared that it was of the utmost extravagance and would not allow it to be delivered. He said to Fontanes, a friend of Chateaubriand and a member of the Academy: "Since when, sir, does the Institute consider itself a political body? Tell it to write verses and correct faults of grammar, and not go out of the domain of the muses. . . . Am I a usurper [Chateaubriand had made a faint allusion to Louis XVI.]? I dethroned nobody, sir; I found the crown in the mud, and the people put it on my head. . . . If you missed me to-morrow, there would only be new massacres." Chateaubriand refused to correct his speech, and the confirmation of his election was suspended. He could not take his place among his colleagues, but his election remained valid.

A new age of Augustus is the dream of absolute monarchs; if such was the dream of Napoleon, it was never realized, and the imperial epoch left no great poetical or literary work. Mme. de Staël and Chateaubriand preserved the power of their genius only by establishing themselves in an entirely independent position. In vain did Napoleon multiply pensions and

academical prizes; he refused to the Academy what letters need above all—liberty. In 1804 he established the great prizes, to the number of 22 (9 of 10,000 francs, 13 of 5,000 francs) destined for the best works and inventions which had honored the sciences, letters, and the arts in a period of ten years. He was to award these prizes with his own hand, but he really never did so. In 1809 he instituted new prizes, but he gave to the Institute merely a consultative power. The prizes were to be bestowed by an imperial decree. The function of the Institute was reduced to the drawing up of reports and to propositions made to the Emperor. Napoleon probably found that the productions of those who competed for the prizes were unworthy of the greatness of his reign; he did not distribute them in person, and a list of them would show that he was right. He was more fortunate when he granted important sums to the new edition of the Dictionary of the French language, to a 'Dictionary of the Language of the Fine Arts,' and to the continuation of the 'Histoire Littéraire de la France,' which the Benedictines had begun.

The first return of the Bourbons did not cause any change in the regulation of the Institute. The literary life of the country was, so to speak, in suspense during the Hundred Days and after the disasters of France. The second Restoration made some changes in the organization of the Institute. By the royal ordinance of March 21, 1816, the Institute was preserved as a whole, but the French Academy reassumed its former name and its old status; some new members were elected by the royal ordinance, and eleven Academicians were excluded—Bassano, Garat, Cambacérès, Cardinal Maury, Merlin, Sleyès, Roederer, Lucien Bonaparte, Arnault, Regnault de St.-Jean-d'Angély, Étienne. The Institute by the ordinance of 1816 was composed of four academies, the French Academy taking precedence; afterwards came the Académie des Inscriptions et Belles Lettres, the Academy of Sciences, the Academy of Fine Arts. All these denominations still stand, but a fifth academy was created later with the name of Academy of the Moral and Political Sciences. The academies were to have each its independent statutes and constitution; they were bound to have every year a public sitting, at which all were to be represented.

The four academies reorganized by the ordinance of March 21, 1816, had their inaugural session on the 24th of April. The presidency of the first assembly of the new Institute belonged by right to the French Academy, and consequently to the President chosen by this Academy. By a curious coincidence, it happened to be the Duke de Richelieu; thus reappeared, at the moment of a new transformation, the name of the famous founder of the Academy. Fontanes, elected Vice-President, said in a speech which he made on that occasion:

"Physical and mathematical sciences surely have a very great importance. . . . It is to their application that industry, commerce, the arts owe so many ingenious contrivances; but these arts, as Bacon energetically says, are rooted in the needs of man, and develop themselves by the efforts of interest and cupidity. The increase of wealth and of the commodities of life is a great benefit, it cannot be denied; but our heart has nobler instincts which have to be satisfied. Letters, viewed in their general relations, have a more direct influence on the moral and sensitive part of man. I am not afraid to say, 'A people which should be only savant might remain barbarous; a lettered people is necessarily sociable and polite.'"

The preëminence of the Academy of Letters

over the others was thus asserted, and it must be said that generally it has not been contested by public opinion. The members of the French Academy have preserved the name of "Immortals," though the word is often pronounced ironically, and the irony would be well justified in going over the list, already very long, of those who have received this brevet of immortality. This list would show you the "rari nantes in gurgite vasto." The mind is its own place, and you cannot easily force it into categories.

Whoever may be interested in the questions relative to the organization of the Institute and to the prizes it has to distribute, will do well to consult the following work: 'L'Institut de France: Lois, statuts et réglemens concernant les anciennes Académies et l'Institut, de 1635 à 1889. Tableau des fondations. Collection publiée par M. Léon Aucoc' (Paris: Imprimerie Nationale. 1889). The "Tableau des Fondations," which occupies pages 330-384, indicates the prizes which the Institute distributes annually.

Correspondence.

THE MAIN QUESTION.

TO THE EDITOR OF THE NATION:

SIR: So far, perhaps because of the pressure of the more important aspects of the Venezuelan matter, I have seen no condemnation of a certain happening which, it seems to me, marks accurately the depth of imbecile rage to which we have reduced ourselves. I refer to the dragging forth of Lowell's letter written in 1865 in which he says (I quote from memory), "There is but one thing worse than war in England, and that is, to be afraid of war," etc.

There are no present weapons effective enough for us, and so, forsooth, we bring dead men from their graves, and essay a feeble flourish of mouldering documents which by no means represent later convictions under changed conditions. It is a brave deed.

CELIA A. M. CURRIER.

IOWA CITY, IOWA, December 28, 1895.

[Just so we are disintombing the Monroe Doctrine "under changed conditions." —ED. NATION.]

TO THE EDITOR OF THE NATION:

SIR: May the wild West dare offer you thanks and congratulations for voicing such Americans as think with their brains? It seems queer to thank people for being sane, maybe, but it stirs me to find truth and wisdom and patriotism in these days of the Jingo, so much that I wish I could go and shake your hand. It has not just the charm of novelty to find the *Nation* safe and sound, but custom does not stale the delight of it, perhaps because more and more we have to suffer from those who peddle their mouths.

I am young enough still to like fighting, and rather to believe in it, too—but not as an elective means of grace. The frontier may not exactly teach a Quaker-like abstinence from strife, but it certainly never develops Jingoism. The gentlemen who looked upon indiscriminate quarrels as good for the blood and muscle, have all joined some other graveyard than the ones which they respectively sought to swell. Few grieve for them; yet they were more virile, at any rate, and less venal than the persons who aim to sell papers by getting their substitutes

killed. And as between their intellectual horizon and that of those who would dress a nation in the discarded togs of the Bad Man from Bodie, I can find little to choose.

A Republican when my party will allow me, a Westerner by every fibre of choice, I often find things in the *Nation* whose letter I cannot keep. But its spirit is one of the things I love and venerate and am proud of every day that I am an American; and with all my heart I wish it godspeed. L.

LOS ANGELES, CAL., December 27, 1895.

TO THE EDITOR OF THE NATION:

SIR: For thirty years now—that is, from the foundation of the paper—I have been a constant reader of the *Nation*. Long ago I fell into the habit of reading nearly the whole of every number—a larger percentage than of any other periodical. In shaping my habits of thought and such intellectual training as I have been able to give myself, I recognize the *Nation* as one of the most potent influences. Perhaps that is the reason why your recent denunciations of the folly and savagery of the President and the Congress appeal so powerfully to my reason. If I may judge from my own case, you have largely formed the intellects you address, and that is the secret of your power. But may I not, on the other hand, congratulate myself on having assisted to create the power that has made me what I am? But more (and this is the fact of which I am proud), in creating the power that has made me, I have helped to build one of the bulwarks that shall stem and roll back the tide of barbarism now sweeping over the land.

The country must be saved. It is a gigantic but not impossible task. I suggest the need of immediate organization and prompt action. In every city, village, and township there must be a few sane and sober-minded men opposed to war under the present circumstances or any conditions likely to arise. Let them unite, without regard to party or creed. Let them speak in unmistakable tones. Above all, let us be prompt. The "howling savages" are on top at present; and the longer they remain on top, the more difficult it will be to dislodge and overthrow them.

In the war upon war and savagery every man may be a hero without rapine or murder. Forward the light brigade of peace and civilization! "The path of duty is the way to glory." A. F. HAMILTON.

TO THE EDITOR OF THE NATION:

SIR: While I agree with the general tenor of your comment on the recent war scare, it strikes me you are too despondent in your view of the general outcome of it. In the first place, though I am no adept in such questions, do you not greatly overestimate the financial loss already incurred through the panic? No doubt there have been heavy transfers of securities, in some cases out of hands which could ill afford to part with them; but what positive destruction of values has yet taken place?

Then, how healthful, if the evil exist, has been the revelation of the thinness of the veneering or varnish of our civilization, and of how much yet remains in us of the ape and tiger—the same brutal nature seen in the lynchings prevalent over a large part of our land.

But what an uprising, too, of the better portion of the people in both countries, with the willingness manifested to suffer "humiliation" if need be, in retreating from a false position and acknowledging an error, or even wrong.

committed. One could almost be glad of the excitement if it shall teach us that nations are amenable to the same principles of honor and integrity which govern individuals; that it is no more dishonorable for a nation to acknowledge mistakes and make reparation than for an individual; and that, as the duel with its code is fast becoming obsolete, so war must one day pass away.

It will be no small gain, too, if the Monroe Doctrine, so often invoked, yet evidently so imperfectly understood or defined, shall have its place and value in the world's code formally determined.

And worthy of mention, also, may be the impetus given to the restoration of good feeling between North and South among our own people.

We must deplore the wild and almost wicked talk which followed, though it did not begin with, the war message; but it is worth while to note some compensating benefits which have also followed.—Respectfully yours,

H. D. C.

EASTPORT, ME.

[The address adopted by the New York Chamber of Commerce on Thursday last does not make light of "the financial loss already incurred." This loss, "caused by the rude derangement of business and by the fall in the value of merchandise and of securities, is too painfully fresh to require discussion at our hands." If our correspondent will further take account of *prospects* as well as of current values, of the check given to all long-term enterprises as well as to the common confident calculation from year to year, he will discover a widespread loss which, if it cannot be calculated, can hardly be exaggerated. War devastates by repression as well as by destruction.—ED. NATION.]

POINTERS FOR THE COMMISSION.

TO THE EDITOR OF THE NATION:

SIR: Although it is difficult to see how American safety, interests, or honor can be affected by the boundaries of any of the insignificant despotisms of South America, yet one can scarcely help noting certain facts and principles of a general character which must present themselves at the beginning of any investigation of boundary, however cursory.

The territorial rights of nations are based on discovery and occupation, on cession or on conquest. Since Venezuela discovered nothing, and conquered nothing, except in so far as by successful rebellion she constrained a cession from Spain, her rights rest exclusively on such cession, and carry no title except such as Spain possessed. But the only paper title of Spain is derived from the Pope's bull of 1493, when his Holiness, possessing no knowledge of the New World beyond the discovery of one American island during the preceding year, took it upon himself, as vicegerent of God and owner of the world, to grant to Spain all lands that had been or might be discovered west of the Azores. If, therefore, Spain derived title to anything from that source, it is not confined to Venezuela, but extends to all the islands and both continents of America, including New York and Philadelphia, and even that bed of justice and seat of patriotic virtue, the capital at Washington. Mr. Cleveland's new-born and expensive zeal for parti-colored

American autocracies masquerading as "republics" should therefore not be confined to pampering them at the sole expense of Great Britain, but should prompt him to hand over to the grantees of Spain the whole United States; and if it is right to do it at all, it should be done at once, because, if the grantees of Spain hold anything under the bull of his Reverence, they hold equal title to all of both Americas.

Descending from record to possessory title, it is an acknowledged principle of international agreement (which agreement, when universally accepted, is called international law) that the incipient occupation of new countries is chiefly defined and ascertained by their natural drainage systems. Thus, a settlement made in the valley of a river having its own independent debouchure at the sea, accompanied with a corresponding claim of right, is held to extend to all the territory drained by such river and its tributaries, whether immediately and fully occupied by such claimant or not; but to no more than such drainage system. If another valley is claimed, that also must be visibly occupied by at least one post or settlement, or will remain open to new-comers. Any other rule would be intolerable to the world, because it would enable the nation making the first puny settlement to claim and exclude others from an entire continent by establishing a single post of a dozen men.

It is a matter of history that the Spanish occupation of what is now known as Venezuela was for generations confined to the north side of the Orinoco basin, while the Dutch occupation (now passed to Great Britain by treaty) covered both banks of the Essequibo and certain points on the south side of the Orinoco basin, as shown by official maps of all the parties. There was some doubt as to the Dutch or English right to the posts held by them in the Orinoco basin, and they were consequently long ago abandoned to Venezuela on the condition of Venezuelan protection of the native inhabitants, although such points have never been reduced to actual occupation by Venezuela. England now claims, as she has always claimed, the entire basin of the Essequibo, and nothing else, and most of it is and has long been occupied by her settlers. Venezuela claims the entire basin of the Orinoco, which was long since conceded to her, and a large part of the basin of the Essequibo, no part of which has ever been occupied either by her or her Spanish predecessor, and which England, who is in actual possession, cannot surrender without yielding her plain rights by all the tenets of international law, her duty to forty thousand of her settlers now occupying the territory, and suffering an unprecedented debasement before the world. She is demanding no new territory, but claims only what she or her predecessor held before Mr. Monroe was born. It is a question whether it would not be to our interest if she should claim new territory, since her occupation would be equivalent to the introduction of free institutions and the dominion of settled industry and law into an uninhabited wilderness which may otherwise fall into the clutches of the cruel, corrupt, and irresponsible despots who succeed each other by revolution, every few months, in the plunder of one of the most despicable of all the Spanish *residua* in either America.

If it be true that intelligent diplomacy as hitherto defined is the art of making it easy for the other party to do what one wishes him to do, then Mr. Cleveland's burst of reckless zeal has succeeded only in making an honorable adjustment well-nigh impossible. Without

troubling himself to ascertain the rights of the parties who are alone concerned, he has inflicted on a friendly nation of our own blood, and the only one that has never objected to the Monroe Doctrine, an insulting threat, before which no free government can yield without being overthrown by the passions of its own people.

It is now too late for the great republic of the world to escape this absurdity of schoolboy ill-temper, or the loss of hundreds of millions of its capital already destroyed, but the profounder ruin of national bankruptcy and the bloody destruction of war may yet be averted; and unless Mr. Cleveland is willing to stand forever in the pillory of history, it devolves on him to discover an honorable way of allaying the passions of the ignorant rabble on both sides before they are irremediably aroused.

L. J. W.

PHILADELPHIA, JANUARY 4, 1896.

TO THE EDITOR OF THE NATION:

SIR: In the Boston Public Library is a little volume entitled 'A Voyage to the Demerary, containing a statistical account of the settlement there and of those on the Essequibo,' etc., "by Henry Bolingbroke, Esquire, of Norwich, Deputy Vendue-Master at Surinam." I have examined the book, and it purports to be a minute account of the author's personal examination of the territory, the productions, the people, and the history of the colony then lately taken by the English from the Dutch. The book was published in London in 1809, but a note in it states that it is a reprint. It was written after the occupation by the English in 1796, however, for there is frequent reference to the English occupation, and the correspondence between the English Government and its officers who took possession of the colony is given.

I quote from it as follows: "The west coast of Pomaroon juts on the boundary of the Orinoco where there is a military post established. . . . Since the English took possession of the colonies they have cultivated the whole of that coast, extending upwards of fifty miles, and are now making estates on the banks of the Pomaroon" (p. 273). The author mentions as situate on the Pomaroon River "Fort Zealand, which the English destroyed in 1666; Middleburg, which at the same period was plundered and abandoned" (p. 273). "The estates already made between the Essequibo and Pomaroon Rivers are variously valued from five to eighty thousand pounds sterling, each according to the extent of cultivation, number of buildings," etc. (p. 273).

These are only part of a number of facts stated by the author, showing that the region between the Moroco and Essequibo Rivers, part of the territory now claimed by Venezuela, had been occupied for many years, and had been under the actual jurisdiction of the Dutch and their English successors. There is no mention or suggestion of any question as to the right to this jurisdiction. The book contains a map of the whole colony, showing also the old sites of New Zealand and New Middleburg on the Pomaroon River, roads along the coast, and a military post on the east bank of the Moroco River. It does not show any territory west of the Moroco, nor does it indicate a boundary line of the colony in the interior.

I have not seen this book referred to in any of the newspaper or magazine discussions upon the subject of the Venezuelan boundary dispute, and it is quite evident from the speech of Senator Lodge in the Senate, delivered a few

days ago, that he was ignorant of the information that it contains.

In the same library there is also a book, published by Sir Robert H. Schomburgk, entitled 'A Description of British Guiana, Geographical and Statistical,' etc. It was published in London in 1840, and contains a map. The preface by the author states that it contains "the result of my personal examinations . . . during successive years from 1835 to 1839." At page 62 there is a "List of Estates" in the parishes of St. John and Trinity, which shows that in 1832 and in 1839 there were forty-nine "estates" in sugar, coffee, cotton, etc., in those two parishes. On a previous page the author states that the whole colony is divided into parishes, and that the two parishes just mentioned take in the territory between the Essequibo and Pomaroon Rivers, west of the Essequibo. In a list of towns and villages within the colony the author mentions two villages on the west bank of the Essequibo: Williamstown, "with fifteen houses, a good mercantile store, and a church capable of holding five hundred persons. . . . About seven miles higher up is a village called Catharinesburg, with about fifteen houses, a Wesleyan chapel, a store, and an apothecary's shop." All of these settlements were within the disputed territory.

CHARLES H. HARTSHORNE.

JERSEY CITY, January 3, 1896.

THE HOT-BED OF JINGOISM.

TO THE EDITOR OF THE NATION:

SIR: One explanation of the extraordinary bellicose attitude of a large portion of the citizens of the United States will undoubtedly be found in the false and pernicious teaching of history which they had in their youth. It is not too much to say that, twenty years ago, the only part of United States history that was well taught in the public schools was war. The French and Indian wars, the Revolution, the War of 1812, and the Rebellion were the only cases in the dreary desert of American history. The internal development of the country, the progress of the useful arts, our national experiments in political economy and finance, our foreign relations, were all slighted in the text-books in American schools twenty years ago, and the only time when the woman, who generally taught history to the present generation, felt she was on firm ground was when the class followed up and witnessed vicariously the barbarous slaughter, destruction, rapine, and brutality of sea and land engagements. With us Americans the average citizen never goes to a high school. He "quits" study when he "quits" the grammar school, and about all that he recollects of his school history is the wars; and about all he brings away from the little "red" school-house is a blind hatred of the country with which his ancestors fought.

The inability of the American people to profit by the economic and financial blunders of the previous generation has often been commented on. The explanation is that they know nothing about, and have never been taught in school, our financial, economic, and industrial history. Furthermore, it may be said without exaggeration that the masses of our people who got their education in the grammar schools departed from those schools with the idea that there was really no other history worth knowing except American, barring a dim idea that away back in the abyss of time there were such countries as Greece and Rome. The only existing foreign country

of whose history the masses of America know anything at all is England, and of her history they know very little, and that little is altogether bad.

E. L. M.

INSIDIOUS MONARCHISM.

TO THE EDITOR OF THE NATION:

SIR: I have failed to see, in all the discussions of the "Schomburgk line," any mention of perhaps the most interesting result of Sir Robert Schomburgk's explorations. On the first of January, 1837, he discovered, in the River Berbice, a new and magnificent water plant, specimens of which he sent to England, where it was propagated. At the time of the discovery William IV. was King, but, before it received recognition from naturalists, his niece had succeeded to the throne, so that the new water-lily was named *Victoria Regia*, and is now cultivated under that designation. Surely this was a high-handed attempt to extend monarchical institutions to the Western Hemisphere. American botanists have been very supine in this matter; they ought to hold a conference at once at the Smithsonian rooms and have the name changed to *Monrovia Onneyensis*. As a popular designation, "Lodge's lily" might answer.

"GALLO."

TO THE EDITOR OF THE NATION:

SIR: In a review of a book entitled 'Among the Pueblo Indians' in your issue of December 19, 1895, you say:

"There is nothing new in the story, unless the account of the game of 'gallo' which they saw played on San Juan's day, in the village of Cochiti, can be so considered. In one portion of the game 'a living rooster [gallo] was buried in the sand' up to the neck, and the object of the player as he rode by was to 'catch the bird' and bear it off to his home. Evidently this is the game of 'gander-pulling,' well known in early times in portions of the South and West; the only difference being that with us the bird was hung by the legs to a cross piece and the riders 'grabbed for the head' as they galloped by under the pole. Whether the Indians borrowed the game from their Spanish neighbors, if indeed they had it, or from ourselves, we cannot say, but that they did borrow it, is, we think, beyond all question."

The game is mentioned by many writers, travellers, novelists, etc., who treat of life in countries once owned by Spain; but at present I can give you only one quotation referring to it. In Bret Harte's poem of "Concepcion de Arguello" (which is a picture of life in California during the days of Spanish-American occupancy), we find the following lines:

"Vainly, leaning from their saddles, caballeros, bold
and fleet,
Plucked for her the buried chicken from beneath their
mustang's feet."

The game was probably introduced from Spain. It certainly could not have existed in America previous to the discovery by Columbus, for both horses and roosters were unknown in our continent before that time.

ADDITION AND SUBTRACTION.

TO THE EDITOR OF THE NATION:

SIR: To your admirable review of 'The Psychology of Number,' by McLellan and Dewey, in the issue of November 28, this addition may be seasonable.

We read of a scholastic discussion as to how

many angels could stand on the point of a needle. Suppose that some investigator had decided that the true number was exactly one hundred and eleven, and had recorded this result in a text-book. Suppose that all subsequent text-book-makers had adopted this conclusion, until finally some one thought out and published "The Psychology of the Angelico-humanistic Interrelations, founded on the Number 'One Hundred and Eleven.'" Undoubtedly, we should be interested in it as an instance of mental ingenuity, but should consider that its purely arbitrary foundation rendered it of slight practical value.

As regards one phase, at least, of the work under discussion, the above illustration would be a fair parallel—the phase which treats of "addition" and "subtraction," wherein the authors travel a purely arbitrary path. To illustrate: In the school-room, a child's attention is directed to two groups of blocks, and he is asked to tell the total number in both. Counting those in either group, he goes on counting from that point till he has the sum of both sets. He is now asked to tell the difference between the two sets of blocks. Again he counts from the number in the larger set backwards till he comes to the number in the smaller set, or from the smaller number forward; in either case, finding the same difference. If he wishes to record on paper each of these steps, he arranges the symbols representing the number of blocks in each set in convenient position to aid him in his counting, by custom (not by necessity) one under the other. He still finds sums or differences wholly by counting or by memory of previous countings.

In an evil day of the long ago, some genius determined to call it "addition" when counting totals, "subtraction" when counting differences. Not only was this purely arbitrary, but its effect was to completely obscure and keep out of the arithmetics the real addition and subtraction as we know them in our daily experience. The child, e. g., could have really added blocks to the place where either group was situated, but he could have done it only by a simultaneous subtraction from some other place. He could have subtracted any block from its place in either set, but he must have added it at once to some other place. Addition and subtraction form inseparable parts of one operation, and the child would have represented this operation on paper in very different fashion from his representation of the artificial "addition" and "subtraction."

In arithmetic, where the so-called "subtraction" is confined to counting from a smaller number to a larger, the mischief was confined to a wrong order of development, and to the suppression of the equation that follows at once the true addition and subtraction. When it came to counting from a larger number to a smaller—calling it "subtracting"—a larger number from a smaller—the mischief was complete; for the scholars, at any rate, thought the attending concepts applicable to dollars and other material objects, instead of being purely imaginative. It is unfortunate that these conventional terms, with their affixed conventional meanings, should have been so long followed by the text-books; a careful examination, so far, revealing but one honorable exception, which is worth noting. In a little text-book, published at Exeter, N. H., in 1845, by Z. Jones, principal of Hampton Academy, the common use of the terms "addition" and "subtraction" is noted, but the author studiously avoids them, choosing more exact terms.

It is still more unfortunate that two author

of such repute as Messrs. McLellan and Dewey should have incorporated into their 'Psychology' a fundamental arbitrary concept. Had they searched carefully, they would have found it the source of many contradictions and absurdities in our mathematics, and might have changed some of their own psychological conclusions. WILLIAM D. MACKINTOSH.

CHAUNCEY HALL SCHOOL, BOSTON, MASS., Jan. 8, 1896.

USE AND ABUSE.

TO THE EDITOR OF THE NATION:

SIR: Among recent abuses of the word woman, the worst is the curious trick of substituting the plural of the substantive form for that of the adjective, as *women* writers, *women* students, *women* graduates, *women* bicyclists, *women* prisoners. I have not the time nor do I care to verify quotations, but may I say that I have within six months seen this error committed twice in my home daily, twice in the official report of the State Superintendent of Prisons, once on the title-page of a semi-official and once in the body of an official publication of Cornell University, once in a literary letter of Mr. Zangwill's to the *Cosmopolitan*, and once in the columns of the *New York Evening Post*? Would it occur to those who take *women* in such connection for an apposition to praise the valor of our *sailors* boys or to refer with a touch of pride to their *soldiers* ancestors?

If woman is going to be *supra grammaticam*, like King Sigismund, her progress is backwards. Folk grammar, to be sure, admits "teeth-brushes."—Yours very truly,

ALFRED EMERSON.

ITHACA, N. Y., December 30, 1895.

[So long as we say "*men* folk(s)" and "*women* folk(s)," and Shakspeare is not scouted for writing "Bring forth *men*-children only," and "Will you not go the way of *women*-kind?" the "abuse" pointed out by Prof. Emerson will perhaps not appear such to the majority. We cannot admit his analogy in the case of "*sailors* boys." It lacks the essential feature of "mutation" (*man*, *men*), which folk grammar (or should we say idiom?) has preserved in *teeth*-brushes. We might in English have had the word "*teeth*-brush" as the Germans say *Augenglas* (eyeglass), *Bücherschrank* (bookcase), etc. Their *Männerchor* corresponds to our "*men* folk."—ED. NATION.]

Notes.

MACMILLAN & Co. announce 'Jewish Ideals, and Other Essays,' by Joseph Jacobs; a volume on the evidences of Christianity from Browning's point of view, by Dr. Berdoe; a translation of Erdmann's 'Grundriss der Logik und Metaphysik,' by Dr. B. C. Burt of Ann Arbor; 'The Number Concept; Its Origin and Development,' by Prof. Levi L. Conant; an 'Atlas of Nerve Cells,' by Dr. M. Allen Starr; and 'Plant Breeding,' by Prof. L. H. Bailey, which will in September introduce the "Garden-Craft Series."

T. Y. Crowell & Co. enlarge their "Library of Economics and Politics" with 'Proportional Representation,' by Prof. John R. Commons of Syracuse University, and 'The Inter-

nal Revenue System of the United States,' by Dr. Frederic C. Howe of Cleveland, Ohio.

Charles Scribner's Sons have in press 'The Near East,' by Henry Norman, and 'One Hundred Games' for social amusement.

Roberts Bros. will soon issue the 'Family Letters of Dante Gabriel Rossetti,' with a memoir by W. M. Rossetti; and 'Modern Women.'

Efflogham Wilson & Co., London, besides a new and revised edition of Alexander Del Mar's 'Science of Money,' will issue a 'Handy Guide to the Patent Laws,' by G. F. Emery.

We have received the printed catalogue of the Avery Architectural Library, the sub-title of which sets forth that it is a memorial library of architecture, archaeology, and decorative art, and that it is connected with the library of Columbia College. The book is a massive quarto of 1,139 pages, with an introduction and a few illustrations at the beginning; it is sumptuously printed, and the matter of composition and proofreading seems to have been attended to with much more than usual thoroughness. It is not possible to ascertain from the text how many volumes, or how many separate works, the library contains, but the introduction states that there were about 13,000 volumes when the catalogue went to press, and reminds the reader that so many volumes devoted to a branch of the fine arts are of more pecuniary and actual consequence than the same number devoted to history or literature. Of course, the majority are richly illustrated, and, again of course, either a majority or a large minority are of folio size. The introduction is signed by the commission of purchase, which is composed of the professor of architecture in the School of Mines ex officio, now William R. Ware; the librarian of Columbia College ex officio, now George H. Baker, and Russell Sturgis of New York. It was in April, 1890, that Henry O. Avery died, and his parents, Mr. and Mrs. Samuel P. Avery, shortly afterward founded in his name and to his memory this great benefaction to students. The foundation has been increased and its range extended, until now it consists of the important collection of books above named and an invested fund of \$15,000 for further acquisitions.

If we were to pick out the most timely reading from the closed volume 28 of the *Century* (May-October, 1895), we should designate the account of the naval battle of the Yalu in the late Sino-Japanese war. It is a peace tract of the first quality written by an American participant. Besides Prof. Sloane's continuing *Life of Napoleon* (which also has its peace lessons), and the serials that have already become books—Crawford's 'Casa Braccio,' Mrs. Harrison's 'Errant Wooling,' and 'Life in the Tuilleries under the Second Empire'—there is nothing significant that we have not touched upon in our monthly notices. Still, we will recall Mr. Janvier's graphic story of the *Comédie-Française* in the old amphitheatre at Orange, France; and, among the illustrations, the several portraits of Rubinstein, Bryant, Clay, and Keats.

The two volumes of Scribner's for 1895 have also their books in embryo—Meredith's 'Amazing Marriage,' Mrs. Ward's 'Story of Beatie Costrell,' and Robert Grant's 'Art of Living,' to say nothing of President Andrews's unfinished scrap-book 'History of the Last Quarter-Century,' begun in the March number. The papers on Golf and on Poets, French, English, and American, bespeak attention to current fads. Theodore Roosevelt's "Six Years of Civil Service Reform" must now be

read with melancholy reflections on the fine gold that has become dimmed. The biographical-critical sketches of wood-engravers have been worthily continued. It is well to remember the late portrait of Huxley, and to forget certain eccentricities of illustration, which will be found in the second volume.

Continuing its standard edition of papers read before it, the Massachusetts Military Historical Society has published, through Houghton, Mifflin & Co., another fine octavo volume entitled 'The Virginia Campaign of 1862 under General Pope.' The papers, fourteen in number, were nearly all read before the Society in 1877, and have a double interest: first, of course, for the historical and critical matter contained in them, but, second, for the instructive evidence of the change of sentiment and judgment which has come to intelligent military men in the progress of twenty years. Half of the papers show the strong predilections (not to say prejudices) which were rife among army men at the close of the war. The publication of the Official Records by the Government has made obsolete such ardent advocacy of favorites and sweeping condemnation of others. There is also another portion, calm and judicial in character, which has not lost in weight or influence. Noteworthy among these are the papers of Mr. John C. Ropes and Colonel Thomas L. Livermore. Outside of the controversial list are admirable descriptive papers, like Gen. Walcott's "Revisit to the Field of Chantilly," and Gen. Andrews's "Battle of Cedar Mountain."

In spite of rather careless style and wayward punctuation, Mr. Bernard C. Steiner's monograph on 'Citizenship and Suffrage in Maryland' (Baltimore: Cushing & Co.) is likely to be useful to several classes of persons. Historical students will probably be most interested in the earlier pages, dealing with citizenship and suffrage during the early colonial period, and based on diligent study of early laws and records; the summaries of important cases in State courts involving the suffrage and election laws ought to be of some value to lawyers; while the dark picture which Mr. Steiner draws of the political and judicial corruption attending elections in Baltimore from time to time during the past thirty years, though presenting nothing new, is nevertheless a forcible illustration of the conditions against which municipal reform has to contend.

The "verse renderings of typical passages" of 'The Song of Roland: A Summary for the Use of English Readers,' by Arthur Way and Frederic Spencer (London: Nutt; New York: Macmillan), are not of such a quality as to distinguish the little pamphlet which serves as an excuse for printing them. And if we admit that "small service is true service," we must add that with little trouble a much greater help could have been rendered. If interest is to be aroused in the 'Chanson de Roland,' the English reader might at least be directed to the most convenient original text—say, Léon Gautier's, with its parallel translation into modern French prose, line for line, and all its apparatus. Our editors would also have done well to borrow freely from Prof. Gautier's full introduction as calculated to whet the student's appetite.

It will be strange if some Jingo Furioso does not speedily translate into pure American-English Paulo Fambri's 'La Ginnastica Bellica' (Rome: Casa Editrice Italiana). Its brawny giant of an author examines Galen's three divisions of gymnastics, namely, "medica, sive sapientia, bellica, sive patriotica, athletica, sive

histrionica"; likens the first to the Swedish system, the third to the German, and makes them over to invalids and acrobats respectively; and adopts the third as apt to render the youth of the country strong and formidable, ready for self-defence and for attack—warlike and therefore patriotic. He holds up to scorn the wretched bodies of the annual volunteers from the Italian student class as compared with the peasantry, and calls for a training that will form soldiers capable of timely rallying (*tempestivamente arrivare*) and impetuous fighting (*tempestuosamente combattere*). His chief reliance is upon the art of fencing, which he has ingeniously made applicable to teaching in classes (*metodo collettivo schermistico*).

M. J. Cruppi's book on 'Linguet: un avocat journaliste au 18^e siècle' (Paris: Hachette & Cie.) is a valuable contribution to the literature bearing on that period. Linguet himself is not a sympathetic personage, "a viper of the worst kind, a slanderous pamphleteer, a venal, snarling, evil-working barrister," but he was a power in his day, wielding an influence and enjoying a celebrity which have long since vanished. M. Cruppi has resurrected him and his times in a thick, closely printed book which amply repays perusal.

To those who are interested in the "Chat Noir," the "Âne Rouge," and other cabarets artistiques of that type, M. H. Valbel's 'Les Chansonniers et les cabarets artistiques' (Paris: Dentu) will be welcome. The story of each cabaret and of every composer and "artist" is told brightly and intelligently. The illustrations are apposite.

Hachette & Co. have brought out a new and revised edition of M. Ferdinand Brunetière's 'Les Époques du Théâtre-Français, 1636-1850.' The book has already been noticed in these columns, and its value is well known to every student of French literature.

That Könneke's 'Bilderatlas zur Geschichte der deutschen Nationallitteratur' has been appreciated is proved by the fact that the first edition of 6,000 copies has been for some time exhausted. The new edition, which has been appearing during the past year in *Lieferung* fashion, is improved in many respects, especially in the text accompanying the illustrations, which has been revised to date. Five hundred new pictures have been added. The whole work now contains 2,200 reproductions of the most varied kind, but all dealing in some way with the development of German literature. Particular attention has been given to the history of the drama from Roswitha down to the end of the classical period, and to the development of the theatre and stage devices. The 'Nibelungenlied' is emphasized by a specimen from every known manuscript or fragment of manuscript. Writers in other than purely literary lines are represented so far as they have been connected with literature. The gallery of authors' portraits is brought down to Sudermann and Hartmann. Facsimiles are abundant, showing the development of German script, printing, and illustration. Many of the portraits and autographs have been reproduced for the first time. The portraits of recent men are for the most part very satisfactory, but it seems as though better photographs could have been found of Heyse, Mommsen, and Scherer. In addition to the 2,200 illustrations, there are fourteen inserts with fine portraits of Luther, Hans Sachs, Goethe, Schiller, together with several colored reproductions from the Heidelberg 'Liederhandschrift.' The book is published in the large folio form (12x16 inches) of the former edition, at the low price of twenty-two

marks, or twenty-eight marks if bound. It forms an excellent companion for any history of German literature, and should be in every library that pays any attention to this subject.

If we may judge of the two volumes of Gustav Holzmüller's 'Methodisches Lehrbuch der Elementar-Mathematik' (Leipzig: Teubner) by the present one, which seems to form a sort of supplement, they must be both pleasant and profitable. Taken by itself, this third part will be very useful to those who sometimes make use of mathematics without being accomplished mathematicians. It treats in a clear, simple, and fundamental way of projective geometry, stereometry, and the calculation of moments, spherical trigonometry, algebraical analysis, and equations of higher degrees; the whole in 224 pages.

The State Department at Washington has just issued, as a Bulletin of its Bureau of Rolls and Library, an index to the calendar of the correspondence of James Madison.

The thirteenth volume of the Collections of the Wisconsin Historical Society has reached us. It is the last of a triennial series. Henceforth a new volume will appear biennially. In the present instalment long and important articles, hitherto existing only in single manuscripts, are preserved. One of these, filling more than a hundred pages, relates to the holding of Wisconsin as a conquest or field of battle after peace had been concluded at Ghent December 24, 1814. Five months after that date, the British, still ignorant of the peace, attacked an American post. Sixty pages include the log-book of a canoe voyage from Detroit through Lake Superior to the Mississippi and down it to Prairie du Chien, which in 1820 took some three months. The census of the region in a pre-Territorial era has survived with so many personal names as to furnish a precious bead-roll for local genealogists. Two other papers, however, will be of more general interest. One deals with the Belgian immigration of 1853, and its growth to 20,000 persons—a history full of romantic vicissitudes. The other is on lead-mining and shot manufacture. Lead had as much to do with the settlement of Wisconsin as codfish with the colonization of Massachusetts. Lead, too, was a potent factor in uniting the Southerners who brought slaves into mines along the Mississippi with free State men on Lake Michigan. Besides, it turned the current of transportation from the great river and New Orleans to the great lakes, the Erie Canal, and, later, the iron rivers eastward that never freeze or dry up.

The Nova Scotia Historical Society has published as volume eight of its Collections the History of Halifax City, by the late Dr. Thomas B. Akins. It is a reprint of a paper published in 1847, with much additional matter, and covers a period of about seventy years from the settlement in 1749. A treasury of facts, many of them quaint, it contains, besides the annals of the city, biographical sketches, descriptions of streets and buildings, and valuable lists of early settlers. In another volume are papers upon the voyages of the Cabots, the towns of Louisbourg and Onslow, together with an entertaining account of an early Attorney-General of the Province, R. J. Uniacke.

D. B. Updike, 6 Beacon Street, Boston (The Merrymount Press), has arranged with G. Napier & Co., Birmingham, for an American edition of the *Quest* magazine, of which a new series began with the December number of 1895. This periodical is an apostle of book-making (including illustration) in the spirit of

William Morris and the Kelmscott Press, and deserves attention from those who are interested in the movement directed by that artist Socialist, and still more in what may permanently come of it.

Biddeford, Maine, is not exactly the soil out of which one might expect a Franco-American *Figaro* to spring and blossom; but French Canadians are not unknown in Maine any more than in the rest of New England, and M. Urbain J. Ledoux issued his comic monthly in December last with an eye to support in all parts of the United States and Canada. Contributions to it, he gives notice, must be "inédites, humoristiques, et surtout morales," and there is nothing in the first number that goes counter to this standard of excellence. There is a woman's page and a children's page.

With the first of December last the Paris *Figaro* changed its form, becoming a six-page paper. The Wednesday and Saturday supplements have been suppressed, and the critical and literary articles which used to appear in them will now be found in the daily edition. Forain continues his biting series of sketches, "Doux Pays," and to him has been added Caran d'Ache as a regular Monday contributor. The *Figaro* in other ways, too, shows much improvement. M. Alphonse Daudet leads off in a feuilleton, and M. Paul Bourget follows him worthily in some admirable memories of the end of the Commune, "Pendant la Bataille." Nothing better-observed or more directly and forcibly told has been written about this often-described period. It is delightful to find M. Bourget reminding the world that he possesses qualities as a writer which he did not permit to appear in his later studies of erotic hysteria.

In his address to the students at the opening of the lectures of the faculty of letters in the Sorbonne, M. E. Lavisse spoke with enthusiasm of the new departure under which diplomas for advanced work in history and geography were for the first time given by the faculty to thirteen students in June last. He dwelt upon the important results to be expected from these independent studies in the history and geography of France, and in other fields to which the system will no doubt be extended. Already the faculty of letters have decided upon the establishment of a special library for the collection of these treatises. Another consequence of the new plan will be what amounts to a sort of university extension, in so far as it will stimulate persons outside of the regular university course in the provinces as well as in Paris, including foreign students, to special labor in lines of study in which they are interested; for, a bachelor's degree not being requisite to obtain the diploma, "il suffit de travailler." The speaker also referred to the new regulation for the examination for the master's degree (*licence ès lettres*) to be instituted this year. It consists in allowing the various faculties, within certain limits, to determine the material for examinations—to choose, *e. g.*, the authors to be submitted to candidates—whereas heretofore the programmes have been identical for all France. Add to these a third innovation, viz., greater freedom in the choice of studies for university students, and the tendency towards educational decentralization in France becomes evident.

The last word of educational reform comes from Hungary, whose Liberal ministry has issued a decree which provides for the admission of properly qualified women to the Universities of Buda Pesth and Klausenburg (founded 1872), and which duly authorizes the training of women "for the professions of teachers in as-

condary female schools, as physicians for women and children, and as dispensing druggists."

The committee of the Hebdomadal Council, Oxford, England, which is expected to report this term on the subject of university degrees for women, has received, among other favorable memorials, two from representative educational bodies, the Girls' Public School Company, whose petition was signed by 34 out of a total of 36 head-mistresses, and the Church Schools Company, 18 of whose 24 head-mistresses signed the memorial.

Non-collegiate graduate study has taken a new departure in the London School of Economics, under the joint control of the Chamber of Commerce and the Society of Arts. This school opened lately with over 200 students, men and women employed in mercantile offices, in Government and municipal civil service, and as teachers, journalists, and high-grade craftsmen. The classes are in economics, commercial and industrial law, taxation, political science, and commercial history and geography.

It appears from the Milan *Corriere della Sera* that Baccelli, Minister of Public Instruction after a long absence from official life—in the course of which he isolated the Roman Pantheon and inscribed on it in bronze letters *Agrippa fecit*—refuses to sanction the teachings of excavations made four years ago at the base of the rotunda. These revealed a marble pavement much lower than the present one, and the foundations of a rectangular temple, built by Agrippa, upon which Hadrian, more than a century afterward, erected the rotunda. There was recently exhibited at the Istituto di Belle Arti a fine array of drawings made most carefully after the excavations, and proving to a demonstration this double construction upon the swampy site of the Pantheon. But the Minister will not undo his inscription.

—Among the purely literary articles in the current number of the *Atlantic*, Miss Repplier's "Fête de Gayant" more than holds its own in style and finish of expression, while as a matter of fact her skill in the difficult art of essay-writing is a better proof of the mental power of her sex than that "vainglorious" assertion of which she again takes the opportunity to emphasize her disapproval. Dr. Birkbeck Hill's article, to which the Johnson Club supplies a title and a connecting thread, is less surely, formless, and attractive. "One of Hawthorne's Unprinted Note-Books" will probably be interesting to the general reader chiefly as an example of the ordinary material for observation out of which men of imagination have been able to make their extraordinary creations. On the practical side, John R. Proctor's "Emancipation of the Post-office" contains a clear outline of what every intelligent reader should know about the important extension of the merit system made on the 8th of November last, when the President signed the order which opens the way for inclusion within civil-service rules of the minor or fourth-class post-offices, where "the spoils system has had its greatest stronghold." "Josiah Flynt" has told before sad facts concerning the "Children of the Road," but not so systematically as here; neither has he elsewhere indicated so clearly the duty of legislation to protect the most impressionable of children from "desperadoism" thrust upon them "from the shop windows through the picture-covered dime novels and the flaring faces of the *Police Gazette*," nor so convincingly pointed out the "rare usefulness" that awaits gifted young men and women, such as now fill the

University Settlements, whenever they are ready to apply themselves to the scientific management of reformatories, where at present, under raw and untrained hands, many children take their first serious lessons in vice.

—For readers who prefer, to the study of human nature in the mass, impressions of unique individualities that distinctly detach themselves from the mass, the best pages of the January *Scribner's* will be the few in which Augustine Birrell describes the late Frederick Locker, or Locker Lampson. Mr. Locker was the possessor of a delicately accentuated personality, the mere unjarred preservation of which is an appreciable service in a dull world, and Mr. Birrell has done well in approaching him from this side, rather than from that of his considerable actual achievement as a writer of accomplished *vers de société*. Probably Mr. Locker was never seen to greater advantage than in his private library at Rowfant, Sussex, modestly exhibiting his famous collection of rare books, and Mr. Birrell will find cordial response to his sentiment, "Woe worth the day when they come to be scattered over half the town." A second paper in the number invites attention to the pleasures and dangers of tobogganing in the Engadine, where the humble local method of winter locomotion was first elevated to the dignity of a sport by the late John Addington Symonds, at Davos, in 1883. Tobogganing now ranks as an art among its votaries, with rival English and American claims to championship, and with headquarters at St. Moritz, where the remarkable "Cresta run" is a feat of skilful engineering in snow and ice. Reproductions from instantaneous photographs give a capital idea of the headlong speed with which riders make the descent of this run, while the anonymous author of the paper brings to bear on his subject every qualification that is needed to give it interest and importance. In "Water-Ways from the Ocean to the Lakes" Thomas Curtis Clarke makes conservative opposition to Government expenditure for a ship canal between the Great Lakes and the Atlantic, and presses the argument that steel barges, the electric trolley, and Niagara Falls dynamos will, with the proposed deepening to nine feet of the Erie Canal, afford all needed commercial facilities.

—An article in *Harper's* by Prof. T. R. Lounsbury exposes first the mortifying shabbiness of our educational equipment at Annapolis, and next supports the view, which in any country but our own would not be open to discussion outside the limits of a schoolboy debating club, that "it ought to be the aim of the nation to attract to the Naval Academy the very flower of its youth who are fitted by nature and inclination to enter the naval service." The reasons that make this last a practical and not an academic question are the low standard of admission and the system of apportionment by Congressional districts. The percentage of failures to pass the entrance examinations, notwithstanding their incredible disparity with those of civilian institutions, and the percentage of failures to graduate, compared likewise with the percentages of other institutions, furnish eloquent comment on the wisdom of the low standard and on the judgment of Congressmen in selecting their candidates. The writer of the article, a member of the Board of Visitors of 1895, is, however, not blind to the fact that Congress has something better to do than remedy faults in the training of youths to an important national service. Mr. and Mrs. Pennell are al-

most equally happy in their united picturing and describing of the Metropolitan and District Railways of London. Mrs. Pennell, beside giving useful statistics, remembers to sympathize with the feelings of a novice in the underground labyrinth. Her remark that "the marvel is that the artist has but just discovered the underground," may excite painful apprehensions of realistic and impressionist canvases on the walls of future exhibitions; but her own use of darkness, steam, and flaming posters, in producing a picture of the lines, is restrained and effective. Prof. Woodrow Wilson contributes a somewhat florid historical study of the making of men and manners in colonial Virginia, and William Black continues the serial "Briseis."

—Readers of an earlier number of the *Century* (the June issue) will this month be glad to be introduced again, by Thomas A. Janvier, to the company of the *Félibres*, of whom Mr. Janvier has the honor to be enrolled as one. A boatload of Provençal poets, with their colleagues in other arts, en route for their biennial festival of the Sainte-Estelle, is as frankly joyous an assemblage of returning exiles as modern life can show. In describing their journey from Lyons to Avignon, with triumphal stoppages at Tournon and Valence, Mr. Janvier falls in with the genial temper of the occasion, writing in a vivid style which proves fully adequate to the favorable auspices under which it has been his good fortune to see the banks of the Rhône. The illustrations to this article, by Louis Loeb, have both character and grace. Marion Crawford's "Kaleidoscope of Rome" is an article of the automatic type of production; while less easily turned in phrase, but probably more profitable reading, is C. G. Borchgrevink's narrative of personal adventure in skirting the antarctic continent, where a first landing was made in January, 1895, from the Norwegian whaler *Antarctic*. Commercially the expedition is pronounced a failure, but its importance in emphasizing the possibility of extended exploration, through the agency of steam, cannot yet be adequately estimated. "Responsibility among the Chinese" is a brief paper, full of data for the social student who is striving to adjust measures of individual and official responsibility. With a system of locating responsibility for public and private offences that puts our own laxness to the blush, the Chinese are nevertheless living witnesses to the suspicion and barbarous lack of mutual helpfulness that are the outcome of a rigid and unreasonable personal accountability. We commend to Southern governors striving to suppress lynching by assessing the costs on the community, the Chinese example here cited of holding the merchants of a street responsible for a theft committed upon it.

—The third volume of the Berlin *Pan* shows but little left to recommend the periodical. As an example of book-making, it fails utterly. Its ample proportions (it is a large folio) and thick paper merely emphasize this failure. There is absolutely no feeling for the beauty or the harmony of the page. Various types are used, with apparently no good reason to account for the discord they create. An occasional page is decorated—or disfigured, we might almost say—by an enclosing border that has no special relation to it, and betrays on the part of the designer a striving after the strange or the mystic or the eccentric, rather than honest decorative intention. The same tendency to be striking at any cost, the same disregard of beauty, characterizes many of the

full-page illustrations as well. Once it was the artist's game in life to do something good: now it is to devise something new, and his efforts here are undeniably irritating. Even M. Toulouse-Lautrec, in a lithograph printed in color, seems to be sacrificing the simplicity that once was the charm of his work, to the grotesque and to the self-conscious cult of ugliness. Even Knopff threatens to sink his individuality, often so delightful, in the endeavor to copy the pre-Raphaelites, whom Belgian and French writers are now busy extolling. For the contributions that have legitimate claim to artistic merit you must turn to the woodcuts after Mr. Frederick Sandys, first published in *Once a Week* and some of the other English illustrated magazines that saw their greatest days between 1860 and 1870. When the modern phenomenon is not forthcoming, giants of earlier generations are pressed into service. The reproductions of Beaudouin also have their interest, though there are few painters whose work fares less well in black-and-white. A good piece of color printing by Gerhard Munthe, really the best thing in the number, a full-page in *chiavoscuro* by Franz Naager, and an excellent head by Peter Halm should also be mentioned.

—The meeting of the American Psychological Association in Philadelphia during the holidays was a notable one, chiefly because it was the first joint meeting with the American Naturalists. The psychologists have not affiliated with the naturalists formally, but their meeting with them this year was so evidently to their advantage that it may well be their settled policy hereafter. The *rapprochement* between psychology and biology was celebrated in a special way on Saturday morning (December 28), when the whole half-day was given up to a set discussion on "Consciousness and Evolution," in which well-known speakers on both sides took part. The size of the audience and the presence of representatives from other societies showed the general interest the topic aroused. The speakers for biology were Prof. Cope of Philadelphia and Prof. Minot of Boston, and the psychologists on the programme were Prof. James of Harvard and Prof. Baldwin of Princeton. Besides these, others also spoke from the floor, notably Prof. Ladd of Yale and Prof. Strong of Chicago. In all the speeches the reality of the alliance between the two branches of inquiry was abundantly evident, and this may be made clearer from the mere statement of two positions which seemed to be assumed by the speakers generally. In the first place, there seemed to be no question in any one's mind as to the application of the evolution doctrine to consciousness. It was taken for granted that genetic psychology sets a problem of race growth in the same way that genetic or evolutionary biology does; and secondly, it was about equally clear from the utterances of the two biologists and of one, at least of the psychologists (Prof. Baldwin), that the two sciences are coming to think that their historical ground is common in all its extent, i. e., that consciousness is co-ordinate with life. Two important steps were taken by the psychologists looking toward enlarged activity. A committee was appointed to consider the matter of formulating a series of mental and physical tests to be made on students in the colleges—the idea being to secure material for practical utility to the teaching profession, and also to reach scientific results of a statistical kind. The other move was made in the direction of forming a section for philosophical discussion. This latter matter, however, was left in the hands of the exe-

cutive council for report at the next meeting. Abstracts of the proceedings, together with the debate on "Consciousness and Evolution" in full, are to appear in the *Psychological Review* for March.

—The eleventh annual meeting of the American Historical Association was held at Washington on December 26 and 27, and was attended by many representative historians and professors of history from all parts of the country. At the opening session Senator Hoar of Massachusetts, President of the Association, delivered his inaugural address. His subject was "Popular Discontent with Representative Government," and in the course of his remarks he took occasion to rebuke the tendency of some modern writers to exaggerate the weak points of American institutions and to depreciate the characters and services of the great men of the past. At the second session, on the morning of the 27th, many papers were read upon American colonial and political history, among them a scholarly monograph by Prof. W. H. Siebert of the Ohio State University, entitled "Light on the Underground Railway." The afternoon session was devoted to papers on European history, and the evening session to papers of general interest. Among the latter may be selected for special commendation the paper by Dr. Frederic Bancroft of Columbia College, on "The French in Mexico, and the Monroe Doctrine." The fact that Seward made no mention at all of the Monroe Doctrine during his correspondence with the French Government was clearly proved, and Dr. Bancroft evoked the only round of applause during the evening by his incidental remark that the Monroe Doctrine was better understood in the days of Seward than it is now. After the reading of the papers some important resolutions, having for their aim the promotion and encouragement of historical work, were submitted to the members present by the Executive Council and unanimously adopted. It was resolved to institute an Historical Manuscripts Commission for the preparation or supervision of a calendar of original manuscripts and records of national interest relating to the colonial and later history of the United States. It was voted to offer a prize of \$100 for the best monograph, based upon original investigation in history, submitted to the Council during the coming year, university dissertations excluded, and to print the five or six monographs thus submitted if of an approved degree of excellence. It was also voted to establish a gold prize-medal of the value of \$100, to be awarded at suitable intervals for the best work of research in history published in this country through the ordinary channels of publication. The proceedings closed with the election of Dr. Richard S. Storrs of Brooklyn as President of the Association for the ensuing year; of Dr. James Schouler of Boston and of Prof. George P. Fisher of Yale as Vice-Presidents; of Prof. Herbert B. Adams of Johns Hopkins University as Secretary; of Dr. Clarence W. Bowen of New York as Treasurer; and of Prof. George B. Adams of Yale, Dr. G. Brown Goode of Washington, Prof. H. Morse Stephens of Cornell, and Prof. F. J. Turner of the University of Wisconsin, as members of the Executive Council. It was resolved to hold the next meeting of the Association in New York on December 29 to 31, 1896. Advantage was taken of the meeting of the Association to call together the guarantors of the new *American Historical Review*, when entire satisfaction was expressed with the work already done, and the former board of editors was re-

elected. As upon previous occasions, the social side of the meeting was most successful. The Cosmos Club of Washington extended the privileges of membership to the visitors, and much pleasant intercourse took place within its hospitable walls between the historical students from all parts of the United States who had the good fortune to be present at the eleventh annual meeting of the American Historical Association.

—An almost unexampled sight in literature, and surely one of the strangest and saddest, is the publication of the posthumous works of a living man. This is being shown to the world by Naumann, the Leipzig publisher, who has just sent out the first two volumes of the works of Friedrich Nietzsche, 'Schriften und Einwürfe (1869-1876).' The tragic story of Nietzsche's long agony has been told lately by M. Téodor de Wyzewa in the *Temps*. Seven years ago he began to be affected by a general paralysis. He was at first sent to a *maison de santé*, but afterward was taken back to his paternal home, where he has been cared for by his mother and sister. Little by little his mind and even his reason have faded out, and he has sunk beneath the level of the lower animals. Until lately, although he had become dumb and all thought was extinct in him, still he was able to walk about, and to sit at table, and when his name was spoken he would sometimes look up. Now the last ray of intelligence is gone, and what was once one of the keenest and strongest philosophic minds of our day is *merum silentium*. A group of his admirers and disciples have gathered in the little city where he still breathes, and are devoting themselves to the pious work of maintaining and spreading abroad his fame. Under the direction of his sister, Mrs. Elisabeth Förster, they have founded at Naumburg a sort of academy, or institute, the Archives-Nietzsche, where they occupy themselves in collecting, arranging, and publishing all the papers left by their unhappy master; in watching over the republication of his books; and in gathering materials for a complete and definitive biography of him. The two volumes the title of which has just been given are the first fruits of their work—two great volumes of five hundred pages each, where are to be found gathered together and put in chronological order fragments of unfinished works, sketches, and notes that date from the first years of the sojourn of Nietzsche at the University of Bale. It is a pious work, certainly, that these ardent disciples are engaged in, and a pathetic work—none the less pathetic, perhaps, when one reflects how much wood and hay and stubble they must be gathering up together with the grains of Nietzsche's gold.

ROBERT LOUIS STEVENSON.

The Novels, Travels, Essays, and Poems of Robert Louis Stevenson. Thistle Edition. In sixteen volumes. New York: Scribners. 1895.

THE appearance of two sumptuous editions of Stevenson's collected works in a single year brings up the inevitable inquiry, How many of these volumes will live? To "appreciate," as the phrase goes now, a writer of one's own time is undoubtedly, in most cases, to store up merit for the time to come. Still, the question is pertinacious and may reckon on getting its answers, hit or miss. Without addressing ourselves to it directly, we shall perhaps do well, in a rapid review of some points in Stevenson's literary activity, to keep it in mind

as a steady influence. Some such check is needful, apparently, in discussing Stevenson, not only because he is in himself so attractive as a writer and as a man, but because everybody is so grateful to him for leading his generation away from the aridities of "realism." Admiration and gratitude are his just due, but they have of late been uttered in a somewhat dithyrambic measure.

In two characters has Stevenson endeared himself to his contemporaries—as a romancer and (*sic venia verbi*) as an egotist. In his rôle of amiable egotist (not *Montaigne* egotist, however, if the reader please) he has given us an account of a matter closely connected with the question of his literary permanence—we refer to the formation of his style. From this account, frank with something of a doctrinaire's candor, we learn that this artful and exquisite diction, which some do not scruple to say has evoked new harmonies from our language, was in inception and elaboration essentially bookish. It was formed by a long process of tentative imitations, each abandoned when it had served its turn, but all, of course, leaving their traces on the finished product. We learn, also, from later and casual utterances, that expression remained to the last with Stevenson the conscious, almost the self-conscious, practice of a complicated handicraft. To the last he felt keen pleasure in the clever collocation of syllables, in point, in the quaint or unusual turning of a phrase, in felicitous jingle (it is his own word, so that we need not ask pardon for it). "I am discontented with 'The Ebb Tide,'" he wrote to Mr. Colvin, "there seems such a veil of words over it; and I like more and more naked writing; and yet sometimes one has a longing for full color and there comes the veil again." In judging this whole matter it would be stupid not to reckon with the Stevensonian irony; it would be doubly stupid to forget that the most mannered of styles may be or may have become the natural vehicle for the expression of a quaint but unaffected nature. But, when all deductions have been made on these heads, thus much remains indubitable: the style of Stevenson was as truly a *mode* style as the style of Spenser, and it carries, in many of his works, as distinct characters of its making. *Poseur* has odious connotations, and besides it says more than one can possibly mean; but, if some such term could be so sublimated as to lose its drossy and offensive qualities, it might serve us here. Better, perhaps, to take refuge in the delicate reticence of a phrase of Mr. Colvin's—"a slender, boyish presence, with a graceful, somewhat fantastic bearing, and a singular power and attraction in the eyes and smile." Written of Stevenson's personal appearance in youth, the words admit of easy transference to the style of almost everything of his that preceded 'Treasure Island.'

Fond as we may be of the travels and essays that Stevenson wrote before he reached this turning-point in his career, we are forced to admit that they are 'prentice-work after all. The three American volumes, 'The Amateur Emigrant,' 'Across the Plains,' and 'The Silverado Squatters,' are interesting as autobiography, but the most ardent worshipper of Stevenson will hardly claim a place for them in literature. 'The Inland Voyage' (1878), with all its beauties, is manifestly labored, and has too much immature moralizing about nothing in particular. 'The Travels with a Donkey' (1879) has been described as "charmingly vagabondish"; but vagabonds do not post up their note-books at each day's end. "For my part," says the donkey's master, "I

travel not to go anywhere, but to go. I travel for travel's sake. The great affair is to move; to feel the needs and hitches of our life more nearly, to come down off this feather-bed of civilization and find the globe granite under foot and strewn with cutting flints." But the landlady at Bouchet knew better, for she sketched what the traveller was to put into his book when he got home: "Whether people harvest or not in such or such a place; if there were forests; studies of manners; what, for example, I and the master of the house say to you; the beauties of Nature, and all that." A keen-eyed hostess, who understood the young writer a thought better, perhaps, than he understood himself.

'*Virginibus Puerisque*' (1874-1879) is clever to distraction, but self-conscious altogether. The *advocatus juventutis* may command, for a time, the delighted attention of all who are not past five and twenty, whether in fact or heart; but, without upholding the old paradox that "youth can be comely but by pardon," we must admit, however reluctantly, that the author was right in his judgment of these papers. The point of view is maintained with some effort; the interest is ephemeral; the style is completely enjoyable by those only who have a fancy for the smell of the lamp. Of similarly transient interest are the early critical and biographical essays that make up a large part of the volume of 'Familiar Portraits.' Stevenson was both too impulsive and too ethical to be a great critic, nor had he in any degree the judicial temper. Besides, all criticism except the greatest is a very transitory form of writing.

If these early works live, it must be by virtue of the amiable personality which they reveal, and in this regard they have a powerful rival in the familiar letters. These, so far as they have been published, promise to express that personality without the veil of lamp-haze—perfumed or not—which shrouds (however faintly) the essays and travels.

Is it not significant that, in Stevenson's last period, when he was fully committed to the exercise of his genius in its truest activity, he found sketches of travel impossible? His friends had hoped, we are told, for such an account of what they called his *Odyssey* in Polynesia as should reproduce, in terms of his greater maturity, the charm of the 'Inland Voyage.' But the 'South Sea Letters' turned out mere journalism, with which neither he nor they were contented. Yet out of this hopeless struggle to write in a manner long outlived and hardly worth recovering, came of a sudden and almost without reflection what is, in spite of one or two obvious defects, almost as good a story as ever was written—'The Beach of Falesá.' It is not hard to see what this means. Sketch-book travels were mere training. The business of Stevenson's life was romance. And when he was once engaged in the business of his life, he could not turn back and play the clever apprentice. This was as it should have been, and nothing is made for the honor of a great genius by insisting on the eternal quality of his juvenile attempts.

As the 'Travels' and 'Virginibus Puerisque' were but essays of an apprentice, so also of the tales written in this preparatory time—the collection called 'The New Arabian Nights' (1878), 'The Pavilion on the Links' (1880), and 'The Story of a Lie' (1879). In 'The New Arabian Nights' Stevenson plays with incidents and characters as in 'Virginibus Puerisque' and the 'Travels' he played with style and moral reflections and scenery. One does not feel that the story is the thing—it is rather the clever-

ness of the story that is the thing; and, though the cleverness is unsurpassable, it never rises into imagination. The characters, with one or perhaps two exceptions, are marionettes—as Stevenson himself felt them to be—and the scenery is bizarre. We are dealing with the sportive athletics of a great romantic talent as yet undeveloped. 'The Pavilion on the Links' comes nearer to serious art, especially in the portion that precedes the arrival of the *Carbonari*, but the motive of the tale is strained and the dénouement ill-managed. As for 'The Story of a Lie,' it is a sketch of no great consequence, written in a style as nearly faultless as is vouchsafed to man, but with a rather clumsily precipitated catastrophe. The provincial editor who is forced into the part of *deus ex machina* reminds one, by his mechanical fashion of playing it, of the Scotch uncle in 'The Wrecker,' who dies in the nick of time, and of the opportune but unaccountable blackamoor in 'The Merry Men.' We are not sure that the theatrical Attwood in 'The Ebb Tide' has not associations with the same troop of amateurs, though his characterization shows all the power of Stevenson's later manner. The tiresome Secundra Dass in 'The Master of Ballantrae' is certainly a runaway from the same company.

In 'Treasure Island,' then, Stevenson had at last got into the true path of his genius, and no critic can perceive this more clearly than he perceived it himself. Here for the first time his style ceased to bear the marks of artificiality, gaining enormously in vigor without losing anything of its subtle charm. Here for the first time he showed that he could treat the incidents of a story seriously—otherwise, that is to say, than as the squibs and fireworks of a pretty wit. Nothing could have been more fortunate than the circumstances under which 'Treasure Island' was produced. It was meant for boys, and the hero, who speaks in the first person, is himself a boy. Now boys are singularly and even unreasonably intolerant of posturing or "manner." Without affectation themselves, they are satanically keen in detecting it in others. Even fitting cleverness, unless "craftily qualified," appears to them, in their sturdy barbarism, a highly suspicious trait, and verbal cleverness is downright unbearable. A wholesome control was thus exercised over the style of the romance. Again, the tale had to depend for its main interest on bare incident, and this requisite not only acted salutarily on the style, but kept down Stevenson's innate tendency to moralizing and to playing with character delineation. And, finally, no freakishness of incident was admissible. Verisimilitude is rigorously demanded by a boy—above all in such weighty concerns as pirates and hidden treasure. These subjects are not to be handled with levity; there must be no suspicion of a wink at the audience. All this Stevenson knew as well as anybody, for he comprehended a boy's nature thoroughly; indeed, in some things he never ceased to be a boy himself, albeit a boy "with a graceful and somewhat fantastic bearing." Besides, there was his dramatic sense—the instinct of putting himself in the place of his characters. There was also the presence of the elder Stevenson, who made the tale so real that he insisted on drawing up the inventory of Bones's estate in the sea-chest—a very salutary presence indeed.

For all these reasons the book wrote itself easily—"it flowed from me like small talk"; and, looking back on his exploit after twenty years, the author hardly perceived that the

question of style had entered into its composition. Henceforward, apparently, the coast was clear. That exquisite diction, so easily beguiled into airy quaintness when the author chose to write about trifles, that almost uncanny skill in the technique of narration which had often betrayed him into mere fantasia, had only to be kept under the control imposed by the requirements of a long story. Almost the perfection of art in both respects was reached in 'Kidnapped' (1886). The tale is nearly as good as a tale can be, and the style seems so inevitable that we are staggered to remember what years of elaborating toil it had cost. Still, the time between 'Treasure Island' and 'Kidnapped' was a period of uncertainty. 'Prince Otto' (1885), despite its intangible charm, could not be taken seriously. It reverted to the admirable fooling of 'The New Arabian Nights,' nor is the mention of Prince Florizel of Bohemia without significance. Stevenson himself says that the book was "half play." 'The Dynamiter' (1883) is a frank return to extravaganza. 'The Black Arrow' (1883) is mere task-work, Stevenson's one flat failure: the trouble was that he had no real comprehension or enjoyment of the period with which the book deals.

'Dr. Jekyll and Mr. Hyde,' despite the unifying effect of its strong and serious art, bears unmistakable testimony to what we have vaguely called the uncertainty of this middle period. The book is at once an apologue, a wonder-story, and a genuine romantic fiction of a high type. Fables are out of fashion, and we should prefer, therefore, to call 'Dr. Jekyll' a psychological fiction; but this would be mere juggling with names. 'Markheim' is openly an apologue, and 'Dr. Jekyll' carries as patent and intentional a moral as 'Markheim.' The curiously comparative might even construct a form of proportion with the nineteenth century and 'Dr. Jekyll' on one side and on the other the eighteenth century and 'The Vision of Mirzah.' The plot itself combines extravaganza with serious romance. In those parts in which the work is genuine and impressive, 'Dr. Jekyll' marks a high state of Stevenson's romantic power. The weak point, at once detected by the critics, is a mere bit of fantastic detail, worked into the inmost structure of the fiction. We refer to the chemical hocus-pocus—a desperate expedient, not quite consistently carried out. The fact is, the author was in difficulties much like those which beset him in 'The Beach of Falesá.' For the latter he had conceived, in a flash, while at work in the Samoan bush, a plot requiring a large concession to the supernatural, but the reality of his characters and the verity of the romantic principles that he wished to follow forbade his cutting the knot of the story in this fashion. After some delay and a moment of real despair, he hit upon a simple device. He kept the supernatural, but reduced it to a complicated course of knavish trickery on the part of the villain of the piece. This was probably well, for the genuine supernatural would be intolerable in 'The Beach,' and, in any case, the *élan* of the narrative hurries one over the dangerous place. In 'Dr. Jekyll,' however, no such device was possible. The transformation had to be a fact; and accordingly the impossible was dared. The trick of "transcendental medicine" was perhaps the only trick that would do the business, but it was a poor trick. Jekyll changing into Hyde in his sleep, he knows not how, is terrific; Jekyll taking the draught is not even impressive. One wishes that the means of the transformation had been left unexplained. But this

was not Stevenson's way. He is habitually complaisant to the reader who "wants to know"—witness the epilogue to 'Prince Otto,' in which the history of the characters is drained to the very tea-dregs. In spite of this single weakness, however, 'Dr. Jekyll' remains unsurpassed in its kind. Its popularity is unequivocal, but we doubt if most readers care much for the chemicals.

With the appearance of 'Kidnapped' the uncertain time was over. The history of Stevenson's activity between 1881 and 1896 had made it clear that his permanent contribution to literature was not to be criticism, or vagabondizing, or fantasias in style or in narration—these were but the small talk of his genius—but serious romantic fiction of a high imaginative type. His own views, as expressed in "A Gossip on Romance" and "A Humble Remonstrance," form a sound Romantic creed, and he brought to his task a style which no English novelist has surpassed. It is superfluous to insist on the merits of 'Kidnapped.' With its sequel or second part, 'David Balfour' (1889), it is undoubtedly Stevenson's best book, and much of his inferior work will "live with the eternity of its fame." The second part suffers a little from the usual malady of continuations, but it has its own peculiar merits, too. The author, who had for the most part a pretty correct idea of the comparative excellence of his writings, wrote, not long before he died: "I believe the two together make up much the best of my work and perhaps of what is in me." The temptation to compare the adventures of David with some of the Waverley Novels is hard to resist; but the utility of such a comparison is not apparent. So far as it has been attempted, the result seems to be merely that Stevenson reached a kind of perfection in detail for which Scott never strove, and that, in addition, some scenes and characters in Stevenson are not unworthy of the great master, but that in those indefinable qualities which we vaguely suggest by the words "breadth" and "greatness" Scott still stands without a rival. The fact is, the hour for such a parallel has not yet come. By the middle of the next century, men may perhaps look at both writers from a sufficient distance of time to measure their comparative eminence. At present, Scott's supremacy in romantic fiction appears to be almost as unassailable as Shakspeare's supremacy in dramatic poetry. It is not sufficient, however, to observe that Stevenson withholds his hand from great historical characters. This seems to be a rather artificial test of power, nor is it certain that Stevenson would not have succeeded as well with such characters as with his David or his Alan Breck, to say nothing of Prestongrange or Cluny Macpherson. True, his work fell off after the appearance of 'Kidnapped'; but this, too, is not decisive of what he might have done if he had lived. It must not be forgotten that 'David Balfour' and 'The Beach of Falesá,' which are hardly inferior to 'Kidnapped,' were written shortly before his death, and that he left behind him the unfinished 'Weir of Hermiston,' which Mr. Colvin rates very highly.

The stories that followed 'Kidnapped' and preceded 'David Balfour' did undeniably show some falling off. 'The Master of Ballantrae' is not uniformly good. Up to the moment when the old lord is awakened by Mac-kellar to hear the news of the duel, the tale is not surpassed in power by any other of Stevenson's romances. But this duel is the climax of the tale. The resuscitation at the end is a false climax. The Master has returned from parts unknown too often—so often as to

suggest trivial comparisons—and, at the end, in spite of the art with which the closing scene is written, the thought intrudes itself that, after all, the chief point is the perversity of the Master, who is determined to come back to his reluctant family, even from the grave. The whole of this second part is a recurrence to the fantastic. The Master working as a butcher reminds one of Prince Florizel behind the counter of the cigar-divan, and there are other points of contact between these essentially incongruous characters. The story should have ended with the duel, even if it had remained a fragment. In this way we should also have been rid of Secundra Dass, about whose genuineness we have our suspicions; certainly he was but an amateur at the fakir's trick of burying a man alive.

'The Wrecker' (1891) and 'The Ebb Tide' (1893) are closely associated, not only by the coöperation of Mr. Lloyd Osbourne in both, but by certain painful resemblances. Both are powerfully interesting, but both give the impression of misapplied strength. 'The Wrecker' is by no means a unit, and the reader feels some indignation at being forced to sympathize with the crew of murderers who are the heroes of the main adventure. Carthew, with all he had on his conscience, need not have selected the commercial Topelius for special favor. As for 'The Ebb Tide,' it is just what Stevenson once called it—"a rancid yarn," with perhaps the worst ending that ever a story had.

Of the rest of Stevenson's works we need not speak. His verses entitle him to rank among the minor poets; the Samoan book, the 'Memoir of Fleeming Jenkin,' and the plays written with Mr. Henley consumed precious time which posterity will begrudge. "I am not a novelist alone," said Stevenson in his account of the writing of 'Treasure Island.' "But I am well aware that my paymaster, the great public, regards what else I have written with indifference, if not aversion." The language was too strong, but it had its basis of truth. It was as a novelist (or romancer) alone that his really great work was done, and it was in that capacity that the world was looking eagerly for still greater works from his pen when his sudden death came as a calamity to our letters and a personal loss to thousands who knew the man only in his books.

The present edition consists of sixteen volumes—eleven for the novels and tales, four for the essays, and one for the poems: 'Samoa,' 'Fleeming Jenkin,' and the dramas are excluded. In mechanical execution it is a model to publishers. The volumes are light and easy to hold; the paper is fine, dead-white, and opaque; the typography (by De Vinne) is admirable, the types being well designed and thick enough in their lines to give an effect of blackness and distinctness very agreeable to tired eyes. Each volume has a frontispiece in photogravure or etching. That prefixed to vol. xiii. is a copy of an excellent photograph of the author by Notman. Of the others, Mr. Pyrie's illustration of Alan Breck's defence of the cabin is particularly spirited. We could wish that the concluding volume contained a list of the original dates of publication, since these are not, as in the Edinburgh edition, given at the head of each separate work. The cloth binding is rather profusely gilded, but that is a detail easily remedied. The edition is sold only by subscription, and the price is remarkably low.

LORD ACTON.

A Lecture on the Study of History, delivered at Cambridge June 11, 1895. By Lord Acton, LL.D., D.C.L., Regius Professor of Modern History. Macmillan. Pp. 142.

THE newly appointed Regius Professor of Modern History in the University of Cambridge is one of the most interesting figures in English society. The old Catholic gentry of England have honorable and pathetic traditions of loyalty to a lost cause which give them a place apart from the humdrum conformities of neighboring squires; and from such a family in Shropshire is Lord Acton descended. When the time came, these Catholic gentry were faithful, from interest and sentiment, to that other lost cause, the Stuart monarchy; and it was from Charles I. that an ancestor of Lord Acton received his baronetcy. And to these family memories have been added others equally remote from the commonplace. His grandfather was prime minister and commander-in-chief of the forces of Naples under the Bonapartes; his father married the heiress of that Duke of Dalberg who thrived on the favor of the first Napoleon, acted as his go-between with the court of Vienna, and abandoned him with the turn of the tide; his cousins have been generals and ministers, or have married generals and ministers, for the last half-century of Italian history.

Out of such a family one might look either for a *début* or a diplomat. That Lord Acton is neither, must be ascribed to the fortunate chance or wise choice which brought him in his early years under the influence and into the companionship of Dr. Döllinger, then at the height of his reputation at Munich. Döllinger's teaching made of him a scholar and a liberal, and it is said to have been Lord Acton who organized the opposition in Rome and Germany in 1870 to the acceptance of 'papal infallibility' by the Vatican Council; and when his friend Mr. Gladstone—from whom he had received his peerage in 1869—attacked somewhat later "the Vatican decrees," Lord Acton boldly placed himself by his side. He has remained within the Roman communion; the strength of family tradition has probably kept him from joining in the heroic but hopeless Old Catholic movement, but his intellectual attitude towards the church of his fathers on the one hand, and, on the other, towards the world of free historical investigation in which he habitually lives, has continued to present a curious psychological enigma. As Browning makes one of his shrewdest characters remark,

"Our interest's on the dangerous edge of things";

and Lord Acton draws to himself the same sort of curious attention as Mr. Mivart.

Lord Acton had long been known for his exhaustive acquaintance with historical literature when, in 1896, he contributed the opening article, on "German Schools of History," to the first number of the *English Historical Review*. Of that unique piece of work—those thirty-six pages of brilliant characterization and comment, bristling with epigram, caviare to the vulgar alike from their all-pervading allusiveness and a style as of a George Meredith turned historian—this only need be said here, that it is perhaps the only magazine article that has ever served as a justification for appointment to a chair in a great university. When in 1894 the filling of Sir John Seeley's chair became the task of her Majesty's Government, it was not unnatural that, if Mr. Gladstone hinted at Lord Acton's willingness to accept the honor, Earl Rosebery should feel

a certain gratitude towards one of the scanty band of home-rule peers. But those who cared for historical scholarship rather than for historical pedagogy recognized that a choice had been made which was not likely to do discredit to the reputation of Cambridge.

And now Lord Acton's inaugural address is before us. Considering what difficulties have arisen with the Church of Rome in many a university over the teaching of history, considering that a Roman Catholic was here stepping into the only professorship of modern history in a university still almost completely Protestant, there was abundant occasion for curiosity. The impression produced was, in many quarters, one of mystification and bewilderment. At first reading—and few will give more than a first reading—there seems no clear pronouncement on anything. Many of the paragraphs, and still more of the separate sentences, look as if they had no connection with what precede or follow; and the London *Times* confessed solemnly that to some passages it could assign no probable interpretation. Moreover, when a proposition does, apparently, stare us in the face, it is a mere commonplace—say other critics. But any one who had considered Lord Acton's career and his essay of 1886 might have anticipated that he would be careful—to use a convenient colloquialism—not "to give himself away"; that he would see both aspects of every question, and try to express them at the same time; and that the expressing of them in sentences packed with thought and unassisted by connecting particles would not make easy reading.

It is, however, after all, not so very hard, on a second reading, to catch the drift of the discourse. After distinguishing "modern" history from "contemporary," and claiming a broader field for history than mere politics, for "Politics and history are interwoven, but not commensurate" (p. 5), he argues that modern history is clearly distinguished from mediæval by that sudden "forward movement" which initiated modern progress towards liberty of thought and action. Modern history is intensely interesting because it "touches us so nearly" (p. 74), and affects our vital interests—first among them Religion (p. 21). "Whatever a man's notions of these later centuries are, such, in the main, the man himself will be. Under the name of History, they cover the articles of his philosophic, his religious, and his political creed" (p. 73). Religion, furthermore, has played a great positive part in relation to "the significant and central feature of the historic cycle before us"—"the progress of the world towards self-government" (p. 27). For, "but for the strength afforded by the religious motive in the seventeenth century," that progress would have been arrested. Lord Acton fails not to give a passing word to those who refuse to see progress in increasing liberty; but his own opinion is clear enough. The constancy of progress is the tribute of modern history to the theory of Providence (p. 28); it is "the action of Christ who is risen" (p. 31). After showing how the modern Historical Movement arose "directly and indirectly, by development and reaction" (p. 36), from the storm of the French Revolution, he describes the characteristics of "the present order of things" in historical writing—the use of original sources, the application of criticism, and the dogma of impartiality; and this leads up to a criticism of the method of Ranke, "the representative of the age which instituted the modern study of history," and "taught it to be critical, to be colorless, and to be new"

(p. 48). He ends with a powerful and even touching appeal to the men before him not to yield to the modern temptation to identify explanation with justification. "The weight of opinion is against me when I exhort you never to debase the moral currency or to lower the standard of rectitude, but to try others by the final maxim that governs your own lives, and to suffer no man and no cause to escape the undying penalty which history has the power to inflict on wrong" (p. 63).

These, then, are the "commonplaces" of Lord Acton's address: That liberty, on the whole, means progress; that in the past, as in the present, black is black and white white. Is it objected that the only significance in the first proposition lies in its coming from a Roman Catholic? Surely it is something that a man of sixty years, one who has seen "many men and cities," one who is bound by strong ties to the past, and who knows all that can be said of the seamy side of modern life, should thus confirm the faith that we indolently suppose ourselves to hold. And as to the second, no one who has immersed himself in historical literature will refuse to recognize the grave dangers which do in sober earnest beset our moral judgment.

Lord Acton is not, so far as we are aware, an original investigator; he is contented to read and ponder with all the shrewdness of a man of affairs and of the world, over the historical works of others; and he is as far as possible removed from the popular lecturer or entertaining essayist. But there is certainly need of men of his type; and if he does not exactly stimulate Cambridge undergraduates either to begin to read or to begin to make research, he will probably, to those who have already made some way with reading and research, be a wise counsellor and a helpful critic.

SHALER'S DOMESTICATED ANIMALS.

Domesticated Animals: Their Relation to Man and to his Advancement in Civilization. By Nathaniel Southgate Shaler. New York: Charles Scribner's Sons. 1895. Large 8vo, pp. xii, 267, many illustrations.

ALL who know how well Prof. Shaler can write on a wide range of topics, and especially those who were interested in his sketches of animals lately to be read in *Scribner's Magazine*, will be glad that these have been gathered in a convenient volume, with some additions—notably of two concluding chapters, on the Rights of Animals and the Problem of Domestication. These latter sum up the author's case in its ethical and ethnological aspects; they accentuate the general tenor of his humane discourse, which is sympathetic without a trace of mere sentimentalism, and written in a large way, with keen discernment of animal nature, and full sense of the responsibility assumed by man in bending or breaking the will of animals to his own. In these chapters particularly, but throughout the work, as the author says, "an effort is made to direct attention to the importance of the problem of man's relation to the lower life which is about him, and which in the future far more than in the past is to be helped or hindered by his rule. Our life is made up of large problems; but there seem few that are greater than this, which concerns our duty by the creatures which share with us the blessings of existence, and over which we have come to rule." Prof. Shaler is far from confining himself to mere zoological facts, or even to simply æsthetic or utilitarian consideration of the pleasure or profit man derives from this association; from his scientific and philo-

sophic standpoint, it will "enlarge our conceptions of our own place in the order of this world."

The several essays are at high-water mark of popular natural history, as distinguished from what is popular because it is unnatural and non-historical. It is nothing like a "history of my pets" or a collection of staple "anecdotes." Every one of us perceives intuitively the close relation of animal instincts to our own, and draws those comparisons which, however flattering to our own intellectual supremacy, credit beasts, birds, and the rest of our "poor relations" with certain human traits. Under wise and kindly treatment, the kinship can be made to serve high moral purposes, besides affording endless entertainment and instruction; we come to understand ourselves better when we see ourselves in the side-lights which the brute creation affords. Thus fables of the right sort, which invest the lower animals with human traits, put them in human environment, and make them think, talk, and act as we should under the same circumstances, are legitimate fiction of the utmost interest and positive value—say La Fontaine's for instance, or those commonly ascribed to Æsop, or any of the legends of sound zoölogical folk lore. It is probably not too much to say for Prof. Shaler, that he does in sober prose, on the basis of actual fact, and in strictly scientific method, what the wit and wisdom of some other philosophers have accomplished by appealing to the imagination to enlist our sympathies and improve our acquaintance with our fellow-creatures.

Perhaps the last word, "fellow-creatures," strikes the keynote of the book. The author's own sense of fellowship makes him kindly, reasonable, and impartial in estimating animal traits, and he is too good a naturalist not to show great discernment and penetration. We have seldom seen animals so fairly treated, and have never known them to be more reliably characterized, either in their own natural dispositions or in the artificial modifications which a few of them have undergone through domestication or other contact with the human species. As a consequence of bringing sound judgment and intimate knowledge to bear upon the case, our traditional snap-judgments are in many instances shown to be wrong, despite the core of truth they may and generally do contain. Shaler's decisions regarding relative sagacity, docility, or other evidences of mental development in animals, are marked by acute insight. The dog and the cat he leaves *in statu quo*, about as they are rated by consensus of opinion; but he puts many things in a clearer light than usual. For example, everybody knows the attachment of dogs for persons and of cats for places; but he traces this back to the fact that the wild canines are gregarious, and roam in packs to hunt their prey, while the felines lurk in solitary lairs. The horse goes down several pegs in his estimation of general intelligence, as compared with public opinion, and rightly so. The merit of the horse is more in his hoof than in his head; and in tracing the evolution of this animal organism from the Eocene the well-trained paleontologist is at his best. Other beasts of burden, and all those which come under the head of flocks and herds, go below the horse—pretty near to the foot of the class. But the mule finds, as everybody who understands a mule knows that it should find, not only the apologist for paternal ancestry, but the eulogist of the spindle side of the equine house. The mule is a shining light, better than either its sire or

its dam; it has the virtues of both and the vices of neither, happily blended with personal peculiarities of its own. Almost the only "anecdote" in the book is the mule story, and that is simply irresistible—we wish we had space to tell it.

The pig comes off handsomely in Prof. Shaler's court of equity; he is much more than a pork factory—he is a stalwart Democrat, with strong socialistic tendencies, some decided altruism, and a quickwittedness which removes the stock stories of "learned pigs" from the domain of fiction into the fold of sober fact. We expected to find the author fortifying his judgment in this case from the peccary, and he might have scored a point there; but perhaps his case is good enough as it stands. The camel is abused for the hateful beast he is, with a saving clause for the gastric arrangement which mainly determines his peculiarly limited usefulness. As for the "noblest Roman of them all," the elephant, *palmam qui meruit ferat*; for strength of mind and body that noble animal stands at the head of all those which man has made to subserve his own purposes. The case of the elephant is all the more remarkable in that, as the author points out, he has never been domesticated, in the usual sense of the term. The elephant is so long-lived, so slow in attaining maturity, and numerically so infrequent, that almost all the individuals man has ever used have been caught wild. The whole training of the species has thus been a series of fresh experiments with wild brutes, which in one lifetime can be brought to display a degree of intelligence beyond that shown by any other animals after uncounted generations have been subjected to educational influences. The mental equipment of the elephant would, therefore, seem to be a natural gift; and it is one of a high order, to be properly called intellectual. This animal has positively a Promethean touch; he reflects and reasons; he adapts means to ends understandingly, devises rational expedients in emergencies, shows forethought, makes fine discriminations, has a sound memory, and on the whole is more of a man than any other brute. His average intellectuality is surpassed only by the exceptional attainments of the porcine prodigies; and here it is interesting to note that these two pachyderms of the Cuvierian classification have actually closer zoölogical affinities than those subsisting between some of the other domesticated animals.

Birds are not so fully treated as mammals, though the author has many pleasant things to say of poultry, and points out some interesting facts not generally appreciated at their true value; what he says of falconry is particularly to the point. In the nature of the case, we have no dominion to speak of over reptiles and fishes; both may be subdued, even tamed and to some little extent taught, but their living world remains apart from ours. Insects sustain a peculiar relation to man. Their numerical disproportion to all other forms of animal life is inestimably enormous; more than three-fourths of the technical species of animals are insects, and probably we know but a relatively small fraction of all that exist, while their individual numbers are practically inconceivable, like the distances of the fixed stars or the multitudes in the milky way. Yet these myriads, in their relations to man, are, almost without exception, either neutral, or annoying, or noxious. Practically, the bee and the silkworm are the only ones we have reduced to some sort of domestication; cochineal and cantharides are useful; but if we add to these four, which the author treats, a very few others, which make wax or are eaten by

some people, we come about to the end of the direct utility of the insect world to man, and the question of purpose in such cases as those of flies, fleas, lice, mosquitoes, and the like ranges itself alongside the standard problem of the origin of evil in the universe.

We have left ourselves no room to do more than mention one important thing which runs through this notable book, and that is the plasticity of animal organization which domestication brings into such strong light. This, it will be remembered, was the corner-stone of the whole evolutionary edifice which Darwin reared when he first raised the question of the origin of species. Prof. Shaler handles it ably, and goes a step further in showing how our association with animals reacts upon ourselves to modify human nature appreciably. This is interesting as an abstract scientific study; but it assumes also an ethical aspect when viewed in all its bearings, and becomes distinctly a moral question of grave import, under the author's handling in the chapter on the rights of animals. We have said enough to show that this book is one to which we may give not only an easily held attention, but also some very serious reflection; for it is written with a noble purpose.

The type is large and the lines are heavily leaded, yielding a very open page, suitable for eyes whose owners have passed from the merely observant to the reflective age; and the illustrations are numerous and effective.

The Riviera, Ancient and Modern. By Charles Lenthéric, Ingénieur-en-chef des Ponts et Chaussées. Translated by Charles West, M.D. With maps and plans. London: T. Fisher Unwin; New York: G. P. Putnam's Sons. 1895. Pp. x, 464.

THIS work, under the title of 'La Provence Maritime Ancienne et Moderne,' has been before the world for fifteen years, and the other two by the same author, 'Les Villes Mortes du Golfe de Lyon' and 'La Grèce et l'Orient en Provence,' for a still longer period. They are for the French Mediterranean coast something what Lenormant's 'La Grande Grèce' is for the coast of Southern Italy: they hold up to you enticing pictures of a new and beautiful world to be seen, and then furnish you with all sorts of knowledge toward the proper enjoyment of it. M. Lenthéric is perhaps not an archæologist of the force of the lamented Lenormant, but he is enough of one to rectify the exuberances of some of his brethren, and to make sound use of monuments, inscriptions, and documents. He tells more about Ligurians, Phœnicians, Greeks, Romans, and Saracens than about the people who have succeeded them; the special office of the book is to connect the past with the present, and to make the two live together upon the same scene. Many later writers, says Dr. West, have helped themselves out of M. Lenthéric's pages, but while they may have bettered their own state, they have in no way diminished his riches.

In the days of the Empire, the hills about Cannes and Nice were covered with Roman villas, as to-day they are with those of all the world; and from the time of the Roman conquest of Gaul, along the coast to Marseilles, there were both naval stations and harbors of refuge. These especially are the points about which the author gathers everything that can be learned from documents, ancient ruins or inscriptions, noting also the changes that have accrued from alluvial deposits or otherwise.

From Marseilles to Toulon this coast is almost unknown to travellers, and but little even

to Frenchmen. For most of the way the railroad keeps at a distance from the sea, and the good harbors, of which there are several, are consequently neglected by commerce. The ship-building yards of the Messageries Maritimes suffice to make an important place of Ciotat, but that is all. And yet, under Roman rule, and earlier under Greeks and Phœnicians, these waters were animated by the sails not only of war galleys, but also of merchantmen, of the fishing craft, and of the coral divers. Along the land are traces of towns, camps, castles, where now perhaps is some decayed village. The ruins of Tauroentum, to which M. Lenthéric gives a chapter, are to day in part half-buried in a waste of land, in part covered by the waters of the Gulf of Lèques. In the year 49 B. C. a battle took place here between the fleets of Cæsar and Pompey, wherein that of the latter was discomfited, and the fate of Southern Gaul (the "provincia," or Provence) decided. The archaeologist now has to fight with the shifting dunes in order to lay bare temporarily the scant remains of that time. A few huts at a distance (the nearest village is more than a mile inland) are all that look upon what, for Phœnicians, Greeks, and Romans, was one of the best anchorages off this coast.

In the parts left one side by the railway, there is much that, independent of history or archaeology, is worth knowing and seeing. Between Marseilles and Ciotat there is a stretch of limestone cliffs, indented by lonely gulfs running deep into the land—a region that, but for its sun and vegetation, might be Norwegian, but is utterly dissimilar to any Southern coast. Then among the wooded granite slopes of the Mountains of the Moors are nooks where the date-palm ripens its fruit as in Africa, though no enterprising physician has as yet tried to establish there a new *station d'hiver*. The flora of the Estérel, the vigorous bits of landscape here and there, an occasional tradition or the survival of pagan customs and beliefs in the Christian practice of to-day, all are noted; the book is, in short, an admirable companion for the visitor to these shores.

From Cannes to the Italian frontier, the *Côtes d'Azur*, the *Rives d'Or*, of the Parisian, the pleasure-ground of all the world, is a region so well known that it would seem that nothing remains to be told of it. In despite of pilferers, however, M. Lenthéric has still something of interest to tell us about the Lérins, or of Nice and Cimiez, or of La Turbie. The fourteenth division of the last chapter in the book may be recommended as an absolutely unique account of the way that Monaco gains its living. The satire is so light that one may almost doubt if it exists at all; in any case, the simple statement of facts is a sufficient irony. How could it be otherwise when you start from the Monegasque saying,

"Son Monaco sopra un scoglio,
Non semino e non raccoglio,
E pur mangiar voglio!"

—neatly translated by Dr. West: "I am Monaco on a rock by the shore; I neither sow nor reap, but all the same I mean to eat."

The present slightly octavo is an improvement on the dumpy duodecimo of the French edition, and secures the advantages of larger print and more convenient reference for the maps. In the original these are generally across the volume, and any one who has experience of the tightness of ordinary French bindings will at once perceive that it cannot be always easy to see the middle of the map. Then, too, Dr. West's index is an improvement on that of M.

Lenthéric. As for the translation, it must be called, on the whole, a very good one. One may say that the translator wears his coat as if it were his own, and not borrowed; and one may add that he has here and there adapted it to himself. One or two examples will suffice to show how this has been done:

"In those days the two headlands, the Cape of Ceuta and that of Gibraltar, were joined together and then formed part of the same mountain chain, and the sea was then a lake" (p. 6).

The words in italics may be called a patch of new stuff added to the original garment.

"The absolute good taste of this crowding together of orange groves, of clumps of olives, and of palms may perhaps be a little questionable; but all the same it goes on year by year, and one is scarcely inclined to criticise this assemblage of all that is bright and beautiful, the result of which is so charming" (p. 345).

That is an audacious patch: this is how it was in the beginning:

"... les bois d'orangers, les massifs de palmiers et d'aloës enchevêtrés dans un pêle-mêle confus et d'un goût peut-être douteux, mais dont l'accumulation désordonnée et l'exubérante richesse suivent depuis près d'un demi-siècle une progression rapide jusqu'ici non interrompue" (p. 403).

One might suspect the translator of having a garden of the sort here described, and not having the heart to repeat words that might seem in its dispraise. He might take courage from the number of those who keep him company: on the Riviera we all sin in the same way.

There is in the translation of the preface a case of adaptation still more amusing; but, as it is too long for quoting here, we leave any one who has sufficient curiosity to look it up for himself. The best of translations is never faultless, but this one is so good that it is decidedly not worth while to note the rare slips that diligent comparison has discovered. Two only call for remark: "C'est qu'en effet aucun pays au monde ne possède un climat comparable à celui de Cannes." This is translated: "There can be no doubt but that Cannes possesses a climate," etc. The not very elegant formula in italics is used over and over again to represent various French locutions. It ends by exasperating. It may be noted, in passing, as to the statement about the climate of Cannes, that M. Lenthéric may well have dared to make it fifteen years ago, when there were but five or six Riviera towns to contest it. But to day?

Dr. West's worst blunder is in the title he has chosen. The book concerns the coast of Provence; the last chapter in it alone treats of the Riviera, which is properly the Genoese coast from Monaco to Porto Venere (Spezia). Foreigners nowadays talk of the Riviera loosely as including Nice and Cannes—which for them, and socially speaking, it may; but no one pretends to call the region from Cannes to Marseilles the Riviera. Dr. West's title may, from a commercial point of view, be held as more inviting, but a book of the value of this does not need pushing by claptrap devices.

In a Walled Garden. By Bessie Rayner Bell. Macmillan & Co. 1895.

READERS of George Eliot's 'Life' will perhaps remember that she had a friend Bessie Parkes, afterwards Madame Belloc, who was loyal to her through all the changes of her domestic life, and they will thus identify the author of this volume of somewhat random sketches and studies. It takes its name from a garden which has freshened and faded for

two centuries and more, close to the remains of an Elizabethan cottage, and hard by a church whose foundation stone was laid by St. Anselm. Such a place is naturally haunted, and, in a brief introductory chapter, Madame Belloc describes a ghostly procession that she saw walking there, making less than we should expect of a good opportunity. Nor does her next chapter, "Dorothea Casaubon and George Eliot," do much better, considering the writer's advantages. She met George Eliot first in 1850, and received the last letter that she ever wrote, but she does not tell us much about her. What she does is to connect 'Middlemarch' with Coventry in a pleasant way, find Dorothea's situation unreal in 1828, and touch the relations of Mr. and Mrs. Lewes in a manner that has not much illumination. Madame Belloc is a Roman Catholic "pervert," and says, "Surely only those who hold the sacramental view of marriage would have any right to condemn her"—a way of putting things rather common to the region of ecclesiastical amenities. "It would be unjust to judge her by a Christian law which she repudiated." But what confounds her is that Miss Evans worshipped Lewes, and she even prophesies disclosures which will prove him to have been unworthy of her trust and love.

"Joseph Priestley in Domestic Life" is quite the most interesting and important chapter in the book. It has seldom, if ever, been the fortune of Priestley to be treated in this genial manner. His personality for most people is as evasive as his own oxygen. When the Birmingham statue of Priestley was erected in 1874, the writer's mother, "who was born in Pennsylvania, was probably the only person living in England who could recall him." Some tie of blood between her and her subject is suggested by this and other passages, but the suggestion is not definitely confirmed. The estimate of Priestley is, for a Roman Catholic writer, very sympathetic. Evidently he joined a beautiful piety to his mechanical theology. Another good subject is "Mary Howitt," and still another, "The Montagus and Proctors," but the treatment of Mrs. Proctor, the wife of Barry Cornwall, is strangely disappointing in view of her reputation for the most brilliant and eccentric conversation. An unpublished letter of Lowell's, which was much more to the point, is recalled by this chapter. "A Chapter of War" gives us an inside view of Paris during the German siege and occupation. "Dr. Manning at Bayswater" affords a few glimpses of the Cardinal at different stages of his career subsequent to his secession from the Anglicans. The first impressions were not agreeable. "He spoke with the most measured, chilly calmness." But he comforted our author with the story that after his first Roman communion he said, "Now my career is ended." "But where I once worked on an acre," he added, "I now work on a square mile." Nothing is said about his most characteristic and successful work—his pushing for the declaration of infallibility. That his name "was literally unheard of in public for ten years after his secession," is certainly an exaggeration. The breadth and sympathy of Madame Belloc's dealings with religious opinions and sentiments different from her own are exceptionally beautiful. For Catherine Booth of the Salvation Army she has the warmest word of all.

Methods of Mind Training: Concentrated Attention and Memory. By Catherine Aiken. New York: Harpers. 1895.

A SOMEWHAT striking little book, this. The

author proposes that of each school day twenty minutes at the outset should be sacrificed to attention-gymnastics—in other words, to inducing the most intensely vigorous effort, under stimulation of active rivalry. She trains her scholars at remembering columns of numbers, a blackboard-full of shapes nearly alike yet all different, etc., seen for three seconds. The whole thing must be recalled seven minutes later in all its details. She trains them to recite verbatim, after seven or ten minutes, a whole page of prose read to them a single time, having first trained them in a method for doing this. One example that she gives, from 'Tom Brown at Rugby,' is very loose and rambling prose, almost as bad as, "So she went into the garden to cut cabbages." Some are the most inane extracts from the Court Journal, and still more nauseating stuff about New York society, paragraphs about meetings in country towns, with a lot of names of supreme mediocrity, price lists, etc. Then mixed with these are superb pieces of prose and verse. She compares the proceeding to opening the day with dumb-bell exercise. Something like this has been practised before, but here are elementary methods fully set forth, and others will suggest themselves. If teachers will only put them into practice, not fearing to expose their own stupidity, but keeping before their minds the beneficent results to be attained, they will assuredly do something to "make the next age better for the last."

Let us add that Miss Aiken quotes an excellent passage from Ribot's little book on attention, and that she incidentally leads us to believe that, in the remainder of the school hours, she is guided by an intelligent use of the principles of scientific psychology upon which effective teaching must be founded.

Some Ancient English Homes and their Associations, Personal, Archaeological, and Historical. By Elizabeth Hodges. Illustrated by S. J. Loxton. London: T. Fisher Unwin; New York: G. P. Putnam's Sons. 1895.

NINE essays make up this volume, of which the first is devoted to the two mansions of Wotton-under-Edge and Bradley Court; the first a large house which has been almost wholly destroyed, and the second a small country house half a mile distant from Wotton, and not of special importance. Another chapter deals with two houses—Kingsbury Hall, near Birmingham, and Hurley Hall, not far from Kingsbury, and connected with it in the family history. These two buildings are good examples of the very small English manor-house common in central England. In each case the house is described in a sketchy way, with but brief mention of details which seem interesting if one could know more of them. In each case, also, a single slight drawing explains the general character of the structure. The other chapters treat each of one manor-house or castle. The only illustration which gives anything interesting about the general design of the house is that of Little Sodbury at page 193, but there are several slight drawings of staircases, gateways, and the like which are attractive. In each case we get a rather informal account of family history and of family traditions, including ghost-stories, in preference to any architectural study. Being what it is, and being simply written, the book is as entertaining as one need wish, and one who reads it with care will have added a good deal to his sense of historical verity. The modern school of historians are inclined to reject archaeology, but the

historical student who makes excursions into archaeology will certainly understand his history the better for it.

Science and Art Drawing: Complete Geometrical Course, consisting of Plane and Solid Geometry, Orthographic and Geometric Projection, Projection of Shadows, the Principles of Map Projection, Graphic Arithmetic, and Graphic Statics. By J. Humphrey Spanton. Macmillan. 1895.

THE idea of teaching geometry to draughtsmen while their pencils are in their hands is in itself an excellent one, and, were it only well carried out, would seduce them into real mathematical thinking before they knew it. Moreover, some of the subjects here treated bear such stamps of the great geometers who established their theories as it would require a mind of more ingenuity than Mr. Spanton's to obliterate. Descriptive geometry and graphical statics, let the teacher do his worst, cannot but inculcate some genuine mathematics. With map projection it is different. The whole subject has never been very well treated, except by Herz, whose work is probably unknown to Mr. Spanton; and to call the few items here given "Principles" is ridiculous. The chapters on Elementary Metrical Geometry could not well be worse than they are. Thus, for the construction of a regular heptagon, three different methods are given. For one of these, the information is vouchsafed that it is not mathematically exact. That the problem itself is insoluble by rule and compass, the author, though a gold-medallist, does not seem to suspect. The Pythagorean proposition, to say nothing of such theorems as the 35th of the 3d Book of Euclid, will be sought in vain. The problems that are solved rightly are often solved clumsily. Let us say to the young draughtsman, If you want to be a master of your art, take the trouble to study geometry. You will be terribly handicapped in problems upon which bread and butter depend if you content yourself with any such smattering as this book affords.

The Soil: Its Nature, Relations, and Fundamental Principles of Management. By F. H. King, Professor of Agricultural Physics in the University of Wisconsin. Macmillan & Co. 1895.

WITHIN the compass of about three hundred pages, Prof. King has brought together a vast amount of important and interesting information regarding the origin and behavior of soils. With a right sense of perspective, he has dealt fairly with the older as well as with the very latest results of research, and has arranged all his facts in a convenient manner. The marvellous relations which soils sustain to water and the atmosphere, to the lowest and the highest forms of vegetable life, and, indirectly, to all animal life, are dealt with in an attractive way.

A few of the engravings cannot be truthfully called illustrations, for they themselves require to be explained. For instance, in the figure designed to show "the work of the common earthworm during a single night after a heavy rain," there is a picture of a good hunting-case watch lying on the disturbed surface of the ground. In close proximity to the watch the soil is rather less disturbed than at a little distance, perhaps to be interpreted that the earthworms were more or less frightened by the ticking of the watch; but it is unlikely that a watch would be left out over night in a heavy

rain. It is probably inserted to show the size of the earthworm casts. Other cuts which leave much to be desired are those which attempt to show the distribution of roots. It is possible that some of the obscurity of the cuts comes from the reduction in size by a photographic process. Aside from these engravings and two bits of good poetry which are rather out of place, the book can be heartily praised. Examination of it will ensure a comprehensive view of the present condition of its many-sided subject.

The Nation.

NEW YORK, THURSDAY, JANUARY 16, 1896

The Week.

Two or three weeks ago a number of bankers in this city were invited separately to the office of one of them, and asked the question how much money they could withdraw from their ordinary business and invest in Government bonds for the purpose of avoiding a suspension of specie payments. Each one was told that it was a matter of life and death, and that, unless the requisite amount was made up, they and their customers and the Government would all go to financial smash together. They all knew this before they went to the rendezvous. Accordingly each one of them made a statement of the amount he could take and pay for. Soon afterwards the understanding was reduced to writing and signed, but it was not an agreement in law because the terms of the subscription were not settled, and because the other party, the Government of the United States, had not assented to it. It was binding in honor only, and would remain so as long as the necessity which gave birth to it continued. If the necessity should cease for any reason, the members would be released. If, for example, the gold reserve of the Treasury should increase as it did a few years ago without bond-selling, or if other persons, either foreign or domestic subscribers, should come forward and take the loan, the members of the syndicate would be released.

By reason of the preponderance of blatherskites in the newspaper press and in Congress, the public were induced to believe that those bankers, instead of being hauled up to this agreement, and forced to sign it by necessity, were eager to get the bonds. The transition from this view to that of highway robbery was easy and natural. By copious blackguardism the public, or the unthinking portion of it, were led to consider these men in the light of public enemies, simply and solely because they were willing to lend the Government the money to tide it over a crisis. And now we are told from day to day that the syndicate is dissolved, or is about to dissolve, in obedience to public disapprobation of its cormorant propensity to grab all the Government bonds in sight and to prevent the poor man from getting any, whereas in truth there is nothing to dissolve. The only thing that ever existed was the willingness to subscribe. That exists still. It exists not by virtue of a signed paper, but by virtue of the needs of the Government.

The lightning transformation of the "popular loan" from a miserable failure

on Thursday into an enormous success on Monday is one of the most remarkable events in financial, and also in journalistic, history. The intention was, of course, to have the bonds taken up by the plain people, in denominations of \$50, so that banks, plutocrats, corporations, syndicates, and especially foreigners, should get none of the enormous profits. For some days the subscriptions dragged, and it began to look as if Wall Street had us again. But the strong and patriotic appeals to the plain people at last told, and they began to bring out their hard-won savings. First a life-insurance company emptied its stocking and offered to put its little accumulations, laid up against a rainy day, into bonds to the amount of \$10,000,000. Two other small investors in the same business heard of the \$50 bonds in reach of the poorest, and fished out of their old clothes and worn pocket-books enough to take (only "estimated," however) \$15,000,000. Banks, suddenly transmuted from cormorants and sharks into "the people," offered to take \$15,000,000 more. Even German bankers, by the most sudden sea change on record, figure in the patriotic list of toiling and thrifty Americans, putting their little all at the disposal of the Government, to the amount of \$40,000,000. Borne away by the infectious enthusiasm and love of country, plain people like Mr. Russell Sage have now come forward to make this issue of bonds to the simple, honest Poor Richards of the land a great success, and to complete the confusion of all syndicates and blood-suckers. The boasted thrift of the French peasantry is nothing to this. What French peasant ever ripped open his mattress and brought out \$3,000,000, as did our Jacques Bonhomme, Mr. Sage?

The Republican scheme for raising more revenue by increasing tariff rates, and thus diminishing imports and the duties collected thereon at present, hangs fire. Speaker Reed carried the bill through the House with ease, and Senator Quay concluded that it would be "good politics" for the Republicans in the upper branch to concur. A resolution declaring that the finance committee should report the bill to the Senate as it passed the House was readily accepted by the Republican caucus on Wednesday week, and the managers began congratulating themselves on having solved a difficult problem so quickly. But it soon appeared that the decision of the question rested with a man who no longer accepts the decrees of Republican caucuses as binding. Senator Jones of Nevada holds the balance of power in the committee, and Senator Jones is nowadays a Populist, who thinks that raw sugar should share in the increase of 15 per cent, provided in other

schedules. The Republican Senators generally are said to believe that Mr. Jones will finally relent and act with them. This is by no means impossible, but it is safe to predict that the Nevada Senator will insist that the relenting shall not all be on one side. If the silver men must yield something to the high-tariff men, they will demand something in return.

It is good news that many of the Republican Senators from the silver States are resolved to make a straight-out fight for free coinage. Mr. Teller of Colorado told the caucus last week that he proposed to assist in placing a free-coinage amendment on the pending tariff bill, and on every future tariff bill, until such a measure should become a law. He declared that it was his intention to endeavor to have such an amendment placed on a tariff bill in the next Congress if the Republicans should control both branches of Congress and the executive. If the other Republican silver Senators sustain Mr. Teller in this position now and during the next six months, the Republican national convention will hardly be able to "dodge" the issue. It is on every account earnestly to be desired that the party shall make up its mind "where it is at," and take a firm stand on the silver question. If the sound-money men are inclined to be disingenuous, the soft-money men will render a public service by pushing the fight until they force a decision.

The apparently official announcement that the English Government will publish, even in advance of the meeting of Parliament, all the documents in their possession bearing on the Venezuelan dispute, removes the last doubt that the outcome of the whole affair will be peaceful. Those of our dogs of war who are not already muzzled can work off their superfluous valor by taunting Salisbury with "backing down," and thus prepare themselves for the question, which they will soon be indignantly asking, "What has become of the crazy fools who were talking about the possibility of a war with England?" What the English case will prove to be, no man knows in advance except Lodge, and he, of course, knows that it will be worthless. He astutely pointed out long ago that the President's message had carelessly left a possibility of peace in the admission that Great Britain and Venezuela might compose their differences amicably, without our interference; and now he and the Senate committee on foreign affairs are trying to turn out a form of the Monroe Doctrine which will insure to us and our posterity the blessings of countless wars. They admit, however, that they are sorely handicapped by the President's blun-

der in not making war inevitable while he was about it. This, with Salisbury's craven offer of all the documents in the case, makes the outlook for senatorial warriors most discouraging. The wonder with many minds will be why it never occurred to Mr. Olney to ask for the evidence which the English are now going to submit without being asked. He might have had it at any time for the asking. He might himself have appointed an investigating committee, paid them out of the secret fund at his disposal, and avoided all the fanfaronade and clap-trap. Why did he not? The only rational answer is that his letter, the message, and the pretence of war were for politics only.

The Venezuela dispute did not reach an acute stage until the beginning of July, 1895. It was on the 20th of that month that Mr. Olney wrote his despatch to Lord Salisbury asserting the sovereignty of the United States over the whole of this continent, and so forth. It is a curious fact that the grant to the Manoa Company, which had been declared void in 1886, was renewed on the 17th of June, 1895, just thirty-two days before Mr. Olney's despatch was written. The latest prospectus of the company records this fact. The eastern boundary of the grant of land is described as a line running from a point where the Imataca Mountain range touches the limit of British Guiana, and "from this limit and along it, toward the north, to the shore of the Atlantic Ocean." This limit being the very point in dispute between Great Britain and Venezuela, the tracing of it was undertaken by the Manoa Company itself, with the result of carrying its operations a long distance beyond the boundary claimed by Great Britain. In fact, the present Venezuelan Commission is expected to determine, so far as we are concerned, the very question which the Manoa Company determined for itself in 1885 by occupying the disputed territory. The correspondence between our Government and that of Venezuela shows that the latter pressed us very strenuously about that time (1885) to induce Great Britain to consent to arbitration of the boundary dispute, but only in case the United States should be the arbitrator. No other kind of arbitration was ever proposed by her. Mr. Bayard was then Secretary of State, and he replied that we could not push our services as arbitrator upon Great Britain, nor act as such unless requested by both parties. Then the Venezuelan authorities, apparently finding the Manoa Company of no service in a political way, declared its charter forfeited (September 8, 1886), and did not renew it until they fancied that there was a prospect of embroiling our Government in the dispute. If this fancy turns out to be a miscalculation, the Manoa grant will probably be declared void again. It is as easy to upset a land

grant in Venezuela as it is to upset a government, and nothing is easier than that.

Recent Venezuelan despatches put in a charming light the kind of government this country is asked to go to war to extend over 40,000 British subjects. There is a revolution going on, of course—there always is; that is the way all elections are held and Presidents chosen in Venezuela. But President Crespo, who himself got his office by a revolution, has issued a decree affirming that this revolution is particularly heinous on account of pending international complications; that it is, in fact, treason, and that all persons caught in it will be shot out of hand. Eminent lawyers in Carácas say the decree is illegal. This will make it Crespo's painful duty to shoot the eminent lawyers, too. The jails are already overflowing with political prisoners, and the school-buildings are now being used as prisons. This will not check the great work of Venezuelan education, as the students are all enlisting for the war, anyhow. An awful suspicion is abroad that the "illustrious American," Guzman Blanco, is in England arranging a little treaty of his own, with his pockets full of British gold. This report was a hard blow to the patriots, who are usually in the fix of the Georgia free-silver patriot, certain that "we've got the gold-bugs down unless they buy us up." But a shrewd counter-stroke was made by asserting that the \$100,000,000 in gold which the United States are now trying to borrow was all to be passed on to Venezuela to aid her in her war against England. This aroused tremendous enthusiasm for "the immortal Monroe"; and "the busts of Washington, Monroe, Cleveland, and Bolivar were entwined with rare flowers." And yet there are those who say that republics are ungrateful!

Senator Morgan is clearly of the opinion that the Monroe Doctrine can be extended over the Transvaal, otherwise his resolution expressing "the satisfaction of the United States at the successful stand of the Boer Government," and "directing President Cleveland to transmit a message to this effect to the President of the Transvaal Republic," has no cause of being. The *Tribune* asks anxiously whether Great Britain "will resent this," but we really think there is no cause for alarm. She must be "on to" Morgan by this time, for he has been roaring at her steadily now for many years. The only persons who are likely to be distressed by this latest outbreak are Lodge and Chandler, who will be alarmed lest Morgan get ahead of them as haters of England and apostles of the doctrine of "the immortal Monroe." Morgan has a great advantage over the latter, for he is a member of the committee on foreign relations, and can thus have his own resolutions considered seriously and possibly reported.

Major Ricarde-Seaver writes in the last *Fortnightly* forecasting the course of events in the Transvaal. What he predicts is that the patience of the 40,000 Uitlanders will soon be exhausted; that there will soon be a hostile demonstration against the Boer Government; that "Paul Krüger and his Hollander friends" will be "sent to enjoy themselves on the banks of the Amstel" (Amsterdam), and then will come in a new régime. He quotes from a late speech of a progressive Boer in the Volksraad to the effect that the Uitlanders have built Johannesburg, which in a few years will contain 150,000 inhabitants; that they pay three-quarters of the taxes; that they cannot be naturalized, nor their children, under fourteen years of residence, and that the settlement of their claims has been relegated to a convention to be held in 1905. Major Ricarde-Seaver adds that a "few Hollanders and Germans at Pretoria lead Krüger, while Krüger leads his Dopper Boer population, and 'owns' their representatives in Parliament." It is plain from all this that an armed attempt at revolution has been running in the Uitlander head for some time, and that Dr. Jameson was not called on unexpectedly to go to the assistance of the Johannesburgers.

Gov. Morton's appointment of George P. Lord as a member of the State Civil-Service Commission is shockingly bad. Not only is Lord an unfit man for the place, but, in order to get him into it, the Governor forced out Mr. McKinstry, a faithful and efficient Commissioner, who has performed valuable service in abolishing political influences from the public service of the State. Lord, whose chief backer is Senator Raines, and who is a thoroughgoing Platt spoilsman, will use all his powers as Commissioner to undo the work which his predecessor and his associates have performed. It is said that the Governor has appointed him in accordance with a political "deal" which has for its object the control of the commission by Platt; and whether this be so or not, there is no question that this will be the outcome, unless the Governor shall decide upon recalling Lord's name from the Senate. Unless he does recall it, it will be impossible to treat seriously his professions of sympathy with civil-service reform. He already has a Platt editor on the commission, and if he persists in putting a Platt politician there with him, leaving Col. Burt in a hopeless minority of one, he will turn the service of the State over to Platt's mercy with all that this implies.

Judge Barrett's special-jury bill, which is now before the Legislature, ought not to be allowed to fail of passage. No measure has ever gone to Albany which can be more properly described as the outcome of experience and the product of expert ability than this. It was drawn by Judges Barrett, Ingraham, and Beekman, and is

designed to remedy defects in our jury system which their experience has shown to exist. Its primary object is to give us competent juries for the trial of accused persons whose performances have become, either through political or other associations, a matter of great notoriety. As Judge Barrett says, the experience in our courts with the recent police cases is a striking illustration of the need of the new system. Not only was a conviction obtained with great difficulty, but the time consumed in the successive trials congested the courts and entailed great expense upon the city. So discouraging was the result of the McLaughlin trials that the other police indictments were dismissed. The consequence of this was very demoralizing, both upon the police force and upon the public mind, for it gave the impression that little had been accomplished by the Lexow inquiry towards real reform in police matters. This result was only too typical of what has happened repeatedly in other cases; and unless something is done to prevent such outcomes in future, we must, as Judge Barrett says, face the fact that criminal justice in this country is a failure. The Legislature, we are sorry to say, is not a body which is likely to pass a measure of this sort of its own free will. There is nothing in the measure for "politics," and the Platt-Tammany combine which is in control at Albany has no interest in pure justice. The Bar Association should take the leadership in pushing the bill through, and in arousing such public sentiment in its support that the Legislature will not dare to refuse its passage.

The appointment of Dr. John S. Billings, now rector of the Department of Hygiene in the Pennsylvania University, as librarian of the new consolidated libraries in New York, has been formally confirmed, and its importance for the new enterprise cannot be overrated. Not only is Dr. Billings's fame as a medical man world-wide—he has been loaded with foreign scientific honors—but he has done one of the most remarkable pieces of cataloguing ever known, in making the Index Medicus and the Catalogue of the Surgeon-General's Library at Washington. The Index Medicus is, in fact, a marvel of skill, industry, and accuracy. His genius is specially shown in his capacity for organization—that is, forgetting the right men for particular work. He has valuable gifts in other ways than cataloguing—his knowledge of books, his experience in collecting, his knowledge of building—and they all tend towards making him singularly fit for the place he is taking. The selection of the librarian was the crucial point in the consolidation scheme. The wrong man would have deprived it of half of its value. With Dr. Billings its success is assured.

Lloyd Lowndes, the new Republican Governor of Maryland, makes a good start.

In his inaugural address he takes pains to acknowledge that he could not have been elected but for the support of many independents, and declares that "while I shall try to do my duty towards my party, I shall also remember I am the Governor of the whole people of Maryland, and as such give all due consideration." This, of course, is only a general statement, but he was specific also. Under the Gorman machine the appointing power of the Governor in Maryland has been increased to an extent equalled in no other State, so that there is an immense number of "plums" for a Republican Governor to deal out. But Mr. Lowndes comes out in favor of restoring to the people the right of selecting public officers "wherever it can be done with due regard for public interest, this being in harmony with our theory of government and a safeguard against centralization of political power in the hands of the Governor." He also declares against anything like a "clean sweep." While admitting that some of the State officials should give way to those more closely allied in principle to the party in power, he holds that "we should heed the demand for civil-service reform, and extend, wherever practicable in this State and its principal cities, the merit system of appointments to office." He discusses the use of money at elections, which he says is increasing in Maryland so rapidly as to demand the especial attention of the new Legislature. "Our election laws," he says, "should be amended and so framed as to insure to the people absolutely fair registration; to guarantee to every voter the inestimable privilege of casting his vote with the right to have that vote honestly counted, and to secure to the people honest machinery of elections without any advantage to the party in power"; "violations of these laws should be clearly defined, the method of proof facilitated, and prompt and severe punishment should follow conviction." Altogether, Gov. Lowndes talks like a really independent man, and in Congress twenty years ago showed that he could live up to independent principles when the pinch came.

Texas Populists have made what is to them a saddening discovery, that there are alleged evils or discriminations in railroad transportation rates which even the State Railroad Commission cannot remedy. The Populist mind cannot comprehend why freight rates should not be uniform per mile, regardless of the length of the haul. A through rate from Waco to Boston for 85 cents, against 59 cents from Waco to Houston, they denounce as an unjust discrimination, and the Texas Commissioners echo the opinion. But when it is learned that the Commission itself has made the rate for the 500 miles from Gainesville to Houston the same as the rate for the 140 miles from Cameron to Houston, the Populists wonder whether they have gained anything by the

adoption of a constitutional amendment providing for the election of Commissioners by the people. As the Commissioners are Democrats, it is felt to be incumbent upon the Democratic party to defend or explain their acts, lest converts be made to the Populist plank of State ownership of railroads. The task is a difficult one, for complaints come from all quarters of the State. Southern Pacific alleged discrimination against south Texas ports is matched by alleged discriminations against Dallas and common points in north Texas by the Gould and other lines, and at Austin there is a bunching of lawsuits and investigations involving the rights of the railroads and the powers of the Railroad Commission. Out of it all may come, the Texas Democrats hope, an educational influence on the Texas rural mind, to change the conception of what constitutes wrong in railroad charges, and the equally fallacious conception of what a Railroad Commission is constituted to do.

Pope Leo's appeal to Christendom for union with the Catholic Church did not meet with the warmest response from the Protestant world, but for absolutely chilly reading one should turn to the reply of the Holy Catholic and Apostolical Orthodox Church of the East. A translation of the encyclical letter on the subject sent out by the Patriarchs, all of them "loving brothers in Christ and well-wishers," has just been published, and certainly shows that the Greeks are still ready to prove their doctrine orthodox by apostolic blows and knocks. The Bishop of Rome is sternly exhorted by them to "shake off, once and for all time, the many and diverse innovations which, contrary to the Gospel, have been stealthily introduced into the Church." Until he is prepared to do that, and to abide, in company with the Orthodox Church, "by the divine apostolic traditions and by the rules of the first nine centuries of Christianity," all his "proposals of reunion are vain and empty words." The document is a long one, and filled with vigorous argumentation to show the Pope's "manifest contradiction with himself," his "side-retreat and admission," etc. The Patriarchs make a square offer to leave the question to arbitration, as it were, asserting their readiness to submit to Rome if she can prove her doctrines "out of the teaching of the Fathers and of the divinely assembled Ecumenical Councils." They close with an exposure of the "vain device of the Bishop of Rome" in pretending to refer them to "original sources," intimating that they know a thing or two themselves about original sources. All told, the Pope's sincere and praiseworthy efforts to bring about the reunion of Christendom have resulted in nothing except a strong reaffirmation by each division of its willingness to unite with all the others whenever they wish to surrender unconditionally to it.

AMERICAN HATRED OF ENGLAND.

No one who has taken the trouble during the present crisis to look into the Jingo mind, can have failed to find, behind all irritation about the Monroe Doctrine or the Venezuelan boundary, a deep hatred of England and a strong desire to do her some kind of harm. As the same feeling is very rife in other countries—France and Germany, for instance—it is worth while to examine its nature and causes.

It is not difficult to account for it in Europe. No nation there quite likes the men of any other nation. International hates or dislikes are the natural result of 500 years of wars, carried on until very recently with great atrocity, about boundaries, about titles, or for mere glory, or to preserve "the balance of power." Then differences of manners, of standards of morality, and of religion, and trade jealousies, help to keep alive the old prejudices arising out of these wars. It is only ninety years since Nelson taught his middies to "fear God, honor the King, and hate Frenchmen," as the whole duty of young Englishmen.

The great increase in intercourse between England and the Continent has done a good deal to allay these antipathies, but it has supplied other causes of English unpopularity, notably a more extensive contact with English manners. That these are good, even the warmest admirers of England will not venture to assert. They have for a century played a leading part among the sources of Anglo-phobia. The most provocative feature in them is the English habit of ignoring strangers in places where people are brought into close contact, such as cafés, restaurants, hotels, and public conveyances. In all such places few foreigners ever fail to acknowledge the presence of others, not as either gentle or simple, but as human beings. The foreigner either bows, or speaks, or indicates by tones or looks or behavior of some sort that he is conscious of the presence of fellow-men. Englishmen are very apt, on the other hand, to affect absolute ignorance that they are not completely alone. By keeping a close watch on them they may often be caught taking a peep at you, by way of curiosity, but they instantly avert their gaze as if taken *en flagrant délit* in a low act, like reading private letters. All this, to a Frenchman or Italian or South German, is very galling or irritating. It is partly due to shyness, but also, partly, to the English fear of making undesirable acquaintances; or, to put it differently, to an Englishman's assumption of superiority to everybody whom he does not know. To this must be added an undeniable superiority to the mass of Continentals in the matter of personal cleanliness and comfort. Of this matter the English have for a century made a careful study, and foreigners of the upper class widely imitate it, but it enrages a great many of the other kind when forced by English travellers on their notice,

The English differ, too, from the Continentals in this, that their code of manners makes no provision at all for strangers. That is, it does not "run," as the conveyancers say, with the individual himself, but with his acquaintances. An Englishman does not know how to behave to you till he knows who you are. He owes nothing to himself in his way of treating you. To a Continental, on the other hand, his manners are part of his personal equipment, like his gloves or his cane. An Austrian or French gentleman is extremely polite to every one he meets, as something due to himself. He behaves this way because this is the way gentlemen ought to behave. The Englishman, on the other hand, considers only what the stranger is entitled to in the way of consideration, and what this is he cannot tell till he finds out who he is, and in the meantime he treats him with no consideration at all.

Most of these observations, however, will hardly apply to the American dislike of England, for America has the same language, and, if not the same religion, the same religious ideas; and, if not wholly of the same race, thinks she is, and has had only one short war with England since the beginning of the century. Wars, too, which are carried on between peoples 3,000 miles apart do not breed the intense hates excited by an enemy on one's own borders. Then Americans have but very slight familiarity with English travellers. Comparatively very few visit this country, and they are apt to be a picked class who come over to marry our rich girls. While, too, our commerce with England is enormous, we have little or no commercial rivalry with her, because the protectionist policy which has prevailed for the past thirty years has substantially withdrawn us from the great foreign markets, or at all events, has caused us to treat them as undesirable objects of search.

The usual answer a Jingo makes to inquiry as to the cause of his desire to fight England, is that she is "grabbing" and "insolent." There is a certain truth in both these charges. But her "grabbing" since 1815 has been, in general, of barbarous countries, as in India and Egypt, or of savage countries, as in Africa. In all these cases it has resulted in the covering with law and justice and security of vast populations who have for ages known nothing of these blessings. What is of more importance for the purpose of this discussion is, that she has grabbed no territory to the benefits of which she has not admitted all nations on an equal footing. She has not in recent times attempted to apply to any of her possessions the old theory that colonies exist for the benefit of the mother country. Trade and protection are offered in them all on equal terms to Americans as well as to Englishmen. In every one of them the American enjoys all the rights and privileges which would be given him by American dominion. A British conquest is

substantially an American conquest without the expense and worry. Moreover, nothing has been "grabbed" from America. There is, and has been, no boundary dispute which has not been settled amicably. The British in Canada have been peaceable and unobjectionable neighbors. Any unpleasantnesses that have occurred have been caused by tariffs, and have been easily adjusted by retaliation. The newspapers occasionally interchange incivilities, but they have always been recognized as strictly "journalistic," and therefore harmless. So that it is hardly possible to find in the "grabbing" charge a real *casus belli*—that is, one of the motives which make men wish to kill their enemies, destroy their property, and fill their land with mourning.

We think it likely that if the secrets of all hearts were known, the hostility to England would be found in the sort of ambition with which our immense material development has filled so many people, and which makes even writers like Capt. Mahan call for a Gibraltar or Malta of our own, and for "keys" in all sorts of out-of-the-way places by sea and land. The revelation which has come to us since the rebellion of the extent of our resources has spread the idea that, to be a great nation, as Great Britain is admitted to be, we must have a large number of outlying dependencies and a very big navy as she has. These things seem to thousands, if not millions, the only visible signs of national success, like the rich man's furniture and "costly mansions." The jealousy of Great Britain expresses itself, therefore, in the eager expectation of every Jingo, when he is going to seize something himself, that England will come forward and try to take it from him. It will have been observed that for a long time past every politician who was advising annexation or acquisition of any place, has confidently predicted that, if we did not take it, England would surely do so.

The "insolence" complained of has not been shown in diplomatic correspondence, so it must be found in "social intercourse." Social intercourse is mainly limited to persons who go to England in search of society or acquaintances, and who, no doubt, often encounter snubs or depreciation, covert or open. But the remedy for this is not war, but staying at home. It must be remembered, too, that we take no pains to present our best national side to foreigners. In the choice of our consular and diplomatic representatives, for instance, we often seem to invite their contempt, and the impression our newspapers give of us may be guessed from Matthew Arnold's talk about them in his letters. The prosperity of these delineators of our life and manners naturally leads strangers to suppose that they faithfully represent us, and they create a view of America which is not flattering and is difficult to conceal. But the cure for all this is not throat-cutting and house-burning, but self-respect and self-improvement.

ment. Better legislators and better administrators would do more for the national fame, and command more foreign deference, than a thousand battle-ships.

"NATIONAL HONOR."

THE *Boston Herald* asked the other day, with much point, apropos of the new navy for which enormous sums are being appropriated, what the navy was for. The navies of the great naval Powers are meant to carry on wars with each other, which their past history and experience lead them to expect. They expect to have to fight, as they have fought for hundreds of years, for prestige—that is, to decide which is the leading Power. In the past this leading Power—that is, the Power whose word weighed most with the smaller states—has been either England or France. Under Louis XIV. and Napoleon it was France. After 1815 it was England. Under Louis Napoleon it was France again. Then Germany appeared on the scene, and it became Germany. Ever since the peace of 1815, too, Russia has lowered on the horizon as a possible competitor for the place, and at all events a very important ally for any of the more active competitors. In the last century, England and France contended for India and North America. England succeeded in both cases. She drove France out of India and out of America. In this century, England, France, and Germany are contending for the continent of Africa, and, besides this, the long-impending break-up of the Turkish Empire seems to be at hand, and it is well understood that there will have to be a division of the territory. So that it may be said that only one old bone of contention between the Powers (Italy) has been removed within this century, while a very considerable one (Africa) has been added.

We see here clearly enough why all these Powers need a navy. They have in view numerous causes of quarrel. The big ones need large navies in order to intimidate or subdue their rivals. The smaller ones need small ones in order to make their alliance worth the courting by the big ones when the general scrimmage begins. And this has gone on for ages—ever since, in fact, Europe came out of the mediæval darkness. The United States of America was founded in order to get a portion of the civilized world out of this Donnybrook fair, to provide a corner of the earth in which men could live without having constantly enemies to watch and suspect.

There does not exist in our case a single one of the reasons which excuse large navies in Europe. We have no hostile neighbors. We have no foreign possessions. We have no interest in European quarrels. Since 1812—that is, since we became a moderately large community—no foreign state has shown any disposition to quarrel with us. In all the disputes with foreigners which looked serious, [our

known resources, and the plain difficulty of getting at us for purposes of mischief, have been sufficient for our protection. In no foreign question have we been baffled or overborne or worsted; witness the Mexican trouble and the *Alabama* trouble. In fact, there is not in our past the smallest support for the theory that we need a large navy. The prediction that we shall need one in the future must rest either in the belief that the stronger, larger, and richer we grow, the more disposed European Powers will be to attack, or in the belief that we meditate great transpontine contests. No Jingo holds any such belief. He will not affirm that every time we add 10,000,000 to our population, or \$100,000,000 to our revenue, foreigners will feel more moved to invade us or bombard our ports. In fact, the reason which a Jingo always falls back on, when hard pressed, for wishing to live in complete armor, is that somebody may assail our "honor"—that is, say something offensive, or refuse to submit to some demand of ours, or resent some of our language. It is impossible beforehand to describe or define injuries to honor, because honor is an impalpable thing. Invasion, seizure of territory, blockade of ports, injuries to trade, maltreatment of citizens, as causes of quarrel are easily estimated and understood, but national honor is a creature of the mind.

In Europe it may be said that, as a rule, national honor means what individual honor used to mean in duelling circles—that is, the belief among other people that you were not physically afraid; or that if anybody did anything to annoy you, he would have to fight you. An offence against your honor was therefore something which indicated that somebody else might annoy you in some way without having to fight you; that, in short, he doubted your courage. If, for instance, he called you a liar or a thief, his offence lay, not in these aspersions on your truthfulness or honesty, but in the assumption that you would put up with them. Your remedy, therefore, was not to disprove his charge, but to try to kill him. This inconsequential character of the duel between individuals has often been exposed. It accounts for the prevalence of the duel in barbarous ages and countries. There has never been more honor at the South than at the North, or in France than in England; there has simply been more fear on the part of each man that other men would think he was deficient in physical courage. Accordingly each person was the sole judge of what concerned his own honor. Nobody but himself knew in what his honor consisted or what was injurious to it.

The adoption of this private code of honor by the European nations is not surprising. It is of the last importance to each that the other should think it very fierce and touchy. This keeps them from attempts on each other's possessions, and keeps the small ones in proper awe of the

big ones. If one intimates in some way that it thinks the other reluctant to fight, it is an imputation on the national honor, and has to be avenged. If this suspicion is pushed too far, it has to be quelled by war—that is, by an immense destruction of life and property.

That we shall suffer substantial damage from any power, such as invasion or physical injury, we do not suppose any one in his senses believes. The use of the navy is to punish people who think we are afraid to fight. Our honor will be in charge of somebody in Washington whom no individual would intrust with his own honor and he will say when the national honor has been hurt, and whether the injury calls for destruction of life and property. Our honor, too, after the war is over, will remain in precisely the same condition as before. No apology will be made on account of it. The two parties will simply compare the number of their dead, and their losses of property, make peace, and go on as before. In short, when we get our navy and send it round the world in search of imputations on our honor, we shall have launched the United States on that old sea of sin and sorrow and ruffianism on which mankind has tossed since the dawn of history. We shall have formally made the duellist's code part and parcel of American polity, just as the old slave States are abandoning it. We shall have abandoned as a failure the greatest experiment any government ever made.

"ONE-MAN POWER" IN AMERICA.

THE *London Economist*, in discussing the course of the President regarding the Venezuelan controversy, treats his action as "a severe object-lesson in the weak places of the Constitution." It holds that "the recent interruption to the calm progress of the republic" was caused by Mr. Cleveland alone, and it finds in the incident an illustration of "the dangerous ascendancy which the system gives to a single officer, whose competence is as little secured by the mode of choosing him as it is by the hereditary principle." It asks Americans to consider "whether their Constitution has not a fault; whether it does not, like a despotism, render it possible for one man, in his own interest, or out of his own defect of judgment, to work injury to his own people upon the most colossal scale?"

The *Economist* admits that the President cannot really act, in any question of internal politics, in opposition to the national sentiment, that his messages are of no weight unless the people endorse them, and that Congress, by refusing money, can arrest the course of the most self-willed or ambitious of Presidents. But it holds that, nevertheless, our system allows the national executive to cause "volcanic shocks" as regards external affairs without any effective responsibility, and that "if a President is ambitious or vain, or, which is even more dangerous, under the dominion of ideal-

ogues, he is able at any moment to make as great, and it may sometimes be as disastrous, a commotion as any absolute king."

The subject thus opened up is both interesting and important. In establishing the system of checks and balances, the framers of the Constitution devoted especial attention to the problem of making the executive efficient without giving him absolute power. He was made commander-in-chief of the army and navy of the United States and of the militia of the several States when called into the service of the nation, but the dimensions of the federal army and navy are determined by Congress, and those of the militia by the States. He was given the power to formulate treaties with other nations, but such treaties do not become operative without the concurrence of two-thirds of the Senate. He was authorized to make nominations for a great number of important offices, but his nominations must be approved by the Senate in order to become effective. As regards the tremendous prerogative of declaring war, that was expressly committed to Congress, for reasons thus stated by Story:

"The power to declare war might have been vested in the President. In monarchies the power is ordinarily vested in the executive. But certainly in a republic the chief magistrate ought not to be clothed with a power so summary, and at the same time so full of dangers to the public interest and the public safety. It would be to commit the liberties as well as the rights of the people to the ambition, or resentment, or caprice, or rashness of a single mind."

The truth is, that the Constitution leaves but one way open for a President to take action which might necessarily involve the nation in war. It is provided that "he shall receive ambassadors and other public ministers." Story, writing in 1840, was of the opinion that this is a far more important and delicate function than it was deemed by the framers of the Constitution. While conceding that it might properly be confided to the executive alone in times of profound peace throughout the world, he pointed out that, in cases of revolution, the acknowledgment of an ambassador or minister might lead to an open rupture, and the receiving or the refusal to receive one "may even provoke public hostilities." For example, if the Cuban insurgents were to send a minister to Washington, and Mr. Cleveland were to accept him as the representative of the ruling power in that island, Spain would undoubtedly regard the act as practically equivalent to a declaration of war against her. Story himself had seen "abundant examples of the critical nature of the trust," and he inclined to the view that some check ought to be imposed upon the unlimited discretion given the executive by the Constitution.

But Mr. Cleveland was not guilty of any abuse of this power in the Venezuelan matter. All that he did was to "recommend to the consideration of the Congress such measures as he shall judge necessary

and expedient." His message of December 17 recommended the passage by Congress of an act establishing a commission to determine the true divisional line between Venezuela and British Guiana. He made plain his own belief that, if the commission should determine that Great Britain had trenched upon the rights of Venezuela, we ought to notify her that she must back down or fight us. But he did not and could not commit the Government to this position. He could not even, as a leader of one party, by taking the course he did, carry his proposition through Congress as a partisan measure, for his party controlled neither branch. What caused the panic and precipitated a crisis was the surrender of all responsibility by Congress, and the readiness of both houses to make the President's attitude their own.

We hardly see how the Venezuelan incident can be considered to show a weakness in our written Constitution. The weakness is rather in the men who compose Congress. A national executive must have some power, and the President of the United States could hardly be intrusted with less than he now possesses unless some check were put upon his absolute discretion in the matter of receiving ambassadors. The whole tendency of our governmental development has been towards an acceptance of the theory that executive responsibility insures deliberation and caution. What the *Economist* calls "Mr. Cleveland's escapade" shows not so much an unsuspected weakness in our frame of government as in its present executive head. It is one of those risks which we must run under the wisest possible system of checks and balances.

POPULAR LOANS AND SYNDICATE LOANS.

CURRENT discussion of the impending \$100,000,000 Government loan has revealed a vast amount of ignorance as to the nature, principles, and necessary machinery of Government borrowing. Vague recollections, or hasty and imperfect generalizations, have largely taken the place of clear-headed reasoning from existing conditions; and this is true, unfortunately, not alone of self-advertising newspapers and obstructive Congressmen, but of many fair-minded private citizens. We believe it to be true that there are thousands of people who do not sympathize with sensationalism, and would personally be glad to see the loan placed with a compact and powerful syndicate, but who nevertheless believe that the Government sacrifices its credit by such an award.

Classifying them roughly, it may be said that Government loans are issued for three distinct purposes—to raise capital for immediate expenditure, as in the case of war loans; to replace maturing high-rate bonds with bonds at a lower interest rate, as in "conversion loans"; and to

provide gold for maintenance, through Treasury reserves, at the standard of value. We shall see very readily that the conditions governing the issue of a loan depend entirely on the class to which it belongs. The huge loans of the civil war, for example, belong unmistakably to the class first mentioned. They were issued simply to borrow capital, and to borrow it for Government expenditure far beyond current income. From this fact it resulted, first, that subscriptions to a loan might be continuous without any permanent disturbance of the money market. When the funds were taken, either directly or indirectly, from bank deposits, they were so promptly disbursed to soldiers or contractors that they were back in the bank reserves again within a month—credited, indeed, to other owners, but equally available for the general money market.

This was not the only peculiarity of the Jay Cooke loans of the war period, if those can be called popular loans in which a commission was paid to a banking-house. The circulating medium had expanded enormously, the net increase in the year preceding July, 1863, being \$260,000,000, or more than 75 per cent. This increase had been effected chiefly by issues of Government notes in vast quantities. Now the 6 per cent. bonds offered in the loan of 1863 were sold at par for Government notes. Since the notes were at a discount, then, of 35 per cent., and since the bonds were payable, interest and principal, in coin, the offer was very tempting. In substance, the citizen was invited to exchange on even terms a non-interest-bearing obligation of the Government for another obligation paying about 10 per cent., considering the premium on gold in which the interest was paid, plus the probable increase in the value of the principal. The success of Jay Cooke and his sub-agents in floating this enormous loan in all the cities and towns of the United States was hardly surprising, under such conditions. But it is not at all difficult to see how little analogy that situation bears to the problem of 1896.

By the act of February 26, 1879, the sale at par of 4 per cent. "refunding certificates," convertible into the regular 4 per cent. bonds of 1907, was authorized; these certificates to be issued in denominations of \$10 only, and to be sold to private individuals over the counter of all sub-treasuries, national banks, post-offices, and other Government agencies. Specie payments had been resumed, and the rush to buy these bonds was one of the sensational episodes of the year. The city agencies were literally overwhelmed, and the incident is often quoted as a proof of what can be accomplished through a genuine popular loan. But there was very good reason for the success of the popular loan of 1879. The certificates were sold at a fixed price actually below the market for the 4 per cents into which they were convertible. They were sold for currency at the very same price

at which in 1877, before resumption, a block of the same 4 per cents had been sold to a syndicate of international bankers who paid in gold. As a matter of fact, the Treasury officers had reason to believe that the greater part of the \$40,000,000 "refunding certificates" of 1879 were snapped up by speculators who went so far as to hire "repeaters" to stand in line for the subscription, and who sold the certificates at an advance in the open market as soon as they got them in their hands.

This explains why the loan was so immediately successful; but it was feasible, from the Treasury's point of view, for another reason. By the terms of the act authorizing the popular loan of 1879, its proceeds were to be applied "only to the payment of the bonds bearing interest at a rate of not less than 5 per cent." In other words, this was a refunding operation pure and simple, and the funds received on subscription to the loan, like those received for the loan of 1863, were promptly disbursed through Treasury purchases, and reappeared on the general money market.

Now a loan to raise gold for the permanent reserves of Government is clearly a very different operation from the two already described. If, indeed, the currency of a nation were gold alone or chiefly, then a popular loan would be paid as naturally in gold as it would be here in notes. But the very fact of the existence of such a currency would preclude the necessity of such a loan. A Government has no need to supply itself with gold reserves unless it has been engaging in the banking business through circulating its own redeemable notes as currency. By the very fact of such note issues—if they are redundant—the Government will itself have prevented free circulation of gold in its people's hands. Every one knows that this is our own situation. There is plenty of easy-going talk about the "hoarded gold" in the people's possession which will come out immediately under a bond subscription. The idea seems to be, if we may believe the advocates of the popular loan, that individuals the country over have their gold laid away in old tea-pots or stockings, ready to appear when bidden. How great an illusion this notion is, was sufficiently proved by the total failure of the people at large to bid, under the popular-loan advertisements of January and November, 1894.

Another widespread error is the idea that the bankers in the syndicate want these new bonds at 105 or thereabouts, and that they hope that the "popular loan" will be a failure. Nobody can hold this opinion who has mingled with the members of the syndicate during the pendency of the loans of the past two years, including the one now pending, and who has known how reluctant they were and are to take these bonds. The reason is perfectly plain to anybody who understands the banking business. Every dollar of cash in a bank forms the basis of

four or five dollars' worth of discounts, upon which the bank draws interest in the same way as from money loaned. Take the quarterly statement of any bank, or of all the banks together, and you will see that the loans and discounts are four or five times as large as the amount of cash on hand. This is true of State banks and private banks exactly as it is of national banks. The converse of the proposition is true also, viz., that for every dollar of cash subtracted from their reserves and handed over to the Government, they must curtail \$4 worth of discounts. Not only must they incommode their customers in that ratio, but they must forfeit their own gains in like proportion until they can sell the bonds and get their money back, and with it their power of discounting commercial paper. The truth is, that this Government loan is in all essential particulars a forced loan, and the members of the syndicate would hail it as a boon to be relieved of it altogether.

PRESS AND GOVERNMENT IN GERMANY.

PRESS prosecutions for the offence known as "lèse-majesté" have been so frequent in Germany of late that it becomes of interest to inquire into the press laws of the German Empire. A condensed account of the various ways in which German newspapers are brought under the control of the authorities has just been published by Dr. E. P. Oberholtzer of the Philadelphia *Evening Telegraph*, in a pamphlet of 180 pages, entitled 'Die Beziehungen zwischen dem Staat und der Zeitungs-pressen im Deutschen Reich' (Berlin: Mayer & Müller).

The principal object which the Continental press laws of Europe have in view is to restrict journalistic criticism of the Government and of privileged persons, rather than to protect private citizens in general from invasions of their privacy. The liberalizing tendencies which date from the revolutionary period of 1848 have had for one result the abolition of the censorship of the press, which now survives in Russia only. The libel laws of Germany, so far as offences against private persons are concerned, can hardly be regarded as excessively stringent. The truth of a publication may be pleaded as a sufficient defence in criminal as well as in civil proceedings. It may be assumed, however, that if German newspapers were to follow the lead of our sensational journals and make it a practice to drag private matters into print, the lawmaking power would grant more effective redress than is enjoyed by our helpless public. When it comes to resenting newspaper attacks on the authorities, there is no lack of energy in the legislation of Germany. The publication of any statements or reports, whether true or false, which may be construed as offensive or insulting to certain privileged persons, is prohibited under stringent penalties. Criticism, anecdotes, rumors, any expression of opinion which may have a tendency to degrade or ridicule such persons, will render the perpetrator liable to prosecution. At the head of such privileged persons stands the Emperor, and joined with him are the other reigning monarchs of Germany. The families of the various rulers are likewise protected, but the penalties for an offence against

them are not quite so severe. A third category is composed of foreign potentates, among whom, however, presidents of republics and the Pope are not included. Then follows a descending scale of functionaries, through foreign ambassadors, members of the federal council (Bundesrath), etc.

Aside from libels and other offences against individuals, the press is restricted from publishing anything which may be offensive to the community by reason of immorality, indecency, or blasphemy; or which may be regarded as an incitement to rebellion or to resistance against the law; or which may stir up classes of the population to acts of violence against each other. A newspaper may not publish fictitious or distorted news which may throw contempt on governmental institutions; or false reports concerning foreign countries whereby German citizens may be misled to emigrate; or fraudulent statements made for the purpose of inducing the public to buy shares in the stock of a company or calculated to influence stock quotations. A curious law is that which prohibits newspapers from opening subscriptions for the public payment of a fine imposed by a court of law, or even from publishing reports of moneys contributed for such a purpose.

In addition to prescribing what a newspaper may not publish, the law also provides that there are some things which a newspaper must publish. In certain cases it must publish a reply from persons who feel aggrieved by an article containing a misstatement of facts. The reply must confine itself to facts, must be signed by the writer, and must be free from offensive expressions. If it exceeds in length the article, or the parts of an article, to which it replies, the additional room which it fills must be paid for at the usual advertising rates of the journal concerned. The reply must be printed at once, without any alteration of the text or any misleading head-lines, and it must appear in the same part of the paper and in the same style of type as the original article. Newspapers are also required to publish official announcements sent to them by the public authorities, but are paid for them as advertisements. In this manner they may be compelled to publish judgments rendered against them in libel suits.

In order that there may be no evasion of responsibility for an infraction of the various laws we have referred to, it is provided that every newspaper must print in every number the name and residence of its "responsible editor"; and in order to prevent the setting up of a dummy for this purpose, it is further provided that the responsible editor must actually be employed as one of the editors, and must be vested with authority to determine the contents of the paper. In the eye of the law he is the author of the entire journal, or of that part of it which falls within his province, for a newspaper may appoint one editor for its political part, another for the literary feuilleton, for the advertisements, etc. A failure to comply with this regulation, or any false representation, will render the paper liable to summary confiscation. The publisher's name and that of the printer must also appear in every issue. A copy of every number must be delivered to the local police authorities as soon as the distribution of the paper begins. The power of summary confiscation, which we have just spoken of, is a very effective weapon in the hands of the authorities, and even if it extends only to a single issue, and for a few hours, may do serious if not irreparable injury to a daily paper. It may be

exercised in certain contingencies by the police authorities without the intervention of a judicial order or judgment, and there appears to be no practical redress for its abuse.

Quite peculiar is the German system of delivering newspapers to subscribers outside of the place of publication. Within a radius of ten miles thereof a paper may be delivered in any manner the publisher prefers; outside of that it must be sent by mail or by special messenger—that is, newspapers cannot be forwarded as freight or by express. The post-office claims a monopoly of the business, and acts not only as a carrier or forwarder, but also as subscription agent. Every postmaster throughout the realm receives subscriptions for every newspaper, and delivers papers to subscribers. The postmaster of the town in which the paper is published informs the publisher how many copies are wanted, and they are then regularly delivered in bulk and forwarded to their respective destinations. The publisher does not know the names and addresses of his subscribers, which are known only to the postmaster of the place where they live. As a matter of favor a publisher may learn how many copies go to each place, but nothing further. The publisher fixes the price at which he is willing to sell his paper to the Post-office Department; to this the latter adds 25 per cent. to pay for its service, including postage, and thus arrives at the charge to be made to subscribers. In December of each year the Berlin post-office issues a price-list of newspapers for the coming year, and sends a copy of it to every postmaster to guide him in receiving subscriptions, which may be for three, six, or twelve months. There is a detailed system of regulations according to which the business is conducted. For instance, a limited number of free or "sample" copies and of exchanges is carried as a matter of courtesy, charging the regular tax of 25 per cent.; when papers are delivered at residences by letter-carriers there is an additional charge, amounting, in the case of daily papers, to 40 cents a year. While this method has some conveniences, they are counterbalanced by drawbacks. Its principal recommendation is that it is cheaper than mailing each copy in a separate wrapper at the regular rate of postage for printed matter, which is the alternative offered to publishers.

Some of the hindrances to which newspapers are subject in Germany, and which would seem intolerable to Americans, are the incidental result of the general scheme of legislation. Thus, newsdealers and newsboys must have a license, but so must all itinerant vendors; a newspaper may not post a bulletin of its contents, because the Prussian law prohibits the exhibition of placards. More serious consequences arise from the fact that in Germany the telegraph and the telephone are a monopoly of the Government, which claims and exercises the right of refusing to forward any messages which the officials consider detrimental or objectionable.

In the matter of copyright for newspaper articles the law does not seem to be entirely settled. News is considered as public property and not copyrightable. On the other hand, literary productions and scientific discussions may not be reprinted without permission, and as a general thing any article of any length can be brought under the same protection by printing a notice to that effect at the head of it.

From the hasty view here presented, and which, of necessity, could take into account only the salient points of the law and custom, it will be seen that the press laws of Germany

partake of the paternalism and of the faith in bureaucratic guardianship characteristic of the country. It should be remembered that there was a time, not so very long ago, when English newspapers almost had the life taxed out of them, and, to go further back, when editors risked imprisonment and the pillory if they presumed to report the proceedings of Parliament. In Germany, France, and Italy there has been a gradual relaxing of the severity of the press laws during the past half-century, and where the letter of the law has retained its old-time harshness it has been mitigated in practice by the milder spirit of the age. There is a German proverb to the effect that no broth is ever eaten as hot as it is cooked; the actual condition of the German press is by no means so abject as one might infer who looks only at what might legally be done to it by the officers of the Government.

PROHIBITION IN MAINE.

BRUNSWICK, December 28, 1895.

It is now nearly forty-five years since the first prohibitory liquor law was enacted in Maine. The act "for the suppression of drinking-houses and tippling-shops" was approved June 2, 1851, and with it began in the United States the era of attempted regulation of the liquor traffic by prohibitory legislation. The law of 1851 was no sooner on the statute-book than it was found to be insufficient, and down to the present time some fifty additional or amendatory acts have been passed. In 1884 an amendment to the Constitution was adopted, prohibiting the manufacture and sale of intoxicating liquors, except for medicinal and mechanical purposes and the arts. The general features of this mass of legislation are probably well known. Severe penalties are provided for the illegal sale of liquor and for drunkenness. The possession of a United States internal-revenue license is to be taken as evidence that liquor is illegally kept for sale; and druggists are not authorized to sell. Officers of the law are given large powers of search and seizure, extending in some cases to seizure without a warrant. The sale of liquor for medicinal, mechanical, and scientific purposes is provided for by a system of town agencies, their stock being furnished by a State liquor commissioner appointed by the Governor. The establishment of a town agency is optional with the selectmen, and at present less than twenty of these agencies are in operation. The law now requires an analysis by a competent chemist of the liquors actually sold by the agents; and the State commissioner is limited by statute in the percentage of profit he may exact in his dealings with the towns.

A great deal has been said and written about the "Maine Law" by both advocates and opponents. So far as the principle of the body of legislation commonly referred to as the "Maine Law" is concerned, probably that is no longer open to serious question; for while we may decline to admit that everything a people does is right, we cannot now deny the abstract right of a people to prohibit a traffic which it deems dangerous to peace and prosperity. Discussion nowadays rightly turns, not on the theoretical rightfulness of prohibition, but upon its practical usefulness in attaining a desired or desirable end. The Maine Law undertakes to stop the sale of intoxicating liquors as a beverage, and in consequence to lessen or put an end to the habit of liquor-drinking; and in these aspects not only has it been much talked about, but many of its provisions have been copied in

other States. Yet the real test of a law is not at all the amount of interest it excites, but rather the degree of success with which it does what it was designed to do, and its resulting effects upon the habits and modes of thought of the people subject to its influence.

As to the practical effect of the Maine Law in suppressing the sale and limiting the use of liquor, testimony is very conflicting. Some temperance agitators, a few ministers, and public officials when speaking for the State, as a rule uphold the Law, and claim that it has been a success—that liquor is much less used than formerly, and that the open saloon, flaunting its temptation in the face of passers-by, has disappeared. On the other hand, one hears it asserted, with equal positiveness, that the Law, so far as its primary object is concerned, is a patent failure; that in every considerable community liquor is still sold, if not openly, yet with but a thin screen between it and the public; that the use of liquors has not greatly diminished, and that drunkenness is common. About a year ago a correspondent of a Boston daily paper made an extended study of the question, embodying his observations in a series of articles that were widely read and commented upon; yet it may be doubted if the articles changed many persons' opinions. The friends of the Law insisted that the reported instances of "general violation" were isolated and microscopic, such as any detective might ferret out, while the opponents of the Law, of course, pointed to the articles as sustaining all they had ever charged. In ordinary discussion it is quite impossible to reconcile these opposing arguments, for the very practical reason that one specific instance of positive badness will effectually offset a great deal of general assertion of prevailing goodness.

It seems clear that in this matter, as in so many others, the truth does not lie at either extreme. In the small villages and remote country districts the Law is generally well enforced, and illegal selling is not extensive. In the cities and larger towns, with some few exceptions, the Law is either spasmodically enforced, or more or less openly violated. As a rule, hotels either have liquor on the premises for sale, or will obtain it for their guests; in a few cases hotel bars are maintained, with but slight pretence of concealment. Druggists commonly do not hesitate to sell to persons whom they know and can trust. But illegal sales are almost invariably made with at least a show of secrecy, the elaborate and pretentious fittings of the typical saloon are lacking, and a person must often make considerable inquiry before finding a place where a purchase can be made. There are of course "dives" and "joints" in all the larger centres; but as there is always a low stratum of wickedness which no legislation can remove, the existence of such places should not in itself be urged against the efficacy of the Prohibitory Law. With the exception of the better class of hotels and drug-stores, the liquors illegally sold are often of the poorest quality. In no part of the State is drunkenness unknown.

More to the present purpose, however, than these facts, obvious enough to any candid person who keeps his eyes and ears open, is the question as to the state of public feeling in Maine in reference to the Prohibitory Law; and on this point there are two or three considerations which seem to me to be of some importance, but to which attention has usually not been much directed. To begin with, one cannot know Maine very long without remarking the absence of a steady and constant sentiment in favor of the enforcement of the

Law. There is a noticeable lack of firm pressure in this direction. It seems to be generally assumed, as a sort of fundamental proposition, that the Law either cannot or will not be enforced; and so, as long as violation is not flagrant or notorious or offensive, there is a disposition to close the eyes to its quiet but general evasion. On the other hand, public feeling on the subject gets a good deal of spasmodic expression. Every few months a wave of reform sweeps over a community: sermons are preached, mass-meetings held, law-and-order leagues are revived, and "Lexow committees" investigate and report. City and town officials, with sheriffs and policemen, are of course quick to note the new drift, and to meet it with a series of liquor raids and seizures, and sweeping imposition of fines upon sellers. But such tension on the moral sensitiveness cannot be long maintained, and in a few weeks the excitement is over, and sales and evasions go on as before. There is hardly a considerable town or city in Maine that has not at one time or another been through such an experience. The agitation does no good, but, rather curiously, it also does no harm: the last state of the community, while not better, is certainly not worse than the first. And the explanation seems to lie in what has just been said, that a certain appreciable degree of violation of the Law is expected, and public feeling is aroused only when that normal point is passed.

Partly in consequence of these periodical agitations, partly also as a result of the prevailing sentiment, the so-called "Prohibitory" Law is in many places simply a license law. Every six months or so the proprietors of hotels, drug-stores, and other places where it is known that liquor is illegally sold—and such places are well enough known—are brought before a court, either in person or by attorney, and fined; the fines paid, the persons are not again molested until the time comes round for the next regular raid. The amount of liquor fines paid into the several county treasuries aggregates many thousands of dollars annually, affording a striking example, as some one has put it, of a revenue legally obtained under false pretences. A few years ago an attempt was made to punish illegal selling by both fine and imprisonment; but juries refused to convict, and the former method of punishment by fine alone had to be resumed. A judge of one of the State courts told me the other day that to imprison a well-known and respectable citizen for violating the liquor laws would in many places almost provoke a riot. The meaning of all this seems to be that the great majority of the people are not sufficiently anxious to have the Law strictly enforced to tolerate measures stringent enough to secure that result, but are satisfied with an administration that at once prevents the running of open saloons, drives the liquor traffic into semi-retirement, and swells the column of receipts in the balance-sheet of the county treasurer. In this aspect Maine has "prohibition for revenue only."

One test of a prohibitory law is the extent to which it has diminished or changed the habit of liquor-drinking. It is, of course, obvious that on such a point one cannot quote statistics or make statements that are very exact or precise. There is still a good deal of hard drinking in country places in Maine, and the stuff consumed is often of the deadliest kind. In the cities and towns a certain portion of the population, always accustomed to drink in moderation, now drink at home instead of in public places. So far as the great mass of the population is concerned, I think

there can be no doubt that the general absence of open saloons, and the consequent round-about and belittling methods that must usually be resorted to in order to get liquor, have appreciably lessened the consumption of all kinds of liquors, and have even tended to put the drinking habit itself on the defensive; and no one will deny that the removal of saloon influence from a community is a very great gain to good order, morals, and health. As for social drinking among the well-to-do, there seems to be good ground for thinking that it has somewhat declined. Comparatively few persons, even among those who make occasional or even regular use of liquor in their own families, would care to offer it to their guests at table, except to intimate friends; and the majority of public or semi-public "functions" of one sort or another somehow contrive to get on without alcoholic embellishment. Some social clubs have liquors for the use of their members; but in general, so far as the use of liquors is concerned, there is no "social law" to which any one, whatever his social position, need conform. In public as in private life, society leaves each man free to decide whether he will drink or whether he will not; and probably most men in Maine decide that they will not.

Any impartial observer would, I think, have to admit that the success of the Prohibitory Law in this State, although significantly qualified, is after all considerable. But I cannot think that the experience of Maine affords any warrant for the belief that a similar system would have equal or greater success elsewhere. I am of course aware that that kind of argument is common with professional advocates of prohibition; nevertheless, the position seems to me to be at once dangerous and unsound. The Prohibitory Law has been as successful as it has in Maine, not because of anything especially good either in the general principle or in this particular application of it, but very largely because of certain social conditions peculiar to the State. Maine is a thinly settled State, with a population chiefly engaged in agriculture, lumbering, and the fisheries. Its cities have all less than 40,000 inhabitants, and all but one have less than 25,000; there is no massing of population, and no overwhelming foreign element. The great manufacturing industries of New England are not largely represented in Maine. It is apparent that conditions such as these greatly simplify all problems of law and order, and give any kind of sumptuary legislation a favorable field. Moreover, even rigid enforcement of the Prohibitory Law would not necessarily prevent any individual from obtaining liquors for his own use, for the simple reason that adjoining States, not under the prohibitory régime, at once become sources of supply. If Maine could not obtain an abundant supply of liquors from Boston or some other convenient point, I am decidedly of the opinion that the enforcement of the Prohibitory Law here would be very much less efficient than it is now. That is to say, even with the aid of favorable local conditions the success of prohibition in one State depends very greatly upon the absence of prohibition in neighboring States; and it should not be forgotten that in this country the system has always been tried under these conditions. To insist upon the universal practicability of prohibition as a method of regulating the liquor traffic, pointing meanwhile to the operation of the law in Maine as an illustration of "how it works," is both idle and misleading unless these vital qualifications be also made.

With the Prohibitory Law become in many places a license law, and with considerable general violation and evasion, it is not surprising that every little while the repeal of the Law, or the resubmission of the Constitutional amendment, should be advocated. But any one who should suppose that such action is at all probable, at least for a long time to come, would, I fancy, entirely misinterpret public feeling on the subject. Certainly the agitation to that end receives but scanty support. Notwithstanding the palpable weaknesses of the system, both in theory and in practice, the mass of the people undoubtedly are satisfied with it; there is no desire to reopen the question and precipitate another volume of discussion and agitation; and there is no general feeling of incongruity in the spectacle of a license system masquerading as prohibition. In practice, such a state of mind does less harm than might be supposed. As a live political issue, prohibition is no longer of importance; but professed adherence to the principle is still a test of political orthodoxy, and alleged "public sentiment" is used as a club with which to terrorize politicians. Politically, however, prohibition is in Maine only a name to conjure with.

WILLIAM MACDONALD.

SPANISH ART IN LONDON.

LONDON, December 30, 1895.

If Velasquez was forgotten—if, as Mr. R. A. M. Stevenson puts it, his genius slumbered for two hundred years—certainly he is now having his revenge; for to-day, when there is reference to the art of Spain, it is usually supposed to mean Velasquez, and Velasquez only, as if he were the one artist who ever lived and worked in the land lying south of the Pyrenees. And inasmuch as the master can, notoriously, be really studied as he should solely in Madrid, to organize a show of Spanish art in London might be thought to court failure. But, after all, though Velasquez does tower head and shoulders above them, there were other painters in Spain, and, moreover, painters often of decided originality, as may be learned in the Prado's cellars, or half-divined in many a Toledan dimly lit church and chapel; while, in the more purely decorative arts, the Moor-inspired craftsman and the artisan of the Spanish Renaissance stand well-nigh unrivalled. Though the masterpieces of Velasquez can still be claimed by Madrid's gallery, though only in Toledo can *El Greco's* greatness be realized, though there have been many to think with Gautier that even Murillo is not to be appreciated until seen in the cathedral and museum of his native town, it is as true that much else of Spain's great art-work is to be found nowadays more fully represented almost anywhere abroad rather than in Spain itself; perhaps nowhere to better advantage than in England. For, if that beautiful grove of elms on the Alhambra's hill is held up as proof of the English conqueror's benevolence, there can be no doubt that the Great Duke amply repaid himself for his trouble with the art treasures which he and a multitude in his train carried home with them from the pacified Peninsula. When these facts are remembered, in the success of the show of Spanish art just opened in the New Gallery there will seem less cause for wonder. Without question, it is so far the most interesting and delightful in the winter series of historical exhibitions given at this same gallery.

The first impression, as you enter the central hall, is one of unwonted sumptuousness.

Even the splendor of last year's Venetian decoration pales by comparison. Here, indeed, is something that, at a glance, reminds you, not of the tawdry modern Spanish palace, but rather of Seville's Capilla Real, for instance, if yours has been the good fortune to see it when resplendent with gorgeous hangings and shining with precious plate and jewels, in honor of St. Ferdinand. There may be an element of barbarism in the wealth and exuberance of Spanish ornament, and yet it never lacks the touch of austerity that chastens and refines, and that is so eminently characteristic of the country's art in its best periods. Tapestries, rich in their faded beauty, hang from the four sides of the hall's high balcony. Frames of embroidered and jewelled priestly garments, chests elaborately carved and gilded are set against the walls. Arranged with some feeling for the general effect are cases filled with rare pottery and gold and silver plate, and exquisitely chased daggers and rapiers, breast-plates and helmets; and in the hall's very centre, well raised, stands a horse in complete war harness of the fifteenth century; at its feet tulips and other flowering plants, so that it looks like the horse that steps among blossoms in so many an old tapestry.

To speak of all these things in detail would be quite impossible, since in the two large galleries, as well as in the hall, are cases of exquisite embroideries and rare stuffs and laces and fans and jewels and combs and ivories, and still more pottery and glass and plate. Besides, for collector and amateur, there is a very thorough catalogue to supply all illuminating facts and dates; while the finest pleasure is reserved for those who can revel in the loveliness of color that everywhere leaps to the eye, in the loveliness of design that everywhere reveals itself upon closer study. On the other hand, it seems as impossible to speak of the collection as a whole without pointing out how surprisingly few examples of Moorish work it contains. The Spanish Renaissance is the period most largely drawn upon. The Moor's own design, or evidence of his direct influence, which in Andalusia long survived the Conquest, is found only here and there in the arms and armor, and more often in the pottery. One vase, covered with the familiar arabesques, comes from the famous Malaga works, and dates as far back as the eleventh century, its interest being enhanced by the fact that a foot supporting it was made by Fortuny. There are, besides, numerous specimens of Hispano-Moresque ware which show to what admirable advantage, blue, the color thought by some painters so impossible in a picture, can be used in the conventional ornament of dishes and jars. But then it is in the pottery, especially of the South, that Moorish influence perhaps lingered most persistently. In the very coarsest made for the people to-day in Malaga and Seville, you may still see the old Moorish shapes, and traces of the old Moorish color schemes, just as you see the old Moorish blood in the faces of so many of the men and women.

In the pictures, of course, one does not look for any suggestion of the Moor, who is responsible for so much that is best and finest in Spain. Here must be sought all that is most characteristic of the Spaniard himself; for the painter, unlike the potter or the decorator, was ever independent of Moorish principles and tradition. The exhibition gives a fair idea of the measure of his accomplishment, from his first efforts down to his most recent performances. It is inevitable that some periods and some artists should have less justice done to them than others; inevitable that masterpieces

have not in every case been forthcoming. But, as a whole, the collection is unexpectedly complete. The Primitives appear in small numbers, but yet in sufficient force to assert that sound and somewhat original decorative talent which they display so impressively in the Prado's cellars, to recall the golden glory with which they shine from shadowy altars in Cordova's mosque, or from the chapel of many a forgotten monastery. Zurbaran's sombre penitents and monks have been found to fill the appropriate space upon the walls, and Ribera's more exuberant saints and virgins. If there be little by such men as El Mudo and Herrera the elder, this little is so unusually good as to justify the reputation they once enjoyed better than the more extensive showing they may make in Spanish galleries. Indeed, in El Mudo's portrait of Doña Maria Padilla there is a rich, warm glow, a softness in the flesh tints, that one is more inclined to attribute to the kindness of time than to the genius of the painter. But if Herrera really painted the marvellous little partridge on the wing here ascribed to him, as delicate and subtle a bit of modelling as if it were by the master of to-day, he must count for more than one fancied as a factor in the development of Velasquez, who was his pupil. And there is really no reason except its excellence, the almost unprecedented naturalism of the painter's method, to doubt the picture's authenticity. It is the property of Sir Clare Ford, and once belonged to Richard Ford, author of the indispensable Handbook to Spain, who bought it for the work of Herrera at Seville in 1831.

Again, of Il Greco, who fortunately seldom figures under his full name of Domenico Theotocopuli, there is enough to explain the sudden interest lately aroused in him. His greatness has been so obscured in the dim sanctuaries of Toledo's churches, or so hopelessly hidden in Toledo's monasteries, across whose thresholds no laic foot was allowed to pass, that there has been, and, for that matter, is, small chance to study his pictures in the very town where so much of his work, as painter as well as sculptor and architect, was done; out of Toledo there is scarcely any chance at all. In the Prado itself he is quite inadequately represented. Here, in the National Gallery, there is but one example of him, and this one is a recent acquisition. The Spanish exhibition boasts some half dozen of his pictures, a St. Martin, a Christ with the cross, a Christ chasing the money-changers out of the Temple, and one or two portraits. In his treatment of religious subjects there is a primitiveness more naive than that of the men who preceded him, and the results are at times unpleasantly flat and hard, without a premonition of the triumph of the master who dipped his brush in air and light. But there is in them a dignity of composition, an effective color mosaic, and an individuality in the way of seeing things and expressing them, together with occasional wonderful drawing and modelling, that make him as distinguished among his contemporaries who painted saints and Christs according to rule, as a Sargent seems in the Academy, a Carrière in the Salon.

I have always wondered at Gautier's delight in the Murillos at Seville. There, above all places, I thought the overdone sentiment and the mawkish prettiness of the painter sadly emphasized, though there is not, as at Madrid, a Velasquez to set the standard. Whatever vigor, whatever personal element is in his art, makes itself felt now on the walls of the New Gallery far more than in rooms that are filled

with his flamboyant Assumptions and ecstatic monks. For the well-known "Beggar Boys" has been borrowed from Dulwich; several of his portraits are included, among them one of himself, its prosaic homeliness of presentment a curious contrast to the swagger with which Velasquez ever painted his own portrait; and there is also a landscape, bathed in atmosphere, though not in southern sunlight, to which the old Spanish painter was deliberately blind—in the foreground, a group of trees somehow suggestive of Corot—which is, without doubt, the most genuinely observant and poetically expressed Murillo I have seen.

Alonso Cano is another painter who pleases here more unreservedly than in his native town. If I except a little statue of a saint in the Cartuja, I remember nothing of his in Granada to equal the stately group of well-pose figures in his "Assumption," and the well-balanced composition of his "St. Francis in Ecstasy," which both come from private English galleries.

But when all is said, interest now, as whenever Spanish painting is in question, centres about Velasquez. I must admit my disappointment upon discovering that some of his most important canvases owned by Englishmen have been omitted. There are few things in the Prado that surpass his marvellous "Venus," belonging to Mrs. Morritt and hung with the Academy's Old Masters of 1890; but for this occasion it has not been lent. A small sketch for "Las Meninas," of private ownership at Kingston Lacy, is likewise missing. Nor have several portraits from royal galleries been allowed to add to this collection's importance. It is again a disappointment to know, without the aid of the new critic's foot-rule and photographs, that so many canvases to which the catalogue tags on the name of Velasquez could not possibly be his work. There is, for instance, a replica of the incomparable Doria Pope which, though if measured up scientifically it might be proved irrevocably his, leaves one sceptical simply because it lacks the masterly elegance of his touch, the subtlety of his modelling; while one is as positive that the other, from Apsley House, though it has been declared not his by complacent authorities, could not have been painted by any one else, save another genius as great. Masterpieces may not abound, save in copies, but there are sufficient good examples to make the collection of enormous use to the student of Velasquez, viz., several of his very early water-carriers and boys of Seville, powerful in their uncompromising realism, though without those qualities which mark his later work and which have made the modern painter look to him as the first impressionist; the little Don Carlos from Buckingham Palace, the Prince on his prancing horse in the courtyard, the King and Queen looking down from the balcony; the portrait of his slave Pareja—it may be the very one he sent about with Pareja himself to show what a swell he, the most daring of all innovators, really was as a portrait-painter; the Quevedo in spectacles from Apsley House; a little sketch of Saint Sebastian, a good strong study of the nude which, it is curious to note, belongs to Mr. Holman Hunt; the Philip from the Dulwich Gallery, said not to be his. But it is needless to name them all; excepting Madrid, probably there is no place the world over where Velasquez is to be seen so satisfactorily as just now in London, thanks to this Spanish exhibition, supplemented by the National Gallery.

The modern Spaniards fare less well. Of Goya, in his way another fearless innovator, there are but two or three indifferent por-

traits, and one or two more characteristic sketches and lithographs of the bulls and bull-fights which were his chief delight. Fortuny, third among Spanish painters if ranked by the extent of his influence, is more fortunate. Besides the etchings, which every one knows so well, there are several of his water-colors, a singularly beautiful unfinished "Acrobats at Tetuan" which, may be, would have lost in color and charm had it been carried further, and a picture, "Transport of Arab Prisoners," a wide sweep of hillside broken by the curving line of the long train of flying draperies, with, beyond, a glimpse of a blue sea: a composition full of a beauty, rightly felt, rightly expressed, which Fortuny too often sacrificed to clever tricks of technique and brilliant mannerisms. The few unimportant Ricos could easily be overlooked, which is a pity, for the collection would have gained in usefulness had the modern Spaniards, as eager to paint sunlight as the old men were to ignore it, been granted a more appreciative recognition. Vierge is omitted altogether, and so is Casa nova, though Madrazo, with his clever yet vulgar portraits, finds a place. But if the show is not entirely beyond criticism, it still remains the most notable held in London for many a long day. N. N.

Correspondence.

THE MAIN QUESTION.

TO THE EDITOR OF THE NATION:

SIR: Allow me to express to you the sincere gratitude which I feel for the admirable editorials which appeared in a recent issue of the *Nation* upon the course followed by President Cleveland in the Venezuelan controversy. Before I read that series of articles denouncing the much-applauded message, and showing what a ridiculous and unstable position Mr. Cleveland had taken, I was, from a sense of patriotism and a feeling that the United States ought to protect Venezuela in her rights, a hearty and admiring supporter of that position. When I first read the articles referred to, I was slightly prejudiced against them by their rather bitter and violent language—I like sober discussion; it carries much more weight than rabid denunciation or scathing sarcasm. But the arguments which were submitted, after careful perusal and thought, and laying aside the prejudice created by the heated language, pressed themselves upon my mind as reasonable, logical, and true. The articles referred to, understand, are those upon the course taken by the President, and not those regarding the right and wrong of the controversy. I do not think either one of us is able to reach a conclusion on that point. But allow me to again thank you for the light which you have shed upon this important matter.—Sincerely yours,

ROBERT A. ALLEN.

SIoux CITY, IOWA, January 4, 1896.

TO THE EDITOR OF THE NATION:

SIR: I cannot refrain from congratulating you upon the just and fearless and Christian tone of your editorials upon the Venezuelan question. While I speak only for myself, I have no hesitation in saying that the almost universal opinion in western Canada, and, indeed, throughout the whole Dominion, is one of deepest regret that even the possibility of war between the two great brother nations

should be considered by any wise men as anything but utterly deplorable.

The talk of the Jingoos in American newspapers seems to us quite absurd, and—were it not so wicked—almost amusing; and our hope is that this talk does not represent the sober common sense of the great mass of the American people, whose keen commercial instincts and Christian sentiment must make evident, after a second thought, the ruinous folly and wicked barbarity of war on such a plea.

Your remarks upon the Jingo chaplain's prayer (*sic*) appear to me singularly felicitous. It is difficult to understand the notion of the Deity out of which such a prayer could arise. The best judgment of the best men is on your paper's side, and this the future will make abundantly plain. While Canada is devotedly loyal to the Empire, and would willingly send her last son to defend it, she has only the kindest feeling for the people of the United States.

I hope you will pardon this note. With hope and prayer that both nations may be guided to do the right and wise thing, I am yours, etc.,

CHARLES W. GORDON.

BRITISH CANADIAN NORTH-WEST MISSIONS,
WINNIPEG, January 3, 1896.

TO THE EDITOR OF THE NATION:

SIR: Waiving for the present the further threshing out of the Monroe Doctrine—although I am with Prof. von Holst in his analysis of the same—two points occur to my mind that ought to be carefully considered.

(1.) In round figures, the total population of the world is estimated to be 1,400,000,000. About 10 per cent., or say 140,000,000, comprise the English-speaking people, united by ties of blood, traditions, literature, laws, and religious aspirations. Are not the English-speaking people rapidly encroaching upon the slower-moving members of the human race? Is it not the proud boast of every member of the Anglo-Saxon family that we are the dominant factors in repressing the unruly, and making civilization, culture, and progress a reality and not a dream? Separate or split in two the British Empire and the United States, and say what will be the fate or future of either nation, assuming that the suggested and much-talked-of war were finally precipitated. Do political leaders in either country fully realize what mischievous doctrines, like Russian thistles, are being scattered broadcast, inciting people to cultivate hatred, cruelty, and bloodshedding?

(2.) Land and gold-mine grabbing and booming during the last twenty five years has gone on at an accelerated pace in all portions of the globe. The average American citizen differs in no wise and in no respect from the average enterprising Englishman or European. Electric and steam motive power, plus the efficient cable and telegraphic service, has made it possible for quick-witted men the world over to forestall markets and make fortunes for many with great rapidity. Excessive and unlimited confidence in America and its marvellous resources has enabled us, through the use of foreign capital, to build and operate in the United States alone almost one-half of all the railway mileage of the world. The total railway mileage of the world was recently placed at 350,000 miles, and our system, exclusive of sidings, embraces about 170,000 miles. British capital to the extent of \$2,000,000,000—or about two-thirds of the total indebtedness against our lines held in Europe—has come to us since the war of the Rebellion. Did any of us sneer at the British during the period of track-laying when Englishmen lent us

their money? Did not our leading citizens in every State cry out for more money to build new roads? Did not our own State of Iowa get its one-twentieth of our total mileage referred to from money borrowed from London? "Sell more bonds in London and extend our road" was the lofty talk of the promoter. How many more millions of British money have come to us for loans upon our breweries, mills, factories, and what not? Can all this enterprising talk be so quickly forgotten, and our young people inspired to hate England and the people who so generously trusted in our good intentions, our honesty, our integrity, and our sense of justice?

I am sick at heart as I observe the prevailing sentiment suggesting war. It is my earnest hope that thoughtful people will "keep in memory" all our fair talk and promises in our interrelated financial dealings with foreigners.

JOSEPH SAMPSON.

SIoux CITY, IA., January 9, 1896.

A WAR AGAINST CIVILIZATION.

TO THE EDITOR OF THE NATION:

SIR: Among the recent utterances reported in regard to the excitement occasioned by the message of President Cleveland, I have been particularly impressed with the language employed by the Rev. Dr. Huntington of Grace Church, New York, who says "that he would not shrink from a war if it were for the right, but asking on what grounds some Americans propose to go to war with the civilizers of the world."

England is truly a civilizer of the world. Who that has travelled in the East can fail to be impressed with the truth of this statement? Every one recognizes the striking contrast between the condition of things at Gibraltar and the little Spanish town just across the "neutral ground." A writer with whom I travelled last winter, in describing a visit to the latter, says: "We came back through the begging rabble of ragged children and filthy women, passed the line of Spanish sentries, and in a few more steps we entered the line of English sentries, and were again in a civilized country." No one can spend a little while in Cairo without observing the helpful and elevating influence which England is exerting over Egypt. In Palestine, England's civilizing power is specially exhibited in towns such as Nazareth, Tiberias, and the like, where English chapels and schools are established.

England is "a civilizer of the world." Wherever she exerts her influence, it results in the uplifting of the people and the benefiting of humanity at large.

W. D. MORGAN.

BALTIMORE, January 10, 1896.

SEWARD VERSUS CLEVELAND.

TO THE EDITOR OF THE NATION:

SIR: In support of the position taken in your editorials that the recent declaration of the President is not warranted by the Monroe Doctrine, I beg to cite a passage from the instructions of Mr. Seward, Secretary of State, to Mr. Kilpatrick, June 2, 1866:

"The Government of the United States will maintain and insist, with all the decision and energy which are compatible with our existing neutrality, that the republican system which is accepted by any one of those [South American] States shall not be wantonly assailed, and that it shall not be subverted as an end of a lawful war by European powers; but beyond this position the United States Government will not go, nor will it consider itself hereby bound to

take part in wars in which a South American republic may enter with a European sovereign when the object of the latter is not the establishment, in place of a subverted republic, of a monarchy under a European prince."

Yours respectfully,

FRANCIS MCLENNAN.

MONTREAL, January 6, 1896.

JINGO GEOGRAPHY.

TO THE EDITOR OF THE NATION:

SIR: Prof. McMaster, in his exposition of the Monroe Doctrine, published in the *New York Times*, would have us believe that "Great Britain is to-day attempting to take from Venezuela not 30,000 square miles, as is commonly stated, but 109,000 square miles, to which she has no just claim whatever." As 109,000 square miles represents the area of the whole of the undisputed British possessions and the disputed territory combined, we must conclude that Prof. McMaster's interpretation of the Monroe Doctrine is that we should make it retroactive, go back of 1823, and drive the British invaders clear into the ocean, not leaving them an inch of foothold which might serve as a "base of operations" to disturb Secretary Olney's repose. So much for Jingo geography running amuck. We trust that Prof. McMaster will institute proceedings against our wicked and un-American publishers of school-books, who, ever since he first conned his Primary Geography, have been trying to make innocent little children believe that British Guiana does not stop short of the sixty-first meridian.

LOUIS HEILPRIN.

SUMMIT, N. J., January 11, 1896.

THE ATHENIAN FORUM.

TO THE EDITOR OF THE NATION:

SIR: An excavation was begun here to-day which is likely, whether its results be positive or negative, to prove of highest importance for the determination of Athenian topography. Dr. Dörpfeld has long been convinced that the Stoa Basileios, which Pausanias saw "on the right-hand side" (i., 3, §1) as he entered the Kerameikos Agora—the central town square of Athens in the classical period—was located close against the eastern slope of the Kolonos Agoraios, the knoll upon which stands the so-called "Theseion." The identification of this "Theseion" with the temple of Hephaistos, described by Pausanias (i., 14, §6) as standing "above the Kerameikos and the Stoa called Basileios," lends added precision to the location. Combining this interpretation of our ancient guide-book with what recent excavations about the southwestern, western, and northwestern corners of the Areiopagos have shown concerning the general direction and levels of the ancient street leading toward the Acropolis, Dr. Dörpfeld has brought his archaeological faith to a conviction which he is willing to test in terms of drachmas. As public means are not forthcoming for the work, he has purchased with private money, partly his own, two house-lots on the west side of Poseidon Street, a street running parallel with the face of the "Theseion" knoll, and there he began to-day tearing down a dwelling-house preparatory to the excavation which, within three weeks or a month, is likely to furnish an unmistakable answer to the central question in Athenian topography. It is estimated that the foundations of the building sought must lie under about twenty-five feet of earth. While this greatly increases the difficulty of the work,

especially in view of the narrow space open to excavation, it involves a compensating assurance that under the protection of the earth much has been preserved. Particularly is this to be hoped for the numerous legal inscriptions which are believed to have existed upon the walls of the Stoa. Though the wooden *εἴσοδος* and *αὐτὸς* containing the laws of Solon, which formerly stood here, had gone to decay probably before the end of the fifth century B. C., it is known that copies of at least portions of the Draconian and Solonian codes were set up here in stone.

If the excavations just beginning should result in the discovery of traces of the Stoa Basileios, the Greek Government would undoubtedly proceed directly to expropriate enough land in the vicinity to admit of search for the Stoa Poikile, the Stoa Eleutherios, the temple of Apollon Patroös, the Metroon, the Bouleuterion, and the Tholos. All these buildings can readily be located, once the clue has been given by the discovery of the Stoa Basileios. Much zeal and much money have been expended in past years in uncovering relics of post-classical buildings in the later market places to the east, such as the Hadrian Stoa and the Attalos Stoa, but the real thing, the forum in which the characteristically Athenian life was manifested and was made, has, strange to say, been hitherto left to a shadowy and somewhat restless existence in the vague or ill-comprehended allusions of the ancient writers.

BENJ. IDE WHEELER.

AMERICAN SCHOOL, ATHENS, December 27, 1895.

INSTITUTES AND NOVELLÆ.

TO THE EDITOR OF THE NATION:

SIR: Mr. Frederic J. Stimson has rendered such immense service to his profession and the public by his monumental collation of 'American Statute Law,' that when he would recreate himself by an excursion into airier and lighter fields of literature, every one owes him the tribute of good-will. He has begun, in the January *Atlantic*, what seems likely to be a capital story, "Pirate Gold." But it begins (p. 73) with a special deposit in a Boston bank of a bag labelled as containing, on the 24th of June, 1829, besides Spanish doubloons, "four hundred and twenty-three American twenty-dollar gold pieces." Now, inasmuch as that coin appears to have been struck for the first time by virtue of the act of March 3, 1849 (9 U. S. Stat. at Large, 397), is not this just "a little too previous"? And, considering whom it comes from, should it not serve as an encouragement to some of the rest of us who slip up now and then in our history and our law?

When the professor of mnemonics had departed from the hotel, after gathering about him his bags and bundles, the porter came rushing to the clerk, exclaiming in wide-eyed wonder: "The memory-man has forgotten his umbrella!"

T. B.

ROCHESTER, January 7, 1896.

A TESTIMONIAL TO KIRCHHOFF.

TO THE EDITOR OF THE NATION:

SIR: Many Americans who in days gone by have had the privilege of sitting at the feet of Prof. Adolf Kirchhoff of the University of Berlin will doubtless be pleased to learn that a committee, including many distinguished names, has been organized in Berlin for the purpose of honoring this great classical scholar upon the occasion of his seventieth birthday and the fif-

tieth anniversary of his doctorate, to be celebrated on February 4, 1896. It is proposed to present to Prof. Kirchhoff a bronze (or, if the subscriptions prove sufficiently large, a marble) bust of himself, executed by Martin Wolff. Heliotype copies will be furnished to all subscribers.

The undersigned, having been requested by the committee to solicit subscriptions in this country, hopes that the appeal herewith made will meet with a ready and speedy response, realizing a substantial sum, as a visible proof of the esteem and admiration which the American pupils of Prof. Kirchhoff entertain for their illustrious teacher. Subscriptions, of whatever amount, should be accompanied by the full address and present occupation of the donor, and should be sent in not later than February 1.—Yours respectfully,

ALFRED GUDEMAN.

UNIVERSITY OF PENNSYLVANIA,
PHILADELPHIA, PA.

Notes.

D. APPLETON & Co.'s announcements for the current month include Prof. G. Frederick Wright's 'Greenland Ice-Fields, and Life in the North Atlantic'; 'The Monroe Doctrine, and Other Studies in American History,' by Prof. J. B. McMaster; 'Studies of Childhood,' by Prof. James Sully; 'Criminal Sociology,' by Prof. E. Ferri; 'The Story of the Solar System,' by George F. Chambers; and largely rewritten editions of 'California and the South,' by Dr. Walter Lindley, and 'The Sun,' by Prof. C. A. Young.

A uniform subscription edition of the works of the late Eugene Field, in prose and verse, will be at once undertaken by Charles Scribner's Sons, in a truly elegant manner, even to such a refinement as using "a superior deckle-edged paper, containing, in water-mark, Mr. Field's initials on every page." Each of the ten volumes will have a photogravure frontispiece on Japan paper. One hundred numbered sets will be printed on Japan paper.

'A Handbook of Greek Sculpture,' by Ernest Gardner, will usher in a series of "Handbooks of Archaeology and Antiquities" projected by Macmillan & Co. They also announce a second series of 'Legends of Florence,' by Charles G. Leland, and 'Richelieu,' in their "Foreign Statesmen" series, by Prof. Lodge of Glasgow.

An interesting series is promised in the "Warwick Library of English Literature," edited by Prof. C. H. Hertford. Each volume is to trace, by means of a critical introduction and chronologically ordered selections, a single "literary growth" or *genre*. The one volume now in hand treats of the 'English Pastoral,' and is competently edited by Edmund K. Chambers. His introduction, conceived in the broadest spirit of comparative criticism, is (although necessarily summary) clear and full of suggestion. We should like to see the outlines filled out into a more detailed study. These selections comprise only the verse Pastoral, and are chosen mainly from the Elizabethans, who alone among Englishmen, according to Mr. Chambers, have taken the Pastoral seriously. This limited life of the bucolic *genre* gives the present volume a completeness and unity which cannot but be wanting in the next promised issues of the series—'Literary Criticism,' 'Letter-Writers,' 'Tales in Verse,' 'English Essays,' and 'English Masques'; nevertheless, the study of *genres* is an inevitable outcome of the conception of literary evolution, and

"guide-books" like the "Warwick Library" must prove invaluable to the teacher and to the independent student distant from library centres.

Way & Williams, Chicago, are about to issue 'Hand and Soul,' by Dante Gabriel Rossetti, reprinted from the *Germ* by William Morris at the Kelmscott Press. Three fifths of the limited edition has been reserved for this country.

Macmillan & Co. have added Marryat's 'Peter Simple' and Disraeli's 'Sybil' to their excellent series of illustrated standard novels; 'Eugénie Grandet' to their Balzac; and 'Due Preparations for the Plague' and 'The King of the Pirates' to their Defoe, which is now brought to a conclusion, and which, typographically and in the matter of editing, ranks among the most satisfactory series undertaken during the past year. The bookmaking here, as in the case of Balzac, is Dent's.

We have already noticed the first volume of Mr. E. S. Hartland's 'Legend of Perseus,' in which he discussed the supernatural birth of the hero. Since then a second volume, nearly twice the size of the first, has appeared (London: David Nutt), devoted to the "life-token." It will be remembered that in fairy tales the life of the hero is often connected with some sympathetic object which indicates his danger or death. This object has either some original connection with the hero (as where he is born from a portion of a fish, and the sympathetic object, a rose-tree, from another portion), or is merely arbitrary, as where the hero plants a tree which indicates his fate. The belief which underlies these tales is the basis of witchcraft (sympathetic magic, philters, etc.), and explains the ceremonies observed at sacred wells and trees. With it are also connected totemism and the funeral rites involving the eating of a ceremonial meal, and the similar observances at marriage. As the author truly says, the discussion of the "life-token" goes down to the very foundations of the savage philosophy of life. He might have added that it also concerns vitally the basis of our own religious belief. In comparison with the questions raised in the present volumes and the inferences which may possibly be drawn from the enormous mass of custom and belief presented from all parts of the world, the discussions of the "higher criticism" shrink into absolute insignificance. Mr. Hartland intended to complete his work with the volume before us, but a third will be required to deal with the two remaining incidents of the legend—the dragon-slaying and the Medusa-witch. A supplementary bibliographical list and an index are also promised with the final volume.

A number of papers contributed to *Scribner's Magazine* during the last two or three years have been collected and published by the Scribners under the title 'The Poor in Great Cities.' London, Paris, Naples, Boston, New York, and Chicago, all have furnished material for these essays, which are largely narrative in character, and are of varying merit. The volume is profusely illustrated, mainly by prints from photographs, so that it appeals to the eye of the careless reader. But we apprehend that the chief effect of these descriptions was accomplished by their original publication, and that careful students of the condition of the poor will demand somewhat more systematic and scientific treatment of the subject than is here attained.

Somewhat in the line of Herbert Spencer's 'Education' is 'Nursery Ethics,' by Florence Hall Winterburn (New York: The Merriam Co.). This little book, however, is rather

more practical than Mr. Spencer's, and is adapted for earlier stages of education than his, dealing even with pre-natal influences. We do not hesitate to say that the parent who can read it without benefit must either have attained perfection or be beyond the reach of grace. Most of us will find our parental sins of omission and commission very clearly described in these pages, and few that have the care of children will fail to derive from them some valuable suggestions. The book is marked throughout by good sense, and its dominating principle is the importance, to both parents and children, of a constant regard for justice in the exercise of control over the young. As to some of the specific rules and maxims here laid down, opinions may differ; but these are insignificant matters. Such a book as this should find a place in every house where young children are growing up.

Mr. Hamblen Sears's 'Governments of To-day' (Meadville: Chautauqua-Century Press) is offered as "an outline for the use of newspaper readers." This class has certainly never been by implication credited with a denser ignorance than by Mr. Sears, and one example shall confirm our statement. On page 396, treating of the riots against the abolitionists, we are told that "in Pennsylvania a man named Hall of Philadelphia was burned, and another named Lovejoy in Illinois." What was burnt was the building known as "Pennsylvania Hall" in Philadelphia, in 1838, and Lovejoy's printing-office in Alton, in defence of which he was shot down at Alton in 1837. The sooner the Chautauqua directors "fill up" this "outline" with the Russian censor's caviare, the better for their reputation.

Armand Colin & Cie., Paris, are cultivating that cosmopolitanism in literature for which we have lately been taught to be especially thankful to Rousseau. Their English works newly taken over into French include a translation of Morley's 'Critical Essays' and Emerson's 'Representative Men' ('Les Sur-Humains'), by Georges Art and Jean Izoulet respectively, the latter having performed a similar service for Carlyle's 'Heroes.'

A pretty compliment has been paid to our countryman, Mr. Thomas A. Janvier. From 'Avignon' (J. Roumanille) there comes to us a translation of his 'Saint Antonio of the Gardens' into Provençal by Miss Mary Girard, Queen of the Félibres, prefaced with a "bon astru," or godspeed, from Frédéric Mistral. Mr. Janvier is an honorary member of the Félibrige. The English faces the Provençal, and, as page is made to offset page exactly, it is noticeable that the Provençal version is often more condensed than the original.

Although Chantilly and all its treasures are, after the demise of its munificent owner, to become the property of the French Academy, and thus, in a measure, of the public, few collections are at present so difficult of access. Great interest attaches, therefore, to the splendid quarto just published, which, bulky though it is, catalogues only the non-French pictures belonging to the Duc d'Aumale ('La Peinture à Chantilly, Écoles Étrangères,' by F. A. Gruyer. Paris: Plon, Nourrit & Cie.). The text need not occupy us, as, apart from merely iconographic information and indications of size, vehicle, etc., it is positively without interest or value. What gives a real importance to this heavy tome is its forty magnificent héliogravures, which reproduce many of the most precious pictures. A few of these may here be mentioned: two Raphaels, which are both early, the tiny "Three Graces" being one of his very first achievements, while

Timoteo Viti was still guiding his boyish hand; a fascinating profile of a young woman with the attributes of Cleopatra, painted by Pier di Cosimo, which bears the following inscription, "Simonetta Iarvensis Vespuccia," the civil name of the "Bella Simonetta"; a "St. Francis Wedding Poverty, Humility, and Chastity," which has the acutely tender feeling and decorative beauty of Pietro di Sano of Siena; a long cassone panel representing the Story of Esther, the masterpiece of some nameless great Florentine akin to Botticelli; a number of reproductions of pictures attributed to Van Eyck, Roger van der Weyde, Dierick Bouts, and Memling. Even the English school is represented by some fine Sir Joshua's.

A book by M. Paul Stapfer is always welcome; his 'La Famille and les Amis de Montaigne' (Paris: Hachette) as much as any of its predecessors. A delightful subject is here ably treated. Montaigne's parents and close friends, La Boétie, Mlle. Gournay, De Brach, Charron, and of course the captivating essayist himself, are the very living personages about whom M. Stapfer chats—for his book, he expressly states, is a series of "causeries," as is fitting, in view of the real hero of it.

Great men have come out of Brittany—Chateaubriand and Renan will suffice as samples—and the Breton race has literary aptitudes and an army of literary men, not as great as the two named above, yet worthy to have found a biographer in M. Joseph Rousse, who, in 'La Poésie bretonne au 19e siècle' (Paris: Lethielleux), has related their deeds in the field of verse. The book is not particularly well written; the portraits are of the newspaper class, and the subject, capable of being made very interesting, does not become so in the author's hands; but altogether we have a useful work of reference.

Under the guise of a novel, with the thinnest thread of a story, M. R. de Bonnières gives us, in 'Lord Hyland' (Paris: Ollendorff), an attractive account of the humanizing and broadening of a fanatical English nobleman who has a mania for converting heathens, whether Christian or pagan. There is much boldness in the treatment of the theme, which involves questions that cause even now considerable discussion, usually acrimonious; but it would be hard indeed to take offence if the book is read without prejudice. It is distinctly interesting in itself and as indicative of the growing trend of thought in French literary circles.

Dahms's 'Das Litterarische Berlin' is a rather peculiar book. It gives the history of every newspaper and periodical in the city and in the suburbs, with such minute items regarding each as policy, contents, frequency of issue, names and addresses of the editors, rates for subscriptions and advertisements, office hours of the editors. In the majority of instances portraits of the editor-in-chief and frequently of many of his associates are exhibited. There are numerous articles specially prepared by men prominent in various kinds of newspaper work, such as criticism of the theatre, of music, of the Government; the critic's place in the theatre, in the art exhibitions, in the music hall, and in the Board of Trade; together with an article on the press ball. These articles are accompanied by good illustrations, the one accompanying the description of the ball being large enough to contain about one hundred portraits of Berlin society leaders. The whole book is admirably prepared and contains a large amount of well-classified knowledge.

Mr. John Rae communicates to the London *Athenæum* a hitherto unpublished letter from

Adam Smith to the Duke de La Rochefoucauld, written in 1785, and preserved in the public library of Mantes. The letter was in part occasioned by a promise on the part of Smith, subsequently fulfilled, to correct in a new edition of his 'Theory of Moral Sentiments' an injustice committed by him in that work, when he associated the distinguished ancestor of his correspondent, the author of the 'Maxims,' in the same condemnation with Mandeville. It appears, also, in answer to an inquiry of the Duke's for letters from Turgot, that, in spite of their friendship, Turgot and Smith had had no correspondence. Smith mentions incidentally the subjects of the two works upon which he was engaged during the later years of his life and which he had destroyed shortly before he died. One was "a sort of Philosophical History of all the different branches of Literature, of Philosophy, Poetry, and Eloquence." The other was "a sort of Theory and History of Law and Government." The materials of both, he says, were in great part collected, and to some extent put in tolerable order. But, he continues, "the indulgence of old age, tho' I struggle violently against it, I feel coming fast upon me, and whether I shall ever be able to finish either is extremely uncertain." Posterity might perhaps dispense with the former of these treatises, but even in incomplete form the latter would have been an inestimable legacy.

An admirable scheme for enabling the public which buys books to make its choice with intelligence (and at the same time for increasing, no doubt, largely the number of books which it makes up its mind to buy) has lately been put in operation in London. The Library Bureau has opened a Publishers' Central Showroom, to which the principal English publishers will send all of their publications for inspection. No books will be sold at the showroom, and no orders taken—a regulation which is obviously essential to giving the proper character to the undertaking.

A very useful work has been issued by the Library Bureau (Boston) in 'A List of Books for Girls and Women and their Clubs,' put together by various different writers who are more or less authoritative in their different fields. The books are for the most part such as would be equally interesting for men as well, but its special adaptation to women is emphasized by the large number of titles given under the heads of Domestic Economy, Home Sanitation, and Women's Clubs. The text-books under the head Education are apparently chosen upon no principle whatever. Particularly valuable are Parts I. and III. Fiction, and Art (Fine Arts by Russell Sturgis and Music by H. E. Krehbiel). The former especially is delightful reading, and one cannot but wonder that so many acute and witty things can be said about two hundred and fifty novelists without any sacrifice of sound judgment or accurate characterization. These two parts (as well as the other three) may be had separately for a very modest price, and they deserve a wide circulation.

Portugal is about to follow the example of some greater Powers, and celebrate a quarter-century of its own. At the request of the Geographical Society of Lisbon the Government has just determined to celebrate, with much pomp, in 1897, the four hundredth anniversary of the expedition which, on July 8, 1497, set out, under the command of Vasco da Gama, for the discovery of the route to India round the Cape of Good Hope. Few details of the celebration have as yet been settled upon, but it is expected that special expositions will be opened at Lisbon, and many scientific con-

gresses held, to which the world will be invited.

—We have already reported the contents of the second number of the *American Historical Review* (Macmillan), and shall confine our present notice to the "Documents." The very valuable Diary of Richard Smith of New Jersey, in the Continental Congress (1775-1776), of which, by the way, the historian Bancroft had the benefit, has, for its most significant entry, under date of September 26, 1775: "Com^{rs} brought in a Letter to [query from?] Gen Washington, in the Course of it E Rutledge moved that the Gen. shall discharge all the Negroes as well Slaves as Freemen in his Army. he (Rutledge) was strongly supported by many of the Southern Delegates, but so powerfully opposed that he lost the Point." On January 16, 1776, "A Report passed from the Com^{rs} on Gen. Wash^g Letters, . . . to allow Him to reinlist the free Negroes," etc. Next in interest is a letter from Lincoln to N. J. Rockwell, in the nature of a circular to his political friends, dated Springfield, January 21, 1846: "You, perhaps, know that Gen Hardin and I have a contest for the Whig nomination for Congress in this District. He has had a turn; and my argument is that 'Turn about is fair play.' I shall be pleased if this strikes you as a sufficient argument." The sufficiency of this argument for what used to be called rotation in office is still recognized by the majority of Lincoln's countrymen. The holding of office is still a matter of personal aggrandizement as opposed to a public trust, the competent and faithful discharge of which should be a bar to envy or jealousy on the one hand and to insecurity on the other.

—Most timely of all is an inedited letter of John C. Calhoun's to Waddy Thompson, dated October 29, 1847. The whole of it deserves to be read and pondered in this war-crazed time, but we can make room only for the following extract, for its parallel to our present false and hypocritical situation:

"In deciding that question [how to bring the Mexican war to an end] it must not be overlooked that both parties, by large majorities, stand committed by their recorded votes, not only to the war, but [to the contention] that the war is a war of aggression on the part of the Republic of Mexico—aggression by invasion and spilling American blood on American soil; and thus committed also to the Rio Grande being the western boundary of the State of Texas. It is true that very few of either party believed that there was any just cause of war, or that the Rio Grande was the western boundary of Texas, or that the Republic of Mexico had made war on us by the invasion of our territory, or any other way; but it is equally true that, by an act of unexampled weakness (to use the mildest terms), both stand by admission on record to the very opposite of their belief. And what is worse, they have, by this act of unpar[alle]led weakness, committed large portions of both parties out of Congress to the war, as just and unavoidable on our part. . . . The fatal error of the Whigs in voting for the war has rendered them impotent, as a party, in opposition to it."

—The meeting of the Modern Language Association at New Haven during the holidays was an unusually pleasant one, the charm of the place and the cordial hospitality of the Graduates' Club and other organizations doing more to produce this effect than the general excellence of the papers read. Of the latter there were, in fact, too many; suitable discussion being impossible. The subjects treated are a fair index to the relative activity in the various departments of modern-language study in this country. Of the two score papers pre-

sented, nearly three-fourths pertained to Germanic subjects and less than one-fourth to Romance. Of the twenty-seven Germanic papers, fully half were English, ten German, and three Scandinavian, etc. A majority of the seven Romance papers treated of French subjects. Of the English papers, but two concerned strictly linguistic matters: Dr. Belden's paper on Anglo-Saxon prepositions, and Mr. Grandgent's paper on the *p* in words like "warmth." The remaining English papers dealt with the modern period, with the exception of five that fell in Middle-English times. It is remarkable that, of these, four were devoted to Chaucer. Prof. Price of Columbia made an elaborate presentation of the story of Chaucer's "Troilus and Criseyde"; Prof. Manly of Brown proved that in writing the "Squire's Tale" Chaucer was not indebted to Marco Polo; Prof. Easton of Philadelphia presented many interesting features of Chaucer's versification; while Prof. Hempl of Michigan made the same facts throw new light upon Chaucer's literary workmanship and the chronology of his writings. The evidence presented made it more than likely that the "Palamon and Arcite" was written in the heroic couplet, and that we still have a large part of it but slightly revised in the "Knight's Tale." A somewhat less scholastic character was given the meetings by certain papers of a more general literary flavor: "The Conventions of the Drama," by Prof. Brander Matthews of Columbia; "Fiction as a College Study," by Prof. Bliss Perry of Princeton; "The Comparative Study of Literature," by Prof. Marsh of Harvard; "The Significance of Pastoral Literature," by Dr. Smith of the University of Pennsylvania; as also by one or two papers on politico-social movements rather than on literature—for example, the paper of Dr. Baker of Johns Hopkins University on "Das junge Deutschland" in America. By the election of Prof. Calvin Thomas of Ann Arbor to the presidency of the association, this distinction falls for the first time to a Western man, and for the first time to a teacher of German. The choice is, however, regarded as a peculiarly happy one in that Prof. Thomas not only is distinguished for his familiarity with Germanic and Indo-European philology, but is also generally regarded as foremost among American students of German literature. He is at present engaged in the Goethe archives at Weimar, in the preparation of his edition of the second part of "Faust."

—*Minerva*, "Jahrbuch der gelehrten Welt," continues to grow in size. The fifth volume, which has just appeared (Strassburg: K. J. Trübner; New York: Lemcke & Buechner), contains sixty pages more than the preceding one. This year the editors do honor to Italian educators by choosing for their frontispiece a portrait of V. G. Schiaparelli, director of the Royal Astronomical Observatory in Milan. In numerous respects the book is more complete than heretofore, especially in regard to American institutions. Important additions are also observable in the case of institutions of western Europe—witness the description of the French archives at Paris and of the archives of Holland. The Papal institutions at Rome are for the first time adequately represented. Owing to the difficulty in presenting to Europeans a clear idea of American colleges and universities, quite an essay has been introduced in the early part of the work, calling attention to the main differences between the German system and our own. The outline of the historical development of our institutions, and the classification of them, are, on the whole, very just. In

the estimation of the editors of *Minerva*, the following are entitled to the name of university: Harvard, Johns Hopkins, Columbia, Yale, Cornell, Chicago, Michigan; others likely to become worthy of the name after a few more years of development are Wisconsin, Minnesota, Colorado, California. The University of the State of New York is carefully distinguished from all the others, and is compared to the University of France. It is somewhat surprising, however, that the University of Indiana and Washington University in St. Louis are the only ones added to last year's list. The book is divided into four parts: (1) a classification of institutions according to their geographical location; (2) an alphabetical list of institutions, with a description of each and a list of faculties; (3) an alphabetical list of instructors, with a reference to the place where the institution with which each is connected is described. The number of students attending the great universities is thus set down: Paris 11,010 (10,643), figures in parentheses being for the previous year; Berlin 8,652 (8,348), Vienna 6,714 (4,856), Madrid 5,829 (5,867), Munich 3,561 (3,406), Leipzig 2,957 (3,067), Harvard 8,290 (8,156), Michigan 2,772 (2,695), Yale 2,350 (2,202), Cornell 1,686 (1,801), Chicago 1,587 (878). These figures are probably for 1894-'95, although the book states that they are for the winter term 1893-'94—exactly the same statement that stands at the head of the list for the preceding year.

—The time has come to make what we may call a topographical survey of painting in Europe, at least as far as the older schools are concerned. Public galleries have already garnered in most of the masterpieces, and the few pictures of note still remaining in private hands are fairly well known and readily catalogued. At the same time, good reproduction has become so cheap that such a survey as we speak of can afford, with but slight addition to the selling price, to include fairly adequate illustrations after at least the most important pictures. An undertaking of the kind we have just outlined has been begun by MM. La fenestre and Richtenberger in 'La Peinture en Europe' (Paris: Quantin). The first two volumes of the series, dealing with the Louvre and with Florence, left much to be desired in the way of accuracy of statement and acquaintance with the latest research. We are, however, happy to give unstinted praise to the third volume, just published, which deals with the paintings in public and private collections, churches, and other lay and secular foundations in Belgium. Perhaps the easiest way to convey an idea of the nature of the volume will be to name the more important of the works reproduced. At Brussels: Dierick Bout's "Penitence of Otto," Petrus Cristus's "Descent from the Cross," Van Eyck's "Adam and Eve," Quentin Matsys's "Story of St. Anne," a "Crucifixion" and the "Portrait of Barbara Vlaenderberch," by Memling, Patinir's "Rest in the Flight," and Roger van der Weyden's "Charles the Bold." From Louvain we have reproductions of Bout's "Martyrdom of St. Erasmus"; from Antwerp, Antonello da Messina's "Crucifixion," Titian's remarkable early picture containing the portrait of Pope Alexander VI., Jehan Fouquet's "Madonna," Mabuse's "Four Marys," Quentin Matsys's "Entombment," Memling's "Portrait of a Canon," little "Madonna," and "Christ and the Angels," and Roger van der Weyden's "Seven Sacraments"; from Ghent, Van Eyck's "Adoration of the Mystic Lamb"; from Bruges, the shutters of Gerard David's

"Baptism" and his "Cambyses and Sisamnus," and of course several of the Memlings in the Hospital. We scarcely need add that the best of Rubens and of other later masters is also reproduced.

—A young savant, M. Abel Lefranc, secretary of the Collège de France, has come upon a manuscript in the Bibliothèque Nationale which contains the whole of the later work in every kind of Marguerite of Navarre. If anything might be taken as certain, it would seem to be that, after so many learned researches and so many careful studies, both in regard of Marguerite herself and of her time, our knowledge of her writings was complete. And yet we now find that she left behind her in poems, dramas, dialogues, "chansons spirituelles," letters, and light poetry, about twelve thousand unpublished verses. By what strange chance such a mass of literature has lain hid, and by what train of circumstances the manuscript which contains it has escaped the researches of the learned during the hundred years that it has lain in the Bibliothèque Nationale, can hardly be explained. M. Abel Lefranc is himself as much astonished at this as anybody, and as little able to clear up the problem. Strangest of all, the title of the manuscript is duly inscribed in the catalogue, 'Les Dernières Oeuvres de la Reine de Navarre, lesquelles n'ont pas encore été imprimées.' The volume has the elegant and characteristic covering of the celebrated collection of the learned Bouhier (1673-1746), *président à mortier* of the Parlement of Dijon, and member of the Academy—a collection which was broken up at the time of the Revolution and divided among many public libraries. M. Abel Lefranc happened to pick up the manuscript by the merest chance at the Bibliothèque Nationale, and opened it, and the discovery was made. In the *Figaro* of December 27, 1895, he states that several of the compositions show erasures and interlineations which greatly add to the difficulty of deciphering. The necessity of these appears from what is told us by Brantôme of the literary habits of the Queen. He says that she most often either dictated or wrote in her litter, as she went on journeys. There are two dramatic compositions in the collection, ten letters in verse to Marguerite's daughter, Jeanne d'Albret, with three of that princess's answers, dialogues and lyric pieces, and two long poems, "Le Navire" and "Les Prisons," the latter being of about five thousand verses, and the most extended work of the royal poet. It appears evident that all these were written at the same period of Marguerite's life, that is to say, during its last four or five years. The whole of the new-found works will be published as soon as may be, under the auspices of the Société d'histoire littéraire de la France.

—An important monograph, by Mr. Samuel Garman, of 'The Cyprinodonts' of the entire earth has been published as one of the "Memoirs of the Museum of Comparative Zoölogy" (vol. xix., No. 1). The so-called Cyprinodonts constitute a family of fishes related to the pikes; the species about New York are generally called killifishes and mummichogs. All are of small size, and some among the smallest of fishes; the largest are the "four-eyes" of tropical America. Most have the sexes externally well differentiated and are viviparous. The sexes of the four-eyes (*Anableps*) are "rights and lefts," that is, "a dextral male pairs with a sinistral female," or vice versa. It is noteworthy that while, in the species

with plain or moderately bright males, the females are larger—often very much larger—as among fishes generally, in one genus (*Mollinia*), the males, which are very ornate representatives of that sex, reach larger dimensions than the females, and thus falsify a generalization extended to all teleost fishes. Mr. Garman displays an unusual acquaintance with the literature of the subject. In reviving the old name Cyprinodontes for the family, however, he will not be followed by all ichthyologists. He has shown that Wagner was the first to distinguish the family, but he proceeds to state that Wagner's name "*Cyprinoidae* is incorrectly written; etymologically corrected, it is identical with *Cyprinidae*." *Cyprinoidae*, however, is what was intended by Wagner, and was given because he wanted to imply likeness, but not pertinence, to the Cyprinids: *Cyprinoidae* is a compound with *idæa*, 'form'; *Cyprinidae* with *-idae*, the patronymic suffix. Ichthyologists will certainly be greatly helped by the very numerous references to the widely scattered literature brought together in Mr. Garman's historical survey and synonyms of the groups and species. About 134 species are recognized and distributed among 32 genera.

WHITE'S MONEY AND BANKING.

Money and Banking. Illustrated by American History. By Horace White. Boston: Ginn & Co. 1895. Pp. 488.

MR. WHITE'S book is not a systematic treatise on money and banking, and does not aim to give an elaborate account of theories, or a refined criticism of conflicting views. Apart from a few short chapters, the exposition of principles has the appearance of being brought in incidentally, as though suggested by the events of the story, rather than as constituting the central object of the work. This mode of treatment will not be found fully satisfactory by the economic student who may go to this book with a view to finding a compact body of doctrine; but it has evidently been adopted with a view to attracting the general reader, unaccustomed to economic reasoning, but intelligently interested in those questions of currency and banking which are now of such predominating interest in our national affairs.

The keynote of the book is given in the following passage in the preface:

"It is the aim of this work to recall attention to first principles. For this purpose it has been deemed best to begin at the beginning of civilized life on this continent, and to treat the subject historically. The science of money is much in need of something to enliven it. If anything can make it attractive, it must be the story of the struggles of our ancestors with the same problems that vex us. The reader will find an abundance of these in the following pages. Indeed, a complete and correct theory of money might be constructed from events and experiences that have taken place on the American continent, even if we had no other sources of knowledge. This may be said of the science of banking also. All the wisdom and all the folly of the ages, as to these two related subjects, have been exploited on our shores within the space of less than three hundred years."

There are, in fact, few who will not be astonished at the abundance of illustration which our financial history, as here unfolded, furnishes of almost every conceivable point connected with money and banking. We are certainly, for instance, not in the habit of thinking of old Peter Stuyvesant as a well of wisdom from which we may profitably recommend some of our free-coinage friends to draw in-

struction. Yet here we find him, a quarter of a millennium ago, grappling manfully with the double-standard question on Manhattan Island. Beaver-skins and wampum were used as currency, as well as metallic money, and the little colony got hot over the question whether beaver should be rated at six florins or eight to the skin, and wampum at eight beads to the stiver or ten. But Stuyvesant declared that it was immaterial whether the legal rate was eight for a stiver or ten, "because the dealer marks, holds, or sells his goods according to the abundance of wampum and the price he has to give for beavers."

Only a small portion of the book, however, is occupied with the curious details of the history of wampum, beaver, and tobacco money, instructive as these are; and we soon come to the doleful history of the paper currencies of the separate colonies and of the Continental Congress. Of course, every one knows how these paper substitutes for money went rapidly down-hill, and how each new issue made confusion worse confounded. The phrase "not worth a Continental" still survives to remind the descendants of the men of the Revolution how worthless the currency of the united colonies became. But this general impression is apt to be a shadowy one; and the vivid and interesting detailed account in this book will come, after all, more or less with the force of a revelation to most readers. Not only are we given the startling figures which tell the story of the depreciation in the paper money of one after another of the colonies, and in the Continental currency; but we are made to realize what desperate and futile expedients were resorted to in the attempt to avert the inevitable consequences of financial folly. On the first head, we are told, for instance, that "in 1763 the value of the New Hampshire shilling was a little less than a half-penny; in 1771 it vanished altogether. Rhode Island old-tenor bills in 1770 were worth 26 for 1." It is interesting, too, to learn that "the bills of the middle colonies were kept within reasonable bounds—a result due mainly to the stubbornness of their Governors." Though Mr. White draws no parallel here, not a few readers will be reminded of a similar service rendered by executive firmness nearer to our own day. Of Continental money the amount issued, between 1775 and 1779, was two hundred and forty-two million dollars, and "in 1781 the whole mass became worthless." An act of the United States Congress passed in 1790 provided for the funding of the bills in 6 per cent. bonds "at the rate of one hundred dollars in the said bills for one dollar in specie." Only \$7,000,000 was presented in response to this not very tempting offer.

As regards the means resorted to by the governments of the separate colonies, and by the Continental Congress, to make water run uphill, the account of them makes picturesque, even if melancholy, reading. We have, as a matter of course, legal-tender acts, struggles with the home Government over their validity, repudiation (more or less complete) of old issues, emission of new bills giving rise to such distinctions as old tenor, middle tenor, new tenor first, and new tenor second; but we have, in addition, efforts to force the currency of these precious bills on those who had property for sale, at the value which the legislative fiat put upon them.

"We find in nearly all the colonies severe penalties on those who charged more for their goods, lands, or services in bills of credit than in hard money. In some cases the penalty

was a fine, in others imprisonment, in others confiscation of the property offered. There is no recorded instance in colonial history where the penalties had any effect to reduce the prices of property, or to equalize paper prices and silver prices, although there are many cases where individuals were outrageously robbed."

The Continental Congress resorted to imprisonment, on a large scale, to procure army supplies, at arbitrary prices, for the almost worthless paper money; and finally, in 1779, against the protest of Robert Morris, the Superintendent of Finance, it endeavored to cut the knot of the currency difficulty, so far as providing for the army was concerned, by resorting to the plan of raising, from the several States, "specific supplies" for the army, i. e., avoiding the intervention of money altogether by making requisitions for beef, pork, and so forth. The result was an experimental demonstration of the necessity of money as part of the machinery of civilized life. "Instantly there was a tangle of the public accounts which nobody could unravel. In some cases, flour collected for the army was not forwarded because there was no money to pay teamsters. It remained at the place of collection till it was spoiled. Other consignments, which were actually sent, arrived too early or too late, and were left on the ground exposed to the weather." The whole experiment was a dismal failure. In August, 1780, Washington, writing to Congress, said: "The present mode of obtaining supplies is the most uncertain, expensive, and injurious that could be devised." Mr. White's account of the history of colonial and Continental money is interspersed with an abundance of instructive comment and discussion. In concluding his chapter on Continental money, he refers to the "paper-money debauchery" of several of the separate States after the Revolutionary war, and quotes from Judge Story the following declaration as to the Revolutionary and post-Revolutionary legal-tender laws: "They entailed the most enormous evils on the country, and introduced a system of fraud, chicanery, and profligacy which destroyed all private confidence and all industry and enterprise."

The next subject taken up is the paper-money legislation of the Civil War. Naturally, the prevailing note here is one of deep regret that the experience of our fathers did not avail to keep us away from the maelstrom of irredeemable paper money. Mr. White points out with great effectiveness, both by the examples of history and by intrinsic considerations, that the notion of the necessity of irredeemable paper for the carrying on of wars is a delusion. Referring to the fact that in many wars quite as trying to the resources of the countries concerned as was our Civil War, and notably in the wars of France under the first Napoleon, specie payments were not suspended, he remarks: "Yet sane people talk as though there had never been a war, from the siege of Troy till now, without the use of depreciated paper, whereas this is only a modern device of slovenly financiers." And he avails himself of the assertion made in several reports by Mr. Memminger, the Confederate Secretary of the Treasury, "that it was impossible to carry on a modern war by means of taxes alone," to point out the fallacy of this view, and to explain how the issue of paper money merely veils the true nature of the operation of taxation, and distributes the cost of the war among the people, only not according to a sound or equitable system. "Every country," says Mr. White, "pays the cost of a war at

the time of the war" (of course, money borrowed from abroad is here left out of the account), and he continues as follows:

"The Southern Confederacy presents an easy illustration of this maxim, because it was for the most part isolated, having little communication with the outer world, and because all of its debts were obliterated at the end of the war. Obviously somebody paid the cost. It was not paid by foreigners (except the trifling sum of \$15,000,000 borrowed abroad), nor did it fall from the moon. There being nobody else to pay it, the people of the Confederacy must have paid it, and must have paid it during the time of the war and not a moment later. To levy taxes sufficient to pay the whole of each year's expenses within the year would not have made the burden any greater than it actually was. The Confederacy, by following Mr. Memminger's conception that taxes to pay interest on loans would be sufficient, did not get rid of heavier ones. It only took them in a different way."

This quotation affords an illustration of the way in which, throughout the book, discussions of a general character are brought in at such points as the current of the narrative suggests; a method which will doubtless cause them to be read by very many to whom systematic economic exposition is insupportably dreary. In this particular instance one point is overlooked as regards the general thesis, though it does not apply to the case of the Confederacy. If, during a war, paper money were issued only in such quantity as not to be depreciated, and if this paper money were redeemed after the war, its issue would have acted as a *bona-fide* loan, and would have operated to defer payment of the corresponding part of the cost of the war until after its conclusion. Of course, it would have done so through the expulsion of a corresponding amount of gold, which would have been set free for purchases abroad (in so far as it was not hoarded).

We have perhaps devoted too much space to giving an idea of the contents of that portion of the book which relates to money; and even of this portion we have not indicated the parts which deal with the gold and silver standards (including a long account of the successive international congresses which have struggled with the question of silver), nor the brief chapters relating to the currency of foreign countries. The history of our coinage legislation and of our actual experience in regard to gold and silver money is of especial pertinence to current questions. Thus, the circumstances bearing on the well known fact that we have had the single gold standard *de facto*, though not *de jure*, ever since 1834, are of decided interest just now. The story of how France came to the gold standard is instructively told. Some interesting points are mentioned bearing on the question of the effects, in India, of the fall of silver; the most striking being the fact that rice, the chief food product of Bengal, has "more than doubled in price since the rupee began to fall." The chapter on "the crime of 1873" is conclusive on a matter which we should be glad to think was no longer likely to be heard about, but which, at all events, is far from being the burning question it seemed to some in the palmy days of Jones and Stewart and "Coin." The concluding chapter of the part of the book devoted to money deals with our present financial situation, points out why and to what extent the Government keeps our various other dollars at par with the gold dollar, shows the evils of fiat money, explains the inelasticity of a Treasury currency, owing to the necessary non-possession by the Treasury of the machinery of banking, and touches on other matters of present-day interest, includ-

ing an account of how the contract made with the Morgan syndicate last February saved our monetary system. It closes with some discussion of the Supreme Court decisions in the legal-tender cases.

The second half of the book is devoted to banking. With this, though perhaps as interesting and certainly as important as the first half, we shall have to deal much more briefly. It is less easy here to pick out salient points and to convey, in brief space, an idea of the matters dealt with. The first chapter gives a short statement of the functions of a bank, the second describes the operation of the clearing-house, and the remaining seventeen chapters follow, for the most part, historical lines in the treatment of the subject. The history of the two Banks of the United States is full of interest and instruction, and the personal and political side of the struggle between Andrew Jackson and the second Bank is vividly presented. Successive chapters deal with the various classes of State banks; and their rise and fall, as well as the legislation affecting them, is made the occasion for impressing upon the reader the general principles which underlie the operation of banking. Thus, we have, in the chapter on "Some Notable Banks," a full account of the development of the Wisconsin Marine and Fire Insurance Company (started by the Scotchman, George Smith) into the great issuer of paper money for the Northwest; and, in this somewhat unexpected place, we find, under the head "Advantages of 'George Smith's Money,'" perhaps a fuller explanation of the nature and benefits of an elastic banking currency than anywhere else. The history of ante-bellum banking in the United States contains much in the way of example as well as of warning; and if the story of "wild-cat" banking presents a state of things almost incredibly bad, the history of the Suffolk banking system of Massachusetts, the Bank of South Carolina, the Bank of Indiana, and many others, shows how safe and beneficent a banking system is when based on sound principles.

After a chapter on the national-bank system come the three final chapters of the book, which again deal with general matters, the first being devoted to "The Quantity Theory," the second to "The Mechanism of Exchange," and the third to a number of points related to banking problems of to-day. Mr. White emphasizes everywhere the fact that credit is the thing with which banks are essentially concerned. A passage which occurs in the chapter on the mechanism of exchange is worth quoting as a specimen of the author's style. Referring to Mr. Hepburn's definition of the discount of commercial paper as "the swapping of well-known credit for less known credit," he says:

"The banker, if he understands his trade, enables the most deserving persons in the community to get possession of the tools and materials of industry without the use of money. The most deserving persons in the commercial sense, are those who can make the most profitable use of tools and materials, and who are believed to be honest. By swapping its well-known credit for their less-known credit, the bank performs a service to society by economizing tools and materials. Anything which puts these things into the right hands and keeps them out of the wrong hands is a gain to the world. The continued existence of a bank is conclusive and incontestable proof that it is doing this thing, for if it were not, its own losses and expenses would soon eat it up."

Mr. White's book is not devoted to the propagation of any special views, but is designed to enlighten readers of ordinary intelligence in regard to the history and the essential

principles of money and banking. In its theoretical arguments and its statements of doctrine, while they are not always hedged about with such caution and particularity as would be expected in an economic text-book, there is rarely anything that we can find fault with; and there is a refreshing vigor and frequently even pungency in the expression, which is not often met with in books on this class of subjects. The treatment of the "quantity theory" is not to our mind satisfactory; it fails in that highest requirement of controversial writing, the stating of the doctrine you oppose in the best form of which it is capable. Moreover, Mr. White's views, as expressed in this chapter, seem to be contradicted by his own remarks on page 197, touching the fall in the value of greenbacks between 1874 and 1875, of which he says "the explanation is that there was a greater demand for instruments of exchange in the former year than in the latter. Consequently they would buy more goods per dollar and therefore more gold."

Nothing could be more timely than this book. It ought to have the effect of making thousands of intelligent persons who are interested in the burning financial questions of the day, but who feel that they see them "through a glass, darkly," take the trouble to equip themselves with an understanding of the problem and of its history.

GROSVENOR'S CONSTANTINOPLE

Constantinople. By Edwin O. Grosvenor. 2 vols., illustrated. Boston: Roberts Bros. 1895.

MR. GROSVENOR, now professor of European history at Amherst, was for many years professor of history at Robert College, Constantinople. He improved the opportunities there afforded for the study of the history of the antiquities of that city, and these two large volumes are the result of his work and investigations. In his preface he acknowledges his indebtedness to various "distinguished gentlemen," so many and so distinguished that the list sounds very much like a "recapitulation of glittering names," to use his own words. But the two to whom he considers himself most of all indebted are Alexander G. Paspatis and Gen. Lew Wallace. The latter, whom Prof. Grosvenor designates as "the foremost writer of America," furnishes a commendatory introduction to the work.

Prof. Grosvenor's style has a somewhat Byzantine tinge, which may be due to his long and careful study of Byzantine writers, the evidence of which one finds on every page of these volumes. For he is no mere second-hand student, but one who has read the tedious tomes of the little-known Greek writers of the Byzantine Empire. Moreover, he is a member of the Hellenic Philologic Syllogos and the Society of Mediæval Researches of Constantinople, as well as of the Syllogos of Parnassos of Athens. Through his membership in these societies he has been for many years in close contact with every one in Constantinople who is interested in or has studied the ancient or mediæval history of that city, and has thus been able to draw, as it were, upon a common stock of information. Whoever in Constantinople finds an object of interest or discovers new facts, reads a paper at the Syllogos, and, in conveying his own new information, obtains in return the information and the criticisms of scholars interested like himself in the same researches. The language of the Syllogos and

its publications is naturally Greek, for, with the exception of a very few Englishmen and Americans, it is almost exclusively the Greeks who are interested in the study of the former history of Constantinople.

But it is not merely that Prof. Grosvenor has been able to draw on the accumulated information of all those who are interested in the antiquities of Constantinople; in the many years of his residence he appears to have visited every church, every mosque, every cistern, and to have explored every region of the city for remains of ancient Constantinople or Byzantium, and in these explorations he has made discoveries and formed opinions of his own which constitute an original contribution. Now and then, however, he seems to propound a theory or opinion as though it were a well-attested and generally accepted fact. For instance, on the capitals of the three-tiered columns which support the roof of Bin Bir Derek cistern there are a number of monograms, some of them repeated several times, some of them upside down and some of them wrong-side foremost. Prof. Grosvenor assumes that these are monograms of senators of the time of Constantine, and that Philoxenos, who, we are told, gave this cistern to the city, did not himself bear the entire cost, but that, the undertaking being too great for any one man to accomplish, various senators contributed in larger or smaller amounts, the monogram of each contributor being inscribed on one or more capitals, in proportion to the amount of his contribution. The rude or careless workmen who did the stone-cutting cut these monograms in the capitals in any fashion, frequently upside down and wrong-side foremost. So far as we are aware, Prof. Grosvenor has no other ground for this hypothesis than the fact that there are monograms of various individuals on the capitals. History or tradition ascribes the cistern to Philoxenos only. Now, however plausible his theory, Prof. Grosvenor has no right to state it as a fact on such evidence as this. He makes no mention, by the way, of the cross on a ball which is to be found on at least two of the columns in the Bin Bir Derek cistern, and which evidently belongs to the period of Justinian. In his description of another cistern, Yeri Batan Serai, Prof. Grosvenor asserts as a fact that "it still serves its original purpose, supplying water from the aqueduct of Valens in as copious measure as of old." This may be true, but, inasmuch as other authorities declare that the source of supply is unknown, it is regrettable that Prof. Grosvenor does not inform us definitely of the source of his information.

The plan of the book seems to be to present a panoramic view of Constantinople in all the epochs of its existence. This is, perhaps, best illustrated in the chapter on the Hippodrome, which was first published some five years ago in separate form as a pamphlet. In this, after restoring the Hippodrome from its ruins, Prof. Grosvenor endeavors to make it live by bringing before the mind's eye picture after picture of stirring events which have occurred there: the revolt of the Nika; the extraordinary history of the famous or infamous Theodora, wife of Justinian, who, making her first appearance as the orphan of the deceased keeper of the bears of the faction of the Green, a pitiable little child, vainly begging at her mother's bidding from the patrons of the faction which had employed her father, becomes at last the real ruler of the world, and wreaks her vengeance in the same place on those who then scorned and insulted her. Again, we have the picture of Basil, the groom, be-

striding and controlling the wild Arabian steed which no one else could manage, and by his courage and dexterity so approving himself to Emperor and people that he finally, in his turn, ascends the imperial throne. No panorama of any other spot can be stranger or more picturesque than this panorama of the Hippodrome. The book is not a guide-book, however, and he who wishes to know the chronological order of events and the precise history of each occurrence must look elsewhere. No authorities are cited. The reader must accept Prof. Grosvenor's word; and if he doubt that, he will find it an exceedingly difficult matter to check the accuracy of the information given. Perhaps for the purpose which Prof. Grosvenor had in mind this method is the best, provided that the author is always sufficiently careful regarding his facts. After reading the chapter on the Hippodrome, for example, one has a very vivid impression both of the general life of the Hippodrome, and also of the immense part which the Hippodrome played in the history of Constantinople. One can even restore fairly well the general appearance of the enormous structure.

In another chapter we are taken up and down the Golden Horn, and then up and down the Bosphorus, going on one side and returning on the other, and completing our trip at the Princes' Islands. As we come to each village we are told by our cicerone of the most striking events connected with that village, of the part it played in Byzantine, and sometimes in Turkish, history, and of the great buildings which stood or still stand there. Sometimes the stories are romantic, sometimes gruesome. On the island of Proti, one of the Princes' Islands, where so many princes and princesses, mutilated or with shorn heads, were cast into monastic cells, after being torn from their thrones by palace conspiracies, we meet among others the entire family of the Emperor Leo V. "A leathern sack lying at the Empress's feet contained the headless remains of her husband Leo. . . . The roughly shaven head of the Empress Theodosia testified to the violence with which, in the euphemistic language of the Byzantines, she had just been made 'a citizeness of heaven, wearing the raiment of the angels,' or, in other words, a black robed nun. At her side cowered her four grown-up sons in the agony of a just-performed and nameless mutilation." Eight years before, this same Leo, the Armenian, had turned Michael I., his wife, and his children, into monks and nuns on that same island. Through such pictures as this with which these pages abound, we obtain a vivid conception of the intrigues and vicissitudes of the Byzantine court.

Having explored the shores of the Golden Horn and the Bosphorus, we are next taken through all parts of ancient Constantinople itself—that is, the modern Stambul. At each bath, each forum, each palace, each church, each cistern, each prison, and each antiquity, we are told some story of its founder, its restorer, its destroyer, or of those who have in any way connected themselves with its history.

The second volume is devoted almost entirely to the churches, mosques, and *turbehs*. The section dealing with the churches is designated "Still Existing Antiquities," and begins in the first volume. Besides Sancta Sophia, the churches which receive most minute and affectionate mention are "Kutchouk Aya Sophia, the ancient Church of Sts Sergius and Bacchus," built by the Emperor Justinian before he ascended the imperial throne, in 527 A.D.; and the "Kachrieh Djami, the Church of Chora." The former of these does not re-

ceive from the ordinary visitor to Constantinople the attention which it deserves. As Prof. Grosvenor says:

"No other building in Constantinople has exerted equal influence in subsequent Byzantine church architecture. The towering Sancta Sophia, acme of Byzantine attainment, has served as a model for almost every Moslem mosque, whatever its proportions, which has been erected since the conquest. Apparently the Christians shrank from imitation of Sancta Sophia, their proudest architectural achievement, but the Church of Sergius and Bacchus has been the honored pattern, copied with greater or less fidelity in every Orthodox sanctuary of the East."

Prof. Grosvenor is the first to point out, we believe, the meaning of an apparent irregularity in the architecture of the southern side of this church, and to show that the private entrance to the imperial palace of Justinian was at that point. "The clear cut monograms of Justinian and Theodora" are still visible on the capitals of the columns in this hitherto unexplained niche on the southern side. The latter of these two churches, the "Kachrieh Djami," although in a much more out of the way situation, is better known to the ordinary visitor on account of the beautiful mosaics which are still to be seen there. It is called by the guides the "Mosaic Mosque." Prof. Grosvenor gives us welcome illustrations of all the better preserved of these mosaics.

As one reads the account of the ancient Christian churches, now all of them mosques, except the Church of "the Theotokos, the Mouchliotissa," and Saint Irene, which is a museum of arms, one realizes that the Moslems, after conquering Constantinople, did not treat the Christian religion with that moderation and liberality which some apologists pretend. It is true that all of the churches were not converted into mosques at once, but, little by little, the covetous conqueror wrenched them from the hands of his powerless Christian subjects. In describing "Fetihieh Djami, the Church of Pammakaristos," Prof. Grosvenor tells of the *fetva*, or religious decision of the Sheikh-ul-Islam, in 1530, almost eighty years after the conquest, declaring that "in a city won for Islam by the sword, the Christians had no right to any religious property whatsoever," and of the method by which, through bribery and indirection, this *fetva* was circumvented by the Patriarch Jeremiah I. and the Grand Vizier, Ibrahim Pasha. Nevertheless, in 1586, the Patriarch was ousted from this church also and the church itself converted into a mosque by Sultan Murad III., after the Christians had already been compelled to remove the cross from the dome by Sultan Suleiman, in 1547.

But while Prof. Grosvenor thus points out incidentally the oppression which the Christians have undergone in Constantinople at the hands of their Turkish conquerors, he, with all modern writers, shows that the half-century of Latin rule, 1204 to 1261, was more destructive of the antiquities of Constantinople than the four and a half centuries during which the Turks have governed the city, and that the treatment of the conquered Greeks by the Venetians and Franks at the capture of the city in 1204 was more brutal, in view of the circumstances, than their treatment at the capture of the city by the Turks in 1453. He thus shows what were the grounds of the bitterness which, from the Latin conquest onward, the Greeks have felt towards Rome, and also how extreme that bitterness became, so that, when the choice was between Latins and Turks, there were many, if not the majority, who preferred the latter. The pathetic attempt of Constan-

tine XIII. to secure assistance from the west by submission to the Pope alienated a portion of his own subjects, while it brought him no assistance from without. In the section on "Zeirek Djami, the Church of Pantokrator," Prof. Grosvenor tells us that when, on the 12th of December, 1452, Constantine "proclaimed the ecclesiastical union of the Orthodox Eastern Church with the Church of Rome, monks and nuns crowded here before the cell of Gennadios, imploring his advice," and then at his instigation "anathematized the union and all who favored it. After that event Constantine could no longer count upon the support of his own subjects in resistance to the Ottomans." Six months later, when the Turks had captured the city, Gennadios was made Patriarch.

Outside of the Church of Saint Irene, within the iron railing, are several great sarcophagi. One of these, of porphyry, is, Prof. Grosvenor tells us,

"of all sarcophagi cut from a single block, the vastest in the world. Its inner cavity or receptacle is eight feet nine inches long, four feet one inch wide, and three feet eleven and one-quarter inches deep. Hence it was evidently designed for the reception, not of one coffin, but of two, one resting upon the other. Not a single monogram or character of any sort breaks the sphinx-like plainness of its inner or outer surface. A chain of collateral evidence, which it is impossible to doubt, demonstrates that this sarcophagus was the sepulchral chamber wherein the coffins of Constantine the Great and of his mother Saint Helena, removed from her earlier tomb at Rome, were placed together in filial and maternal nearness for their final rest."

Nevertheless, good antiquarians not only doubt such an identification, but even positively affirm that this cannot be the sarcophagus of Constantine. This is another example of Prof. Grosvenor's readiness to accept hypotheses as proved facts. We are afraid that it must be said that he is not an altogether reliable authority, although his work is by far the most satisfactory on Constantinople that has yet appeared in English.

There is one chapter which is not only unreliable, but which must seem to any reader, in view of recent events, extremely offensive, and that is chapter iv., entitled "His Imperial Majesty the Present Sultan." After speaking of his exalted rank and "that lordly dynastic line of which he is heir and representative," Prof. Grosvenor adds: "But a still sincerer respect and homage are due the present Sultan because of the intellectual and moral qualities which characterize him as a ruler and a man."

. . . The new Sultan manifested unusual talents in organization and administration. There was no problem too humble or detail too minute to receive his careful consideration. Sympathetic, generous, and large-hearted, he endeavored to benefit as well as rule his people." And again: "The many political evils existent in the Ottoman state, incurable because of their very nature, are not his creation, but his inheritance. These he endeavored to mitigate and reform." Sultan Abdul Hamid has shown himself peculiarly skillful in winning sympathy through personal interviews. His method in these interviews is somewhat the same as that which he attempted in the now famous letter to Lord Salisbury. He throws himself upon the mercy of his hearer. He tells him confidentially of the great difficulties of his situation, his earnest desire to make his nation great and glorious and place it in the forefront of progress, and how impossible he has found the execution of these noble designs. He begs counsel and advice, and flatters his auditor by praising the latter's country and asking him to tell him in what manner its rulers

have succeeded in achieving such wonderful results; and especially he makes much of the part which his auditor has played in that which has been done. He asks about railroads, and steam, and electricity, and arms; and displays considerable and minute knowledge in regard to some recent discoveries and inventions. It must be said frankly that he is insincere, and that the representations of his intentions which he makes in these interviews are falsehoods. He is, however, an able and skilful flatterer, and has completely cajoled one or two distinguished Americans, from whom Prof. Grosvenor has derived his ideas. The revelations of the Sultan's real character and of his views of government which have been made in the last few months are surely enough to enlighten the rest of the world, if not these gentlemen. Abdul Hamid has deprived his Grand Vizier and other ministers of all power, and the government of Turkey under him has been a government not of the Porte, but of the palace. The palace—that is, the Sultan—is therefore responsible for all that occurs.

In the transcription of Turkish names, Prof. Grosvenor follows somewhat unnecessarily the French system, writing "dj" for "j," "ou" for "u," etc. The book is well and profusely illustrated, but it is not sufficiently supplied with maps. The numerous references to the various regions, hills, etc., are difficult to understand and follow for lack of fuller maps. The index, also, is poor. The outward appearance of the volumes is fine. Within we are treated to heavy and luxurious paper and large open print; but unfortunately the paper is so highly glazed that the print cannot be read, especially by artificial light, without trying even the strongest and most youthful eyes.

Doty Dontcare. By Mary Farrington Foster. Boston: Estes & Lauriat.

The Story of Babette. By Ruth McEnery Stuart. Harper & Bros.

Melting Snows. By Prince Schoenalt-Carolath. Translated into English by Margaret Symonds. Dodd, Mead & Co.

When Love is Done. By Ethel Davis. Boston: Estes & Lauriat.

The Wise Woman. By Clara Louise Burnham. Boston: Houghton, Mifflin & Co.

The Coming of Theodora. By Eliza Orne White. Boston: Houghton, Mifflin & Co.

The Red Star. By L. McManus. G. P. Putnam's Sons.

Name This Child; A Story of Two. By Wilfrid Hugh Chesson. New York: Frederick A. Stokes Co.

ARE we not a little tired of the high-minded damsel of the Latin Quarter who disbelieves in marriage but is devoted to her children? Or has this lady come to stay, and must we expect her in every style at the pen of every novelist? Mr. Harland now has the floor, and portrays

her as well as another does. Upon the mind of the broken-spirited reviewer of fiction she palls; nor do we hold him literally guiltless who helps to create a new lower standard in story for the prima-donna. The virtue of woman, as an adorning grace in the heroines of fiction, will soon, if the writers keep up their present pace, be relegated to that amused estimation in which we now hold the plaints of Amanda, the rounded periods of Evelina—things gone by and therefore funny. Those stories of Mr. Harland's which are without this mark of the beast are full of his own particular attraction—the light touch, the ingenuity, the delicately tantalizing swaying of the balance between poetic and realistic. "Mercedes," a story of white mice, is a graceful trifle; "The Reward of Virtue," a really powerful sketch. Mr. Harland's English needs looking after, and the Latin Quarter has driven him to quite unnecessary Gallicisms. "I must have been hoping that he would speak *quand même*," and "he felt a little bewildered about the mot juste," remind one of those travelling Americans who ask if one can cross the *Mer de Glace* on a mulet.

'Into the Highways and Hedges' is the sombre story of an itinerant preacher and his high-born wife. It is a novel built on free and fine lines and in a lofty and ample spirit. The unpremeditated, almost accidental marriage between these seemingly ill-matched persons, their strange home-coming, the development of their lives into a culmination which the reader will best enjoy in finding it for himself, form the first nucleus of interest; the second hangs on a trial for life, with striking pictures of Newgate as it was when the day of Elizabeth Fry was but dawning. There are lover-like sketches of the salt marshes of the English coast, and there are keen and deep portrayals of character which give the book distinction; there is strength with restraint, and naturalness with delicacy; the theology is old-fashioned but glowingly alive, and the modern spirit has its manifestation in the absence of "story-book" satisfactions and retributions. This is, all in all, a book of unusual scope and dignity.

Of course it was to be expected that followers of Stanley Weyman would arise and try to shine. The time is ripe and they are here. Mr. Case is one of them, and has written a romance full of mystery, fighting, and explosion, paying Mr. Weyman the further tribute of imitating that style of his that is compounded of archaism and sentiment. The lovable ruffian is here, and the fair lady of many perils and stanch heart, with the goodly band of attendant fighters, pirates, and disappointed lovers. They are wholesome company, and we will not quarrel with them on the trifling ground of having met them several times before in the past three years.

Mr. Dole's story, or "Summer Idyl," as he calls it, shows a distinct gain in cohesiveness over a previous novelette of his. For this relief, much thanks. But it is so slight, mild, childlike, and bland that one wonders how ever it came to stand alone. A few illustrations from photographs of New England coast scenery serve as a prop to this infant life, which is blameless, but hardly promising considered as a book. As a "booklet" it is far superior to much of the twaddle published under that name, and, in so classifying it, one recommends it to a large number of readers who will find herein the evidences of wide reading, intimate love of the sea, a good command of English, and a home-brewed humor.

Mrs. Wright's tales are also of the coast, and

are full of the mysterious weirdness of the sea. But the scenery is lamentably profuse; it for ever breaks in on incident and talk, and is, as Schopenhauer said of life, a needlessly interrupting episode. The worm will turn, and landscape-writing is becoming a pest whose counteractive bacillus the nations pray for. The reader of these stories is impressed, first of all, however, with their unusual quality, and this not so much because they are more or less indeterminate, since that is the order of the day, but because of the originality shown in their construction, their situations, and their conversations. They have some tragic force, much emotional turbulence, and an odd juxtaposition of the realistic, the spectral, and the humorous. With the development of their best traits, strong work may well be looked for from their author in future. On the other hand, they now hover dangerously near the region where power is caricatured into affectation and originality into formlessness.

The genuineness of 'Doty Dontcare' falls comfortably upon the nerves. Here is a real and interesting place, the Island of Santa Cruz; landscape drawing which illustrates and does not persecute; human beings with modes of speech and of living tropically picturesque, with uncomplicated passions like love, jealousy, and revenge; here is a situation full of interest, both historic and ethnologic, and finally, here is tragedy, culminating, indeed, in revolution, but, alas! never absent from the daily lives of those with whom even one drop in sixteen flows dark in the blood. This is a small book, and the story is somewhat stiff-jointed, but it commands attention at once by its obvious faithfulness of description of a lovely island garden and of a striking episode in West Indian history.

From Santa Cruz and its many races an easy transit is made by way of Mrs. Stuart's story to New Orleans and its mixed population, where, besides the usual creole element, we meet Italians and gypsies. 'Babette' is a story of a little creole girl written for young readers; the melodrama is well adapted to them, and the ever-absorbing theme of a stolen child is sure to awaken and hold their interest. In the working out of this good old-fashioned plot, we are perfectly willing to be met by the most amazing coincidences, recognitions, and resuscitations. Why not? Let the deaf mute learn to talk, the idiot to think, the child-stealer to repent. Such marvels are of the right and natural kind for childhood, and will help them into a love of larger romance.

The scene of 'Melting Snows' is laid in Germany, where one naturally expects to find Charlotte's bread-and-butter side by side with Werther's suicide, so that in this story the air of the kindergarten mingles easily with that of the tragic stage. One is prepared for the naïve and submits to it; and the tragedy has a cumulative force as it marches which is unexpectedly effective. The translation is good, yet in quoting Scripture it might be better to use the existing versions. When we read, "one deep calleth another because of the noise of the water-pipes," we are made to feel that the psalmist was thinking less of the sea than of a system of plumbing—an impression probably erroneous. The printing and paper are admirable and make reading a pleasure.

'When Love is Done' is clearly conceived but clumsily written. The author has had something definite and wise to say, but has said it in a way borrowed from bad models, in which the didactic poses for the serious and the awkward for the simple. The pages are

marred by crudities of all sorts, and the style offends with involutions, sentences within sentences, and "loops, whorls, and arches" (as if Galton's finger print classifications had struck through the printer's ink). It is a tribute to the matter of the book that its manner does not utterly condemn it. Upon the subject of woman's work and her need to work in a systematic way, a door is opened, letting in a fresh and bracing air, which blows neither hot with modern excess of zeal nor cold with antiquated conservatism. True, the tone is one of bitterness against the conventions which make caste even in republican America, and against the men who live by these conventions instead of by their affections; but on the whole it is a tonic bitterness, and far better for young readers than the stories where the governess marries the earl. We commend this book to love-sick girls as a somewhat melancholy bit of reading, but one full of suggestion as to sources of recuperation and health. It will be a pleasing novelty to them not to be told that their only salvation is to teach the orphan boy to read, the orphan girl to sew. The fathers, too, who think that that is the only alternative to marriage are respectfully invited to pause and consider; though we confess to a private conviction that the fathers of to-day are in a fairly docile attitude towards their ambitious daughters. That the higher education of women should lead them not necessarily to doing men's work, but women's work in a larger way, is so simple an idea that the novelists have hitherto let it alone.

A kindred problem, the sacred right of woman to be a milliner and a swell, is treated in Clara Louise Burnham's novel, 'The Wise Woman.' There is a great deal of village sputter and feud as to the existence of this right; then the milliner, when Lord Orville looms, is advised by the Wise Woman (one of Miss Burnham's idolized and apotheosized spinsters) to prevaricate about the millinery business and to chant her Long Island ancestry. Thus, when the moment is ripe for Lord Orville, his blushing fiancée is no longer a milliner (a thought Gilbertian, this), and is paraded before society by her friends, leagued in counsels of hypocrisy, as having merely played at the trade, hobby-wise. The wedding takes place, but the problem falls to the ground. This is merry, but is it ingenuous? We have always thought Miss Burnham's books belonged to the department of guileless sport rather than to literature; but if she begins to espouse causes and do it in morganatic fashion, we shall question if her books carry their own excuse for being, notwithstanding their cheery, chatty, fun-loving tone. Her Long Island proverb, "A child in the hand is worth two on the beach," is perhaps better than consistency.

'The Coming of Theodora' shows how intolerable the cardinal virtues may become in the hands of a person who does not know how to manage them. In fact, they sit so uneasily on the pages that the pages sit uneasily on the reader, who spends an uncomfortable hour over the book and wonders just why it was written. Its excellent English and the clever delineation of the happy-go-lucky Edward, the tender wife Marie, the fiercely excellent Theodora, hardly atone for the feeling imparted of an ever present pea-in-the-boot.

'The Red Star' is a little story of military life during the Napoleonic wars in Russia. The hero is an officer in the Emperor of Russia's horse guards; the heroine, a Polish girl of high rank. The story begins with a marriage of convenience between the two, till that mo-

ment strangers to each other. The ceremony is obnoxious to both, and also to the reader, upon the disclosure that the bridegroom has another and a hated wife. But how he earns the little Pole's forgiveness and the reader's, is told in a spirited recital which carries us from camp to field, into battle and siege, through hardships and narrow escapes. We see the Russians fly from Eylau, and we retreat with Murat from Königsberg. The desolateness of the Russian plains, the horrors of war, the honor of patriots, the fulness of moral cowardice and of physical bravery, and the daring of woman when she goes a-soldiering—all have an animated recording in the pages of this slender volume. It is the fifth in order of the Autonym Library, a series of which the clear printing rejoices the eye, and the convenient little shape at once puts itself insinuatingly into the hand.

'Name this Child' is the sickly story of a sickly boy who addled his brain by reading, at dead of night, the secretly discovered manuscript diary of a lunatic, and who in consequence did many foolish things, of which the most foolish was incessant analysis of himself. Narrowly escaping suicide, he settles down into a quiet married life, not "a cynic," we learn, but "the grand deprecator," with a "peculiar mentality," which leads a former schoolmate to observe, "I would not be those thinking people for ten thousand pounds." "I leave you, reader, with a smile," says the author in closing. The sweet sorrow of this parting is likely to be mutual if any eye save the patient reviewer's ever sees these final words. The madness of the theme is sanity itself compared with the madness of method. To do what the French critic accused Shakspeare of doing—"trying all styles but the simple"—seems to have been the author's aim. The outcome is a wild-eyed, rumple-haired, dictionary-fed anarchy of language which creeps and oozes and crawls upon the spirits. It is quite true that under all is a grain of sense and a flash of power that attenuate but do not redeem. For ourselves we should freely forgive one who, reading the book, should exclaim with Marcus Aurelius, "I thank the gods that I did not make more proficiency in rhetoric, poetry, and the other studies."

A Cyclopædia of Works of Architecture in Italy, Greece, and the Levant. Edited by William P. P. Longfellow. Charles Scribner's Sons. 1895. 4to, pp. xxxii, 546.

This very handsome book contains twelve photogravures, one of them from a drawing of the interior of Sancta Sophia in Constantinople, and the others from direct photographs of important buildings and groups of buildings. It contains also 256 text illustrations, of which the greater number are half-tones, the others being plans or photographic copies of plates in other books. Credit is given to the books from which all these are taken. The preface calls attention to the photogravure of Sancta Sophia as having been prepared from a drawing, because the large photographs of that wonderful interior are made up of several pieces each, which cannot be rightly adjusted. It also names the carefully constructed picture on page 412 of St. Peter's from the chancel end, a view which other buildings prevent the student from obtaining in the presence of the church itself, although it is only right to say that Alinari publishes a very large picture which is almost equally complete, showing all but the base of the wall, and of course far more valuable as record. The other illustrations are

good and well chosen, and in many instances at least are somewhat unfamiliar, either because the building itself is less well known or because the point of view chosen is novel. A glossary, purporting to deal only with those technical terms which are used in the text, and a bibliography very complete and good, so far as the author and title alone are concerned, precede the dictionary proper. This, which constitutes the entire body of the book, is composed of a list, with descriptions and comments, of the buildings thought most noteworthy in the towns, villages, and ancient sites of the countries indicated in the title. The list is alphabetical, first as to the geographical names, second as to buildings in each locality. The space allowed the different towns and other places is carefully measured according to the architectural importance and the number of the buildings considered worthy of treatment. Thus Rome has nearly one hundred pages, Ravenna ten, and Brindisi half a page.

The book, it will be seen, is built upon the lines of a guide-book. Those who are familiar with the German guide-books for Italy written by Dr. Gsell-Fels will have a fair conception of the way in which the buildings are brought before the reader. The amount of space given to a building in Gsell-Fels's book for its architecture alone without its contents is not so very different from the amount of space given to it in the Cyclopædia; the German work is often fuller in the account of classical buildings, and gives valuable maps and sketch-plans, but in mediæval and later work the advantage is with the Cyclopædia. Moreover, the latter is superior in the critical judgment and insight shown in its descriptions. The same treatment has been given comparatively to the architecture of lands where Gsell-Fels's guides do not run. That which the traveller or the would-be traveller will welcome the most kindly is perhaps the extending of first-rate guide-book service to the towns of the Dalmatian shore, of Syria, of the coast of Asia Minor, and of the Mediterranean isles. To many of these localities there is no fitting aid whatever, the guide-books being inadequate and extremely vague in their statements, and these and the books of classical geography often antiquated and greatly needing the mention of recent discoveries. The three pages devoted to Pergamon, for instance, are a real gain to every student as summing up the accessible knowledge of that most important site. The two pages and a half devoted to Assos give an excellent account of this interesting town, brought to the knowledge of men by the American explorers of about 1880. The little known ruins of Palmyra are treated as thoroughly as the subject admits, in the present state of our knowledge, in the two pages devoted to it, and the other sites of Roman ruins in Syria and its back country are taken up, each in its turn, and our very slight and imperfect knowledge of them is presented in a compact form. The centre of Asia Minor is as little known as Syria; what there is to give is well given here. The Balkan peninsula has received careful treatment, and the world of students will welcome this new and valuable source of information about its important ancient structures.

As for Italy, the latest researches of students of early pointed architecture have justice done them, as is seen under Casamari, Fossanuova, San Galgano, Ceccano, Valvisciolo, and Santa Maria d'Arbona; the later Gothic architecture is treated very fairly under the names of the well-known towns where

it has flourished; the earliest Renaissance is well handled, as under Florence and under the minor heads Capella Pazzi, Palazzo Strozzi, and the church of S. Lorenzo. In fact, the whole development of the architecture of modern Europe from the fall of the Roman Empire to the French Revolution is to be found here by those who know where to look. Of classical remains the treatment is peculiarly satisfying. What is most needed, and what is well ascertained, is presented in a perfectly comprehensible way. The articles on buildings in Pompeii seem to be quite unsurpassable as lucid and brief description. Herculaneum is, however, set forth in an article hard to understand, because it is not made clear how much the largest part of the explored remains is still deep under ground, accessible by wells and galleries only, and because the immense and celebrated villa in which were found so much important sculpture and the library of scrolls which are being slowly unrolled and deciphered, is only hinted at under the name of House of Aristides.

This brings us to the mention of what is perhaps the greatest disappointment that this book has for the student, namely, the absence of allusion to the little-known towns where something very interesting is to be found, and where more might be found if students were sent to them in greater number. It is a disappointment not to find any mention of Pomposa in the Venetian flat country, and Gavanana in the Apennines above Pistoja, Colle di Val d'Elsa in Western Tuscany, and Santa Maria di Falleri not far away to the southeast (although of this the Etruscan walls are mentioned), Piperno near Rome, and San Marino near Rimini, Pietra Santa and Monte Oliveto. But these would not rightly be classed as omissions; they are places left unnamed because there is not room to name all. More doubtful is the propriety of leaving unnamed many valuable buildings in towns where many other buildings are described. Perhaps on looking up, say, Florence, and on finding only a partial list of the buildings there which are dear to students, one has more reason to complain. Again, however, let it be urged that no cyclopædia was ever complete, or even consistent and uniform in its system of admission and rejection of topics. Fortunate and meritorious indeed the book which is so nearly consistent as this one.

The tone of criticism is uniformly just and moderate, without excess or partisanship of any sort. Mr. Charles A. Cummings and Prof. A. L. Frothingham, jr., are credited with most of the articles on Italian buildings since the fall of the Roman Empire. The late Thomas W. Ludlow prepared most of the articles on classical architecture, and those who have noted his extraordinary achievements in the way of compiling and marshalling information, as in the architectural definitions of the 'Century Dictionary,' will be prepared for the good work there is in the book before us. The question must be asked, however, what is the authority for calling the smaller temple at Baalbek "Temple of the Sun," and giving the larger one to Jupiter, thus reversing the usual attributions, while the photogravure at page 144 gives columns of the smaller temple as of the "Temple of Jupiter," according to the common practice?

M.A., Corpus Professor of Latin in the University of Oxford. Macmillan & Co. 1895.

Good wine needs no bush, and Comparetti's 'Vergilio nel medio evo' is Chianti of the best. It was published twenty-three years ago at Leghorn, and at once gained for its author world-fame among students. Its character and contents are so well known that it really does not require either our notice or our praise. However, it is a pleasure to introduce the late Mr. Benecke's excellent translation to those of our readers who are not familiar with Italian, or have been unable to procure the rather scarce Leghorn edition. Prof. Robinson Ellis, Mr. Benecke's sponsor, has sought for years to have Comparetti done into English. His efforts are at last successful, and a much wider circle will now have access to one of the soundest and most engaging products of modern scholarship.

The work is divided into two parts, each of which deals with an important aspect of mediæval culture. The first section is occupied with the vicissitudes of Virgil's literary fame during the centuries which intervene between Propertius and John of Hauteville, the author of the 'Dolopathos.' The second examines the fame of Virgil in popular legend, and in the medium of the new popular literature which was independent of classical tradition. Comparetti has steeped himself in classical and romance writers alike. Nothing escapes him which relates to Virgil. Nor is this all. He is the historian of whole phases of mediæval thought and feeling. His theme is so much wider than is implied by the title that one can read for pages together in the first part of his book without encountering any direct reference to Virgil at all. His aim is not only to present mediæval conceptions of Virgil, but to use these conceptions as a means of gauging the mediæval mind. He gives us both text and gloss; and even when he seems to go far afield—for instance, in the chapters on "Mediæval Latin Poetry in Classical Form" and "The Causes which led to the Renaissance"—he has always a sufficient reason, viz., the desire to adjust this particular study to whatever else is known of the character of literary pursuits and attainments during the Middle Ages. Later on he accumulates marvellous stories about Virgil till the limit of the grotesque is reached. But here the reason is the same. He says, in explaining his copious reference to myth and legend: "It must not be supposed that my object is merely to surprise and amuse by narrating curious facts and follies. What led me to interest myself in these studies, and to devote much time and labor to them, was the consideration of how noteworthy a part of the history of the human mind was reflected in the varied and various phenomena of which the subject is composed."

"Felix qui potuit rerum cognoscere causas,
Atque metus omnes et inexorabile fatum
Subiecit pedibus strepitumque Acherontis avari."

Here in the midst of one of the finest passages of all verse, the historical Virgil reveals himself. The poet of the 'Georgics' is no thau-maturge. He has, rather, the spirit of an experimental philosopher. But when once the fourth Eclogue had been wrested into a prophecy of the birth of Christ, Virgil easily became exalted by connection with "quella Roma onde Cristo è Romano." The 'Æneid,' with its constant glorification of Rome, did the rest. "Unde etiam in antiquis invenimus opus hoc appellatum esse non Æneidem, sed Gesta populi Romani." The Middle Ages could not be expected to make more difficulty about turning racial legend into authentic his-

tory than did the predecessors of Servius. These are the two main factors in the transformation. The prophet becomes a mage: the poet who had most nobly treated the destinies of the last kingdom of the vision of Daniel, became inseparably connected with it in the memory and imagination of the Middle Ages. Already, under the Flavians, Virgil towers above other Latin authors like Saul in Israel. Macrobius regards him as omniscient and infallible. Priscian cites him 1,200 times. At the moment when the Lombards entered Italy he is almost the sole exponent of classical culture. Comparetti, in summing up the first five chapters of his book, presents Virgil to us as he stood on the threshold of the era of incubation which produced the modern nationalities:

"As supreme centre of the literary tradition left by the Romans, as representative of classical learning, as interpreter of that Roman sentiment which survived the downfall of the Empire, the name of Virgil acquired in Europe a significance well-nigh equivalent to that civilization itself. Such was his charge to the nations of the future, committed to him by paganism as it died. Centuries before, Dante spoke of Virgil as 'virth somma.' Justinian had said almost as much when, in the most perfect monument of the practical wisdom of the Romans which has survived, he puts Virgil by the side of the divine Greek epic poet who was to him 'the father of every virtue.'"

We cannot undertake to follow Comparetti through either part of his book—through the allegorical interpretations of Fulgentius, Bernard of Chartres, and John of Salisbury, or through the legends of Conrad von Querfurt and Gervase of Tilbury. The subject involves endless detail, and an adequate treatment would require pages. We wish, however, to touch upon one point in his remarks concerning the relations between Dante and Virgil, a theme of much more permanent interest than Neapolitan folk-lore, with its bronze flies, floating castles, and magic mirrors which revealed approaching danger. The main thesis which Comparetti seeks to establish is that the choice of Virgil as guide "is not, as is generally considered, a mere freak of the imagination determined by external causes, but has just as true a psychological reason as the choice of the other guide, Beatrice." He clears away the reasons which might have inclined Dante to choose Aristotle rather than Virgil. Dante saw Virgil much more truly than the average mediæval scholar. He did not regard him as omniscient. The Stagyrte is to him "il maestro di color che sanno." But Dante, in so far as he was creative, was a poet and not a philosopher. Virgil was his favorite author, his master in style, the singer of the glories of Italy. Dante's idealized theory of the Holy Roman Empire rested on a Virgilian basis, for in the 'De Monarchia' he treats the 'Æneid' as authentic history. Furthermore, the 'Æneid' was to Dante an allegory which traced the soul's progress towards perfection. He derived his main idea and many details from it. But, most of all, Virgil had, by reason, attained to the one great truth which made him of all pagans appear to the Middle Ages "the purest and the nearest the Christ of whom he had been unconsciously the prophet." Comparetti does not, however, insist on one fact which seems to us particularly clear. Every virtue ascribed by Dante to Virgil but makes him the more a foil to her who leads the way through the heavens of the "Paradiso." Beside Virgil at his best, Beatrice "sticks fiery off." Her reprimand to Dante, when, in the Earthly Paradise, he laments the loss of Virgil, speaks

Vergil in the Middle Ages. By Domenico Comparetti, Professor in the University of Florence. Translated by E. F. M. Benecke, with an introduction by Robinson Ellis.

volumes for the superiority of things spiritual over things rational and things ethical.

Prof. Robinson Ellis, in his introduction, can suggest only "a single point in Prof. Compagetti's sketch of the growth and history of the Virgilian legends upon which something might be urged on the other side." This relates to the influence of Naples in the formation and diffusion of the legends connected with Virgil's name. Soundness of judgment is, indeed, the crowning merit of Compagetti's book—soundness of judgment firmly based on thorough investigation. We have already spoken of the excellence of Mr. Benecke's translation. The conclusion of his labors was almost immediately followed by that accident in the Löttschen-thal which cost him his life.

Bookbindings, Old and New: Notes of a Book-Lover, with an Account of the Grolier Club of New York. By Brander Matthews. Macmillan & Co. 1895. Pp. xiii, 342.

THIS volume, which is one more of the Exlibris Series, is a pleasant and very readable account of old and recent bookbinding. It is illustrated by more than a hundred photographic pictures, in the text or on the separate leaves inserted. The text is divided into five books, though they are not called "books"—five departments, entitled severally *Bookbindings of the Past*, *Bookbindings of the Present*, *Commercial Bookbinding*, *Books in Paper Covers*, and *the Grolier Club of New York*. Each book, as we have called it, or each division, is divided into chapters, each with its separate title; but, in spite of this appearance of system and the abundance of technical terms which are used (and, it is fair to say, explained), it is chiefly as agreeable talk about the coverings of books that this volume will be known and remembered. In the second department, called *Bookbindings of the Present*, one chapter is entitled "The Technic of the Craft," and under this heading a very good brief account of the processes of binding and decorating the modern book is given. This, however, has been done before, and more fully, and the chapter entitled the "Outlook for the Future" contains little beyond a series of jocose suggestions as to binding 'Two Years before the Mast' in fishskin, and 'Dr. Johnson' in bearskin, and similar devices, some of which seem to have that doubtful kind of humor which is known as twitting on facts. More important, we think, is the chapter entitled "The Merits of Machine Binding," and with this are to be reckoned the other chapters of the same division.

The distinction between all kinds of commercial bookbinding, on the one hand, and all kinds of "extra" bookbinding on the other, is clearly marked, and it is explained that commercial bookbinding is not binding, in a strict sense, but "casing"; that is to say, the covers are prepared in advance, and the stitched books are put into them. All our readers will have noticed the great number of quaint and novel fancies which American and other designers have worked up in stamps to be impressed upon cloth covers, and in the fancy of the cloth coverings themselves. Mr. Matthews's chapter on the search for novelty deals with many of the strange whims which have been embodied in some of these cloth covers. The chapter on "Stamped Leather" deals with the more elaborate class of edition binding—namely, that to which belong the pretty covers of Mr. Pyle's 'Robin Hood,' and the Harper edition of the 'Quiet Life' with the illustrations of Abbey and Parsons. The subject is car-

ried on in the chapter upon "Paper Covers." Designs for the printed decoration of these, from the early days of *Harper's New Monthly Magazine*, when it was new, to the very recent and very vigorous design by Mr. Low for the *Bookbuyer*, are given, and among them are one of Mr. Walter Crane's when he was a less mannered designer than he has since become, and one of the inimitable drawings of Caldecott.

The reader would be glad of a little more critical discrimination. Bookbinding in leather is a decorative art of rather strict limitations, and there is much in the modern attempts to introduce novelty in design which cannot be thought successful in result, however original in conception. The designs for commercial book-covers seem to challenge criticism in their very character of a new departure, and it is the more important that they should be looked into with a critical eye-glass. The volume before us, in its simple jacket of dull green, a little glossy, and with plain gold letters, is non-committal.

Dixie; or, Southern Scenes and Sketches. By Julian Ralph. Harpers. 1895.

THERE is sufficient reason in their statistical value, apart from their readable style, for the consolidation into a volume of Mr. Ralph's papers contributed to his publishers' periodicals. Unfortunately for the statistics themselves, the very progress that they represent the new South as making will soon leave them behind, as of historical rather than of present interest. They are, however, in the tale of mills, of furnaces, of refineries, and especially of diversified agriculture, astonishing and captivating to all who have the true interests of the whole country at heart; and the very vivid descriptions of places and manners that belong only below the line, and that must be witnessed to be described, add an element of romance which is the more attractive in not being fictitious. The description is flecked with close observation and shrewd comment, as when, for instance, Mr. Ralph alleges that the cause of the creoles' dislike for Mr. Cable is not his portrayal of their life but of their English; and at the same time it betrays the tourist and not the resident in speaking of shell-stone for coquina (in St. Augustine) and depot (in Atlanta) for car-shed. It is hard to tell whether the writer's alleged ignorance of "toddy," which he professes to have first seen, and by implication first heard of, on the Arkansas in the Territory, is real. But if it was, the Grecian Porson's classical pun, when he found himself stranded at a wayside inn without whiskey or candle, and disappeared up stairs grumbling οὐδὲ τέλει, οὐδὲ τέλλα, would be lost upon him. But such ignorance is venial, if not commendable, in one who knows so much that is better and tells so much that is more fascinating. Mr. Ralph notes the immunity in late years of New Orleans from yellow fever, but fails to recognize, or at least to report, the importance of the Louisiana disinfection stations, the so-called quarantines, at the jetties and above, to which, with the greater cleanliness of the city, exemption is due. Whenever the opportunity offers, he combats the idea that the waste lands of the South are sterile or the worked lands exhausted, and he cites example after example of successful truck-farming on abandoned cotton-fields, and is especially enthusiastic as to the possibilities of white labor in Mississippi. It is a little odd that, having run the rake of his observation over so much of the South, he

failed to draw anything out of Georgia below Atlanta, omitting beautiful Savannah and its great cotton mart and the rice fields, with no hint of their existence. Alabama is concentrated about Birmingham—what patience can one have with this appropriation of foreign names, in a flattery that usually has no significance, and which might have been discarded here for native nomenclature! (Birmingham does echo its original, but it might so easily have found a Cherokee designation of its own.) It is too much to expect for the whole South such a description as Mr. Ralph has given of Biloxi on the Gulf and of the Teche, but, as a part of the renaissance of which he is the herald, at least a few pages might have been spared for Tuskegee, the wonderful outgrowth of Hampton, where the negro is learning to use his brain and his hands together.

Lectures and Essays. By Henry Nettleship. Second Series. Oxford: Clarendon Press; New York: Macmillan. 1895. Pp. xliii, 266.

THIS volume is a sequel to one of the same name published in 1885. With the exception of a lecture on Madvig and a Memoir of Mr. Nettleship by his wife, all the articles in it are republications. Those upon Latin topics are already well known to the scholars whom they interest; the others are so inferior that one regrets their revival, for which, however, the author is responsible, since he thought them worth publishing in his life-time—thus once more exemplifying the purblind partiality of literary men for their weakest productions. The world of scholarship owes much to Nettleship. His work in the line of minute investigation, for which he was specially qualified both by nature and by his training, is always excellent. The articles in this volume which involve the examination of details must long remain papers of great value to the student of Latin. But when he leaves that range of subjects which gives scope for this kind of treatment he is fragmentary, inconclusive, in every way unsatisfactory. When he approaches some educational or ethical subject, it is with an extremely limited fund of ideas—not bad, perhaps, in their way, but altogether inadequate. Nevertheless he takes up the subject as broadly as possible, and raises expectations of a comprehensive treatment; but when he has shot off his small supply of ammunition, he leaves a disappointed reader, and a subject partly over-discussed and partly neglected and ignored. Thus, in the essay on classical education, after promising a history of the subject, he quite leaves out the extremely interesting period of the Middle Ages, frankly confessing that he is not competent to speak of it. Why, then, write on a subject so imperfectly studied? There is no lack of books in which he might have found sufficient material to bridge such a deplorable gap.

There is also, in these *parerga*, a sad want of structural unity and definite purpose. The writer goes rambling through many pages of diffuse writing without bringing out any new thing which seems worthy of so many words. The impression left on the reader's mind is that of an article written to fill up an hour, or so many pages of a magazine. This, however, would not be a fair conclusion. Mr. Nettleship was quite incapable of any such purpose. Nor will any one tax him with indolence. His chief merit, indeed, was industry—laborious, painstaking industry. We repeat, he is admirable in the accumulation of details in his own special field. He is, in this respect, almost a German; and his admiration of the

shallow German theories about specializing education, though perhaps heightened by his residence at a German University, must have come to him through something in his own nature. But when we have done justice to his accuracy and diligence in his specialty, which is the garnering of *minutiae*, and have paid a passing tribute to his high motives and correct moral principles, though this is not precisely literary praise, we have said all that can be said for him as a man of letters. Some of his failings are not very noticeable when he is on his own ground. Yet, even there, he has serious faults both as a thinker and as a writer. He is prone to generalize on an insufficient number of particulars; he is prejudiced; and when he has approached a subject under a bias, he refuses to see anything that crosses his preconceptions, as, for example, in his judgment of Juvenal, in whom, from a literary point of view, he cannot see anything but a declaimer. This also is very German. He is, moreover, eccentric as only an Englishman can be. For example, he has discovered a correct poetic judgment and insight in Cicero, whose bad taste in poetry made him an object of derision to his contemporaries, while he declares that "it would be difficult to quote from Juvenal one really poetical line." This shows that Mr. Nettleship had just about as much taste in poetry as Cicero had; and also that, whatever came into his head, no matter how crude, he would say it without respect of persons.

It will be observed that these defects hang together. They all flow from a want of comprehensiveness, an inability to take in the whole of a large subject in one general view, without which no structural unity, no proportion or measure, and therefore no literary art is possible. And literary art Mr. Nettleship had none. He begins his essay on classical education with a definition of the term. His definition is inept and insufficient; but writers have a large latitude on this point in the interest of clearness. Only, Mr. Nettleship soon forgets all about his definition, and the same thing is referred to in subsequent pages as "literary" and as "liberal" education. When he is analyzing Cicero's style of criticism, he gives several pages of quotations from that author without any indication as to what they

are expected to prove. When these quotations are at last read through, he claims this and that quality for Cicero as a critic; and the reader, if he would verify the claim, must go back and read them all over again. But a worse thing comes of this want of grasp, so natural, after all, in one whose intellectual vision was of the microscopic sort; and that worse thing is obscure and confused thinking. Clear thinking on a large subject demands the ability to keep in view a considerable number of things, in order to see their relations, and especially their relative importance. Of this quality Mr. Nettleship had as little as anybody can get along with. But confused thinking leads to obscure writing, and to the profusion of words which are merely *vox et præterea nihil*. There are many periods in these essays which are capable of any meaning that an ingenious reader may be able to read into them. A definite meaning of their own they have not.

That a man who possessed one field so well should yield to what is sometimes regarded as the clerical vice of attempting to teach all things, merely shows that this is a temptation to be guarded against by all who are accustomed to be listened to with respect when speaking *ex cathedra*. The penalty is a general loss of credit; but the fair minded reader who loves truth better than revenge will not claim the forfeit from Mr. Nettleship, because the man is essentially honest and earnest. He often recognizes the flimsiness of what he gives, and refers to his efforts as "fragmentary," "scattered," "inadequate" remarks. But what he fails to see is that no one compels him to publish anything in that condition. Still, nobody doubts his motives nor his earnestness. Of the latter, indeed, there is more than enough; his seriousness is something appalling. There lurks no smile between the covers of the book; no lambent gleam of wit such as even Cicero, to say nothing of the inimitable Plato, contrives to flash, now and then, on the driest subjects, as an incentive and reward to the attentive reader. One cannot without effort believe that the author of these papers can be the person of whom Mrs. Nettleship could say (p. xlii):

"His sense of humor was keen and delicate, and often, by some witty remark, he would

give an unexpected turn to a conversation that threatened to become too serious. He told anecdotes well, having a retentive memory, and a knack of reproducing other people's gestures and intonations. . . . He would invent rhymes or pour out a torrent of puns and jokes, till every one was infected with his high spirits. He wrote a good many parodies and *jeux d'esprit* in prose and verse, some of which were privately printed, but the secret of their authorship never divulged."

Such is the testimony of his biographer, whose memoir is by far the most readable thing in the book—we mean, of course, as literature. After wading through so much ponderous solemnity, it is almost with a sense of injury and wrong that we learn that, after all, this extreme prosiness was not unavoidable.

BOOKS OF THE WEEK.

- Annals of the American Academy of Political and Social Science. Vol. VI. July-Dec., '95. Philadelphia: American Academy of Political and Social Science.
Bain, R. N. Charles XII and the Collapse of the Swedish Empire. Putnam. \$1.50.
Bell, A. A. Prime of the History of Mathematics. Macmillan. 85c.
Chisholm, G. C. Longmans' Gazetteer of the World. Longmans, Green & Co. \$13.
Claretie, Jules. La Frontière. W. R. Jenkins. 25c.
Drachmann, Holger. Paul and Virginia of a Northern Zone. Chicago: Way & Williams. \$1.25.

Weizsäcker, Prof. Carl von. The Apostolic Age of the Christian Church. Vol. II. London: Williams & Norgate; New York: Putnam. \$3.50.

GERMAN LITERATURE.

MESSRS. HENRY HOLT & CO.,

29 West 23d St., New York,

will send free upon application their new descriptive list of works in German Literature suitable for Home Reading or for THE CLASS ROOM. The list embraces Texts for Early Reading, Modern Narrative, Modern Comedies, Classic Drama, Histories and Anthologies of Literature, History and Science. Many of the volumes are supplied with biographies of the authors and English notes by representative American scholars, several with portraits and other illustrations. A number of the plays and short stories are to be had neatly bound in boards at from 15 to 40 cents each.

ORIENTAL LANGUAGES.

Messrs. SAMPSON LOW, MARSTON & COMPANY, English, American, and Oriental Publishers, St. Dunstan's House, Fetter Lane, London, Eng. will be happy to send, post free, on application, their 16-page Catalogue of Class Books, Dictionaries, Classics, etc., in Hindustani, Hindi, Sanscrit, Persian, Bengali, Arabic, Malay, etc., etc

LIBRARIAN.

Wanted, a position as Librarian, Assistant Librarian, or Reference Librarian, by a man thirty years old, a college graduate, and a graduate of the New York State Library School, with several years' experience in library work. Address LIBRARIAN, Office of The Nation.

The Key of the Pacific, The Nicaragua Canal.

By ARCHIBALD ROSS COLQUHOUN,

Indian Public Works Department (retired), First Administrator of Mashonaland; F.R.G.S., etc., etc.; author of "Across Chrysæ," "Amongst the Shans," etc., etc. Large demy 8vo, pp. xvii-443. With Numerous Illustrations, Maps, and Plans, \$7.00.

LONGMANS, GREEN, & CO.,

15 East 16th Street, New York.

Do me the favor to ask your wine-merchant, or Park & Tilford (wholesale agents), for my "Picarillo" natural sherry, and "Manzanilla Pasada."

GUILLERMO DOBLACHE,
Puerto de Santa Maria.

Books of To-day and 'Belinda' Suppt.

The Best Monthly Review of English Books for American Readers.

Annual Subscription 3s. 6d., post free.

HATCHARDS,

Booksellers to the Queen,

187 PICCADILLY, LONDON.

Complete Index to Littell's Living Age, to the end of 1895. E. ROTH, 1135 Pine St., Phila.

YALE MIXTURE.

The choicest tobacco made, and pre-eminently a gentleman's smoke.

Marburg Bros., The American Tobacco Co., Successor, Baltimore, Md.

HENRY NORMAN'S BOOKS.

From the N. Y. Tribune, Jan. 14.

"His book, 'Real Japan,' has thrown more light upon the inner workings of that country than any other work published. His book, 'The Peoples and Politics of the Far East,' also caused a stir."

THE PEOPLES AND POLITICS OF THE FAR EAST.

Travels and Studies in the British, French, Spanish, and Portuguese Colonies, Siberia, China, Japan, Korea, Siam, and Malaya. By HENRY NORMAN. With 60 illustrations and 4 Maps. 8vo, \$4.00.

"His chapters are vivid in description, shrewd in observation, painstaking in investigation, pleasant in tone and temper, and full of lively impressions of travel. The whole volume is thoroughly readable, and constitutes a valuable and timely contribution to the whole study of contemporary life and politics in a region which seems destined in the near future to engage more and more of Western attention and concern."—*London Times*.

"You cannot turn over a few pages without seeing that he is a traveller of no ordinary kind. He is a practised writer and something more. He has the gift of rapidity; he carries you along with him. He is racy, individual, picturesque; sees things with the clearness of a good observer, and makes you also see them clearly."—Mr. G. W. SMALLEY, in N. Y. Tribune.

THE REAL JAPAN.

Studies of Contemporary Japanese Morals, Administration, and Politics. By HENRY NORMAN. 8vo, \$1.50.

"The book throughout is exceedingly informing, and presents, within reasonable dimensions, a more life-like picture of the country and people than any similar work we know."—*The Pall Mall Gazette*.

. Sold by all booksellers, or sent, postpaid, by
Charles Scribner's Sons

153-157 Fifth Avenue, New York.

The Columbia Bicycle Pad Calendar For 1896

YOU NEED IT.

A Desk Calendar is a necessity—most convenient kind of storehouse for memoranda. The Columbia Desk Calendar is brightest and handsomest of all—full of dainty pen sketches and entertaining thoughts on outdoor exercise and sport. Occasionally reminds you of the superb quality of Columbia Bicycles and of your need of one. You won't object to that, of course. The Calendar will be mailed for five 2-cent stamps.

Address Calendar Department,
POPE MANUFACTURING CO.,
HARTFORD, CONN.

A NOTEWORTHY BOOK.

THE CABELLS AND THEIR KIN.

A Memorial Volume—Historical, Biographical, and Genealogical—on Dr. William Cabell, the Founder of the Family in Virginia, and his Descendants and their Kinsfolk. By ALEXANDER BROWN, D.C.L., author of "The Genesis of the United States." With numerous portraits. 1 vol., large 8vo, \$7.50 net.

This work, which naturally has a special interest for Virginians, still embraces so much historical information that it ought to have a wide circulation among students of history.

The author has devoted to its preparation years of research, and has given to it the same high value which was possessed by his monumental work on "The Genesis of the United States."

Sold by Booksellers. Sent, postpaid, by

HOUGHTON, MIFFLIN & CO., Boston.
11 East 17th Street, New York.

FRENCH BOOKS.

ROMANS CHOISIS.—A series, pure, of high literary value and representative of the authors; printed in large type on good paper. Price, cloth, 85c.; paper, 60c.

No. 17. SANS FAMILLE. By Hector Malot. Abridged. 490 pages.

No. 18. COSIA. By Andre Michel Durand. 166 pages.

No. 19. MON ONCLE ET MON CURE. By Jean de la Brete. 267 pages.

No. 20. LA LIZARDIERE. By Henri de Bornier. 247 pages.

Complete catalogue on application. For sale by all booksellers, or postpaid on receipt of price by the publisher.

WILLIAM R. JENKINS,

851 and 853 Sixth Ave. (48th St.), New York.

Foreign Books. Subscriptions to Foreign Periodicals. Tauchnitz British authors. Catalogues on application. CARL SCHÖNHOF, 28 School St., Boston.

BACK NUMBERS, VOLS., AND SETS of the Nation, as also of all periodicals, bought, sold, and exchanged by A. S. CLARK, 174 Fulton Street, west of Broadway, New York.

BACK numbers and sets of all magazines. For price state wants to AMERICAN MAGAZINE EXCHANGE, De Menil Building, St. Louis, Mo.

H. WILLIAMS, 25 EAST 10TH ST., N.Y., dealer in Magazines and other Periodicals. Sets, volumes, or single numbers.

LEMCKE & BUECHNER,

Formerly B. Westermann & Co.,

812 Broadway, New York.

Will publish immediately:

Flügel-Schmidt-Tanger, School and Hand Lexicon of the German and English Languages.

2 vols., large 8vo, half leather, \$4.50.

The German-English part separately \$2.60, the long-expected smaller edition of Flügel's 8 vol. Dictionary, half morocco, \$16.50.

NEW YORK, THURSDAY, JANUARY 23, 1896.

The Week.

THE Venezuelan Commission has addressed to Mr. Olney a letter which ought to have been written and signed by him and addressed to Sir Julian Pauncefote on the 20th of July last, and have taken the place in this correspondence of his despatch of that date to Mr. Bayard. Had it done so, some hundreds of millions of money would have been saved, and the national reputation for peaceableness and rationality would have remained intact. It is a document evidently emanating from men of sound mind and disposing memory. It points out that an ex-parte body like the Commission, seeking to report on a controversy to which it is not a party, cannot get on very well without help from the disputants in the shape of evidence or "data and arguments." So it proposes that Mr. Olney should ask the grabbing British for "documentary proof, historical narrative, unpublished archives, and the like." They even ask for "an attorney or agent" to appear before them. Secretary Olney has replied that he has done so. Now we sincerely hope, in the interest of peace, that the British will comply. But in the interest of future peace, and in the interest of American self-respect, we must remind our readers that this admission of the Commission of its own ignorance and helplessness follows close on the President's "protest" in his annual message to Congress against "the enlargement of the area of British Guiana, in derogation of the rights and against the will of Venezuela," which is a plain finding that the British were in the wrong, first in enlarging their boundaries, and secondly in refusing to submit to arbitration any claim the Venezuelans might choose to set up. It follows close, too, on his declaration that we should find out the true line of frontier for ourselves and force Great Britain to accept it, if need be by war. To go now, after causing enormous loss of property and filling two nations with anxiety, and confess to the British that we not only do not know, but have never known, whether they had wrongfully enlarged their borders or not, and that the commission we appointed to find the true line cannot get on without their help, is right, but is something which no honest and patriotic man ought to hear of without deep and vindictive indignation. It is virtually the confession of a crime against civilization, and can the perpetrators of it think over it without bitter self-reproach?

A great many Republican journals are at last showing signs of recovery from the

lunacy of Jingoism by disapproving of the Davis resolution. They say we have had enough of Monroe for the present. Secretary Olney assumed sovereignty for us over the whole American continent—about half the habitable globe—and this, of course, carried with it all the claims of every description embodied in the Davis resolution. This resolution is simply notice that wilful annoyance to us as sovereigns will be considered "unfriendly," which sounds very like public notice from an individual that any open pulling of his nose will be taken in bad part. Having proclaimed ourselves rulers of the western hemisphere, and nobody having arisen in rebellion, we ought to be content. But both the performances of Mr. Olney and Mr. Cleveland and the Davis escapade show the extreme inconvenience of having to live by "doctrine," instead of by plain common sense.

An interesting article on the Venezuelan boundary, by Mr. H. R. Mill, from the point of view of a geographer, appears in *Nature* of January 2. He objects to all the lines that have been drawn or proposed as "an outrage on geography," inasmuch as they "cut natural features and mathematical lines at all angles, and in irregular curves which it would be impossible either to describe verbally or to lay out accurately on the ground without a survey as minute as for a railway." The difficulties in the way of any survey whatever in the disputed territory are enormous. Precisely there are to be found the richest and densest tropical forests of the world, and a recent explorer of the Barima River testifies to the severe labor required to force one's way into the woods at all. This will make it certain that our Venezuelan Commission will not go to the spot, axe in hand, to blaze the true lines through the forest, which we are thereafter to defend *ferro et igne*. Such patriotic rail-splitting must be done in youth to make a man eligible to the Presidency. Mr. Mill justly argues, from the defiance of all the principles of scientific political geography shown in the various suggested boundaries, that the case is eminently one for arbitration, and the drawing of a conventional line in such a way as to give a fixed and easily ascertainable frontier. He asserts, what we believe to be true, that the boundaries of every South American republic are disputed. If Uncle Sam is to take the job of surveyor-general for all that region, with the office of infallible arbitrator of metes and bounds thrown in, he had better prepare for roughing it for some time to come.

Mr. Balfour's speech at Manchester, last week, on England's foreign complica-

tions, was that of a civilized man as well as of a member of the Government. His assertion, in the latter capacity, that Great Britain has no cause for quarrel with any nation on the face of the earth, is timely and will be most reassuring; while his strong words about the "unnatural horror" of a war with the United States show that he does not keep his love of civilization as a thing for display merely in books and academic discourse. He put his finger upon our deepest shame and disgrace in the whole flurry, however, when he referred to the "newspaper articles," extracted from the American press, which "appeared to regard a war with England as a thing to be lightly indulged in, an exhilarating exercise, a gentle stimulus." A philosophic observer like Mr. Balfour cannot be blamed for regarding such barbarism as "distressing," but it is doubtful if any foreign observer can understand the phenomenon. It takes a native, long inured to the charming ways of the press in this country, to perceive that not a mother's son of the journalistic shriekers for war had the faintest idea that there would be any war. It was only the shouting for war that they found exhilarating; and their real "exercise," in case of actual war, would consist in running away as far and as fast as possible. Even in such pot-valor, moreover, they grossly misrepresent and outrage the cities and towns in which they vegetate. This is a thing that a foreigner cannot be expected to know, but evidence accumulates that the papers and politicians completely misunderstood the prevailing and respectable sentiment of the country, even of the West. Fortunately, war does not go on silliness any more than, as Bismarck said, on hatred; otherwise we should be constantly at war.

Senator Lodge appears to be giving his thoughts to the purchase by this country of the Danish West India Islands. There is not the slightest evidence that Denmark has made any overtures to us signifying a desire to part with them. But inasmuch as they are really worthless, and a source of expense to her, it may be that an offer on our part to pay, say, \$7,500,000 for them, or even to take them for nothing, would be favorably received. It may be worth while to note what took place in reference to the island of St. Thomas in the winter of 1868-'69. Mr. Seward was then Secretary of State. He was possessed with the idea of territorial extension. In a note at the bottom of page 328, vol. iv., of Pierce's 'Life of Sumner,' we read that "he [Seward] once said at Sumner's table, in 1868, that in thirty years the City of Mexico would be the capital of the United States." (The time will have expired in two years from now.) Mr. Seward entered into a negotiation for

the purchase of St. Thomas in 1867. The price to be paid was \$7,500,000. "It is a worthless island," says Mr. Pierce, "remarkable for hurricanes, earthquakes, and droughts, destitute of productions, and inhabited by a miserable population." No wonder Denmark was eager to clutch that sum of money for a possession that she would not accept as a free gift if it belonged to anybody else. When the treaty of purchase came before the Senate committee on foreign relations, it was rejected unanimously. The committee consisted of Sumner, Fessenden, Cameron, Harlan, Morton, Patterson, and Casserly. Not one of them would consent to it, nor would anybody else in Washington except Seward. The House of Representatives, by a two-thirds vote, passed a resolution against any further purchases of territory.

President Grant, when he came into office, in March, 1869, threw the treaty out of the window at once, so far as the executive department was concerned. Soon after its rejection the island was shaken by an earthquake, which nearly demolished the town of St. Thomas and the ships which happened to be in the harbor. One of the effects of this earthquake was to transfer the centre of West Indian commerce to Barbadoes, where it has remained ever since. Those of our statesmen who want to acquire the island now, want it for war purposes solely. In this way it would possess many advantages. Being an outlying possession, it would enable us to get into war more easily than we can now. Being easily exposed to blockade and bombardment, it would require expensive fortification and the presence of a considerable fleet. Large naval appropriations would be called for expressly on account of St. Thomas. Much stress is laid on its advantages as a coaling station, but it should not be overlooked that we can get all the coal we want at St. Thomas in time of peace by paying a fair price for it, whereas if we were engaged in a war, St. Thomas would belong to us only on condition that we had a stronger naval force than the Power we were fighting with.

Senator Hale called up his Hawaiian cable bill on Thursday, for the purpose of making a speech upon it. The present scheme is to drop the Government building and control of the cable—for which, in the last Congress, Senators Hale and Lodge were for some days willing to die in their tracks—and to fall back on the good old plan of a subsidy of \$250,000 a year to a private corporation. We do not know how fully Senator Hale explained the contract already made by this corporation with the Hawaiian Government. At the time, it caused no small outcry in Honolulu. The concessionaire, Mr. Spalding, ex-United States Consul, and his counsel, ex-Minister Thurston (how naturally these exes

go in for subsidies!), were charged with putting through a secret and monopolistic contract. The company was to have exclusive rights for twenty years, and to be given, as one Government organ complained, "the whip hand in making terms with Australia, Japan, or any other country of the Pacific." However, as the \$40,000 a year subsidy from Hawaii was contingent upon getting six times as much from the United States, it was thought safe to put the act through even with the onerous conditions. In other words, Hawaii gave the company a sort of crowbar with which to break into the United States Treasury. But Senator Hale was, of course, equal to turning this corner with grace and skill. Objection to a subsidy to a monopoly? He hoped Senators would understand that if this country abandoned the project, the British would at once rush in, and fairly cover the Pacific with their devilish military cables. To this there could be no answer, and the bill "went to the calendar." It ought to go to the Greek Kalends.

It appears, from a circular issued last week by Mr. J. Pierpont Morgan, that the suggestion for a public subscription in place of the syndicate subscription was communicated by him to the President in a letter dated January 4—that is, two days before Secretary Carlisle's circular was issued. In this letter Mr. Morgan held the opinion that less disturbance of the money market would result from a loan made through and by the syndicate, but, in view of the legislation proposed and the discussions that had already taken place in Congress, if the President should think best to call for a public loan, he would cheerfully co-operate to that end. He urged his fellow-members to join in it, and dissolved the syndicate in order that they might be free to do so, and he has pledged his firm to join others in taking whatever portion of the loan may be left over after the subscriptions close. It is fair to presume that the Secretary of the Treasury would not have issued the call so promptly (although he might have done so eventually) without the assurances conveyed in Mr. Morgan's letter, since it would have been a serious responsibility to give a bird in the hand for one in the bush—to reject the offer of responsible parties for all the gold he wanted, on the chance of getting a smaller but indefinite amount from some other unknown source. Indeed, the coöperation of the syndicate was the essential prerequisite of the success of the loan, and it is that coöperation which makes it a success to-day.

The small premium on gold existing at the present time in conjunction with an open Treasury and daily redemption of the Government's legal-tender notes in gold, is a phenomenon which needs some

explanation. It is due to the prevailing superstition that it is not patriotic, or at all events is not good manners, to draw gold from the Treasury with which to pay for the forthcoming issue of the United States bonds. For this reason people will go to bullion dealers and offer them one-half per cent. or some other premium for gold, and then the bullion dealers will buy sterling exchange and import the yellow metal. Those who sell sterling have to export gold to make their balances good on the other side, and this they must obtain from the Treasury. This explains the phenomenon witnessed last week of gold imports and exports passing each way on the ocean—all in obedience to the prevailing superstition. The premium on gold in the Street is simply the cost of cartage and shipping. It would be much easier and more rational, and likewise devoid of expense, if the buyers of bonds would wait till the time comes to pay for them, and then go to the Treasury with any legal-tender money they have and pass it in. If the Treasury officers say they must have "coin" for the bonds, it is only necessary for the bond-buyer to demand coin for his greenbacks, and when it is given to him pass it back in payment for his bonds.

The idea prevailing in Congress, and in the country to some extent, that the shrinkage of the gold reserve is due to a shrinkage of revenue or an excess of disbursements over receipts, is a mistake. It overlooks two facts. One is, that the Treasury actually has an enormous surplus on hand, more than \$100,000,000. In the matter we are now considering, the source of this surplus is quite immaterial, whether from bond sales, or internal taxes, or customs duties, or what not. The money is there, and it is applicable under existing law to all ordinary governmental uses. The other forgotten fact is, that between July, 1890, and October, 1893, the Government forced into circulation \$156,000,000 of Treasury notes, besides 36,000,000 silver dollars, or a total of nearly \$200,000,000 of currency, for the greater part of which there was no business demand or requirement. That there was no such demand is evidenced by the fact that we exported \$141,000,000 of gold during the time that we were putting out this new lot of fiat money. The panic of 1893 had its origin here, and not in any deficiency of revenue. Senator Sherman naturally prefers to look in some other quarter of the heavens for the cause of that financial crash. The fatal act of 1890 bears his name. That he is not wholly unmindful of the truth, however, is made plain by the terms of his recent resolution and speech in the Senate, in which he proposes to imprison all the greenbacks and Treasury notes that are sent in for redemption, and not to pay them out except in exchange for gold. This would not be a bad idea in itself, because it would amount to a retirement of

greenbacks *pro tanto*. It would curtail the banking functions of the Government to some extent. It moves the St. Paul *Pioneer Press* to the sarcastic remark that Senator Sherman's affection for the greenbacks, as the best paper currency ever invented, moves him to take them out of harm's way by putting them beyond the reach of a rude, unfeeling world.

The venerable ex-Speaker Grow made last week a vigorous assertion of the prerogatives of the House against the dangerous encroachments of the Executive. It was an awful thing to have a financial bill laid before members known as "the Secretary of the Treasury's bill." Liberty was on its last legs when a letter from the President could be read in the House just before a vote was to be had on a tariff bill. The ex-Speaker was eloquent on the duty of the House to itself in the matter of making the President keep his place. But the question arises, Where was Mr. Grow on December 18 last? Had the House no prerogatives then? Was he sitting by, frightened and dumb like the rest, when a President practically usurped the power of Congress to declare war, and not a voice was raised to assert the privileges and dignity of the House? The ex-Speaker had a glorious chance then to assert the constitutional rights of the House; and his argument would not then have seemed to assert, as it does now, that it is usurpation to ask Congress to pay the country's debts or reform taxation, but strict constitutional patriotism and propriety to urge it blindfold into war.

Bill Chandler is quite as zealous a supporter of Speaker Reed for the Presidency as is Matt Quay, and the New Hampshire Senator has taken to writing articles in favor of the Speaker's nomination. The most novel feature of Chandler's arguments is that he presents the former "czar" in the light of a compromise candidate, who is neither out-and-out for sound money nor bitterly opposed to soft money. It may be that Eastern Republicans, who believe in the gold standard, and silver-State Republicans, who believe in a 50-cent dollar, will rally with enthusiasm to the support of a man who stands on such a platform; but it is hard to recognize in this "wobbling" candidate for a Presidential nomination the man whose friends used to boast of his courage and positiveness.

It is not wonderful that the victory which Representative Bartlett won last week, single-handed, over the whole school of pension sharks gathered in the House of Representatives and its lobby, has attracted wide attention. The public Treasury can always supply itself with watch-dogs of the Holman variety in Congress; any member can win cheap fame

by becoming a chronic objector, and blocking all legislation which does not seek an outlet for expenditures in his own district. But it requires a higher order of courage to defy malicious misrepresentation and vulgar personal abuse from one's own colleagues, by taking a stand alone against an army of time-servers bent on holding the soldier vote at any cost. There was not a point made by Mr. Bartlett during the debate to which every honest citizen will not assent. The blatherskites, on his own side of the House as well as on the other, had to appeal to the lowest instincts of the mob behind them in order to find material for their speeches in response. The deserving veterans have a better champion in a Representative who tries to protect their reputations against the taint of fraud, than in one who is willing to rob the Treasury for the sake of shielding himself from a false charge of disloyalty.

The choice of Chicago as the place, and the 7th of July as the time, for the meeting of the Democratic national convention is significant and encouraging because the free-coinage element in the committee desired St. Louis, as a headquarters of silver sentiment, and a date a month earlier, because they thought they would be stronger, the shorter the preliminary discussion. Precedent dictates the holding of its convention by the party in control of the Administration before that of the Opposition, but the Democrats are now in a minority in each branch of Congress six months before Presidential nominations are to be made, for the first time since 1872, and they feel little like taking the initiative. A more striking sign of party demoralization is the almost complete absence of any serious discussion of candidates, or of any organized movement for the nomination of any man. It is quite without precedent that the party which elected the President at the last election should enter a Presidential year without any general expression of opinion in favor of any candidate for the next term, and, indeed, without evidence that anybody is very anxious to secure the nomination. This extraordinary situation only reflects a general feeling ten months before the election that the Republican candidate is sure of success. Yet so sudden and great have been the revolutions in public sentiment of late years in the United States that it is foolish to regard the result of the voting next November as already settled.

Philadelphia Republicans always elect their delegates to the national convention very early, and the custom was maintained this year by conventions in the five Congressional districts last week. A touch of humor was lent to the occasion by the adoption, in a convention controlled by the Senator's friends, of a resolution de-

claring that their delegates "should favorably consider the name of Pennsylvania's representative Republican for the Presidency, Hon. Matthew Stanley Quay," and instructing them to vote for him if his name shall be presented to the convention. Of more significance was the resolution adopted in another convention which was run by one of Quay's lieutenants, "recognizing the splendid abilities, the masterful leadership, the wise and safe statesmanship, and the distinguished public record of the Hon. Thomas B. Reed of Maine," declaring him "the best exponent of our party in council and in action," and instructing the delegates to "earnestly labor and consistently vote for the nomination of that matchless man of the people as the standard-bearer of our patriotic party." Philadelphia is the first city in the country to elect and instruct delegates, and the Speaker of the House is thus entered in the race ahead of all rivals. This fact illustrates one advantage of being the favorite of a party boss—but there are also disadvantages in enjoying such favor.

There has been a good deal of talk about the exact nature of the control of Great Britain over the foreign relations of the Transvaal, and the general impression has been that the Boers could hold no intercourse with foreign Powers except through the British Government. But this contention does not seem to be sustained by the text of the treaty of 1884. This treaty was a sort of revision of the Sand River Convention of 1852, which first guaranteed the independence of the Boers. Here is the article which is supposed to cut them off from foreign intercourse except through the British Foreign Office:

"The South African Republic will conclude no treaty or engagement with any state or nation other than the Orange Free State, nor with any native tribe to the eastward or westward of the republic, until the same has been approved by her Majesty the Queen. Such approval shall be considered to have been granted if her Majesty's Government shall not, within six months after receiving a copy of such treaty (which shall be delivered to them immediately upon its completion), have notified that the conclusion of such treaty is in conflict with the interests of Great Britain, or of any of her Majesty's possessions in South Africa."

Under this, treaties have been concluded with both Portugal and Holland, with British approval. But this plainly does not prohibit anything except the conclusion of treaties with foreign powers without British sanction. Treaties must be negotiated, and negotiation means a great deal of intercourse, which must be in the main friendly, and may include various sorts of friendly expressions. A government which might negotiate a treaty with Germany must surely be allowed to receive congratulations from Germany on any piece of good fortune, including the repulse of a party of filibusters. In fact, it does not appear that Oom Paul is cut off from any sort of correspondence with any power which is not openly unfriendly to Great Britain.

THE ROOT OF THE TROUBLE.

THE finances and currency of a great and very rich nation are and have been for ten years in such disorder that the Government is borrowing money, with immense hubbub, every three or four months to keep its own paper at par in a time of profound peace. In the midst of this hubbub all branches of the Government have agreed with wild acclamation, although possessing neither army nor navy, to challenge the greatest maritime power in the world to an armed conflict concerning a boundary dispute on foreign soil between this maritime power and a small and semi-barbarous community consisting mainly of Indians and negroes. When this act of folly has shaken the whole edifice of national and private credit, nearly all the public men of the nation in question have thrown the blame on the persons most interested in national prosperity, the bankers and brokers, and denounced them as public enemies, while some have rejoiced in the prospect of having the leading commercial cities laid in ashes by a foreign fleet. Others have gone still further, and accused foreigners of selling their own property cheap for the purpose of annoying their enemies. In the meantime neither branch of the National Legislature shows the smallest capacity to pass bills concerning domestic affairs, while one of them is principally occupied in drafting defiance to peaceful neighbors, and in proposing schemes of taxation and finance which the rest of the civilized world looks on as insane.

Along with this state of things at the capital, all the large cities and many of the large States are given over to the government of bosses, who control all legislation by means of money derived from blackmail levied on corporations as the price of exemption from confiscatory attacks. In this way the attempts made by persons of acknowledged intelligence and integrity to improve social conditions are invariably frustrated, and the comments of these persons on public affairs treated with hilarity. In fact, in whatever direction we look, we see the classes which civilized men have hitherto agreed to consider bad because venal, or dangerous because ignorant and inexperienced, in full control of affairs. If the public men are wise and skilled and pure, then the experience of the human race touching statesmanship and morals is not worth a farthing rushlight.

The name of this country is the United States of America. What is the cause of all these troubles? It was given last week in terse language by Prof. Wheeler of Yale College in a lecture on the Monroe Doctrine. Said he:

"We say that the message was called out by the danger to our institutions. Why don't we take them in out of the wet and not let them remain out over night? Our danger does not lie in Venezuela, nor in the land south of the frost line. It lies not in contact with England, whose institutions are as free as our own. The liberties of our fathers are in peril. The danger lies in the degeneracy of our public men,

and in the failure of the attempt to get a decent municipal government. Republican government has often been a curse. The ballot has no virtue, and under certain circumstances it is a source of great corruption."

Now, if this be not true, what is the matter with us? Why are we in this wretched condition? If these men at Washington are competent, why do they not get us out of our present slough? Why did they ever let us get into it? Why do we have to borrow money to keep our paper at par? Why do we all wear the "shackles of the money power"? Why has not something been done long ago to break "the power of Wall Street"? Why are foreigners able to annoy us by selling their own property at fifty cents on the dollar? Why have we so many tons of silver stored at Washington? Why is it not made to circulate freely among an impoverished people? Why is Spanish America, over which we claim dominion, left in such a condition of ignorance and barbarism? Why are the bulk of our intelligent classes, who do the principal work of our civilization, so discontented and anxious? If they are mistaken, why are they such dreadful fools? Prof. Wheeler answers all these questions, and many more which we do not ask. The cause of all our troubles is the rapid deterioration of our public men. When a ship runs on a mudbank in broad daylight, with the charts unrolled and the instruments of navigation in good order, the cause is not the ship herself, nor the passengers, nor the mudbank, nor the daylight, but the captain or the pilot.

An anti-war sermon delivered in Philadelphia during "the scare" by the Rev. Joseph May, Dr. Furness's successor, contains one tremendous passage, which we quote in full:

"I have lived through two generations. I recall vividly the shameless bodies which sat in our congressional halls and laid the spirit of the North, the principles of our government, the safety of the Union, prostrate before the slaveholding oligarchy. But I know of no Congress that ever sat before in which there was not at least one righteous man to raise his voice against national folly and national danger; against the usurpation of the executive and in warning of the perils to which clumsy diplomacy, acute technicality, and rash and partisan speech were exposing our people. Alas, that we have allowed such a class to take possession of our affairs, that when the most dangerous word of this century was recklessly spoken, not one man had the virility, the patriotism, the mere practical wisdom to rise in his place in stern rebuke, in solemn warning! We have little hope from our politicians of anything good, or wise, or patriotic."

This refers to the wild vote of approval given to the President's sudden declaration of war by both houses of Congress, for it was, we think, the first time since man invented the bow and arrow that a nation declared for war without deliberation. There is no African tribe so low in civilization as not to deliberate or hold some kind of council before putting the community in peril through a challenge to a powerful enemy. We care not what the cause may be, it is human to deliberate before fighting, bestial to bite with-

out caring what follows. It was no Mugwump who said, two thousand years ago, "What king, as he goeth to encounter another king in war, will not sit down first and take counsel whether he is able with ten thousand to meet him that cometh against him with twenty thousand? Or else, while the other is yet a great way off, he sendeth an ambassador, and asketh conditions of peace."

Therefore, we think it may fairly be said to the young men of the country that they will study in vain sociology, and economics, and statecraft, and vainly get their patriotism on the boil for war, unless they can put a better order of men, more rational, more instructed, and more upright, in charge of our public affairs. We cannot go on very long out of all intellectual relations with the rest of Christendom, calling wise what they call foolish, wrong what they call right, and treating as malefactors the men whom they treat as benefactors. There has been no special creation either of men or things for the benefit of America. Human reason and human experience work here in just the same way as elsewhere. Two straight lines cannot enclose a space in any part of this continent. It cannot be true here, any more than elsewhere, that people whom no wise man would think of consulting about any private affair are fit to regulate the affairs of a nation of 70,000,000 in peace or war. Behind the currency question, and the tariff question, and the Monroe question, and every other question which agitates this community to-day, lies the question of more honest and competent national and State legislators.

THE NEW "AMERICAN" DOCTRINE.

SENATOR SEWELL of New Jersey introduced resolutions on Thursday affirming that the Monroe Doctrine was originally propounded as a warning to the allied Powers of Europe not to attempt to subdue the revolting colonies of Spain; that the true ground on which it is based is our interests, and our interests only; that neither by the Monroe Doctrine nor any official declaration have we ever come under any pledge to any Power or estate on this continent that binds us to act merely for their protection against invasion or encroachment by any other Power; and that when a case arises in which a European Power proposes to acquire territory by invasion or conquest, it is then for us to determine whether our safety and our integrity demand that we shall resist such action by armed force if necessary.

These affirmations are not left by Mr. Sewell to stand as mere abstractions. He goes on to connect them with the immediate crisis by affirming:

"That the Executive has pressed the Monroe Doctrine beyond what was contemplated at the time of its announcement, and that the resultant sequence of the positions thus taken seems to be a committal of this Government to a protectorate over Mexico and the Central and South American States. That this would be most unwise and dangerous, and would vio-

late the sound and well-established policy that we should avoid all entangling alliances with foreign Powers, whether they be European or American. That this action was premature, looking to the history of the controversy, and inopportune in view of the business and financial condition of the country.

"That neither Congress nor the country can be, nor has been, committed by the action or position of the Executive Department in reference to the Venezuelan boundary controversy, as to the course to be pursued when the time shall have arrived for a final determination. It will then be our province and our duty to adopt such a line of policy and to take such action as may be then demanded by our sense of duty to the country, and by a due regard for its honor and dignity, the welfare and safety of our people, and the integrity of our institutions."

If Senator Sewell's resolutions had been introduced a year ago, when there was no particular excitement on hand, they would probably have been adopted without debate, or, if objected to at all, would have been opposed on the ground of being a needless affirmation of the undisputed policy of the Government. In the absence of any particular stirring of the war spirit, founded upon misinformation, everybody who paid any attention to the matter (except, perhaps, the Manoa Company) would have said that Mr. Sewell was right in his interpretation of the Monroe Doctrine, but that its reaffirmation was perhaps needless and a waste of time. His resolutions derive their chief significance from the change of public opinion that has taken place since the President's message was sent in. They would have found no place in the Senate's proceedings unless there had been abundant popular support for them. How many recruits Mr. Sewell may find among his Republican colleagues it is impossible to predict. Probably most of them would come to his support if they had not made such a disgraceful exhibition when they allowed themselves to be stampeded by the President. They will naturally seek refuge in the other resolution reported on Monday by the committee on foreign relations, which reads as follows:

"Resolved, That the United States of America reaffirms and confirms the doctrine and principles promulgated by President Monroe in his message of December 2, 1823, and declares that it will assert and maintain that doctrine and those principles, and will regard any infringement thereof, and particularly any attempt by any European Power to take or acquire any new territory on the American continent, or any island adjacent thereto, or any right of sovereignty or dominion in the same, in any case or instance as to which the United States shall deem such attempt to be dangerous to its peace or safety, by or through force, purchase, cession, occupation, pledge, colonization, protectorate, or by control of the easement in canal or any other means of transit across the American isthmus, whether under unfounded pretension of right, in cases of alleged boundary disputes, or under any other unfounded pretensions, as the manifestation of an unfriendly disposition towards the United States, and as an interposition which it would be impossible, in any form, for the United States to regard with indifference."

As there is no boundary in certain regions between Great Britain and Venezuela, and as the boundary is disputed in other places, this is virtually an invitation to Venezuela to claim any line she pleases, even the whole of British Guiana, if the Dictator for the time being should

see fit to do so, and a prohibition to Great Britain to dispute any such claim on pain of war with the United States. It overrules the position taken in this matter by successive Secretaries of State during twenty years of controversy, and also that taken and solemnly promulgated by the President within the last two months in a message which, as it stood, was considered sufficiently warlike. It overrules, also, Monroe's admission of the legitimacy of the European colonies already existing on this continent at the time he compounded his doctrine—for a notice to a colony that it must not dispute any territorial claim which any Spanish-American neighbor may make, is virtually notice to quit. It makes that colony's existence illegitimate for all practical purposes.

This notice, too, which, if addressed to us, would be considered an insult of the most flagrant character, that would range even the most peaceable of us on the side of war in spite of want of preparation, is addressed to one of the strongest Powers in the world, certainly also one of the proudest and most warlike, and most famed for tenacity and resources, which is already in a state of irritation over this very question; and it is addressed by a nation which is borrowing money quarterly to keep its demand notes at par, has no army at all and only a very small navy; and it is addressed in defiance of the protests of the great body of intelligent, sober-minded, and religious persons of all callings, who may be considered the mind and conscience of "this our nation." We can recall no case in history in which any government, big or little, has submitted to such terms except after complete defeat in a bloody conflict. They might have been presented to Thiers by Bismarck, but only after Sedan and the capture of Paris.

We do not need to comment on them at any length, or indeed to comment on them at all, as far as the readers of the *Nation* are concerned. Upon Jingoism any comment or argument would be wasted. We have for the past two months read the remarks of a large number of their papers on this Venezuelan dispute and the President's message, and have never found in one of them any ratiocinative defence either of the Monroe Doctrine or of the Cleveland Doctrine. All objections to it made by sober-minded people are generally met, by a Jingo, with loud yells, and profuse vituperation, and invitations to quit the country if you do not like it. "Do you not see," you say to him, "that such and such consequences will follow your attempt to put your Doctrine in force as you understand it?" "I don't care a rap," he replies, "about consequences; that's the way I feel. Hurroo, hurroo!" and then he jumps about like a maniac, and tries to stand on his head.

We need hardly remark that most of the emanations from Congress touching foreign policy just now are to be judged by much the same rules of interpretation

we should apply to the resolutions of one of D...s or Sovereign's assemblies. We must not consider them as acts of government or expressions of national policy. We must examine them as agencies for the delusion of home voters—as part, in fact, of the general humbug of campaign. Each party just now, within six months of the Presidential nomination, cannot bear to let this dispute with England pass away without getting some capital out of it. A peaceful settlement at this moment would leave all the profits of the escapade with Cleveland and Olney. Something has, therefore, to be done to extract from it a reasonable usufruct for the Republicans. So they are "going him one better." Mr. Gresham said: "You will surely arbitrate this matter." Mr. Olney said: "You must arbitrate or you will be killed." Mr. Cleveland said: "The responsibility of this is awful, but I can bear it." Now, Lodge & Co. say: "You must get out of this continent before the convention meets." This is the precise way in which Debs approaches great questions. They have no difficulties for him.

All we have to say about it to-day is to ask patriotic Americans whether they believe that it is possible for free government, if carried on by such men on such lines, to be permanent or peaceable. This is the question of the hour. It is, we venture to assert, present to the mind of every thinking man and woman in the country. The late chairman of the committee on foreign affairs of the Senate, and a present member of the committee, was present at a public dinner in this city within a month, intoxicated, and delivered himself of an incoherent speech, part oral, part written, which lasted one hour and fifty minutes, and was hiccoughed out to a deriding, hooting, and insulting audience. Yet this man is one of those who have charge of the "national honor" at Washington to-day, and was sent abroad in 1892 as our representative to sit with gentlemen and scholars in a great international tribunal!

DANGER SIGNALS IN NOVELS.

MR. THOMAS HARDY'S latest novel has been condemned, on moral grounds, by critics on both sides of the Atlantic with a unanimity quite unparalleled in the case of a writer of his deserved repute. As to the justice of the strictures made on his 'Jude the Obscure' we will not here express an opinion; but the defence which he sets up, or which his friends, at any rate, set up, is worth examining. Objectors to the propriety of many things in the novel are referred to the preface of the unexpurgated edition. There it is distinctly stated that the book is "a novel addressed by a man to men and women of full age," and that, this being remembered, the author is "not aware that there is anything in the handling to which exception can be taken." In other words, the inference is that by openly re-

pudding the obligations of a writer *virginibus puerisque*, you successfully escape them.

An obvious difficulty with this inference, at the start, is that the repudiation is not open enough. It appears in a preface. But the majority of novel-readers are as impatient as Bacon of "prefaces and passages and excusations." Many young women invariably begin reading their novel at the last chapter; some begin in the middle and read both ways; but who ever heard of one reading a preface? The danger-signal, to be truly effective, should have been placed conspicuously on the cover. Parents should have been warned in large type to keep the book under lock and key; or dealers required to demand a certificate from all purchasers that they were "of full age." With such precautions, no awkward mistakes would have been possible. The apothecaries do these things better. On their poisonous prescriptions they put a suggestive skull and cross-bones, or take pains to sell their carbolic acid only in a roughened bottle, so that a man reaching out in the dark for a sedative dose will not get one far too effective.

But a more serious objection is that any warning of the kind, however emphatic and plain-spoken, cannot fail to be, under a system of perfectly free buying and selling, provocative and alluring rather than preventive. For every parent put on his guard, for every ingenuous youth turned away, ten buyers and readers will be attracted who might have let the book entirely alone but for the hint that it was no better than it should be. The way in which human nature, being what it is—especially youthful human nature, being what it is—reacts under such hinted prohibitions and obscure intimations of danger, is perfectly well known. The warning is always read as a challenge. Old experience may wag its head as sagely as it pleases, and advise hot blood to wait till it is cooled before doing or reading certain things; but it is of the nature of hot blood to want to do and read things immediately, the sooner the more risky. To prescribe the reading of books is a much more certain way of insuring their neglect, with a kind of settled repugnance, than to forbid their reading.

The futility of such warnings in other fields of literature than fiction has often been demonstrated. Take a theological book like 'The Kernel and the Husk.' The author, Dr. E. A. Abbott, in his preface, warns away all those not troubled by doubts about the supernatural. He would disturb no one's faith. But how is such a notice certain to operate? Assuredly by making many a careless turner of the leaves say to himself, "Why should there be any doubts about the supernatural? If some people have them, why shouldn't I? Let's see what this man has to say." Thus the book gets a wider hearing through the very fact of professing to be addressed only to a narrow circle.

Every one knows, also, how such warnings fail to work, or in a little while lose all their terror, in the case of suspicious foreign novels. "French novels" may have been for a time a red flag to make a Saxon reader reverse and put on the brakes. We say nothing about the difficulties of a foreign tongue as helping on the temporary taboo, for, of course, we know that everybody except ourselves is perfectly at home in French. But it was not long before the age of the translator dawned, and now the masterpieces of French and Russian fiction are found everywhere, their indecencies covered with nothing except a garb of unintelligible English. In fact, danger signals of this sort are very like those which the sagacious McKinley had put upon foreign-made goods. He was convinced that patriotic and virtuous shoppers, seeing the legend "Made in France" stamped upon otherwise seductive articles, would turn away in horror and call loudly for American products at twice the price. But it did not work that way; and the student of books should learn from this profound student of markets that to stamp goods or books "haute nouveauté de Paris" is not to deter but to incite buyers.

We cannot but think that it is a serious loss with which the English novel is threatened in going over to French fashions. In France, novels and series are stamped "pour les jeunes filles," and no one thinks anything of it, because everybody understands that all novels not so marked are distinctly not for "les jeunes filles." Such discriminations have not been necessary in English fiction until lately. The English novel began in indecency, because it began in an age of loose manners and speech, and also because it was understood to be written for men and clubs, not for women and girls. The Rev. Laurence Sterne had no satisfactory answer to give when, asking a lady if she had read his 'Tristram Shandy,' he was told, 'I have not, Mr. Sterne, and, to be plain with you, I am informed it is not proper for female perusal.' Few novels at that time were considered fit for female perusal. But the important English fiction of this century has been, until within a decade, of a kind that might safely be left to free publishing and reading without the intervention of censorship, either governmental or parental. We neither affirm nor deny that this has resulted in a limited, a truncated English fiction, as compared with foreign work in the same field. We leave it an open question whether a change from the old custom may not signify a gain for art; but we are certain that it means a loss to our comfort, to our traditions, to our manners.

A BRITISH GUIANA COLONIST UPON THE VENEZUELAN BOUNDARY QUESTION.

GEORGETOWN, January 6, 1896.

To associate the name of the Great Republic

with that of a British colony, in a question of international politics, may sound like the coupling of Alexander the Great with Alexander the Coppersmith. All the same is it a fact that the most friendly relations have for many years past subsisted between the citizens of the United States and the colonists of British Guiana. This good understanding is the result of a long-continued trade between the two countries, to their mutual advantage. That trade was at first carried on between Dutch colonists in what was in those days a part of Dutch Guiana, and British colonists in what afterwards became the United States of America. With Portland (Me.), Boston, New York, Philadelphia, and Baltimore, and with Fernandina (Fla.) and other ports in the South, British Guiana has for years had commercial transactions, exchanging its sugars for cargoes of breadstuffs, lumber, tobacco, ice and iced provisions, mules and other animals, hardware, notions, and things in general. The tariff of the colony does not impose any discriminating duties upon American goods, which enter the colonial market on the same terms as do British goods. Money matters between the commercial men of the two countries are liquidated with hardly a reference to a court of justice. Should the American citizen need to assert his rights by legal process, he would find equal justice meted out to him in the courts of the colony; and so would a Venezuelan. In colonial society, the American is welcomed as a kinsman. He may travel from one end of British Guiana to the other and find himself, everywhere, at least as safe as if he were in the United States; and so might a Venezuelan, and he would find even more safety and freedom than in his own country. Among those who have taken a share in the infantile gold industry of the colony, are some American citizens and one or two Venezuelans. Not a single soldier is stationed in British Guiana; and yet in no South American republic does order reign so peacefully as in this quiet colony.

The people of British Guiana have gone on developing (very slowly, it is true) the resources of their land; living at peace with their neighbors—the Dutch on the one hand, and the Venezuelans on the other. Although they have been from time to time subjected to insult from the Venezuelans, no difference was shown in the treatment of persons of the latter nationality living in the colony or coming there to do business with its inhabitants. The British colonists have taken no part in supporting the ever-recurring revolutions of that unsettled republic. On the contrary, for many years a provision has appeared in the colonial customs-duties law that duty shall be paid upon gunpowder upon its landing in the colony, and that no drawback of duty upon gunpowder should be allowed. This special provision originated in the wish of the Government of British Guiana to discourage the exportation of gunpowder to Venezuela during the troublous times that so often befall that state. This is not urged as any very virtuous act, but it is certainly not an unfriendly one. Then, the Venezuelan State of Guiana, which adjoins the British colony, has often been in revolt against the authority of the President for the time being of the central Government; but no British Sam Houston has appeared upon the scene to repeat the precedent of Texas, although British subjects have for years been numerous in that State, numbers of persons having gone thither from the West Indian Islands to work at the rich gold-fields in that country.

The British colonists have suddenly had their

attention distracted from the making of their world-famous sugar, the "Demerara crystals," from cutting their splendid timber, the "green-heart," and from the working of their gold-fields, by learning that they stand charged with putting themselves in contravention of the Monroe Doctrine, which, it appears, gives a mysterious power to the people of the United States to take away from British colonists territory to which they consider themselves as rightfully entitled as were the British colonists of North America to the colony of New York in the old days before the Revolution of 1776. Having been carefully taught the ten commandments in their youth, those colonists are much shocked by the pronounced determination of Brother Jonathan to outrage the eighth, for "Thou shalt not steal!" would seem to apply to lands as well as to goods. Of course, the colonists know that Americans have been led to take up a hostile position upon the question of the Venezuelan boundary by the importunacy with which it has been misrepresented to them that, in this matter, the colonists of British Guiana have not themselves observed the eighth commandment, despite their early instruction. But here we have the case that Victor Hugo pithily described, where an unfounded charge is taken to be true if repeated often enough. "If some one accused me of stealing the towers of Notre Dame, and repeated the accusation often, I should have to run away from Paris, even though the towers were to be seen standing; for," added Victor Hugo, "no one would believe in my innocence." So it is that, after lustily crying "Stop thief!" for some years, the Venezuelans have led the Americans to believe that British colonists have been robbing that nation of part of its territory.

That there must be two sides to this question can easily be seen by two items relating to it that appeared in the *Daily Chronicle*, a newspaper of Georgetown, the capital of British Guiana, in December last. On the 24th of that month was published a cutting from an American journal, in which, telegraphing from Washington, on the 4th, to New York, a correspondent reported the brave words of Representative Livingston of Georgia upon the situation in the terms following:

"Representative Livingston of Georgia, who introduced the joint resolution yesterday looking to the formation of a Congressional committee to investigate the boundary question, was asked to-day what the United States ought to do if Great Britain declines to arbitrate. 'Why, fight her, of course,' was the emphatic reply. 'No other course will comport with our dignity and self-respect. Venezuela is not to be considered in this matter. Great Britain has violated the Monroe Doctrine. She is continually acquiring additional territory in South America. We cannot and must not permit this. We should go to war first.'"

There you have in the words italicized the result of Venezuelan misrepresentations. Representative Livingston says: "Great Britain has violated the Monroe Doctrine. She is continually acquiring additional territory in South America." Representative Livingston has been misinformed.

The second item that has been referred to appeared in the Georgetown daily paper already mentioned, on the 27th of December last, and took the form of a public news telegram from New York to British Guiana, as follows:

"NEW YORK, December 26.
"Intelligence from Madrid announces that

the newspaper *El Nacional* publishes an article strongly advocating the establishment of an *entente* between Spain and the United States regarding Venezuela, arguing that Venezuela's claims against British Guiana are identical with the ancient ones of Spain against England.

"The London *Standard* publishes a despatch from Madrid in which it asserts that the article appearing in *El Nacional* is an inspired one and is causing considerable sensation."

Now, here we have the Spanish statement, one clearly hostile to England in motive, and made with the intention of currying favor with the United States; with self-interest at the bottom of it, as regards possible intervention by America on behalf of Cuba. And what is the effect of this unfriendly pronouncement of the "inspired" *Nacional*? This, that Venezuela's claims against British Guiana "are identical with the ancient ones of Spain against England." Surely, this statement of the case, given with all the weight of the evidence of a hostile witness, does not support the allegation of Representative Livingston, that Great Britain "is continually acquiring additional territory in South America." The Spanish statement shows that the "claims" are "ancient" ones; that the "claims" are "identical"; and that, while Great Britain was in possession, which used to be regarded as being nine points of the law, the Spanish nation "claimed" against Great Britain's possession. The alleged "claims" of Spain were never asserted against Great Britain except on Spanish maps. But, long years before Great Britain possessed the land now known as British Guiana, the Dutch had owned it, and there had been international contests over its possession between France and England, of which further notice will be taken later on in these notes. Meanwhile, let it be noted that, so far from Great Britain merely acting in this matter the cowardly part of a bully towards a weak nation, the British Government enjoyed its right to the possession of the territory of British Guiana unquestioned, diplomatically, by a powerful nation such as Spain then was, with her then vast dependencies in the New World, and at a time when the Spaniards had the power of the great Napoleon at their back. To enforce these claims, with all their "ancient and fish-like smell," the Venezuelans would bully the colony of British Guiana, but that the whole power of the British empire is at the back of the colony. The Venezuelans assert "claims" that Spain never made against Great Britain when what is now Venezuela belonged to Spain.

The British Government has expressed its willingness to submit to arbitration the question of the boundary of British Guiana, outside of the Schomburgk line; and to this decision the colonists willingly bow. To give up territory within the Schomburgk line would lead, step by step, to a demand for the surrender of the whole colony, as the application of the Monroe Doctrine might from time to time be capriciously stretched. To make clear to the world how just is the title of Great Britain to territory in its possession, it will be well to take note of the several occasions on which those territories were captured from the Dutch.

On four several occasions did England take from the Dutch that part of the territory now claimed by Venezuela. In 1665 England and Holland being at war, Lord Willoughby, the Governor of Barbados, sent an expedition against the Dutch colonies in Guiana. The success of the English was at first complete. What, at that time, was regarded as the boundary on the left side of the Essequibo? Let one

of those who took part in the expedition answer:

"This year [1665] the English could boast of the possession of all that part of Guiana abutting on the Atlantick Ocean, from Cayen on the South East to Oronoque on the North West (except a small colonie on the River Berbishes), which is noe lesse than six hundred miles."

The colony in Berbice remained in possession of the Dutch. France joined Holland in the war against England, and it is specifically mentioned by the same authority that the settlements of Essequibo, Pomeroon, and Moruca, "indured great misery, in a long siege by the French." The manuscript account of the expedition by Major Scott is preserved in the British Museum (Sloane MSS. 3663).

In the end, the Dutch recaptured their settlements, and also took the colony of Surinam, which up to that time had been an English colony. By the third article of the Treaty of Breda, in 1667, it was provided that

"each party shall hold for time to come, in full right of sovereignty, propriety, and possession, all such countries, isles, towns, forts, places, and colonies as, whether during this war or before, have been taken and kept from the other by force of arms and in what manner soever, and that as they possessed and enjoyed them the 10th day of May last."

In this manner were the Dutch confirmed in their rights to their ancient settlements between the Corentyne and the Orinoco. Neither France nor England dreamed of asking for the assent of Spain to these transactions. Spanish claims had not been asserted during the military operations between the contending nations, in those settlements in Guiana. How solemnly England felt herself bound by the terms of article 3 of the Treaty of Breda, history attests. Sir John Harman, the English admiral, and Gen. Willoughby not being at the time aware of the fact that a treaty had been entered into, had actually retaken Surinam from the Dutch, and that colony had again come under an English governor. On news of this reaching England, the King sent out orders to restore Surinam to the Dutch, and this was promptly done. England, having acted with such scrupulous good faith in her observance of the rights in Guiana acquired by the Dutch under the Treaty of Breda, cannot be expected to ignore those rights now that by the chances of war she has herself succeeded to the enjoyment of a share in them.

Nor must we lose sight of the important fact that, while the Dutch were confirmed in the possession of their colonies in Guiana by the Treaty of Breda, the English, under the same treaty, were confirmed in the possession of New Netherlands, which became, thereupon, the colony of New York. One of the events of the war had been the capture of New Netherlands by the English. It is illustrative of the point of view from which colonies were then regarded in England, that the keeping of New York, in place of Surinam, "at that time was looked upon by many as a bad exchange" ('European Settlements in America,' London, 1757, vol. ii., p. 179). The Dutch had not obtained the sanction of the Spaniards for their settlement at New York. The English did not think, for a moment, of asking Spain to ratify the exchange. The original title by which New York formed part of the United Colonies was, in fact, exactly the same as that under which the old Dutch settlements between Surinam and the Amacura now form part of the British Empire. Has the Government at Washington ever doubted the validity of the

title by which the United States hold the Empire State? Papal bulls and Spanish "claims" notwithstanding, Americans possess themselves in peace, assured, as to their right, that Pope and Spaniard could not trouble it.

The second occasion on which the Dutch settlements were captured by the English was in February, 1781, when Great Britain was at war with Holland, Spain, France, and the North American colonies. In 1782 the colonies were taken from the English by a strong expedition sent from France for the express purpose of their capture. On the peace of 1783 France restored the colonies to Holland. As the English had again been turned out of the Dutch colonies, the evidence of an English official as to the boundary on the Essequibo side of the Dutch possessions in Guiana might be regarded as being that of a not too friendly witness. Such evidence is to be found in a chart published in London, on the 6th of October, 1783, by William Faden, Geographer to the King. The chart is one of "the coast of Guyana from the Orinoco to the River of Amazons." It was executed by De la Rochette, from the observations of Captain Edward Thompson of the Royal Navy, made in his Majesty's vessel *Hyacinth*, when Captain Thompson "commanded in the Rivers Berbice, Essequibo and Demerari, and governed those colonies after their conquest from the Dutch." The boundary line given in this chart includes the Amacura River, which is that set down by Schomburgk. There is a curious error in this and in all events one other chart of the Guiana coast published about this time. It is this: that the Barima River is given as the extreme northern line of the Dutch settlements, within which the Amacura is placed, wrongly, to the south of the Barima. As is well known, the Barima runs southerly of the Amacura. This lapse shows the ignorance of the draughtsman, but strongly testifies that the Amacura was within the Dutch possessions. It is well to repeat that the Dutch boundaries in 1665 and 1783, as testified to by Englishmen, were held to be such by persons who had been in authority in the expeditions that captured those colonies, and that their testimony was given after the English had suffered the mortification of expulsion from those possessions, and when there could not be any prospect of recovering them.

It was in 1796 that England became, for the third time, possessed of the Dutch colonies. On this occasion the British Government is said to have informed the Government of Spain, in a friendly manner, what the Dutch held to be the boundaries of their possessions bordering upon those of Spain. No protest was made by Spain against that representation, in any of its details. On the 5th of October of the same year the King of Spain declared war against the King of England, his kingdom, and vassals. Among the many reasons for war alleged by his Majesty—who, be it remembered, was forced into this war by his French allies(?)—was the following:

"The conquest which she [Great Britain] has made of the Colony of Demerary, belonging to the Dutch, and whose advantageous position puts her in a position to get possession of posts still more important."

It will be observed that the name Demerary is here used to include the colonies of Berbice and Essequibo, which had been captured by the English at the same time. Not a word is said therein of any offence taken at the English representation of the boundaries of the Dutch settlements! As the French had themselves been in possession of those very colonies

in 1782-83, they no doubt knew what the Dutch boundaries were. Is it not reasonable to conclude that, had they been able to question the correctness of the claim, they would have procured that the King of Spain, whom they were forcing into the war, should specifically resent an invasion of his territorial rights? The advantageous position of the Dutch settlements to which the King of Spain referred was, no doubt, their proximity to the Orinoco. The posts still more important were, in all reason, the Orinoco and its neighborhood.

The colonies remained in British possession from 1796 until 1802, when they were given up to the Dutch, in accordance with the terms of the Peace of Amiens. During the British occupation the Spaniards had sent a military expedition against that part of the Dutch settlements called Moruca, where, for many years previously, the Dutch had established a fort. The Spaniards, having at that time but the scantiest of population in any part of the right bank, collected their force on the left bank of that river when the expedition set out. They landed at night on the 19th of January, 1797. They were received by Dutch troops who, on the surrender of the colonies, had taken service under the British Government. The Spaniards were completely defeated, and but few escaped. Capt. Rochelle, the brave commander of the Dutch soldiers, died of wounds received in this engagement. On account of his services, the Legislature of the then United Colony of Demerara and Essequibo voted pensions for the support of his children.

For the fourth time the colonies with their dependencies (*en onderhoorige districten*) came into the possession of Great Britain on the 17th of September, 1803, and their cession by the Dutch was completed by the convention of the 13th of August, 1814. Some time after the capture of the colonies in 1803, and before their cession in 1814, a chart of the colony was published. It was prepared by an officer of engineers named Walker. Having no copy of this chart at hand, one can only say, from memory, that it gives the Amacura as within the Dutch limits. The Schomburgk boundary line was not evolved out of Sir Robert Schomburgk's imagination.

From the foregoing statements it will be seen that, for 230 years, Englishmen have borne public testimony to the fact that the Dutch were in possession of territory as far as the Amacura. It should be clearly understood that Great Britain does not claim up to the point

"Where Orinoco, in his pride,
Rolls to the main no tribute tide."

It is said that the Orinoco receives the waters of 436 rivers, and of more than 2,000 rivulets and streams. It does not, however, receive one drop of water from the little Amacura.

But, it will be asked, where were the Spaniards all this time? The answer is simple. They had some petty settlements high up the Orinoco. Being men capable of taking extended views, they "took possession" of Guiana, that vast country of 800,000 or 900,000 square miles, between the Orinoco and the Amazon, by saying they did so, when they first made a tiny settlement up the Orinoco. The Portuguese, the French, and the Dutch, being practical people, entered upon the land and possessed themselves of it, while Spain asserted its "claims" to Guiana by making maps that included the vast regions occupied by the nations mentioned. Will any one be bold enough to assert that the Spaniards ever had a colony on any part of the coast of Guiana, or that the Spaniards ever had any settlement there,

as a settlement would be understood among nations? On the other hand, the Portuguese, French, Dutch, and the English all had colonies and settlements in some part or other of Guiana. And yet, among the grounds of "claim" set forth for the information of the world by the Venezuelan Government is the following fatuous declaration, in a despatch written on the 26th of January, 1887, by their Secretary for Foreign Affairs, Señor Urbaneja, to the British Minister at Caracas:

"According to the order issued by the King of Spain in 1763, the province of Guiana was bounded on the south by the Amazon and on the east by the Atlantic Ocean; so that the acquisitions of other Powers within those limits were not valid until they were made lawful by the consent of said monarch."

How one would like to have the opportunity of reading the orders of his most Catholic Majesty as to the boundaries of Mexico and Florida in 1763! How far would those regarding Mexico be respected by the United States?

A great deal still remains to be said as to the history of the European settlements in Guiana, and of the Dutch and English settlements especially, but that boundaries of the space in an American journal may not be transgressed any more than those of a British colony, under the *Pax Britannica*.

Perhaps the cogency of the British case may be best put to Americans by setting forth the historical fact that the Pilgrim Fathers actually contemplated making their settlement in the New World in Guiana rather than in North America. These forefathers of the great republic would, to Spaniards of that period, have been regarded as fit objects for the application of the system *de hæretico comburendo*. Will any reasonable man say that, seeking a place where they might worship God according to conscience, those persecuted exiles would have contemplated settling in any country under the dominion of Spain or within measurable distance of Spanish dominion? Let an old writer of the history of the settlements in New England be heard. Prince, under the year 1617, and between the dates September 15 and November 4, makes the following statements:

"This year, Master Robinson and his Church begin to think of a remove to America, for several weighty reasons, as 1.....
2.....
3.....

Upon their talk of removing, sundry of note among the Dutch would have them go under them, and make them large offers; but, choosing to go under the English Government, where they might enjoy their religious privileges without molestation, after humble prayers to God, they first debate, 'whether to go to Guiana, or Virginia?' And though some, and none of the meanest, are earnest for the former, they at length determine for the latter: so as to settle in a distinct body, but under the General Government of Virginia."

"And the young and strong Republic was by these in virtue bred,
She was cradled in adventure, she was nursed in good-men's dread,
The young and strong Republic that has filled the world with fame,
And with great praise and marvel of the Anglo-Saxon name."

N. DARNELL DAVIS.

LAFENESTRE'S LA FONTAINE.

PARIS, January 2, 1896.

HE who writes for children is assured, if he does his work well, of a longer immortality (if the two words admit of collocation) than any other writers. The 'Fables' of La Fontaine and the 'Contes' of Perrault will be read as long as the French language is spoken and un-

derstood. Victor Hugo, who had an inordinate vanity, said that he was not jealous of any French poet, but confessed that he was envious of La Fontaine. No French poet ever attained the extraordinary fluidity and ease of style characteristic of La Fontaine's 'Fables' and 'Contes,' except, perhaps, Molière in his "Amphitryon." M. George Lafenestre, who is a distinguished art critic, has been chosen, I do not know for what reason, to write the volume on La Fontaine in the "Grands Écrivains Français," and has acquitted himself very well of his task.

I enter my protest, however, as I have done before on other occasions, against the cut and dried method adopted in these essays on our French writers, which consists in making a sort of scientific analysis comparable to a chemical analysis. I cannot help finding something artificial as well as monotonous in a method which induces the critic to give such headings to the successive chapters of his book. In speaking of La Fontaine as "l'écrivain," after having spoken of him as "l'homme," M. Lafenestre subdivides his subject into "l'œuvre," "l'imagination," "la sensibilité," "la pensée," "le style," "l'influence." Taine is answerable for this new method of criticism. I need not, I suppose, show that it is impossible thus to decompose the human mind as the molecule is decomposed into its component atoms. It seems to me a pity that this analytical criticism should have become a fashion in the new generation, which has been greatly inspired by the teachings of Taine. The collection of "Grands Écrivains Français" would gain much in variety and in interest if the same pattern was not applied to its critical essays.

There is little to be said about La Fontaine as a writer, and he need hardly be explained as such; there is more to be said about his life and the relations of his life to his writings. In this respect, M. Lafenestre's volume becomes very interesting, and will be found very readable. The house where La Fontaine was born at Château-Thierry on July 8, 1621, is still in existence. His father was a King's councillor, master of woods and forests, and *capitaine des chasses* in the Duchy of Château-Thierry. At the age of nineteen, he studied law, spent a little time at the Palais, and, feeling no vocation for chicanery, returned to Château-Thierry towards 1644. For ten years he led the easy and lazy life of the province, hunting, riding (he was still a hard rider at the age of seventy), dreaming, reading, and making at times a visit to his friends in Paris. He wrote verses, and paid court to the ladies of his neighborhood; his love affairs were more in the style of Boccaccio and of Rabelais than in the dramatic and sentimental style. His only real passion was poetical. He was a great dreamer, and La Bruyère said of him afterwards: "The man seems coarse, heavy, stupid; he cannot speak nor tell you what he has just seen. When he begins to write, however, he becomes the model of good story-tellers; there is nothing but lightness, elegance, fine delicacy in his works." His first work was a translation of Terence's "Eunuchus." He studied all the great writers of antiquity, and delighted also in the *conteurs*, French and Italian, of the Middle Ages and of the Renaissance.

His father left him his office and chose a wife for him, Marie Héricart, daughter of the *Meunier-criminel* of La Ferté-Milon. He accepted the office and the wife, to please his father; but he neglected the wife as well as the office, and very openly. He conducted the affairs of the community so badly that his

wife obtained in 1659 a separation of property. Tallemant des Réaux, speaking of this strange union, says: "His wife says that he dreams so that he sometimes remains for three weeks without believing himself married"; and this applies to the first period of his marriage. Mme. de La Fontaine was lettered—too much so for the taste of her husband, who objected to her criticisms. The only letters of La Fontaine to his wife which we possess were written to her during a journey which he made in 1663 to Limoges. They are very characteristic of the state of their relations after fifteen years of marriage, and sound more like the letters which a gay companion would write to one of his gay friends than like the letters of a husband to his wife. They show, at the same time, that Mme. de La Fontaine was not a prude nor a *déguiseuse*, to use the words of M. Lafenestre, and allowed her husband all possible liberties.

The famous *surintendant* Fouquet, who was a great patron of letters, offered a pension to La Fontaine, who became one of the visitors and parasites of the little court of Saint Mandé and of Vaux. He wrote for Fouquet the 'Adonis,' a poem in which is found a tender love for nature's beauties quite unknown in the seventeenth century. In it occurs this verse, which has become proverbial:

"Ni la grâce, plus belle encor que la beauté."

André Chénier used to say that 'Adonis' was the poem which he had read with the greatest profit. It is singular to find the man who was at times so Rabelaisian, writing such delicate and almost melancholy verses as these on voluptuousness:

"O vous, tristes plaisirs où leur âme se noie,
Vains et derniers efforts d'une imparfaite joie."

The friends of Fouquet, even the Marquise de Sévigné, liked something lighter and gayer than 'Adonis,' and La Fontaine was quite able to satisfy them. One of his great successes in the salon of Fouquet was a very light epistle on an adventure of a nun, a gay badinage which charmed Madame de Sévigné so much that she placed La Fontaine at once "among the gods." Every three months La Fontaine had to give a quittance for his pension in the shape of some madrigal. We do not understand such relations in our time, but they seemed quite natural in the seventeenth century; all poets were the pensioners of some king, prince, or great lord. It seemed as natural to La Fontaine to flatter Fouquet as it seemed natural afterwards for him to flatter Madame de Montespan, Louis XIV., Colbert, the Dauphin. It ought to be said, also, that he really liked Fouquet, who was able to inspire great friendships, and who was a very intelligent and able man. It was in Fouquet's house that he became acquainted with Chapelain, Mademoiselle de Scudéry, and Molière, of whom he said at once, "C'est mon homme."

La Fontaine spent lastly three years of his life on the 'Songe de Vaux,' a work written in honor of his patron and his magnificence, which was left unfinished and ought never to have been begun, though here and there you may find in it some fine verses. There is not much more to be said about 'Elymène.' When Fouquet was arrested and thrown into prison, La Fontaine had the courage to stand by him and to make an eloquent appeal to the clemency of the King. "Et c'est être innocent que d'être malheureux," one of the verses of his fine ode, has become proverbial. La Fontaine was exiled to Limoges, with his uncle, and it was from there that he wrote to his wife the letters which I have already men-

tioned. In 1664 La Fontaine had returned to Paris, and he spent his time between the capital and the house of the Duchesse of Bouillon at Château-Thierry. The Duchesse was one of the celebrated nieces of Mazarin, Marie Anne Mancini. During this period he wrote 'Psyché' and the "Quinquina" (after an illness of the Duchesse, who had been cured by quinine). He also wrote his "Joconde," the first of his famous 'Contes'; and, after "Joconde," seven other *contes* in verse on subjects taken from Boccaccio. The volume of the "Nouvelles en vers tirées de l'Arioste et de Boccaccio," without any signature, had an immense success. A new edition came out with other *contes*. On March 31, 1668, appeared the first six parts of the 'Fables,' dedicated to the Dauphin. From that date La Fontaine may be said to have entered into immortality. His bookseller, Barbin, had to print immediately new editions, and soon afterwards published another series of Fables.

La Fontaine was at this time in a very productive vein, for he published also the 'Amours de Psyché et de Cupidon.' He had announced this work in the second series of 'Fables' in this way:

"Bornons ici notre carrière;
Les longs ouvrages me font peur.
Lois d'épuiser une matière,
On n'en doit prendre que la fleur.
Il s'en va temps que je reprenne
Un peu de forces et d'haleine
Pour fournir à d'autres projets.
Amour, ce tyran de ma vie,
Veut que je change de sujets;
Il faut contenter son envie:
Retournons à Psyché."

With the versatility of his character and of his talent, he wrote, in 1691, a psalm in verse (a very feeble production, by the by) in a *Janseist* 'Recueil de Poésies Chrétiennes,' and at the same moment some new 'Fables' and some new 'Contes.' Two years afterwards, he writes at the same time a poem on chastity, 'Saint-Malo,' and a new series of 'Contes,' the most licentious of the whole series. The two books were interdicted at the same moment—the first because La Fontaine had imprudently called the Cardinal de Bouillon "Altesse sérénissime" (a title to which the Cardinal had no right), and the second on account of its bold immorality. La Fontaine always needed some protection and some material help; he found, at this period, a new Providence in Madame de la Sablière, an amiable woman, who was familiarly called "La Tourterelle" (the Dove), the wife of a rich *fermier-général*. She was the friend (I use a mild expression) of the Marquis de la Fare. La Fontaine spent seven or eight years in the house of this amiable woman, which was called the Folie-Rambouillet; he remained there in a state of complete freedom, writing as he pleased and when he pleased. La Fontaine was elected a member of the French Academy after Boileau. He followed Madame de la Sablière to Paris, where she said she had taken with her "only her dog, her cat, and La Fontaine." He led to the end the life of a parasite and of an epicurean, and he remained also to the end a sort of Polyphile, writing on the most various subjects, always with the same ease and graceful fluidity of style, at times with a curious vein of sadness and melancholy, which was very rare in his time. In 1693 he fell ill. Madame de la Sablière was in a convent, but he found a new protector in the person of M. d'Hervart, a *maître des requêtes*, who had a large and splendid hôtel. He lived there till he died, on April 13, 1695, at the age of seventy-four.

Correspondence.

ENEMIES OF MANKIND.

TO THE EDITOR OF THE NATION:

SIR: In connection with the "late unpleasantness" it may interest some of your readers to recall the opinion expressed some fifty years ago by such a distinguished writer as the late Judge Haliburton ("Sam Slick") in his 'Wise Saws' (c. 26), as to the relations which ought to exist between the two greatest branches of the English people, and the punishment that ought to be meted out to wilful disturbers of the peace. If so, here it is:

"Now we are two great nations, the greatest by a long chalk of any in the world—speak the same language, have the same religion, and our constitutions don't differ no great odds. We ought to draw closer than we do. We are big enough, equal enough, and strong enough not to be jealous of each other. United we are more than a match for all the other nations put together, and can defy their fleets, armies, and millions. Single we couldn't stand against all, and if one was to fall where would the other be? Mourning over the grave that covers a relative whose place can never be filled. It is authors of silly books, editors of silly papers, and demagogues of silly parties that helps to estrange us. I wish there was a gibbet high enough and strong enough to hang up all these enemies of mankind on."

Yours, etc., J. M. GELBERT, JR.
HALIFAX, N. S., January 17, 1896.

A NATIONAL UNIVERSITY AT WASHINGTON.

TO THE EDITOR OF THE NATION:

SIR: There are many objections to establishing a national university at Washington, but the strongest of all is the incompatibility of the pursuit of truth with responsibility to politicians. During the past few weeks we have had a striking indication of what would happen at a national university. Many eminent professors, exercising their right as citizens, have spoken and written on the Venezuelan question, and immediately Jingoism in the press and elsewhere have assailed those professors as if they were traitors, idiots, or flunkies. It makes no difference that Prof. von Holst of Chicago, or Prof. Moore of Columbia, or Profs. C. E. Norton and Wm. James of Harvard, happen to plead for a sober consideration of the Venezuelan quarrel and to denounce war as uncivilized, up jump the Jingoists, led by the loquacious Theodore Roosevelt, and scream, "What business have these college professors to meddle, anyway? They don't know anything about the subject, and if they did they ought to hold their tongues."

Of course, only editors, or other persons with a magnified sense of their own importance and a lack of humor, who print three articles a month in the magazines and grant interviews to newspaper reporters every day, on any subject, would pooch-pooch the opinions of men like Norton, and Von Holst, and Wm. James, who think more than they talk. But should not this episode serve as a warning against any proposed national university, whose teachers would be at the mercy of every crank in Congress or out of it—for they would be regarded as public servants, unpermitted to say their souls were their own? If one of them dared to affirm that war is a crime, how quickly would Senator Lodge—whom Milton, with prophetic genius, described so admirably in 'Paradise Lost,' Book II., 109-112—have him impeached or arrested. And if another, in

lecturing on economics, felt it his duty to point out the fallacies of protection or free silver, he would be squelched by McKinley or Teller.

The truth is, that most of the most important topics would be ruled out. Political economy could not, for reasons just suggested, be taught; nor the history of the Reformation, because that would offend the Catholics; nor the history of England, which would rouse the Jingoists; nor criminology, for that would bring out some unpleasant statistics about the Irish, and so alienate the "Irish vote"; nor the history of the United States, for if the Mexican war were truly narrated, it would anger the present disciples of President Polk; and the Rebellion could not be taught so as to satisfy both Northerners and Southerners; nor could Evolution, because all the orthodox would cry out against a doctrine which deprives them of the pleasure of believing that unbaptized infants are damned.

Perfect freedom is the indispensable condition for the discovery and imparting of truth; and at Washington that condition could not exist. The advocates of the scheme, which would give easy berths to a good many office-seekers, protest, of course, that care would be taken to maintain freedom of speech. But there are many ways, besides gagging, of silencing the preacher of unpopular doctrines, and we cannot doubt that they would all be used. Probably no self-respecting professor would accept such a position of servitude; certainly the most eminent professors, to whom free speech is dearer than preferment, could never be enticed into such a trap. T.

JANUARY 11, 1896.

THE COLORS OF MARYLAND.

TO THE EDITOR OF THE NATION:

SIR: I see by the morning's papers that the medal recently presented to the Long Island Historical Society is garnished with a specially prepared ribbon, combining the colors of Brooklyn with "the colors of the State of Maryland—orange and black."

The colors of the State of Maryland are not orange and black, but gold (or yellow) and black. They are the colors of the Calvert arms, which have been used in the seal and on the flag of Maryland from early colonial times. They can be seen on the original exemplification of arms to George Calvert (1622) in the possession of the Maryland Historical Society, in Gwillim or any manual of heraldry, or on the State flag in the City Hall, Baltimore. Orange is not a heraldic color.

The colors of the Baltimore Baseball Club are, I believe, orange and black; but that is not the State of Maryland.—I am, sir, etc.,

WM. HAND BROWNE.

MARYLAND HISTORICAL SOCIETY.

THE REASON FOR GLAZED PAPER.

TO THE EDITOR OF THE NATION:

SIR: In your review of Grosvenor's 'Constantinople,' in No. 1594, I find this sentence: "Unfortunately the paper is so highly glazed that the print cannot be read, especially by artificial light, without trying even the strongest and most youthful eyes." This is no new complaint, but one frequently heard in your columns, and many readers of the *Nation* must be left in a state of wonder at the obstinacy of publishers in using such paper in spite of repeated protests. Yet the reason for so doing is simple. I have not seen Prof. Grosvenor's

book, but I understand that it is elaborately illustrated. Now it is perfectly understood by artists, engravers, printers, and publishers that decent printing of text cuts is possible only on this highly calendered paper to which your critic objects; and if such cuts are to be used at all, they must be printed on such paper or ruined in the printing. To me it seems that the publisher is praiseworthy rather than blameworthy for determining to print his cuts properly, but this is the judgment of an artist. A literary critic may be of the opposite opinion, but ought he not to recognize the reason for the publisher's choice, even in blaming it, and not leave it to be understood by the public that it is a mere matter of whim, or worse, of economy? The rough, hand-made paper which is the delight of bibliophiles is the despair of the poor designer of illustrations, and its use would probably lead to the abandonment of all illustration, or its restriction to such purely archaic adornment as Mr. Morris uses in the publications of the Kelmscott Press.

KENYON COX.

NEW YORK, January 19, 1896.

[We were perfectly aware of the cause of the use of glazed paper. The *abuse* we owe partly to the change in the mode of wood-engraving in the quest for tint and half-tone, and especially to the advent of cheap "process." Often, for the sake of a small number of cuts in the text, the entire readability of a book (hygienically speaking) is destroyed. The effect on text-books for the young in particular is deplorable when we consider all the temptations of that age to overtax the eyes.—ED. NATION.]

SCHOOLS IN FRANCE BEFORE THE REVOLUTION.

TO THE EDITOR OF THE NATION:

SIR: The sweeping conclusion, impliedly endorsed by you in your recent note on public instruction in ante-Revolutionary France, to the effect that the French peasantry of the *ancien régime* were in the full enjoyment of an excellent system of primary education, needs much qualification.

The number and quality of rural schools varied widely from province to province—Mr. Stanley Weyman's low view of the mental condition of the peasant being perfectly correct as to Brittany and the central provinces, and approximately so as to Gascony and the Toulousian; while your reviewer's opinion holds good as to the northern and northeastern provinces, where simple primary schools were abundant.

You point to the fact, as confirmatory of your general position, that in the districts now forming the department of the Meurthe-et-Moselle there were, in 1789, 599 communes, in 566 of which were one or more schools. As an offset to this, permit me to say that records of the time (cited by M. Taine) show that in Gascony "most of the rural districts are without schoolmasters," while in the Toulousian only "ten parishes out of fifty have schools." And in Brittany and the central provinces matters were even worse than in the south. M. Albert Babeau, whom you cite approvingly, gathers, from an inspection of marriage registers of the period, that in the Nivernois only "13 per cent. of the men and nearly 6 per cent. of the women" could sign their names. Taking, then, the average of these extremes, considering the kind of instruction likely to be doled

out to the lower classes by the French clergy in Voltaire's century, and not forgetting the bestial use made by Jacques Bonhomme of his newly acquired liberty in 1789, it would seem that the conclusions of your reviewer on "the universality and efficiency of village schools in France under the *ancien régime*" need revival.
W. R. K.

MILWAUKEE, WIS., JANUARY 5, 1896.

[We cannot prolong this discussion. No monograph on the history of primary education in Brittany exists, to our knowledge, but M. Allain quotes M. Léon Maître for the district of Nantes, in which sixty-four out of eighty-one parishes had schools in the eighteenth century. We have further knowledge of the fact that La Chalotais, the famous Breton *procureur-général* of the Parlement of Rennes, published his 'Essai d'éducation nationale' in 1763, in which he complained, presumably from acquaintance with the condition of things in his own province, that "the Brothers of Christian Doctrine, who are termed *ignorantins*, teach reading and writing to people who ought only to learn how to draw plans and to handle the file and the plane, but who will no longer do so. . . . The laborers and artisans send their children to the local colleges." An echo to the complaints of La Chalotais is found in the complaints made to the Bishop of St.-Dié in 1779:

"There will never be any good popular education until the country schoolmasters, who depopulate alike the fields and workshops, are driven away. The complaints that the fields are left without workers, that the number of artisans is diminishing, and that the class of vagabonds is increasing, are due to the fact that our towns and villages are filled to overflowing with a multitude of schools. There is no hamlet without its *grammairien*."

With regard to central and southern France it may be allowed that in sparsely populated districts, like the mountains of Auvergne and the sandy wastes of the Landes, schools were few and far between in the last century, as they are at the present time; but even in the Landes there were, before the Revolution, 235 schools, though unequally distributed, in 330 communes. These statements of facts are mainly derived from the work of M. Allain on primary education in France before the Revolution, cited in the *Nation* for December 26, 1895.

M. Albert Babeau treats the whole question briefly, with references to authorities, in the first chapter of his 'Écoles de village pendant la Révolution,' in which he shows that he had formed a higher opinion of the extent of rural education in ante-Revolutionary France than in his earlier works, 'Le Village sous l'ancien régime' and 'La Ville rurale dans l'ancienne France.' He arrived at the conclusion endorsed by our correspondent, that primary education was more widely diffused in the north and east than in central and southern France, but his conclusions need to be modified in a more favorable sense since the publication of numerous local monographs by Fayet, Combarieu, Allain, and others.

As to the nature of the education given in the village schools, it is true that it did not much exceed reading, writing, arithmetic, singing, and the catechism; but even this amount of education must have raised the French peasants, and did raise them, from the condition of absolute savages, which still remains the legendary belief and is endorsed by Weyman in his latest novel. "Bestial" is an absurdly strong word to apply to the action of the French peasants in 1789 in attacking the châteaux of the nobility.—ED. NATION.]

Notes.

An elaborate 'Dictionary of Philosophy and Psychology,' edited by Prof. J. Mark Baldwin of Princeton, will be issued by Macmillan & Co., together with a treatise on 'The Architecture of Europe: An Historical Study,' by Russell Sturgis; 'The Anatomy of the Human Body,' by Drs. John Cleland and John Yule Mackay, of Glasgow and Dundee; 'The Principles of the Transformer,' an electrical work, by Dr. Frederick Bedell of Cornell; and 'Studies in Structure and Style,' by W. T. Brewster of Columbia. The same publishers spring list embraces 'The United States of America, 1765-1865,' by Edward Channing of Harvard; 'The Child and Childhood in Folk-Thought,' by Alexander F. Chamberlain of Clark University; 'Vocal Culture in its Relation to Literary and General Culture,' by Prof. Hiram Corson of Cornell; 'A Brief History of English,' by Prof. Oliver F. Emerson of Cornell; 'Woman under Monasticism: Chapters in Convent Life and Saint Worship,' by Lina Eckenstein; 'The Empire of the Ptolemies,' by Prof. J. P. Mahaffy; Dante's 'Divine Comedy,' rendered in the nine-line metre of Spenser by George Musgrave, M.A., Oxford; Friedrich Ratzel's 'History of Mankind,' translated by A. J. Butler; the Works of Friedrich Nietzsche, in eleven volumes, edited in English by Alexander Tille; Georg Brandes's 'William Shakespeare: A Critical Study,' translated by William Archer; a posthumous volume of 'New Poems,' by Christina Rossetti; and a 'History of Nineteenth-Century Literature,' by Prof. Saintsbury.

G. P. Putnam's Sons announce 'The Historical Development of Modern Europe from 1815 down to 1880,' by Prof. Charles M. Andrews of Bryn Mawr; 'The West Indies and the Spanish Main,' a history of settlements, by James Rodway; 'The Nicaragua Canal: its History and its Future,' by Prof. Lindley M. Keasbey; 'A History of Modern Banks of Issue,' by Charles A. Conant; 'Early Long Island,' by Martha Boché Flint; 'The Perambulation of the Forest of Dartmoor,' by Samuel Rowe, with numerous illustrations; and a new edition of Dant's 'Tales of the Fjeld,' with 100 illustrations by Moyr Smith.

Charles Scribner's Sons have nearly ready 'The Love Affairs of a Bibliomaniac,' by the late Eugene Field. We should have mentioned last week that they are the American publishers of the "Warwick Library of English Literature," of which we gave some account.

T. Y. Crowell & Co. have in preparation 'Shakespeare's Heroes on the Stage,' by Charles E. L. Wingate.

Ginn & Co. will publish next month 'Selections from Keats's Poems,' by Prof. Arlo Bates. In his 'Short Historical Latin Grammar'

(Oxford: Clarendon Press; New York: Macmillan), Mr. W. M. Lindsay presents a book based upon his large work called 'The Latin Language' (lately reviewed in these columns), and containing the main doctrines of that work without the detail of evidence upon which they are founded. It is a convenient little volume of some 200 pages; the matter is well arranged and clearly expounded. It is intended for beginners in the study of the development of Latin declension and conjugation. The language of it is simple, avoiding all but the most necessary technical terms, and the book may be highly recommended to those for whom it was compiled.

In April, 1892, Mr. Timothy Hopkins of the Southern Pacific Company (of Kentucky) presented his railway books to Stanford University, and made generous provision for their increase. In order that the collection, which, by September, 1895, had grown to 9,245 books and pamphlets, might be made immediately useful to those interested in the subject—if they be railroad men they may get passes to California—and that the increase of the collection might be facilitated, the library of the Stanford University recently put forth, as number one of its publications, a 'Catalogue of the Hopkins Railway Library,' by Frederick J. Teggart, A.B. It is a quarto of 241 double-columned pages, arranged on a simple classification with an index of personal names. It appears to be accurately made. The most striking features of the library evident upon cursory examination of the catalogue are the large pamphlet collections on the Erie and on the Pacific Railways, and the lamentable incompleteness of the sets of periodicals and reports. On page 191 curiosity is piqued by the entry, s. v. Southern Pacific Company, of "A collection of 740 pieces of stationery in use by the company. Album, folio."

The eighth biennial report of the Bureau of Labor Statistics of Illinois, on the subject of taxation, has been recently issued. It is a thoroughgoing single-tax document, and devoid of any new ideas on the subject; but it contains elaborate statistics of land and building values and assessments in Chicago, which are not without value. The method by which the figures were ascertained for all the tables is described with praiseworthy fullness.

The ultra-conservative spirit of M. Ferdinand Brunetière's treatise, 'Éducation et Instruction' (Paris: Firmin-Didot), will be a surprise even to those long familiar with the author's stanch adherence to the Latin tradition in French literature and education. In a field where, though not a stranger, he is evidently not as much at home as in his own, the less agreeable traits of the great literary critic are so strongly marked as to become repellent. We cannot imagine that his acrimony and "terrible assurance" will change the opinions of many as to the relative educational value of Latin and the sciences, or aid his colleagues in strengthening the educative influence of their work. The subject of the treatise itself is important enough, and M. Brunetière's contribution to it will interest members of the faculties of our higher institutions.

Müller's 'Vademecum für Studierende' will prove attractive to all interested in German student life, and especially so to those who expect to become students in Germany. The first part of the book is devoted to fraternities, and a brief historical sketch is given of the four general classes into which these fraternities naturally group themselves: the Corps, the Landsmannschaft, the Burschenschaft, and the new or free Burschenschaft, which dates from

1883, and whose aim is to counteract some of the apparently degenerating influences of the older fraternities, e. g., duelling, court of honor, etc. Besides this historical sketch, the characteristics of each class at the present time are also set forth, with statistical tables showing at what universities the various fraternities are represented, the colors, date of founding, and motto of each. Another chapter exhibits all the scientific societies connected with the universities; another is devoted to fraternities and societies of all kinds connected with technical schools. A chapter on duelling shows how this practice has arisen in the universities, describes the instruments used, gives the regulations governing it, and demonstrates how little the laws have succeeded in restraining it. The drinking customs are explained somewhat in detail, and a number of student sports or games are elucidated. Finally, a collection of students' songs makes the book serviceable for the "Commerz."

After a very deliberate and careful piecemeal publication, Dr. Moriz Heyne's 'Deutsches Wörterbuch' has been brought to a conclusion (Leipzig: S. Hirzel; New York: Lemcke & Buechner). It is attractively printed, and employs the Gothic letter for the editorial definition, etc., and the Roman (without substantive capitalization) for the illustrative quotations which lend the work its special distinction. The alphabetical sequence is interfered with by an arrangement of which the method is not clear, as witness these examples: *Trauen* introduces a paragraph, of nearly two columns, ending with *Traualtar* (which should have preceded not only *Trauen*, but *Traube*), *Traugebüß* . . . *Trauzeuge*; the next paragraph is introduced by *Trauer*. So *Tropfen* (sub.) must be sought under *Tropfbar*, together with a series of compounds closed by *Tropfenweise*; the next paragraph reverts to *Tropfen* (verb). The literary quotations are, as we have heretofore pointed out, very rich in drafts upon Goethe and Schiller, and also upon such recent sources as Ranke, Moltke, and Bismarck in particular. The first page of the final volume cites not less than sixteen authors; the last (and it is a short page) some twenty. About thirty-five quotations are found under *Strom* (to choose an instance at random). This feature, with the shades of meaning implied, makes Heyne a very desirable companion for students bent on something more than bare translation, and an interesting browsing-ground for those who have mastered the language. The etymologies are compact yet not stinted.

Lemcke & Buechner send us also the concluding parts of the eighth edition of 'Ritter's Geographisch-Statistisches Lexikon,' edited by J. Penzler. The two volumes number 1,064 and 1,203 pages respectively, in condensed but clear typography, displayed in double columns in the Roman letter. This gazetteer has a solid reputation for accuracy, and its range of inclusion is very great, especially for Germany, where every place having a hundred inhabitants is admitted; for Austria and Switzerland the lowest limit is 150, and for the rest of Europe, 300 to 500. Abundant details as to postal, telegraphic, railway, and industrial facilities are given, and the claim is not rashly made that for every place in the world of commercial significance this work is valuable for reference. It is finished just as an English work of large dimensions, 'Longmans' Gazetteer of the World,' makes its appearance, and as Levasseur's 'Lexique Géographique du Monde Entier' is beginning to put out its

fascicules. But of gazetteers there cannot be too many, if good, and each will supplement all the rest by its peculiar copiousness.

From the same firm we have received the fifth issue of the Spruner-Sieglin Hand-Atlas for the history of antiquity, the Middle Ages, and of modern times, in its first division, containing maps of the Persian Empire and of the Macedonians in Alexander's time, the Parthian dominions, the north African seacoast, and the Roman Empire in the second and third centuries A.D.

Dr. Harrison Allen's article, of forty pages and four plates, "On the Embryos of Bats," is No. 2 of vol. i. of the 'Contributions from the Zoological Laboratory of the University of Pennsylvania.' About a dozen genera are represented, in more than thirty figures. The material was not all that was desired, but, according to the author, it shows the differences between foetal and adult stages in bats to be greater in kind and degree than in other mammals, and that the numerous contrasts between embryonic and adult forms may be accepted as evidence of the relatively low grade of the entire order, the high degree of specialization notwithstanding.

In a November extra from the *American Journal of Science*, vol. i., Prof. O. C. Marsh treats of "Restorations of some European Dinosaurs, with suggestions as to their place among the Reptilia." The plates contain restorations of *Compeognathus*, *Scelidosaurus*, *Hypsilophodon*, and *Iguanodon*. In a second paper from the same volume, December, he considers the "Affinities and Classification of the Dinosaurian Reptiles." On the plate, twelve restorations are figured for comparison. The Dinosaurs are placed as a sub-class of the Reptilia and distributed among three orders, Theropoda, Sauropoda, and Predentata, with twenty-six families and sixty-eight genera. The affinities of the exceptional genus *Ceratopsaurus* on the one hand and *Archaeopteryx* on the other bring these Saurians and the birds near together. Remoter affinities are traced through the Hallopora, *Zanclodon*, *Aëtosaurus* and *Belodon* to the Crocodilia, by way of common ancestry. The same volume of the *Journal* contains a notice, by Prof. J. B. Woodworth, of his discovery in the Newark Group, at Avondale, New Jersey, of foot-prints similar to those of the Dinosaurs of the Connecticut valley.

In a recent circular sent out by Prof. Pickering, we learn that an interesting examination of variable stars has been in progress. Prof. S. I. Bailey, in charge of the Harvard station at Arequipa, Peru, has made numerous photographs of globular clusters, which have proved, upon examination, to contain an extraordinary number of variable stars—not a general condition of stellar clusters. The photographs used in this discussion were taken at Arequipa with the 13-inch Boyden telescope. In one cluster (*Canes Venatici*), no less than eighty-seven stars have been found to be variable. That this is unmistakable is proved by an independent examination of the plates by Prof. Pickering and Mrs. Fleming as well as Prof. Bailey. Another cluster shows forty-six variables, while others show three, four, or five each. In general, no variables have been found within about one minute of the centre of the clusters, on account of the closeness of the stars; and none of those found are more than ten minutes distant from the centres of the clusters. Some of the variable stars have short periods, of not more than a few hours. The individual stars in close clusters can be readily found only from photographic or other

charts on which they are marked. The Harvard Observatory is preparing to publish charts of this kind, and meantime marked photographs will be sent to astronomers desiring to study them.

We learn from *Science* that a new star has been found by Mrs. Fleming in the constellation Centaurus, from a comparison with the Draper Memorial photographs. Its spectrum is monochromatic, and closely resembles that of the adjacent nebula. Like the new stars in Cygnus, Auriga, and Norma, it appears to have changed into a gaseous nebula. It is already beginning to fade.

As an indication of the recognition which women are beginning to receive in German-speaking countries, it may be mentioned that upon the occasion of the discussion of the bill for the admission of women to universities, a member of the Austrian Parliament said of Frau von Gizycki (whose husband was the well-known writer on ethics and professor at the University of Berlin), referring to her recent speeches in Vienna, that she would be an honor to any parliament in the world, and that of the three hundred and fifty-three members then present there were not many who could measure themselves against her for eloquence, culture, or learning.

A significant enterprise has just been launched in Vienna by the Archæological Committee for the gymnasia in that capital. A series of permanent photographic prints from approved plaster casts of sculpture that has come down to us from antiquity, will be issued for school use in connection with Greek and Roman history and mythology, at a price averaging fifteen cents a folio plate. The first of six instalments is now before us (Vienna: Carl Graeser; New York: Westermann), consisting of the well-known Augustus from Prima Porta, Zeus from Otricoli, Laocoön group (Vatican), Pericles (British Museum), Homer (Samos), and a less familiar bas-relief of Orpheus, Eurydice, and Hermes (Villa Albani). The prints share the inferiority of the material they counterfeit, but on the other hand it has been possible to control the lighting so as to bring out the details of the statuary. Though some retouching is inevitable in all these mechanical reproductions, the present series is on the whole very satisfactory as well as cheap. There would appear to be no limit to it. A text-book of moderate compass will accompany the complete portfolio.

Mr. Unwin's new venture, the monthly *Cosmopolis* (New York: International News Co.), is a handsome large octavo, and justifies its subtitle, "an international review," by printing three tiers of articles in as many languages, English, French, and German. Stevenson's posthumous "Weir of Hermiston" leads the table of contents, and is bracketed with articles by Sir Charles Dilke, Henry James, and Edmund Gosse. Paul Bourget ushers in the French section, followed by Anatole France, Édouard Rod, Georg Brandes, and Francisque Sarcey. Ernest von Willdenbruch, Mommsen, Erich Schmidt, Spielhagen, and Helferich form the German contingent, and these nationalities reappear among the editors of the concluding chronicles. This, as will be seen, is a brave showing of names, and it would be a narrow intellect that could not find interesting reading in each division. Perhaps a first number calls for no further remark.

The London music-halls, to which we owe, if not the invention, the suggestion, of the substantive "Jingo," some time ago undertook to fix the pronunciation of "Rhodesia," the name of the ambitious South African premier's vi-

sonary domain, uncomfortably adjacent to the Transvaal. The mute e proving troublesome for geographic rhyming, it was boldly sounded, as follows:

"The boom, the boom, the boom, boys,
In fair Rhodesia.
Hurrah for Cecil Rhodes, boys,
The friend of Zambesia!
A cheer for Willie Regan, boys,
And one for Jameson!
But a tiger for Barna'o, boys,
And the lands of Livingstone."

A correspondent writes: "In two different editions of the one-volume edition of Lowell's Poems I find a singular misreading of a word. The verses 'To a Pine-Tree,' stanza four, read in the first line,

'To the slumberer asleep 'neath thy glooming';

certainly a 'damnable iteration.' The early editions have 'lumberer.'" The error has happily not been perpetuated in the ten volume Riverside Edition of Lowell's Works.

The Department of State has, as our readers know, hopefully begun a series of calendars which will help to extend the proper basing of American history on documents. An agency like the English Historical Manuscripts Commission, formed to deal with historical materials not possessed by the Department, was still needed, and the establishment of such a commission was, as we have already announced, the most important step taken by the American Historical Association at its late meeting in Washington. We are now able to report the Commission constituted, and ready to begin its inquiries. It consists of Prof. J. F. Jameson of Brown University as chairman; Dr. Douglas Brymner, archivist of the Dominion of Canada; Mr. Talcott Williams of Philadelphia; Prof. Wm. P. Trent of the University of the South; and Prof. Frederick J. Turner of the University of Wisconsin.

—We call attention to the communication, on another page, from British Guiana. It is from the pen of the Hon. N. Darnell Davis, C.M.G., Collector of the Port of Georgetown, and a well-known historical student and writer. Mr. Davis possesses a strong affection for the United States, and is unusually well-informed as to its earlier and later history. He has for many years been a contributor to the *Nation*.

—The Devil cannot complain that he has not his due in the current issue of the Oxford English Dictionary (Development-Diffusivity). Six pages, or eighteen columns, are allotted to him under his proper rubric, to say nothing of the derivatives from the Latin and French roots. His elusive and metamorphic character is evidenced by the long catalogue of spellings of his name, from *diobol* to *del*, and his alias the dickens; by his vacillating gender in Old High German and Old English—from masculine to neuter; and by the numerous shapes popularly ascribed to him over and above the conventional likeness to Pan and the satyrs. Even in the Scriptures, Jerome must needs restore the Hebrew Satan in place of the *Sathana* of the Septuagint and the *diabolos* of the Old Latin version. Wyclif, with his *Sathan*, followed the Vulgate except in one of the Psalms, where he let in "the deuell." The Devil's proverbial aversion to holy water was recognized as early as 1570; he was not so black as painted in 1596; he made his appearance when talked of in 1672; and he was "to pay" in 1711. A "poor devil" excited pity in 1668. Moxon, etymologizing in 1683, explained the name "printer's devil" by the fact that "these Boys . . . in a Printing House commonly black and Dawb themselves." An unseemly junior-counsel, however, is a "devil" irrespective of color, like his brother

lag the *nègre* of the French art ateliers. Finally, to have done with his Majesty, we remark that *deviltry*, an Americanism for *devilry*, is supported by dialectal English. Another vocable possessing an obvious interest, in this installment, is Dictionary, 'a repertory of *dictiones*, phrases or words.' The word is traced (circa 1225) to Joannes de Garlandia, a native of England, who adopted the form *dictionarius*, while Petrus Berchorius, who died in Paris in 1362, preferred *dictionarium*. Sir Thomas Elyot arrived with his *dictionary* in 1538, as, across the Channel, R. Estienne with *dictionnaire* in 1539. The earliest works of this kind were bilingual or polyglot.

—Much curiosity attaches to the substantive *devoir*, which in Middle English was spelt *dever*, and stressed on the last syllable (*de vair*), then on the penult (*dev'-ver*), with the spellings *devoir*, *devor*, *deavour*, and presently, by Caxton's powerful aid, *devoir* as in French, though retaining the penultimate stress. The English traditional form completely died out after 1600, and by degrees the French pronunciation got and retained the upper hand. The 'Song of Roland' (circa 1400) has: "Trist us neuer, If we in this mater do not our deuour"; and Tom Hood in 1845 revived this archaism for the sake of a pun—"He went to pay her his devours, When he'd devoured his pay." *Dicker*, too, has a singular history, as coming from the Latin *decuria*, 'a parcel of 10,' and being in vogue among our Teutonic ancestors in their skin tributes to the Roman conquerors, just as later in this country in our fur dealings with the Indians. The most Protean of all words in the present section, as respects meanings, is perhaps *dicky*, which denotes seven distinct articles of apparel, as, a detachable shirt-front, a collar, a bib, a petticoat, an apron, an oil-skin suit, besides a rag-bag, a driver's seat, and a naval officer. *Diaper* has nothing to do, etymologically, with "d'Ypres," in spite of all that town's napery. The verb *dictate*, we are told, is now usually accented on the last syllable in England, but Byron and Shelley consistently accented the first, as does certainly the best American usage. Pope, Thomson, Young, Cowper, Keats, and Tennyson to the contrary notwithstanding, *diamond* tends to become trisyllabic, as Shakespeare made it; but metrical license will doubtless keep the pronunciation from "crystallizing." With *different* "the usual construction is now with *from*; that with *to* (after *unlike*, *dissimilar to*) is found in writers of all ages, and is frequent colloquially, but is by many considered incorrect. The construction with *than* (after *other than*) is found in Fuller," etc., to Dasset, as Dr. Fitzedward Hall has shown. A euphemistic American sense of *difficulty*, 'a quarrel, assault, homicide,' is unnoticed under this word. Longfellow's "*diapason* of the cannonade" is, we venture to think, misapportioned under the strictly musical definition; it belongs rather under the "more or less vaguely extended, with the idea of 'all the tones or notes.'" The poet chose it for its polysyllabic dignity, heightened in effect by its infrequent use and consequent obscurity of meaning—*omne ignotum pro magnifico*.

—The coincident progress towards completion of Pottier's Daremberg-Saglio and of Wisowa's rewritten edition of Pauly's classical encyclopædia in ten volumes (Stuttgart: Metzler), which has maintained its ascendancy as the standard work of reference of classical philologists and antiquarians for more than half a century, wears the aspect of an interna-

tional handicap match of polyhistoric scholarship. The new Pauly, like the old, is without illustrations, although volume I. contains a map of the Lacus Albanus region, a plan of Alexandria, and a map of the Oropian Sanctuary of Amphiaræos. Unlike the old, it is printed in two-column large octavo pages in Latin type, and on good paper. Unlike Daremberg-Saglio's 'Dictionnaire des antiquités grecques et romaines,' its strongest point is nomenclature, so that it conflicts neither with its French rival nor with Iwan von Müller's great 'Handbuch der philologischen Wissenschaften.' Its editor's reputation as a critical scholar in the domain of Latinity, of Roman mythology and archaeology is well established. He occupies the chair of classical philology in the University of Marburg, and is an industrious contributor to Roscher's uncompleted 'Lexikon der griechischen und römischen Mythologie.' A characteristic article of the first semi-volume, which stops in the middle of the article *Alexandros*, is the multiple one under *Aelius*. Including *Aelia*, it embraces no less than one hundred and eighty-four individual subjects, down to Aelia Verrina, wife of Emperor Leo I. The chief of all the Aeli is of course Emperor Hadrian, whose biography is given under No. 64. Nothing more convincingly proves the enormous setback in civilization which the Orient has labored under since the days of the Roman Empire than Von Rohden's rehearsal of Hadrian's journeyings from Rome to Athens, from Athens by way of Ephesus, Lycia, and Cilicia to Antioch, thence to Palmyra, Damascus, Gaza, and back from Antioch by way of Jerusalem and Arabia to Egypt, up and down the Nile with the Empress, thence into Libya, where he hunts lions, back to Antioch, north again to Adrianople, Moesia (now Bulgaria), and Dacia (now Rumania), through the Vale of Tempe to Dodona, swiftly again, at the news of the rebellion of Barcocheba, to Jerusalem, and home by sea to Rome—for such is the abundantly verified itinerary of one of his fifteen-thousand-mile journeys. In his ascent of Mts. Casius and Aetna, "to see the sunrise," in his artistic dilettanteism, and in his constant professions of unselfish devotion to the good of his people, the first *Reisekaiser* is indeed quite up to the last. Kaerst's account of Alexander the Great leaves something to be desired in the absence of any allusion to his physical appearance, or to his important relation to Greek art as a subject of portraiture; also in the manner in which the lasting effects of his conquests on the Indian frontier are ignored.

—Specialists cannot afford to ignore the data collected under *Aberglaube* by Dr. Ernst Riess, now a resident of Philadelphia, under *Achaia* by Brandis, who takes little note of the archaeological evidence of the high civilization of the Achæans before the Dorian conquest, under *Aera* by Kubitschek, who gives a six-page synchronistic table of astronomical and Julian years compared with the Greek Olympiads and supplemented by the Byzantine indications, and under *Arithmetica* by Hultsch. The latest and fullest information on Aphrodite has been collected by Gümpel, who favors a purely Hellenic origin of the cult and Kretschmer's etymology *ἀφροδίτη* = foam traveller, "an epithet deriving from Greek hymnology," rather than Preller's from a hypothetical Phœnician *aph'ru-del* = the dove. The immense antiquity and the continuous use throughout Graeco-Italic antiquity of nude images not destitute of sexual significance, as the imagination of a Haw-

thorne conceived the Venus of the Medici and her congeners to be, is clearly shown. In two long articles of the third semi-volume, on Apollo and Artemis, Wernicke takes the advanced ground of denying the primary connection of either deity with solar and lunar worship. His Apollo is an earth spirit, and his Artemis a sort of apsara, or dew fairy, out of which aspects the vegetal, pastoral, genital, tribal, purificatory, and other sides of the cult of both originally unconnected deities develop plausibly under his hands. The last semi-volume is especially rich in important subjects pertaining to the history of Greek literature, criticism, and science: Archilochus, Archimedes, Aristarchus, Aristophanes, Aristotle. In Crusius's article on Archilochus and in Kaibel's on Aristophanes, as in Kaerst's on Alexander, no allusion is made to the extant antique portraits, or to the silver cup lately exhumed near Pompeii on which the skeleton of the Parian poet, with the inscription ΑΡΧΙΛΟΧΟΣ, appears in company with those of the foremost other poets *du temps jadis*. The revised edition of Pauly, comprising 14,400 pages, will appear in twenty semi-volumes at the uniform price of 15 marks, and also in 150 numbers of 6 signatures at 2 marks each.

—The Journal of the Society of Arts (London: George Bell & Sons) of December 6 gives an account of a paper and discussion on a revival of the water-glass method of mural painting which has been used by Mrs. Lea Merritt in the decoration of the little church of St. Martin's, Womersley. This method, which depends on the fixing of the colors by spraying with certain "soluble silicates and metallic oxides" (water-colors being used), was invented in Germany, and was in great favor at the time of the decoration of the Houses of Parliament. MacLise's enormous pictures of Waterloo and Trafalgar were painted in this manner, but he does not seem to have been much pleased with the process or its results, and we believe it has not been used since his time until now. Permanence and resistance to climate, even in exterior decoration, are the merits claimed for it. It seems characteristically English that the discussion should have brought out the expression of great hopes for the enlarged use of decorative painting in England based upon the revival of a process. Here, we should be likely to consider a process of little importance, and to think that a desire for painted decoration on the part of the public and an ability to design it on the part of the artists were the essentials. It may be doubted whether, in the epochs when art was really living, any one has cared much for permanence. The external walls of Venice were covered with frescoes by Titian and Giorgione as we cover ours with red paint and white "pointing"—because it suited the taste of the Venetians; and the work was as little expected to last for ever. The English sense of "commercial integrity," as Sizeranne calls it, places great stress upon permanence, and English painters make their work distressingly ugly with a glowing sense of virtue in the knowledge that it will always remain so. When we really want art we can have it even in so ephemeral a thing as the poster. Why should we not paint our walls in the same spirit, leaving our successors to treat theirs in their own way? The permanence of bad art and bad decoration is one of the melancholy things in this world, and for one lost masterpiece that we regret there are thousands of daubs that we cannot get rid of.

—An article in the *International Journal of Ethics* on "National Prejudices" is of a timely interest, which its author, an Englishman, could not have anticipated when he wrote it. Whatever the amount of slumbering dislike and misconception that may exist between European nations now, it is nothing like the brutal ignorance and the harsh hatred which the best of men felt only a few generations ago for people of a different race from themselves. The quotations which this writer gives are interesting landmarks, from which one can infer how much brotherly love between nations will surpass its present development fifty years from now. For instance, Coleridge writes that he had never met a German clergyman who was a Christian; the Russians he pronounced brutal; the Dutch, he said, were animals; and the Belgians, as impudent as they were iniquitous, consisted of four million restive asses. For the French he had this in reserve: "Frenchmen are like grains of gunpowder—each by itself smutty and contemptible, but mass them together and they are terrible indeed." Dr. Johnson said of the Americans in 1769: "Sir, they are a race of convicts, and ought to be thankful for anything we allow them short of hanging." Of the French he says: "What do you expect, dear sir, from fellows that eat frogs?" When asked whether, after all, God had not made Scotland, he replied: "Certainly he did, but he made it for Scotchmen; and we must remember that God made hell." When in particularly good humor, he was willing to love all mankind, *except an American*. Swift wrote: "The greatest Inventions were produced in times of Ignorance; as the use of the Compass, Gunpowder, and Printing; and by the dullest Nation, as the Germans." And the prototype for all this is the yet earlier proverbial saying, "Can any good thing come out of Nazareth?" A Franco-English alliance has been formed for the express purpose of removing the false views of the manners, customs, feelings, and history of each of those two nations which prevail in the other. Such an organization may easily become a powerful means for good.

—A bit of archaeological news of some importance was announced on December 21 by M. Paul Delombre, in his report on the *crédits supplémentaires* asked for by the French Government. Among these is an item of 50,000 francs to pay for the exclusive privilege of making archaeological diggings in Persia. M. Delombre gives the hitherto unpublished text of the agreement which has been made between the French Government and the Shah. The chief points in this agreement are these: On account of the scientific eminence of the French, and the friendly relations which for so long a time have happily existed between Iran and France, the Persian Government grants to the French the exclusive privilege of making diggings throughout the whole extent of the empire. All sacred places, like mosques and cemeteries, however, are to be exempt from disturbance; and the French excavating parties are held to respect the habits and customs of the country, and to do nothing to vex them. All expenses of whatsoever sort are to be at the charge of the Government of the Republic. If valuable objects in gold or silver are found, or if any jewels, these are to be the private property of the Persian Government; yet, in consideration of the cost and trouble of the diggings, one-half of such objects will be yielded to the French at a fair price; and, whenever the rest shall be sold, if ever, the French shall be given the first chance to pur-

chase it. As to works of sculpture of all sorts, and inscriptions, they are to be divided evenly between the two Governments, but the French delegates are to have the right of making sketches or models of whatever may be found. Finally, "in recognition of the preference which the Persian Government accords to it, the Government of the Republic will make to his Majesty the Shah a present of 10,000 francs." It cannot be said that, as diggings go, the French have paid an undue price for their privilege. Everybody will wish them good luck in the exercise of it, and many discoveries in this relatively new and certainly most interesting and promising field.

SHERMAN'S RECOLLECTIONS.

John Sherman's Recollections of Forty Years in the House, Senate, and Cabinet. An Autobiography. Two volumes, illustrated. Chicago: The Werner Co. 1895.

MR. SHERMAN'S recollections derive interest from two sources—first, the importance of the events in which he has played a part; second, from their presenting a picture of the man himself. As a literary performance the book has no character whatever, but as the picture of a successful politician drawn by his own hand it is instructive. No doubt the success would have been more marked if the great ambition of Mr. Sherman's life, the Presidency, had been attained (we infer from these volumes that he has given it up); but, compared with that of most of his contemporaries, it has been very remarkable. In the world of politics success means remaining in office, and the question which has interested us in reading these volumes has been to make out the sort of character and mind required for the task during the past forty years. The answer is clearly that the first requisite has been a conviction that, no matter what one's party decides, the first duty of a statesman is to vote with it, and not set up his individual judgment against it; the second, that all differences of opinion, no matter whether they involve moral questions or not, can be compromised in some way; the third, that a public measure, no matter how good in itself, is worthless unless it satisfies the popular demand for the time being; the fourth, that when a statesman does not know in which of two opposite directions the popular current is moving, the thing for him to do is to "hedge"; the fifth, that speech is capable of many uses besides the bald and childish one of expressing one's thoughts. Mr. Sherman is a brilliant example of what would be called in France an "opportunist," and that he does not mind at least being criticised as such, seems a fair deduction from his quoting *in extenso* (pp. 810, 811) an article, by Don Piatt, in which he is complimented on a symmetry of intellect which "leaves nothing to regret except the thought that its perfection excludes the blemish of a soul." We shall not attempt to review Mr. Sherman's career in detail, but shall merely endeavor to show how his "recollections" of some of the leading events in it illustrate his character.

A marked feature of Mr. Sherman's personal recollections is their insipidity, and this is evidently due to his disinclination to recollect anything unpleasant or anything which might give offence. The stormy period of Grant's first term, for instance, ending in the revolt of 1872 and the nomination of Horace Greeley by the Democrats, is passed over almost in silence. We are told of the deposition of Mr. Sumner from the Foreign Relations Committee

tee; we are told that it was "a period of slander and scandal," and that in the course of it the author himself was falsely accused of having made money corruptly; also, that he went to California and saw the Yosemite and the big trees—but this is pretty much all. Of course, in the personal recollections of a financier, it is unfair to expect a full history of his times; and this may account for the fact that there seems to be no mention of the long controversy over the distribution of the Alabama claims money, as well as for the statement that the only reason for the defeat of Blaine's nomination in 1876 was "antagonisms" between him and Conkling (p. 550), and that in 1880 he was defeated because nine delegates from Ohio voted for him instead of for the author—this desertion preventing a subsequent unanimous transfer of the delegation from Sherman to Blaine (p. 773). The Belknap and Schenck affairs are not discussed, nor is the Crédit Mobilier scandal, which at the time convulsed the country.

Mr. Sherman's first political contest of importance was that for Speaker of the House in 1859-60. His attitude in it was characteristic of the man. Helper's 'Impending Crisis' had appeared, and a pamphlet had been made from it by F. P. Blair. Mr. Sherman had been asked during the previous Congress by a friend of his, Mr. E. D. Morgan, to sign a recommendation for the circulation of such a pamphlet. Mr. Sherman warily replied that he "had not time to examine the book," but that "if there was nothing offensive in it" he (Mr. Morgan) might use his name. So far from there being nothing offensive in it to the Southern half of the country, from which the "incendiary" work emanated, the moment Mr. Sherman was put in nomination for Speaker, a Missourian introduced a resolution denouncing the book, and declaring that no member of the House who had recommended it was fit to be Speaker (p. 169). The candidate was at once able to say that he had never read the book, nor the compendium founded upon it; that he had authorized his name to be used only in case there was nothing "offensive" in the book; that if there was anything offensive in it, he repudiated it, and that his attitude on the slavery question was a matter of record. His manly, straightforward speech on the subject brought him within three votes of an election. Strange to say, there are people to this day ill-natured enough to think that Mr. Sherman avoided reading the 'Impending Crisis' in order to be prepared to stand by his signature or repudiate all knowledge of the book, as the cat might jump. But the air at the time was full of suspicion and distrust. Thaddeus Stevens, Mr. Sherman tells us, said he would never vote for any other candidate until the crack of doom, and afterwards explained his change of mind by saying that he thought he "heard it cracking."

One great advantage of Recollections is that the author can recollect things pretty much as he pleases, provided, at least, that he has Mr. Sherman's caution of statement. For instance, what he recollects about Johnson's impeachment is that the latter was simply guilty of a plain violation of a penal statute, and that no substantial constitutional question was involved (pp. 430, 431); consequently he "felt bound" to vote guilty, but "was entirely satisfied with the result of the vote, brought about by the action of several Republican Senators." At page 144 he gives what he calls the "whole case" as to the French Spoliation Claims, and declares their payment to be "the most striking evidence of the improvidence of

Congress in dealing with antiquated claims against the Government." He mentions that they were "referred to the Court of Claims," but seems to have wholly forgotten that this court—the Government's own court—had the whole case before it, and solemnly decided that the Government ought to pay the claims, and that the money thus far paid has been paid under this decision.

Again, his account of the legal-tender acts is most peculiar. In a speech made in 1876 we find him laying down in the most positive terms, as a "universal law of political economy," that "whenever two metals or two moneys are in circulation, the least valuable will drive out the most valuable; the latter will be exported" (p. 541). But when Mr. Sherman explains his action with regard to the law by which Government notes were made legal-tender (pp. 255, 288), he forgets all about this "universal law," and lays down a quite different one—that the disappearance of coin is "the universal result of great wars long protracted," and that "gold and silver flee from a state of war"; that consequently what had to be done was to provide some currency in advance to take its place when it should go. Hence it was necessary to make the new currency a legal-tender between individuals. But Mr. Sherman is altogether too cautious to state such a non-sequitur baldly; the legal-tender act also provided that the bonds should be paid in gold, and that the customs revenue should, for this purpose, be collected in gold. This of course strengthened the public credit, and consequently the greenbacks; and Mr. Sherman is able to say, "The legal-tender act, with its provision for coin receipts to pay interest on bonds, whatever may be said to the contrary by theorists, was the only measure that could have enabled the Government to carry on successfully the vast operations of the war." This confuses a very simple question—Did the Government's declaration that the greenback should be a legal-tender for a dollar make it worth a cent more in the market than if it had been simply a promise to pay? On this point Mr. Sherman brings forward no proof. It is very significant that he makes no argument to show that the legal-tender quality of the silver dollar increases its value in any way.

It is the vice of a mind given to compromise that it generally ends in thinking that compromise is an end in itself; and men having this bent will generally plume themselves on advocating some evil at war with all their professions and calculated to produce the greatest public disasters, because, as they maintain, they have by this means averted some other evil, which they of course insist would have been far worse. They do not seem to perceive that, though they may acquiesce in and submit to such evils, they advocate them at the risk of their reputation not only for consistency but for sincerity. Mr. Sherman's attitude with regard to the "Sherman silver law" of 1890 is an illustration of this. Mr. Sherman is opposed to inflation, and yet reported this bill authorizing the purchase of 4,500,000 ounces of silver every month; how does he reconcile his action with his professions? By showing that a large majority of the Senate favored free coinage, that it was feared that the House might yield and agree to it, that if a bill for free coinage should have passed both houses, Harrison might have signed it, and that free coinage was a worse evil than the silver-purchase scheme. Consequently, Mr. Sherman did what he could to pass the latter. The difficulty with this view is that instead of being a genuine compromise,

the act was merely a sop to the free-silver men, and would no doubt have ultimately led to free coinage if the total collapse of the scheme to buoy up the price of silver by Government purchases had not brought the Government to the verge of bankruptcy. But, apart from this, how can a man with any real convictions on the subject advocate and father a bill which he holds to be radically vicious, because something worse is proposed by some one else? On this principle, the candid patriot may advocate anything he pleases, provided he announces that he is opposed to it. Suppose the majority of the House are in favor of an act for the immediate murder of all adult Chinamen or Indians, while the Senate is in favor of killing all the children as well. The first is obviously the lesser evil; but Mr. Sherman would hardly like to report it from a conference committee and favor its adoption. On these principles we might be called upon to listen to arguments in favor of an act legalizing burglary as a lesser evil than an act permitting murder, or of an act authorizing larceny as preferable on the whole to burglary. The matter is clear enough where acts universally recognized as wicked are concerned; but to an experienced financier (the whole book emphasizes this) inflation is only a disguised species of wickedness, designed to enable the debtor to cheat his creditor. And now mark the result. The "compromise," once made, immediately becomes a good and wise measure, and although now Mr. Sherman thinks that "the day it became a law" he was "ready to repeal it" (p. 1070), this is one of those points on which his recollection is at fault, for what he actually thought at the time, as appears by a prepared speech which he prints (p. 1112), was this:

"What we ought to do, and what we now do under the silver law of the last Congress, a conservative Republican measure, is to buy the entire product of silver mined in the United States at its market value, and, upon the security of that silver deposited in the Treasury, issue Treasury notes to the full amount of the cost of the bullion" (p. 1116).

It must not be supposed that we have the slightest desire to belittle the reputation which Mr. Sherman gained by means of the operations that led to the resumption of specie payments. His career as Secretary of the Treasury is the brilliant page in his life. His country no doubt owes him a debt of gratitude on that score, while for cleverness, ingenuity, tact, and adroitness there is probably not his equal in Washington; but his passion for arrangement of difficulties by way of compromise has unfortunately ended in connecting his name with the measure just referred to, passed by inflationists, and which has ever since made the possibility of the honest payment of its debts by the Government an open question. His whole discussion of the currency question shows that he wishes to persuade us that it may be settled by means of a perfectly honest compromise between those who want to cheat the creditors of the Government and their own, and those who want Government and private debts honestly paid. He is consequently opposed to all contraction of the currency and retirement of the greenbacks, and even thinks that the volume of the currency may be increased as the volume of business increases (pp. 755-756). To the fact that a Government currency keeps alive a perpetual political agitation for dishonest inflation Mr. Sherman seems totally blind, though for thirty years, in one form or other, such an agitation has existed.

One thing we miss sadly in these volumes, and that is some account of the actual means by which, through all the difficulties which have surrounded him, Mr. Sherman has managed to retain his foothold at Washington for forty years. In any country it would be an enormously long term of service—in America especially so—(he mentions with pride that his Senatorial career is the longest on record); and behind his action on the public stage which exhibits him rather as an adroit manipulator of legislation than anything else, there must have been forty years of management of the local politics of Ohio no less adroit, to prevent his younger and bolder rivals from ousting him. In this sort of manoeuvring Mr. Sherman is no doubt a master, but of himself as a manager he does not give us a fair view, for he generally represents himself as avoiding as far as possible all dealings with the offices. An anecdote of the impression which his arts made upon Lincoln is curious. It seems that Mr. Sherman wished to dissuade Lincoln from making too many Whig appointments in Ohio, and requested an interview. He found the President in excellent humor, but when he began to complain about appointments, the expression of Lincoln's face "changed to one of extreme sadness." He did not say a word, but placed his feet on the table and began to look the "picture of despair." Mr. Sherman "took" at once. He began to reproach himself for bringing up so unimportant a subject as local offices when the country was in the throes of revolution, and finally he apologized for it, and declared that "he would not bother him again with them." Mr. Lincoln's face brightened, "his whole manner changed, until finally he almost embraced me" (p. 269). It appears that in 1888 Mr. Sherman lost the nomination for the Presidency through a "corrupt New York bargain," and he gives a picture of "bossism" in Hamilton County, Ohio, which shows that offices play the same part there that they do here in New York; but he declares that no Secretary of the Treasury was ever "so utterly indifferent to the distribution of patronage" (p. 769); and perhaps as an illustration of this he mentions that he "severed all connection between his duties in the Treasury" and the business of getting himself nominated for President, by setting up his Presidential "headquarters" in another building (p. 767).

Mr. Sherman is fond of a phrase with which one is more familiar in the mouths of domestic than of public servants. The highest commendation that he can accord any measure is that it "gives satisfaction." What he plumes himself upon in his political career is that he has himself given satisfaction. There is every proof that he has done so. He has seen and deeply pondered the terrible fate of those in public life who do not give satisfaction, and he has steered clear of the pitfalls which beset those who try to be independent of party, or to determine their action by considerations of public interest solely. Not that he avows anything of the kind; the whole book is written on the theory that all the legislation of the past generation is the result of the deliberations of true representatives of the people (excepting, of course, the Democrats in Congress, for when Mr. Sherman speaks of the People, what he has in mind is always his own party)—a most convenient theory, for it enables the author to overlook the fact that in all important crises public opinion has been in advance of legislative opinion, and that what most of the members of Congress and the Senate have been trying to do has been to keep their places or to

get better ones. Mr. Sherman's notion of giving satisfaction, as already explained, is, roughly, in all cases of division of opinion within the party, to arrange some compromise on which the Democrats can be voted down; this, if it involves a sacrifice of conviction, makes it all the more creditable. The great advantage of this view of political duty is that under it the successful retention of place becomes proof of devotion to the good cause; it is only selfish or obstinate or dull people who think themselves called upon to set up their "conscience" against their party.

When Augustus was about to die, he asked those about him whether he had "played his part well"; and on their replying that he had, asked them to give him their applause. It is becoming the fashion for modern statesmen to anticipate a deathbed or posthumous verdict by the aid of a contemporary publisher. When the statesman feels that the fiat has gone forth; that the great Prize for which he has so long struggled is not to be his; that the time is rapidly drawing nigh when all place must be given up, he displays no emotion, but prepares himself calmly to meet the inevitable end. Wrapping his toga about him, with a firm voice and unruffled front he dictates his Recollections to his typewriter. The plan has much to recommend it, though from what we have said, it will be seen that we hardly think that in the long run the Recollections of Mr. Sherman will—if we may venture upon a financial metaphor—pass current at their face value. All the more reason, he would reply, that he should do what he could to keep them at par now by declaring that they are to be received and circulated by everybody with full faith and credit. This helps to float them, and though there is no Gresham's law under which they will drive more accurate and honest recollection out of the minds of the author's contemporaries or successors, he will probably always feel, as in the case of the legal-tenders, that there was really no other way to accomplish what he had in view, while the public at large will have the satisfaction of knowing that these last Sherman Notes will in the end be taken everywhere for exactly what they are worth.

THREE BOOKS ABOUT IRELAND.

Pagan Ireland. By W. G. Wood-Martin. Longmans. 1895.

A Letter by Capt. Cuellar of the Spanish Armada to Philip the Second. Translated by H. D. Sedgwick, Jr. G. H. Richmond & Co. 1895.

The Life of Patrick Sarsfield, Earl of Lucan. By John Todhunter. London: T. Fisher Unwin; New York: Putnam.

THE first of the above trio is by a well-known antiquarian and author of other similar works. It is an exhaustive account of the prehistoric antiquities of Ireland, copiously illustrated, and its compilation must have been the work of many years. There is no failing to which antiquarian observers are more liable than seeing too much; but the ordinary observer sees too little, and needs to have his attention drawn to mounds, heaps of stones, and rock-scribings, all of which have neither interest nor meaning for him unless they are interpreted by a skilled antiquarian. We can only conjecture what manner of men the dwellers in Irish caves, mounds, and "crannogs" were; they left no remains except bones of animals which served for food, rude crockery, primitive stone implements, and

canoes, usually hollowed from a single tree. In the primitive stage of his existence man was scarcely distinguishable from the brute creation, and in Ireland very little advance was made until after the Christian era. Mr. Wood-Martin finds it impossible not to accuse the aboriginal inhabitants of habitual cannibalism, and thinks that a careful analysis of obscure customs still extant in Ireland throws some light on this subject. Regarding the fabled early civilization of the island he remarks:

"We possess many assertions as to the past glories of the land, but these assertions are not supported by material remains. It is clear that when the East was at the height of its civilization our ancestors were mere savages, and were but little better in later times, when Rome was at the zenith of her glory. The description of the ancient glories of Erin, as given by enthusiastic historians, may be compared to the mirage of the desert, the mere reflection of distant scenes and the phantasmagoria of Roman and Eastern civilization, which the writers, imagining it ought to have existed, finally depicted as if actually existing."

Our author does not agree with the few antiquarians who hold that the Ogham inscriptions indicated "alphabetical knowledge." For this, as for other moot topics, one may consult the bibliography at the end of the volume. The number of authorities quoted and referred to in the text is enormous. Although Irish archaeology has been at a standstill for years, there is a vast amount of material to be found in the journals of learned societies, pamphlets, and uncollected notes and letters, and this handbook, certainly one of the best in Irish antiquities, can hardly fail to give a fresh impetus to research.

The first of the Spanish Armada tracts contains a graphic account of Capt. Cuellar's misadventures after the dispersion of the Spanish fleet. Wrecked on the coast of Ireland, he spent seven months "in mountains and woods amongst savages, for in that part of Ireland where we were wrecked they are all such." He wrote to justify himself with the King, for he had been condemned to death when off Calais for some dereliction of duty. He hopes that his Majesty may occupy himself "a little by way of amusement after dinner by reading this letter." There was not much amusement for the Spaniards, for the greater number (about one thousand) who were wrecked with Cuellar were killed as they came ashore, or wherever they were found by the English troops and their adherents. The native Catholics plundered but sheltered them. At that time Ireland was but partly subdued; and, after many hairbreadth escapes, Cuellar reached some mountains "behind which lay a friendly country that belonged to a great lord who was a good friend to the King of Spain." On his way he was sheltered by a young man who "knew Latin," and with whom he conversed. Stripped of his clothes and wrapped in straw, he at last reached the house of the friendly lord, by name "de Ruergue," evidently "O'Rourke." "Although he is a savage," wrote Cuellar, "he is a very good Christian." Here he made himself acceptable to his hosts by telling their fortunes, becoming, he says, a "gipsy among the savages." Here is his account of the natives, who were always at war with the English:

"They live in huts made of straw. The men have big bodies, their features and limbs are well made, and they are as agile as deer. They eat but one meal a day, and their ordinary food is oaten bread and butter. They drink sour milk, as they have no other beverage, but no water, although it is the best in the world. They dress in tight breeches and goatskin jack-

ets cut about but very big, and wear their hair down to their eyes."

Every Catholic appears to have been an enemy in the eyes of the English, and such civilization as the Catholic Church had introduced among the savages had been obliterated, for "almost all their churches, monasteries, and hermitages have been destroyed by the soldiers from the English garrisons." Cuellar escaped at last to Scotland and thence to Holland. This interesting and admirably printed little book is most creditable to both translator and publisher.

Mr. Todhunter's 'Life of Sarsfield' is a good addition to the New Irish Library. It is, however, rather an account of the Jacobite wars in Ireland than a biography of Sarsfield, for but little is known of the details of his life. He was a loyal, gallant soldier, and a devoted lover of his country. Born in Ireland and educated in France, he first saw war in the service of Louis XIV. Rumor says that he was one of the "Gentlemen of the Guard" of Charles II. The accession of James II. brought him into active service, and he took part in the battle of Sedgemoor in 1685. He remained faithful to James when all the leading English soldiers joined William of Orange, and landed at Kinsale in 1690 with James's Court. He sat in the "Patriot Parliament" as member for Dublin; and while William's forces occupied the northeast of Ireland, he preserved Connaught for the King. At the battles of the Boyne and Aughrim Sarsfield was present, but took no prominent part; his name is chiefly connected with the two sieges of Limerick, where, though not in command, he was the life and soul of the Irish party. At both the defence was heroic, and though the terms of capitulation were not observed by the English, it was due to the stubborn defence that they were secured. Sarsfield, created Earl of Lucan by James and a marshal of France by Louis, died at Landon fighting against William of Orange. Whether true or not, what are said to have been his last words as the blood flowed from a mortal wound, are characteristic of the man: "Would to God this were shed for Ireland."

The greater part of this book is occupied by a general account of the campaigns between James and William, and conveys a very clear conception of the various battles and sieges with the exception of that of Derry, which does not come into the plan of the work.

FOLK-LORE, TALES AND FABLES.

An Introduction to Folk Lore. By Marian Roalfe Cox. London: David Nutt; New York: Scribners. 1895. 8vo, pp. xv, 320.

Snow Bird and the Water Tiger, and other American Indian Tales. By Margaret Compton. With drawings by Walter Conant Greenough. Dodd, Mead & Co. 1895. 8vo, pp. 201.

Natural History Lore and Legend. By F. Edward Hulme. London: B. Quaritch. 1895. 8vo, pp. 350.

Fables and Fabulists, Ancient and Modern. By Thomas Newbigging. Frederic A. Stokes Co. 8vo, pp. 152.

In spite of the large number of works in every department of folk-lore published within the last few years, no general treatise on the whole subject for the general reader has appeared until Miss Cox's book. As the author herself states, "This little book pretends without arrogance to answer a question not infrequently heard, namely: What is folk-lore?"

The standpoint is exclusively the anthropological one elaborated by Tylor, Lang, Frazer, and Hartland, and the explanations of other schools are only glanced at. No fault can be found with this, for, whatever may be the shortcomings of the anthropological theory, it is the best working hypothesis yet advanced, and without it the great work in this department of research could hardly have been produced. It needed the human interest of anthropology to impart a fresh charm to the old myths, and to afford the connecting link between myth, ritual, and religion. Miss Cox begins, in an introductory chapter, with the primitive savagery of man, and gives instances of the survival of savage belief in habitual expressions and irrational practices of the civilized. The most important features of folk-lore are then grouped and discussed in six chapters, treating of the Separable Soul, Animal Ancestors, Animism—Ghosts and Gods, the Other-World, Magic and Myths, Folk-Tales, etc.

The author is herself a distinguished folk-loreist, having published through the English Folk-Lore Society an admirable monograph on the story of Cinderella, and is well equipped for her present work. She has not, however, wholly avoided a difficulty almost inseparable from the theory she advocates. One of the main arguments of the theory being universality of observance, a large number of illustrations gleaned from all parts of the world become necessary. These, however, are apt to obscure the point in question, and the repetition of the same details becomes tiresome. In works like those of Frazer and Hartland this is unavoidable; but in works intended for the general reader a judicious relegation of a certain number of examples to the footnotes would be wise. In spite of this, Miss Cox has made an eminently readable and valuable work. The selected list of books at the end is inadequate, and should be replaced in a subsequent edition by a classified list, which might profitably be made part of an appendix on methods of study in the field of folk-lore.

After the scientific collection of folk-tales comes their rewriting for the general public. In the original the characters are often unnamed and the incidents are narrated in the baldest form. It was a happy idea, therefore, for Miss Compton to present a certain number of American Indian tales for the amusement of the young, and she has executed her task so as to produce a pleasant and entertaining volume. Unfortunately she does not mention her sources otherwise than to state that "she has had access to Government reports of Indian life, upon which and the folk-lore contained in the standard works of Schoolcraft, Copway, and Catlin these stories are founded." This delightfully vague acknowledgment will arouse the ire of the conscientious reviewer, who feels that where materials are borrowed an exact statement at least of the whereabouts of the original matter should be made. The present reviewer has had time to look up but a few of the unnamed sources, and mentions them for the benefit of others who may like to know whether the book is trustworthy or not. The story of "The Bended Rocks," p. 57, is from 'Myths of the Iroquois,' by Erminnie A. Smith (Smithsonian Institution, Bureau of Ethnology, vol. ii., 1883, pp. 48-116), p. 54. "The Great Head," p. 115, is from the same collection, p. 50, as is (p. 100) "The Island of Skeletons," p. 143. "The Great Wizard," p. 160, is partly from the same collection, p. 60. A comparison of the above stories with the originals shows that Miss Compton has made skilful use of her

materials, and has introduced no important or incongruous changes, but has preserved very successfully the spirit of the original, and produced a version much better suited to those whose interests are literary and not scientific.

It is difficult to explain the use of such a work as Mr. Hulme's, or to determine the class of readers for whom it is intended. It seems like the stray notes of a scientist who has amused his leisure hours in turning over the pages of old works on natural history, and is surprised that they contain anything approaching the truth. The author's object is stated in the following words: "We propose to consider at some little length the state of zoological knowledge in the Middle Ages," and the title page expressly says "examples—gathered in from divers authorities, ancient and mediæval." It is remarkable, then, to find that the first work cited was published in 1563, and that the majority of the books quoted are of the sixteenth, seventeenth, and even eighteenth centuries. There is very little that is mediæval in the volume beyond occasional references to the Beast books, and these are altogether inadequately treated. An orderly account of mediæval zoology would be valuable and interesting, and we believe does not exist in English, although the Germans have an excellent work of that nature by Carus. The book before us deals with animals real and mythical; and pygmies, mermaids, wehrwolves, lions, elephants, bears, the phoenix, roc, barnacle goose, basilisk, salamander, and leviathan crowd each other in these desultory pages. It would be wrong to give the impression that the book is entirely valueless or uninteresting. Many quaint conceits may be found scattered through it, and the reader will have another proof of the universality of Shakspeare, whose references to the zoological beliefs of his day are cited on every page of the present work.

Mr. Newbigging has attempted to do for the fable what Archbishop Trench did for the proverb in his charming lectures on 'Proverbs, and their Lessons.' The result is a very readable little book, marred, unfortunately, by superficiality and inaccuracy. The first part, in which the author defines and characterizes the fable and discusses its moral and lessons, is the best. The historical résumé which follows is slight and inadequate. This is especially the case with the lists on pages 128-129. The mediæval French fabulist is usually known as Marie (and not Maria) de France, Fénelon is not generally termed the Abbé Fénelon. The ancient "fabulists," on p. 128, are all mediæval, and one, Poggio, is of the fifteenth century. There are many misprints in the list: Boursalt for Boursault, Guinguene for Guinguené, Arnoult for Arnault. Le Grand, on the same page, is probably intended for the Legrand d'Aussy, editor of the French fabliaux, etc. The name of La Motte is omitted from the list of French fabulists, and there are other omissions. La Fontaine died April 13, 1695, and not March 15, as the author states in the text, or February 13, as in the note, on the authority of "Gerusez" (Gérusez.) There is also a brief account at the end of the volume of the modern illustrators of fables.

Antonio Allegri da Correggio; His Life, his Friends, and his Time. By Corrado Ricci. From the Italian by Florence Simmonds. London: Wm. Heinemann; New York: Scribners. 4to, pp. xxii, 408. 1895.

THE form in which Dr. Ricci's 'Correggio' is presented makes its publisher's intention ob-

vious. The elegance of the binding, the attractive pages, the pretty illustrations, were evidently designed for the public which, once a season, loves to buy a book wherewith to adorn the parlor table. To this public we cannot too highly recommend it. They will delight in the reproductions in green, blue, yellow, brown, pink, violet, and other colors, primary and derived, which have been employed with a justice most laudable, although, in truth, we are reminded of the proverb that Justice is blind. But the more esoteric art-lover will be disappointed with this publication when it falls into his hands. His eyes will be annoyed by the rainbow splendor of the illustrations; and his memory shocked by their faithlessness. We venture to say that, excepting the frontispiece, not one of the illustrations does the original even mediocre credit; while many are positively libellous, as, for instance, the reproduction of Lord Ashburnham's altar piece, of the Uffizi pictures, the Hampton Court "Madonna," and the "Ecce Homo" of the National Gallery. Few of the reproductions in the text are clear enough to be of use to students, and the photogravures, when not already spoiled by being printed in color, are valueless from loss of modelling. For the student, we may here say parenthetically, two kinds of books, and two only, have a purpose: cheap books, with unpretentious illustrations intended as mere mnemonics; or works *de grand luxe*, with faultless reproductions. For him, the present 'Correggio' has scarcely any utility; it will not save him from buying the photographs; and for the price of the present volume he could buy most of the photographs themselves, so much better than any possible reproductions after them. We regret, in this connection, to have to rectify a slight misstatement. The publisher announces on the back of the title-page that the Hampton Court "Madonna" and Lord Ashburnham's altar-piece are here reproduced for the first time. They have already appeared in much better form in the 'Illustrated Catalogue of Works of the School of Ferrara-Bologna,' Burlington Fine Arts Club, 1894. And now, having expressed our disappointment with the publisher's part of the undertaking, let us turn to the somewhat pleasanter task of examining the author's share.

Dr. Ricci had before him a problem of exceeding simplicity. Correggio has not been a neglected artist, and few problems of a technical nature regarding his career have remained unsolved. To speak only of more important writers, Pungileoni, Meyer, and Morelli have done all the preliminary work. Morelli did even more: he made clear, to the satisfaction of all competent critics, from just what branch of the secular tree of Italian art Correggio had sprung, thus putting into the hands of the future writer the most essential of all data for the study of the artist's development. There was, in short, no lack of material, and no need for controversy, since, excepting the few writers who in every field of research are bound to lag behind, a happy concord reigned on the subject of Correggio. Dr. Ricci had therefore a splendid opportunity. Availing himself of all the material ready for use, he might have written a monograph on Correggio that would have reconstructed his artistic personality, and painted his imaginary portrait for the eternal delectation of those who love art and are led to its enjoyment by sympathetic interpretation and *le mot juste*. Perhaps Dr. Ricci felt himself unfit for this task—indeed, his chapter on

"Correggio's Genius," although betraying that the writer was at times aware of Correggio's master quality, is prolix, meandering, and never penetratingly illuminating. At all events, Dr. Ricci has declined the undertaking.

He would have us believe that he, too, has new material to contribute to the subject, and to some slight degree this is the case. Dr. Ricci is among the first to draw attention to the fact that the town of Correggio, where Antonio Allegri was born and brought up, was by no means the least in the region of Emilia, but that, on the contrary, it was a seat of culture. Dr. Ricci had already said all that needed saying on this subject in a short essay in his charming volume 'Santi ed Artisti.' But, led astray by the superstition that a writer on art must needs add new facts, he makes much of this small contribution in the volume before us. Dr. Ricci revels in "environment" as if he had discovered it but yesterday. A chapter romantically entitled "The Two Princesses" is wholly devoted to a lyrical account of Veronica Gamba and Beatrice d'Este, two great ladies with whom Correggio was probably on terms of distant acquaintance. Our author still labors under the delusion that it is necessary to give florid descriptions—"moral, political, social, and religious"—of every spot for which Correggio painted a picture, and of every person who employed him. All this, however, is interesting, and even pertinent, compared with the refutation of foolish pedants long dead, and with the scores of pages devoted by the author to a chronicle of the romantic vicissitudes undergone by Correggio's still existing works, and to thrilling accounts of how the others miserably perished. To be brief, Dr. Ricci had the chance of giving us an imaginary portrait of Correggio such as the late Mr. Pater left of Plato. Fancy, however, instead of that volume of subtle, illuminating, and cultivating interpretation, a book most of which was filled up with accounts of the various manuscripts and how they came down to us, with rhapsodies on Athens, Megara, and Syracuse, on Dion and Diotima and Dionysus, and you will have a fair notion of what Dr. Ricci has achieved in his volume on Correggio.

Happily, for the comparatively few pages wherein he is writing of Correggio the artist, we have little but praise. His estimates are rarely wrong; in controversy, almost without exception on the right side. In spite of all our reservations, Dr. Ricci's 'Correggio' is the ablest monograph on any single painter that has yet been written by an Italian. And we could wish to end on this note, but unfortunately the translation does not permit it. A translator from Italian into English should bear in mind, as this translator has not done, that the sonorous and vowelled nature of the one language allows of phraseology which, translated literally into the other, sounds like so much balderdash. Once in a while, the sense even is not quite clear. "Other writers of artistic syntheses" is a queer phrase. Mantegna is almost invariably spoken of as "the great Vincenzan." We protest that if we must write Gibbonese, the word should at least be *Vincenzan*. The translator seems unacquainted with the simple English word "works," and insists on speaking, to our great discomfort, of "Correggio's *œuvres*." A fault of constant recurrence, to which we must draw particular attention, is the use of plurals like "Gonzaghi," "Malatesti," "Sforzi"—plurals which, of course, are not English, and certainly not Italian. When possible, proper names should be Englished: Gonzagas, Malatestas, Sforzas—why not?

Chronicles of Uganda. By the Rev. R. P. Ashe. With portrait and 26 illustrations. A. D. F. Randolph & Co. 1895. Pp. xiv, 480, 8vo.

THE future historian of Uganda will not suffer from lack of original material for his account of the events immediately preceding the establishment of the British protectorate in that country. The official part is fully shown in the report of Sir Gerald Portal and the recently published work of Capt. Lugard. The French missionaries have given their version to the world through the Catholic Union of Great Britain. The native point of view is to be found in the 'Wars of the Baganda,' a work written in the language of Uganda by the present Prime Minister, a prominent actor in the events which he describes. Of the accounts written from the standpoint of the English missionaries the 'Chronicles' of Mr. Ashe is the latest and most authoritative. A resident in the country for the greater part of the ten years preceding 1893, he has been a close observer of events and an eye-witness of many of the most important. But the main object of his book is apparently not so much to narrate the history of the religious wars as to criticise the accounts of other writers, and refute their statements when they seem to conflict with the truth. It should be said, however, that though he severely condemns much of the policy and action both of the English officers and of the French missionaries, no personal hostility towards them is to be detected. He takes frequent occasion to commend the energy and courage of Capt. Lugard and his associates, and bears pleasant testimony to the unbroken friendly intercourse between the representatives of the two great churches of Rome and England.

It is too soon to write a perfectly impartial and trustworthy history of the events of Mwanga's troubled reign, but one or two things are plain from Mr. Ashe's narrative. The most important is the utter impotency of a trading company to deal with the situation which existed in Uganda when the Imperial British East Africa Company appeared on the scene. Had Capt. Lugard possessed the ability of a Warren Hastings, he could not have succeeded in maintaining peace between the hostile factions into which the people were divided, considering the small force at his disposal, the anomalous position which he occupied, and the uncertainty which characterized the action of the British Government in regard to the evacuation or retention of Uganda. It is no less evident that the French priests, who came two years after the English missionaries, were in fact, though possibly unconsciously, political agents, who used every means in their power to bring the kingdom under the influence of France. This fact renders the much-lauded policy of neutrality towards the Catholic and Protestant natives assumed by the company's officers absurd and impossible to be maintained, since these gentlemen were in the country simply to confirm the supremacy of England. We cannot speak so confidently of the other actions of these officials condemned by Mr. Ashe, the bringing into Uganda the remnants of Emin Pasha's Sudanese garrisons, the war against King Unyoro, and other minor hostile expeditions in which the Maxim gun played a conspicuous and deadly part. They seem, however, to have been the unfortunate results of an unwillingness to profit by the knowledge and experience of the missionaries in dealing with the natives and a curious contempt for their judgment.

In the course of his interesting narrative

Mr. Ashe gives many striking pictures of scenes and incidents which throw much light on the life and customs of the Baganda. Among these is a short reference to Lubareism, the national religion of the country. This consists partly of hero-worship, and the mummies of two of their ancient heroes are still carefully preserved and guarded by virgin priestesses honored as their wives.

"Budo is the corpse of a gigantic man wrapped in bark cloth, all except the head, which is bare. He has long hair, and his eyes are closed, and he is in a sitting posture. . . . On certain days drums are beaten, when he is brought from behind the curtains to hold a reception in his temple, at which the neighboring chiefs and important people attend."

In the opening and closing chapters the author describes his last journey to and from the coast. Among its noteworthy incidents was one which at that time was probably unique in the annals of African travel. Mr. Ashe was riding a bicycle on a native footpath far ahead of his porters when his

"attention was suddenly attracted by hearing some large animals galloping by my side. I was marking my path carefully at the time, but, on looking to my right hand, where the animals were, I discovered that the creatures which were accompanying me were three magnificent lions. Though I had heard the roar of lions close at hand in the darkness I had never before seen one face to face. My novel companions kept up with me, going parallel with me for about a hundred yards. They were distant some twenty or thirty yards. Presently they stood still, looked at me for a moment, and then slowly bounded off at a right angle, from time to time stopping and looking back, till they finally disappeared in the long grass, while I held on my way."

There are a number of illustrations, among the most interesting being views of the great church at Mengo, finished in 1892, whose thatched roof, forty feet high along the ridge pole, is supported by some three hundred tree-trunks.

From Editorial in N. Y. Evening Post Jan. 18.

EDUCATION IN WAR.

"It is only within a comparatively few years that our histories have become something more than a chronicle of great battles. Latter-day historians give more attention to the philosophic aspects of human events, and less to battles. . . . If we are to get these truths into the national mind, if we are to get that mind into a condition in which it will be rational and deliberate in times like those through which we are now passing, we must begin at once to sow the seeds of sounder thinking and of a truer civilization. We must begin far back, in the schools and in the family, for in that way only can the desired results be accomplished."

ALEXANDER JOHNSTON'S HISTORY OF THE UNITED STATES.

It does not advocate a "tomahawk civilization."—*Nation*.

"It is a history of the United States, to which it devotes 860 pp., and but 96 to the colonial period and the wars with which it was filled. It tries to teach the pupil citizenship and peacefulness instead of diverting him with tales of blood. It says (p. 302) that 'the object for which the Union men fought' was 'to secure perpetual peace' (p. 425). Speaking of the people of the United States: 'They can, if they should be foolish or wicked enough to do so, maintain fleets and armies sufficient to overawe the rest of the world. They can make other nations dread their anger and yield to their slightest demand. They can make their country a bully and a nuisance among the nations. Such a power, so managed, would be the most terrible evil the world has yet seen.'"

The book is brought down to 1894. It includes The Declaration of Independence, the Constitution, a bibliography, etc. 12mo, 1/4 roan, 456 pp., \$1, net.

The Fifth Army Corps.

The History of the Fifth Army Corps. Comprising a full and complete account of the movements and operations of the Corps from the organization of the first division to the close of the war, together with a description of the battles in which it was engaged. By WILLIAM H. POWELL, Lieutenant Colonel U. S. A. One large octavo volume, with 9 portraits and 40 maps. Cloth extra, \$7.50, net; half morocco, \$10.50, net.

Life and Times of Napoleon

A Metrical History of the Life and Times of Napoleon Bonaparte, contained in a collection of Songs and Poems. Compiled and arranged, with Introductory Notes, by WILLIAM J. HILLIS. With 25 illustrations in photogravure. 8vo, buckram cloth, \$5.00 net.

Regeneration.

A Reply to Max Nordau. American copyright edition. Large 8vo, \$2.00. (In press for immediate publication.)

This work, by a writer who prefers, for the present at least, to remain anonymous, is a vigorous and trenchant analysis of the morbid and exaggerated pessimism of Nordau's sensational treatise. The writer presents a calm and wholesome view of the actual status of modern civilization, and while frankly admitting the serious evils and difficulties, emphasizes the considerations which make for progress and for hopefulness.

St. Paul the Traveller

And the Roman Citizen. By W. M. RAMSAY, Professor of Humanity in the University of Aberdeen, author of "The Historical Geography of Asia Minor," etc., etc. Large octavo, with map, \$3.00.

The Church in the Roman Empire.

A.D. 64-170. By Prof. W. M. RAMSAY. With maps. 8vo, \$3.00.
"This is a thoroughly good book: a product of first hand and accurate scholarship; in the highest degree suggestive; and not only valuable in its results, but an admirable example of the true method of research."—*The Churchman*.

Tales from the Fjeld.

A Series of Popular Tales from the Norse of P. Ch. Asbjørnsen. By GEORGE WEBB DASENT, D.C.L., author of "Popular Tales from the Norse." With over 100 original illustrations by MOYR SMITH. 12mo, cloth, \$1.75.

Cooper's Works.

"The Mohawk Edition," to be issued in 32 volumes. Printed from new plates, and bound in the general style of the new Hudson Edition of Irving's works. The edition will be sold in sets, or in separate volumes, according to the convenience of the buyer. Cloth extra, with frontispiece, per volume, \$1.25; per set, \$40.00. (In course of publication.)

The Second Madame.

A Memoir of Elizabeth Charlotte, Duchesse d'Orleans. By M. LOUISE McLAUGHLIN. With illustrated head-pieces. 16mo, \$1.25.

A Princess of the Gutter.

A Tale of the East End of London. By L. T. MEADE. 12mo, cloth, \$1.25.

Russian Portraits.

By VICOMTE MELCHIOR DE VOGÜÉ. Translated by ELISABETH L. CARY. (No. VI. in the Autonym Library.) Oblong, 24mo, cloth, 50 cents.

An authorized translation of Vicomte de Vogüé's well-known "Cœurs Russes," which, published some time since in France, achieved a signal success. M. de Vogüé is to-day acknowledged to be one of the foremost writers of the new French school, and these studies of Russian character are among the most distinctive bits from his hand.

Charles XII.

And the Collapse of the Swedish Empire, 1682-1719. By R. NISBET BAIN, author of the "Life of Gustavus III.," etc., etc. (No. 15 in the "Heroes of the Nations" Series.) 12mo, fully illustrated, cloth, \$1.50; half leather, gilt top, \$1.75.

"The fascination that for ever hangs about the two or three great Swedish heroes is well caught and impressed on the reader by R. Nisbet Bain. The book is as facile of expression and as brilliant in plan as a novel, while it is rich in historical lore and skilful in its treatment of the science of war. Mr. Bain has a faculty of doing much with few strokes."—*Boston Traveller*.

The Countess Bettina.

The Story of an Innocent Scandal. By CLINTON ROSS. Cloth, \$1.00; paper, 50c.

"Written in vigorous English. Good novel-readers who like a story that moves along with spirit, and is full of varied incidents and surprises, will be delighted with 'The Countess Bettina.'"—*London Literary World*.

The Gold Diggings of Cape Horn.

A Study of Life in Tierra Del Fuego and Patagonia. By JOHN R. SPEARS of the New York Sun. Fully illustrated. 8vo, cloth, \$1.75.

"The work is extremely interesting, and has a value of its own."—*New York Evangelist*.

"A graphic narrative."—*Boston Congregationalist*.

Evolution of Horticulture

IN NEW ENGLAND. By DANIEL DENISON SLADE. 16mo, half leather, \$1.50.

A delightfully sympathetic work which will appeal very strongly to all horticulturists and lovers of out-door life.

A History of Money and Prices.

Being an Inquiry into their Relations from the Beginning of the Thirteenth Century to the Present Time. By J. SCHOENHOF, author of "The Economy of High Wages," &c. "Questions of the Day" Series No. 86. 12mo, \$1.50.

"It is needless to say that Mr. Schoenhof has no confidence in the scheme of regulating prices by artificial changes in the volume of currency. His book is, in fact, a demonstration that prices are the result of very complex causes, in which the amount of currency has only a subordinate part, and that arbitrary interference with the currency must be mischievous and mischievous only. This he illustrates with a wealth of material, thoroughly verified and carefully analyzed."—*New York Times*.

The Forum

For FEBRUARY will contain:

Some Aspects of Civilization in America. CHARLES ELIOT NORTON.

Our Monetary Programme. J. LAURENCE LAUGHLIN, Head Professor of Political Economy, Chicago University.

Victoria, Queen and Empress. SIR EDWIN ARNOLD.

The French Academy. HENRY HOUSSAYE of the French Academy.

The Stage from a Clergyman's Standpoint. REV. THOMAS P. HUGHES, Rector Church of the Holy Sepulchre, New York.

THE VENEZUELAN CRISIS: The President's Monroe Doctrine. THEODORE S. WOOLSEY, Professor of International Law at Yale University.

Lord Salisbury and the Monroe Doctrine. HON. OSCAR S. STRAUS, Ex-United States Minister to Turkey.

The Duty of Congress. ISAAC L. RICE.

"German-Americans" and the Lord's Day. BISHOP WM. CROSWELL DOANE.

The Helms-Fountain Controversy. WILLIAM STEINWAY.

Notable Sanitary Experiments in Massachusetts. W. T. SEDGWICK, Biologist to the Massachusetts State Board of Health.

The Forum Publishing Co., New York.

ALL NEWS-STANDS.

25 CENTS A COPY.

\$3.00 A YEAR.

Pall Mall Magazine

February Number Now Ready. Price 25 cents.

Edited by LORD FREDERIC HAMILTON and SIR DOUGLAS STRAIGHT.

200 pages profusely illustrated by leading artists in black and white.

Among the principal contributors are the following:

Sara Jeannette Duncan, His Honor and a Lady (serial).
Lady De l'Isle and Dudley, Penhurst and Its Memories.
W. Waldorf Astor, Brabant's Love.
J. Holt Schooling, Secrets in Cipher II.
Demetrius Boulger, Fortifications of Paris.
Lord Ernest Hamilton, I. Zangwill,
T. H. Escott, etc.

NEW YORK: THE INTERNATIONAL NEWS COMPANY, 83 & 85 Duane St.

MONTREAL: The Montreal News Company.

TORONTO: The Toronto News Company.

The Monist

QUARTERLY

Contents for Jan., 1896:

Germinal Selection. PROF. AUGUST WEIERMANN.
Pathological Pleasures and Pains. TH. RISOT.
On the Part Played by Accident in Invention and Discovery. PROF. ERNST MACH.
On the Nature of Mathematical Knowledge. PROF. HERMANN SCHUBERT.
On Chinese Philosophy. DR. PAUL CARUS.

"You are making your journal so valuable that I cannot be without it any longer, although I do not subscribe to its philosophy."—PROF. HENRY F. OSBORN, Columbia College, N. Y.

☞ A sample copy mailed free to any address on application. Current numbers 50c.; yearly, \$2.00.

OPEN COURT PUBLISHING CO., CHICAGO.

Letters of Credit. We buy and sell Bills of Exchange on and make Cable Transfers of money to Europe, Australia, and the West Indies; also make collections and issue Commercial and Travellers' Credits, available in all parts of the world.

Brown Brothers & Co., Bankers, NO. 59 WALL STREET, NEW YORK.

** Send for illustrated Christmas number "Notes on New Books" and "Little List of Valuable Books." Putnam's Portrait Catalogue sent on receipt of 10 cents.

The Nation.

NEW YORK, THURSDAY, JANUARY 30, 1896.

The Week.

THE outcome of the Government loan for \$100,000,000 seems to be something like this: The "popular" branch of it will fall considerably short of making up the total. These bids are coming in from day to day, but the public cannot know what they amount to until the 5th of February. Although the Morgan syndicate has been dissolved, some of the members have put in bids for a part of the loan, and others stand ready to take what is left. Whether any part of the loan goes abroad will depend upon the price at which this remainder can be bought. Some of the bidders in the "popular" branch are vociferously demanding that the Government itself fix a price on the bonds, although they have been offered to highest bidder not less than par. Unfortunately, this cannot be done. The Secretary may reject any or all bids, but that does not enable him to issue a general order to A, B, and C to come up and take the bonds at any price he chooses to fix upon them. Moreover, some people, moved by what they call patriotism, or a desire for notoriety, will put in bids for small amounts at rates equal to a 3 per cent. loan, while the money market in general declines to lend at that rate. Then there will be a certain amount of "squealing," as often happens in Wall Street when the speculators find themselves loaded with stocks that they cannot get rid of without loss.

We assume that the whole \$100,000,000 will be taken at rates varying somewhat, but not below that which the syndicate was prepared to bid. The next question is whether that sum will suffice. In the absence of any new disturbance, such as another war scare or a tidal wave of silver lunacy, which is not to be looked for, it is probable that this loan will carry us beyond the Presidential election. It is not to be assumed, however, that it will put the gold reserve permanently beyond danger. We must remember that three bond sales have taken place previously for this same purpose, amounting in the aggregate to \$162,000,000. The plan proposed by the syndicate, to take \$100,000,000 firm and give the Government the option of \$100,000,000 more, was much the best, because that would have quieted all apprehensions and have given time for business interests to make plans for the future. This was and is the immediate problem of finance, the remoter one being some method of relieving the Government of the necessity of providing and maintaining the gold reserve of commerce. The "popular" loan which intervened, al-

though politically unavoidable, was financially a mistake.

The Treasury officials say they are much puzzled over the falling off in internal-revenue receipts, particularly in the returns from the tax on whiskey. This tax the new law increased from 90 cents a gallon to \$1.10. It was a simple sum in arithmetic for our wise legislators to figure out that an increase of 20 per cent. in the tax would necessarily mean an increase of 20 per cent. in the revenue. Nothing could be clearer than that. No, nothing could be clearer, except that it has been proved over and over again in fiscal experience that such expectations are never realized. Taxes cut in two sometimes double the revenue, but taxes doubled usually come nearer to halving the revenue. Ever since William Pitt's day this has been almost axiomatic with English Chancellors of the Exchequer. It should have been axiomatic in this country at least ever since Mr. Wells's practical demonstrations in this very matter of the whiskey tax. But no, our cheerful legislators are never so cheerful as when disregarding all human experience in finance and taxation. They violate well-known laws, and, when they get hurt, look around with a half-pained, half-angry air, and say, "Hang it all! Who would have thought the thing would work in this way?" The classical authority in American taxation is not Turgot, or Adam Smith, or Pitt, or Gladstone, or Wells, or McCulloch, but the Congressman with his famous dictum, "Do not tell me that a government which has put down a great rebellion cannot collect a tax of two dollars a gallon on whiskey!" But it couldn't, and the tax of \$1.10, laid with similar patriotic snorts, appears to be falling into line with universal experience in the most disgusting way.

The chaplain of the House continues his blasphemous prayers. As a way of calling the Almighty's attention to the wickedness of Jones of Nevada in "holding up" the tariff bill in the Senate finance committee, he "prayed" last week for "additional protection to American manufacturers," so that they might "put an end to the privations of American workmen." Washington correspondents are making merry over the chaplain's performances, and they surely can plead that there is a difference between laughing at religion and laughing at those who make religion ridiculous. But the thing has already passed beyond the stage of ridicule, and become a question of how to put an end to sacrilege. What is the use of talking of a great cathedral in Washington, if this spectacle of hideous impiety is to be allowed in the

national legislature? It is high time that "the church vote" made itself felt, in connection with this public scandal, not to let the Jingo vote, the high-tariff vote, the Cuban vote, the generally quarrelsome and repulsive and underbred and Heaven-defying vote, have everything their own way in congressional devotions.

Quorum-counting by the Speaker has now been quietly abandoned by the Speaker who introduced it without authority, and who gloried in it throughout the Fifty-first Congress as his chief title to fame and all the good things that go with fame. Mr. Reed's offence in 1890 was, as Mr. Crisp pointed out on Thursday, not in counting a quorum after the rules of the House authorized him to do so, but in seizing the power to do so before the rules were adopted. In short, he usurped authority in order to get a rule giving him authority. But even that rule he now throws over, thereby practically confessing that it could not be made to work without gross unfairness and mistakes, and goes back to a form of the rule first proposed years ago by a Democratic Congressman, Mr. Tucker. Under the rule as now adopted, the sergeant-at-arms is to bring in absent members, and their presence is to be noted by the clerk on the roll-call. Thereafter they are to be considered as present and helping to make a quorum even if they refuse to vote. This is a very different thing from letting the Speaker's fallible eye wander about, guessing who is in the cloak-rooms and corridors, and counting as present members who were (as happened more than once in 1890) in the opposite end of Washington or actually in Baltimore. The new method is certain to be more orderly and accurate, and its adoption with so little clamor, with the quiet handing over to oblivion of the great constitutional right of the Speaker to do the counting himself, probably marks a general acquiescence in it as the best solution of the difficulty.

It would be well if the tomfoolery which goes on at Washington never took a more harmful guise than that which the *Congressional Record* of January 20 presents, ten pages of which are occupied with facts sent in by the President in answer to the House resolutions calling for information touching certain speeches made by Thomas F. Bayard in England. First we have a letter from Mr. Olney, enclosing one from Mr. Bayard, enclosing his speech of November 7, 1895, before the Edinburgh Philosophical Society. The speech, he says, was made to a society of a non-political character, which society had been addressed by his predecessors in office, Mr. Lowell and Mr. Phelps, in response to invitations. The opinions

expressed, Mr. Bayard says, are his opinions, "formed by me after careful deliberation." He adds ominously that "when Congress shall have concluded its action on the subject, it is possible that I may desire to submit a further statement." The speech itself is then printed at length, filling eight columns of the *Record*. That comes under date London, December 12, but is only the beginning. Under date of January 3 a cable despatch was sent by Olney to Bayard saying that the House wanted information about an earlier speech, which referred to the President as one who "stood in the midst of a strong, self-confident, and oftentimes violent people—men who sought to have their own way." The speech referred to, Mr. Bayard says, was delivered at the opening of the Boston Grammar School in August last. He tells what the Boston Grammar School is, and how he was invited to attend the opening exercises, and how he joined the others in a dinner after the exercises, where toasts were given and responded to extemporaneously, he being one of the responders. Then he encloses a newspaper containing a report of the whole proceedings, including a list of the scholars who took prizes, reports of the examinations in the classics and mathematics, all the speeches, including his own, to the extent of fourteen columns of the *Record*. We hope that the House will derive profit from this report. By giving their entire time to it for the remainder of the session they would relieve the country very much.

The two Senators from the new State of Utah were sworn in on Monday, and the seats in the upper branch are now all filled, except one from Delaware, which will doubtless soon be awarded to the Republican claimant. The full Senate now consists of ninety members—almost twice as many as sixty years ago, and one-third more than at the outbreak of the civil war, while almost one-sixth have come in during the last half-dozen years. The Senate was never so large a body as now, and it never stood lower in the public esteem. The most striking feature in the development of Congress during the past quarter of a century, and particularly during the last ten years, has been the steady and of late rapid decline in the Senate, as compared both with its own past and with the House of Representatives at the present time. Until a comparatively recent period, the upper branch of Congress maintained to a great extent its ancient hold upon the public mind as a far more dignified, conservative, and able body than the House—a body which could be trusted to resist a popular craze, as in 1868 it defeated the wild scheme for deposing Andrew Johnson through an abuse of the impeachment power. This position has now been entirely forfeited. The Senate to-day is a less conservative body than the House, and it is more easily car-

ried for any wild scheme. Not only has it lost its old hold upon the public, but it is regarded with a growing contempt.

Mr. Sewell of New Jersey is one of the last members of the Senate from whom the country is wont to expect either the presentation of a notable proposition or an argument that deserves attention. But the anti-Jingo resolution which he introduced a fortnight ago was striking in itself, and it was supported last week in a speech that was full of good sense and sound reasoning. The New Jersey Senator began by tracing the origin of the Monroe Doctrine and setting forth the limitations that were then put upon it, in contrast with the attempts now made to extend it over half the globe. He pointed out that the position taken by the President and the Secretary of State in the Venezuelan matter "practically means that this Government must assume a protectorate over Mexico, Central America, and all the South American states, and that, no matter whether these states be right or wrong, in any case of a conflict with a European Power we pledge ourselves as an ally to furnish men and munitions of war, and force enough to protect the weaker American Power against the stronger European Power." What such a policy would mean in the case of Venezuela he shrewdly showed by quoting the remark of Mr. Olney in his correspondence, that "in 1848 Venezuela entered upon a period of civil commotions, which lasted for more than a quarter of a century, and the negotiations thus interrupted in 1844 were not resumed until 1876."

The closing passages of Mr. Sewell's speech were rendered particularly noteworthy by the fact that he showed some perception of the condition of the country, and of the folly of unnecessarily precipitating an international controversy now—and such an attitude of mind has unhappily become a rarity in the Senate. He expressed his conviction that a matter which has been slumbering so many years in a state of diplomatic repose might have been delayed at least a few months longer, and reminded his colleagues that "if we address ourselves to the proper ordering of our domestic economies, we have quite enough now to engage our full time, and upon which to exert our best mental energies." While believing that the executive ought to uphold the honor of the nation, he holds that "we have a right to expect that discretion and good judgment will be exercised in bringing to a culmination an issue so grave and serious as that now presented," and he pronounced the President's action "in this respect alike unseasonable and premature," in view of the facts that the country is yet "in a state of convalescence from the financial malady of 1893," and that "the still unsettled and troublous condition of its financial affairs is too strongly in evidence

to warrant the putting of any further unnecessary strain upon it." In short, Mr. Sewell's speech was full of words of truth and soberness. The wonder is that the Shermans and Morrills and other veterans of the Senate should have left the utterance of such words to a member whose standing does not lend them the added weight that they would receive coming from a leader of national reputation and influence.

Senator Frye of Maine is a nice man to make an uproar about the Armenian massacres. He is the calm, sensible legislator who expressed his regret that Spain apologized for the *Alliança* incident. War for war's sake has no warmer friend, and war produces everywhere the state of things which we are deploring in Armenia. It makes widows and orphans by the thousand; it destroys towns, cities, and villages, and spreads famine and pestilence and destroys crops, and in fact reduces the seat of operations to the condition in which Armenia is to-day. Part of the reluctance of the Powers to tackle the Turk is due to the dread of reducing large regions of Europe to a similar condition. This is not an unworthy fear. Of course it is a reproach to our civilization that there should be any occasion for it—that the Powers should not be able to agree to abate the terrible nuisance known as Turkey without falling out among themselves; but we who are afraid that an agreement between Great Britain and Venezuela about a boundary line may endanger our institutions, are hardly in a position to find fault with them. Every country contains its Jingoos, and there is nothing like the Jingo imagination for detecting danger from foreign machinations. If the Powers had one-quarter the suspicion of each other that an American Jingo has of Great Britain, they would be fighting like demons all the time. The way our Senate is going on just now, without either army or navy, gives one, we fear, but a faint idea of the way it would go on in meddling, threatening, and "claiming" if it had the great navy which so many of us are longing for. Fancy such an instrument of destruction in the hands of men like Senators Frye and Morgan and Davis. The true responsibility for what is happening in Armenia rests with Russia and Germany—with Russia for not offering to restore order in Armenia under a "mandate," as the French did in Greece in 1828, and in Syria in 1860, and Austria in Bosnia and Herzegovina in 1877; and Germany for not sustaining England in the recent demonstrations. The notion that we can apply pressure to the Porte which England cannot or will not apply, is one of the whimsies of the day.

The Boston *Herald* says:

"Some of the greatest men of our country have had this habit of drinking heavily—it has gone into history as a weakness in their cha-

racters; but when there has been no public display, the mantle of charity has been cast over it by their contemporaries. It is better to answer the argument of Senator Morgan than to abuse him for his personal habits."

Well, the "mantle of charity" was grossly misused when it was cast over this "weakness." Anyhow, whatever excuse a public man may have had for "drinking heavily" fifty years ago, he has none to-day. If he cannot stop it, he ought to get out of public life. It is preposterous to make abstinence a condition of employment in an engineer of a locomotive, or in a captain of a liner, and allow a statesman whose blunders may any day bring on a bloody war, to get drunk as often as he pleases and then whine for the "mantle of charity." We believe we are the only civilized people to-day who allow men high in office to roll in the gutter with impunity. In the early part of the century it was not so. Everybody got drunk occasionally. But there has been an immense change in manners since then, and the nation ought to get the benefit of it, as well as railroads, steamboats, and factories. It is monstrous that drunkards should be incapacitated for every service but the public service. As to Senator Morgan's "arguments," we shall answer them when we see them. We know of none at present. With his blatherskite we are very familiar, but blatherskite is not refutable.

Commodore Sicard made some remarks last Thursday about the condition of our navy which are likely to call down upon him the rebukes of the Jingoese who are eager for immediate war with England:

"The ships we have so far are good ones, but we really are only upon the threshold of the development of such a navy as we should have. We have a number of good cruisers, but it is the battle-ships that are really necessary in war. We need about fifteen or twenty more ships—good battle-ships. It takes four or five years to build a battle-ship, and that is time enough to be beaten many times over."

Lodge and Chandler ought to introduce a resolution at once expressing in stern terms their disapproval of a naval officer who will admit that we have only the beginning of a navy, that cruisers are really of small account in a war, and that before we could get an efficient navy constructed we might be "beaten many times over." What Commodore Sicard says is, it is true, what every competent and frank naval officer has been saying in private for weeks past; but what do the Jingo warriors care about that? Naval officers are aware that cruisers would be of small use to us in a war with England, because the two nations which sell coal are England and America, and our cruisers would not be able to replenish their supply if they were to get away from American ports. They know also that what is needed to protect American seaboard cities is battle-ships, of which we have only a few at present, and these would offer small resistance to England's powerful ships. But what do the Jingoese care for little things like these? They do not pro-

pose to fight, but to stay at home and read about the war in the "extras." They believe that war is necessary "to develop the manhood of the nation"; but it is not their manhood which needs development, but that of some other fellow. Theirs is all right. It flinches at no danger which somebody else will have to encounter.

The coming season ought to be an unusually profitable one for the ocean steamship companies, as there is to be an immense and enforced emigration of Americans. Already the numbers are portentously large of those upon whom notice has been served by the Jingo press that they cannot stay in this country, but must go at once to England, where they belong; and the list is extending every day. The college professors as a body will have to go, under the terms of this new alien and sedition act, together with the great majority of the clergy, the Chamber of Commerce, most merchants and bankers, and a few (we are thankful to say only a few) editors. It appears to-day that the "pro-English party" is now in the majority in the United States Senate, prepared to side-track the Davis resolutions. So at least fifty Senators will have to emigrate. The House foreign affairs committee is pro-English too, and of course must go also, along with the Speaker and a majority of the House. All these classes come, by their actions, under the head of "pernicious foreigners" whom newspapers have the constitutional right to expel the country on thirty days' notice. In a crisis like the present they only weaken us. We must offer a united front to the enemy. We must not allow foreigners to suspect for a moment that there is a single man in this country who ever thinks, or asks the reason why he must do and die, or does anything but bellow and foam at the mouth.

Nobody will be surprised to learn that the McKinley boom is encountering obstacles in Ohio. All his enemies among the Republican managers in his State, and they are neither few nor weak, have declared over and over again that they are for Ohio's Favorite Son, heart and soul, and yet McKinley is not happy nor are his friends at ease. The radical trouble seems to be that no Republican politician in Ohio trusts any other Republican politician, and all of them expect "treachery" as a matter of course. Foraker, for example, has taken occasion publicly to declare that Ohio must support McKinley with enthusiasm, and yet McKinley organs announce that "ill-advised persons" in various sections of Ohio who "pretend to be friends of Foraker" are seeking to "inject him into the Presidential race." Wicked Democratic organs go much further, and insist that Foraker is bent on "knifing" McKinley, and that the Ohio delegation to the St. Louis convention will be made up of men who will

shout for McKinley in public, but will drop him the first moment they can find any excuse. At best the situation is not promising for "the logical candidate"; at worst, his chances of getting the nomination will be no better than Sherman's have so often proved to be.

The inaugural address of the new Governor of New Jersey would be a striking document in itself, even if had not the advantage of being in such sharp contrast with the floods of inanity or folly with which other governors have been inundating their Legislatures. Mr. Griggs's description of the plague of over-legislation from which New Jersey (and, he might have said, every State and the whole nation) is suffering, strikes home. The mass of hasty, ill-considered, ill-expressed, and conflicting laws on all subjects that stuffs the general statutes is appalling. No lawyer can find his way through the jungle; the courts can but contradict each other and themselves in interpreting the hotch-potch. When the general statutes of New Jersey, under a Constitution supposed to prevent all special or class legislation, fill three large volumes of 1,000 pages each—or twice as much space as the revised statutes of the United States—the greatness of the evil is apparent. Nothing but endless litigation, uncertainty, waste, destruction of property, and contempt for government and courts can result from this huge conflict of laws. Against the general and pernicious superstition that all the ills of humanity can be cured by law, Gov. Griggs squarely arrays himself, and flatly says that he will veto every law which has not some positive and convincing reasons to justify it. Laws enacted out of mutual complacency will find no toleration from him, he serves notice.

For years the sugar interests of the Argentine Republic have enjoyed the benefit of a high protective tariff on imported sugars. With cane cheaper than in any other country, with no duty to pay on imported machinery, and with labor under perfect control at low wages, the price of sugar in that country has been more than double the cost of the imported article minus the duty. This condition of things naturally caused overproduction until the demand was exceeded by many thousand tons. To avert the logical result—a lowering of prices—the sugar-makers are forced to export and dispose of their surplus in the open market. To recoup them for the loss involved, a pliant minister of finance has considerably submitted to the Chambers a project to levy an internal tax of 4 cents a kilogramme on all sugars sold in the republic, and to devote the fund so acquired to a bounty of 12 cents a kilogramme to the producers for every kilogramme exported. Here we have the doctrine of protection "developed" with the severe logic of an Olney mind getting out of a doctrine "all there is in it."

THE "DOCTRINE."

Now that we are nearing the close of the Jingo craze, it is impossible for the calm observer to avoid the conclusion that it owed much of its gravity and extent to the fashion of calling the policy recommended by President Monroe by the name of "doctrine." When it was first called a "doctrine," we are not yet able to say with positiveness, but it was apparently long after 1823. The expression was not used during the discussion in Congress of a proposition to send delegates to the Panama Congress in 1826, which involved frequent references to Mr. Monroe's statement. A passage in a speech of Daniel Webster's made on April 14, in the course of that debate, shows that the term "doctrine" had not then become fixed, and that there was in Mr. Webster's mind, and probably in that of the public, a clear appreciation of the fact that President Monroe was not teaching a doctrine, but was making a declaration of policy with regard to our own interests exclusively, when he issued his celebrated message. Here it is, and we have italicized the expressions which confirm our view:

"It is, doubtless, true, as I took occasion to observe the other day, that this *declaration* must be considered as founded on our rights, and to spring mainly from a regard to their preservation. It did not commit us, at all events, to take up arms on any indication of hostile feeling by the Powers of Europe towards South America. If, for example, all the States of Europe had refused to trade with South America until her states should return to their former allegiance, that would have furnished no cause of interference to us. Or, if an armament had been furnished by the Allies to act against provinces the most remote from us, as Chili or Buenos Ayres, the distance of the scene of action, *diminishing our apprehension of danger*, and *diminishing, also, our means of effectual interposition*, might still have left us to content ourselves with remonstrance. But a very different case would have arisen if an army, equipped and maintained by these Powers, had been landed on the shores of the Gulf of Mexico, and commenced the war in our own immediate neighborhood. Such an event might justly be regarded as *dangerous to ourselves*, and, on that ground, to have called for decided and immediate interference by us. The sentiments and the policy announced by the *declaration* thus understood were, therefore, in strict conformity to our duties and our interests."

In 1848 President Polk sent to Congress a message, regarding affairs in Yucatan, which provoked a debate that involved frequent references to Mr. Monroe's position, and in this debate we find the expression "doctrine" used more than once. "The President," said Mr. Holmes of South Carolina, "had taken the opportunity of reiterating a doctrine which was said to be the doctrine of Mr. Monroe; and there never was a more inappropriate time for the assertion of that doctrine, even if it did apply." Mr. Bagby of Alabama "did not think that the doctrine contained in the declaration of Mr. Monroe either sanctioned or discountenanced this measure." But even at that time doctrine was not universally accepted as the proper term, and Mr. Root of New York referred to an assertion that "Mr. Monroe had committed us by his

declaration in 1823." Whether called a declaration or a doctrine, it had not yet acquired the sacrosanct character now ascribed to it. Mr. Root declared that Mr. Monroe had no authority to commit succeeding generations by his declaration, and even went so far as flippantly to remark: "It was sometimes very convenient, when gentlemen had a point to carry, to resort to some of Mr. Monroe's old musty letters."

At all events, "doctrine" is an unfortunate term—in the first place, because it is not strictly descriptive. But the second objection to it is more serious. It is that the term fell among a people bred in theological discussion, and accustomed to use doctrine as a term of mystery and divine authority. Webster gives various definitions of it, such as "teaching," "instruction," like "Christ's doctrine," or "a body of principles of faith," like the "doctrine of atoms," or "the doctrine of gravitation," or "the doctrines of the Bible." He mentions the Monroe Doctrine, but he gives no definition of "doctrine" which will cover Monroe's recommendation. In fact, in popular use, both in Monroe's time and down to our own day, a doctrine was something with superhuman authority behind it, and which could not be approached from a purely mundane point of view. To the ordinary "plain American," a doctrine is something different from, and much more serious than, an opinion, or theory, or recommendation; something to be handled more reverently and to be accepted with less question. He finds it difficult to believe, therefore, that Monroe's advice to interfere in the affairs of the Spanish-American states if they are attacked by a European Power is a piece of political advice, to be examined (like every other) as a piece of policy with reference to time, place and circumstances, and probable result.

If any one doubts this, we advise him to make an experiment with any of his older neighbors by propounding to him, for acceptance, separately and apart from the others, any one of the "developments" of the Monroe Doctrine to be found in Secretary Olney's despatch of July 20, for example. Ask him whether, when a community of "yellow-bellied Dagoes" down there quarrels with a European Power, we ought to take it for granted that the European Power is in the wrong and the Dagoes in the right; or whether the Dagoes ought to be allowed to choose a European arbitrator in any of their quarrels; or whether a Dago ought to be allowed to accept the boundary claim of a European colony to his own detriment, or to enter into an alliance with a European Power against one of his sister republics; whether the Dago states, Chili or Peru, for example, by "natural sympathy, by similarity of governmental institution," were "our natural friends and allies, commercially and politically," more so than Eng-

land; whether we were "practically sovereign on this continent and our fiat law" in any matter about which we choose to concern ourselves. Ask him these questions without letting him perceive your object, and he will undoubtedly laugh a merry laugh, and ask you for whom you take him, or request you "to give him an easier one." But if you then go on and tell him that all these things are part and parcel of the Monroe Doctrine, that they flow out of it, he will at once become grave and reverential, and say: "Ah, that is a different matter. If it is all in the Monroe Doctrine, I have nothing to say. I am for the Monroe Doctrine every time." And he will support the Monroe Doctrine, and "stand behind" any one who recommends its application, without discussion or examination, just as a Mussulman rallies to the sacred standard in a holy war. The Monroe Doctrine, like all doctrines firmly held, is fundamental, above criticism, something to fight for and die for, like all articles of religious faith.

The inconvenience, for a great commercial state, of having a doctrine of this sort, which intimately concerns not our eternal but our temporal welfare, is not discussable, and has to be enforced without regard to consequences, has been made very plain during the past few weeks. If Monroe's opinion were called, not a doctrine but a policy, we think there is hardly a doubt that the appointment of a commission like that now serving to report on the boundary between Great Britain and Venezuela would have taken place in a quiet and gentlemanly way, as the result of friendly communication with Great Britain. Policy is something intended for human happiness, and to be considered with reference to human comfort and convenience, while doctrine concerns the things of the spirit, the unknown or unknowable concerns of the individual soul. A nation which lives by doctrine is necessarily, like Turkey, somewhat, at least, of a theocracy. It has often to pursue courses in obedience to the doctrine which are full of misery for man as a member of human society. A nation which lives by policy or expediency, on the other hand, asks itself at every step, "Does this make for justice, for peace, for law? Is it reasonable? Will it increase the burdens or promote the comfort of the poor? Will it cherish the great interests of civilization, the spread of knowledge, the rule of science, the feeling of brotherhood among the sorely tried and much puzzled nations of the earth?" Of all the misfortunes which can overtake a society, the greatest is having to live under a dominion which cannot be discussed, and which cannot be judged by its probable results.

For these reasons, and many others for which we have no space here, we think the chances of future peace and order on this continent would be much improved if we got into the way of talking of the Monroe Doctrine as the Monroe Policy, and taught the coming generation that,

far from being a thing to die for, it was a thing to examine when the time came for its use, just like taxation, or the liquor question, or good roads, or judicial organization. This Government was founded first and foremost for the benefit of citizens of the United States, and not for that of Venezuelans, Guatemalans, Costa Ricans, or Chilians. Monroe meant his doctrine avowedly to subserve, before all else, the safety, honor, and welfare of his own country.

HOMŒOPATHY IN GOVERNMENT.

WHEN the Jingo craze was at its height, the story reached us, through an excellent channel, that the excuse for Mr. Cleveland's message was that he had learned that the Republicans in Congress were preparing, and would surely pass, a warlike resolution directed against England, and that he felt compelled, as a politician, to forestall them, in his own interest and that of his party. On Thursday the *Evening Post* printed a despatch from its Washington correspondent, containing another version of the same story, on still better authority. This ran as follows:

"We all knew it [the Davis resolution] as long ago as last spring. The scheme was carefully hatched, undoubtedly for political purposes and nothing higher. The President simply headed it off. The public furor which this action of Congress would have brought about has simply been discounted, and, now that the Jingo resolution is before the people, it is found to have spent its force. The people found all they wanted in the President's message, and have no use for the Senate resolution. The Senate has already discovered this. As a result the Davis resolution won't pass the Senate. Mark my prophecy. It is losing friends every day. . . . Had Congress, however, acting by itself, passed such a measure as the Davis resolution on the eve of Great Britain's assertion of her claim in Venezuela, it would have been equivalent to a declaration of war. I contend, therefore, that the President performed a valuable public service in the interests of peace in forestalling Congress and robbing it of its hostile ammunition."

Here, as will be seen, the President acts simply in the interest of peace, and not in that of party. He hears that Congress is disposed to declare war, so he determines to declare it in advance of them, in the belief that his war would not be taken so seriously as the congressional war, and would be more readily got rid of.

There are two weaknesses in this story. One is that Congress, far from leaving him to fight the British alone, immediately "stood behind him," and endorsed his war measure without debate—an incident, we think, without parallel in the history of parliamentary government. The craziest war venture of any modern nation was that of France in 1870, but that project was before the Chambers and under discussion for nearly two weeks—that is, from July 6 to July 19. What frightened the country and the world in December was not what Congress said or did, but what the President said and did, for he held the confidence of the country for steadiness and self-control and courage and rationality, in a remarkable degree. Congress, speaking alone, would not have

made much excitement, because its action would have been set down to "politics," and Mr. Cleveland would have been relied on to prevent any mischievous result. It was Mr. Cleveland, therefore, and Mr. Cleveland alone, who made the panic, and he virtually confessed in his second, hysterical message, that he had not duly considered the possible consequences of the step he was taking.

The second weakness of the story is more serious. It is a confession that our sanest statesman was ready on a pinch to administer the Government on homœopathic principles; that is, when he heard that a coördinate branch was going to engage in an enterprise injurious in the highest degree to the national interests, he was prepared to anticipate it by administering to the unfortunate people a smaller dose of the same stuff. Foreseeing that Congress would shortly get drunk, he determined, by way of cure, to anticipate their bout by one of his own, feeling that his own recovery would be speedier than theirs and less costly. But the result was that they joined him in his carouse, and they both went to work to smash the national furniture and crockery. We have not a word to say against the homœopathic system as a therapeutic agency for the human body, but in daily life no one calls in a homœopathic doctor without knowing what he is about, and the nature of the remedies to be prescribed to him. The President of the United States has no license to practise it on the people of the United States. It would be impossible to find in any debate or discussion of the Constitution the smallest authority for the doctrine that the President may head off anticipated folly on the part of Congress by minor folly of his own.

The framers of the Constitution had evidently never dreamed that any such theory of the President's powers or duties would ever see the light, much less be accepted. Hamilton says in the *Federalist*:

"The republican principle demands that the deliberate sense of the community should govern the conduct of those to whom they intrust the management of their affairs; but it does not require an unqualified compliance to every sudden breeze of passion, or to every transient impulse which the people may receive from the arts of men who flatter their prejudices to betray their interests. It is a just observation that the people commonly intend the public good. This often applies to their very errors. But their good sense would despise the adulator who should pretend that they always reason right about the means of promoting it. They know from experience that they sometimes err; and the wonder is that they so seldom err as they do, beset, as they continually are, by the wiles of parasites and sycophants, by the snares of the ambitious, the avaricious, the desperate, by the artifices of men who possess their confidence more than they deserve it, and of those who seek to possess rather than to deserve it. When occasions present themselves in which the interests of the people are at variance with their inclinations, it is the duty of the persons whom they have appointed to be the guardians of those interests, to withstand the temporary delusion in order to give them time and opportunity for more cool and sedate reflection. Instances might be cited in which a conduct of this kind has saved the people from very fatal consequences of their own mistakes, and has procured lasting monuments of their gratitude to men who had courage and magnani-

mity enough to serve them at the peril of their displeasure."

With the position which Mr. Cleveland had before the country in November last he could well have waited calmly for any act of folly the majority in Congress could commit. He was waiting in that attitude for their financial or fiscal follies. He expected, and the public expected him, to meet them with a veto. Nay, his enemies in Congress used the certainty of a veto as a reason for not being so foolish as they would have liked. He was put in the Presidency to stand guard against such things as the Davis resolution, as much as against a free-silver bill or a McKinley tariff. There was no likelihood that Congress would exercise the war-declaring power. What was to be anticipated was a blatherskite concurrent resolution, like the one now before the Senate, and that he could have met with a veto which would have given him the opportunity of his life, and sent him out of office with a reputation following close on that of Washington and Lincoln. He might in such a veto have explained the exact condition of the Venezuelan negotiations, and have revealed our own ignorance of the merits of the controversy, have announced his plan for seeking light on the subject, have defined the nature and scope of the "Monroe Doctrine," the rights it proclaims and the duties it imposes, and have, at the same time, formulated the American view of war as a means of settling controversies among nations, in a way that would have made one of the great state papers of American history, and have substituted the Cleveland Doctrine for the Monroe Doctrine in the popular mind and memory. This is what those who most admired him and have longest supported him, expected of him.

Their bitter disappointment is due to that most pernicious legacy of the Middle Ages, that fatal "relic of barbarism," the idea that even for us—"foremost in the files of time" as we consider ourselves—war is a thing not to be pondered or discussed; that when contemplating the most awful action that man can take against the peace and dignity of his fellow-man, it is base to reflect, to reason, to take counsel, to seek the better way; that in such crises the nearer we get to the enraged tiger or bulldog, the more reason we have to be proud of ourselves. If there was one man in the country whom last November we considered superior to this sad delusion, we should have said it was Mr. Cleveland. We consider his subserviency to it, next to the wild "standing behind" him when he issued his challenge, the saddest sight this century has witnessed.

TARIFF LEGISLATION.

COLORADO held the attention of the country on Wednesday of last week in rather an impressive way. In addition to Senator Wolcott's brilliant speech on the Da-

vis resolution, Senator Teller delivered one on the tariff bill and the financial situation generally, which made a decided stir and is likely to have important consequences. Mr. Teller's speech, like that of his colleague, was effective in telling the truth at a critical moment, and knocking over a lot of humbugs that had been leaning against each other ever since the session began, maintaining an uncertain equilibrium, and sure to fall if anybody should give them a front blow.

The centre of Mr. Teller's attack was the House tariff bill which is still in the Senate committee on finance. The history of this bill is pretty well known. It was concocted by the Ohio wool-growing triumvirate—the same who laid the foundation for the McKinley tariff in 1889-'90. This interesting clique came to Washington before the present session began, and took steps to commit the Republican party to the enactment of a tariff on wool, not now, but a year or two hence, provided the party should be successful in the coming Presidential election. It was a game that these people were very familiar with. They had played it often. Revenue for the Government had nothing to do with it; but the Republican leaders, when the measure was forced upon them, put the revenue pretence forward as a stalking-horse. They passed the bill through the House as one of the happy financial conceits of the hour, along with the Venezuela Commission bill and the bond bill. It reached the Senate simultaneously with the bond bill, and both were referred to the finance committee, which is a free-silver committee presided over by the most pronounced gold-bug in the Senate.

This committee promptly substituted a free-coinage bill for the bond bill, and then sat upon the tariff bill, waiting to see what would be the effect on the temper of the House. The effect being *nil*, mutterings began to be heard in the free-silver camp to the effect that the tariff bill was a measure for the protection of wool-growers, that it was for revenue not to the Government but to private individuals, and that silver-miners were just as much entitled to a tax for their benefit as wool-growers or anybody else. Yet the McKinley organs were hopeful that, as Senator Jones, who held the balance of power in the committee, had been a good Republican before he went over to the Populists, he would allow free play to his natural instincts and let this little bill pass without a free-silver amendment. Such an amendment, if securely fastened to the wool bill, would kill the whole measure in the House. Hence the importance of getting it past the danger point of the finance committee.

It has not yet passed that point when Mr. Teller pounces upon it and shakes it as a terrier would shake a rat. His opinion of it was expressed in the following vigorous terms:

"I know very well that the free silver bill will not become a law. But I am tired of be-

ing lectured by Senators who know equally well that the revenue bill will not become a law. There has never been the slightest expectation of its becoming a law. Even if it should be brought before the Senate and finally passed by the aid of two or three Populist votes, it would be sure to meet with an executive veto. Had you the slightest expectation of its ever becoming a law it would have been framed on very different lines. It was just put in to Congress as a political move, and for no other purpose. As this is to be a political play, we will play politics on our side."

This is something more than a hint that the Republican silver Senators are not to be coaxed or coerced into passing the tariff bill merely to give the wool-growers a good position at some future time. What the latter want is the chance to say, whenever the Republican party comes into full power: "You passed our bill when you could not get the approval of the executive; you committed yourselves to us then, and you cannot go back now; therefore please to pass it again." The free-silver Republicans have no particular objection to the wool bill *per se*. They simply want to force their own measure along with it. This they cannot do, and they know that they cannot, but neither will they allow any other measure for the private interest of a class to go through while theirs is kept behind, especially when its object is not of a practical nature at present, but is merely to commit the party to pass some similar bill at some future time.

It is in the interest of good government that Mr. Teller and those who stand with him should stand firm. The wool bill, besides being a bad measure, is a game of false pretences. The leading Republicans, in fact, do not want it to pass. The woollen industry of the country has scarcely yet adjusted itself to free wool, and now it is asked to turn a second summersault and adjust itself to a high tariff on its raw material. Of course this will not be the last of it. A new tax on wool will lead to renewed efforts to throw it off, and these efforts will be successful eventually. Meanwhile the business will be "all torn up." There can be no settled trade, no steady employment. It is bad enough to have all our industries based on the rolling stone of an uncertain standard of value. The woollen industries, if we set out on a new tariff adventure, will have to bear the silver trouble, which is common to all, and another one special to themselves. It will be something of a paradox if they find relief from the latter at the hands of those who are producing the former.

THE SILVER PARTY'S PLATFORM.

THE silverites, in their preliminary convention at Washington on Thursday, adopted a preliminary platform with several preambles, one of which recites that the demonetization of silver in 1873 caused a fall in the prices of all kinds of property "except in peculiarly favored localities." It proceeds to say that "such fall of prices

has destroyed the profits of legitimate industry, injuring the producer for the benefit of the non-producer, increasing the burden of the debtor, and swelling the gains of the creditor, paralyzing the productive energies of the American people, relegating to idleness vast numbers of willing workers, sending the shadows of despair into the home of the honest toiler, filling the land with tramps and paupers, and building up colossal fortunes at the money centres." In connection with this misstatement of the causes of the present stringency we call attention also to another, which Senator Sherman had the hardihood to make in his debate with Senator Teller on Wednesday. The subject under debate was the pending sale of bonds, and Mr. Teller remarked, with perfect simplicity and perfect truth: "You are not selling bonds to meet deficiencies [of revenue]. You are selling bonds to accumulate gold." To which Mr. Sherman replied:

"If there was no deficiency, there would be no demand for gold. For fourteen years that \$100,000,000 of gold stood there in the Treasury, a standard of credit, and no one approached it or diminished it. But the moment the deficiencies occur, then they say they sell the bonds to keep the gold reserve good; but it is to meet the deficiencies, because to meet the deficiencies they take the gold."

It is very convenient for Mr. Sherman to overlook the operation of the act of July 14, 1890, otherwise called the Sherman act, which added nearly \$200,000,000 to the fiat money of the country, and alarmed the public on both sides of the water to such an extent that they began to withdraw capital from this country, and continued to do so until the panic of 1893 occurred and it became necessary to repeal that fatal measure. The operation of the Sherman act was coincident with a deficiency of revenue, but it was itself a cause contributing to the deficiency, because it required the purchase of 4,500,000 ounces of silver bullion each month, or more than twice as much as had been required before. The purchases were made in a deceitful, or at all events misleading, way. The Government paid for the silver with Treasury notes; but as the notes were redeemable on demand in gold, it might as well have paid gold directly for the silver bullion so bought. As a matter of fact, the exports of gold from the country during the time the Sherman act was in operation were just about equal to the emission of Treasury notes. The author of the act in question has reasons enough for ignoring that feature of the panic of 1893 and the subsequent misery; but the business men who were ruined by it, and the multitudes who were thrown out of employment in consequence of it, have too many reasons to remember it.

Senator Aldrich, too, was harping on the gold reserve and the fact that it never fell below \$100,000,000 until the present Administration came into power. Mr. Teller was quite well aware of this. Mr. Aldrich explained, further, that there were fluctuations up and down, but never,

until this fatal Administration came in, did it fall below the sum mentioned. Then this colloquy ensued:

"Mr. Teller—That is a fact which everybody understands. We did not break into the reserve of \$100,000,000 until after the present Administration came into power. To be fair, I am bound to say that I have not the slightest doubt but that we should have broken into it if Mr. Harrison had been re-elected. It was not the Democratic party that came into power that made it; it was the condition of the country.

"Mr. Sherman—It was a Democratic law.

"Mr. Teller—It was not a Democratic law. There was not any law and had not been any law. That was long after."

The law that Mr. Sherman referred to was the Wilson tariff, which was not passed until July, 1894, whereas the gold reserve fell below \$100,000,000 in April, 1893, or fifteen months earlier. Every day we have fresh evidence that Mr. Sherman is losing his wits. Senator Aldrich, however, is not in his dotage. He knows perfectly well that President Harrison's Secretary of the Treasury, Mr. Charles Foster, in his last annual report (December, 1892), predicted an early decline of the gold reserve below the \$100,000,000 line, saying:

"One of the embarrassments to the Treasury, in the opinion of the Secretary, is the inability, with the limited amount of cash on hand above the \$100,000,000 reserve, to keep up a sufficient gold supply. When the demand comes for the exportation of gold, the Treasury is called upon to furnish it. If this demand should prove to be as large the coming year as it has been for the past two years, gold in the Treasury would be diminished to or below the reserve line."

But to return to the silverites, the condition of trade and industry which they bewail in their platform is mainly their own work. They caused the Sherman act to be passed. Its consequences were an alarm in the public mind and a withdrawal of capital from the country. When a scarcity of capital began to be noticed, they said that it was caused by the demonetization of silver which had taken place twenty years earlier. They overlooked the years of prosperity that had intervened. They ignored the fact that an era of great business activity began in 1879, when specie payments were resumed, and continued with slight interruptions until the Sherman act was passed, and until its operation had had a marked effect in the expulsion of gold from the country. Then they said the evil dated back to 1873, and many of them believe so now.

It is perhaps hopeless to reason with people who go back to ancient history to find the cause of troubles that their own immediate misconduct has brought upon them; yet he must be a very ignorant man who cannot see that a withdrawal of capital from the country is an adequate cause of all the evils complained of. Every one of these evils is explainable by the single phrase "lack of capital." This will define and describe not only the general badness of trade, but the badness of every individual's trade, his want of profit, or

his loss of employment. It is immaterial whether the capital withdrawn is native or foreign. It is immaterial whether the owners of it are Americans or Europeans. Nor is it of any importance whether the motive impelling them to withdraw their money is fear of a change of the money standard or a war scare. The effect is the same. Bad trade, scarcity of money, higher rates of interest, curtailment of loans must follow, and when they come, some leatherhead who has done all in his power to drive capital away by threatening us with the silver standard or with a foreign war, declares that the "money power" is producing all the misery by "cornering gold." First tell every man who has a dollar that you are going to fix things so that it will be worth only fifty cents, and when he takes it to a place where you cannot work this transformation, accuse him of maliciously causing a scarcity of money. O Liberty, how many sins are committed in thy name!

THE ARMENIAN RESOLUTIONS.

THERE has been more debating in the House and Senate over the Armenian resolutions than there was over the Venezuelan correspondence, but no more real taking of counsel. The discussion in the House on Monday had the aerial character which usually marks the fiery utterances of young men's debating clubs. Where else but in the proceedings of such a body would one find it solemnly resolved that "it was an imperative duty, in the interests of humanity, to express an earnest hope" that somebody else would behave properly? What other body would order the Secretary to send this resolution to six first-class Powers as an encouragement to execute one of their own treaties to which we are no more a party than the Y. M. C. A.? We may imagine the hilarity with which it will be received in the various European chancelleries, and the mock solemnity with which its receipt will be acknowledged. We doubt whether it is worth while to notice that the resolutions abandon that part of the Monroe Doctrine which denies our right "to take part in the wars of European Powers in matters relating to themselves" also Secretary Olney's recent interpretation of the Doctrine, which shuts us out from "wars or preparations of wars with whose causes or results we have no direct concern," and which closes with the remark:

"If all Europe were to suddenly fly to arms over the fate of Turkey, would it not be preposterous that any American state should find itself inextricably involved in the miseries and burdens of the contest? If it were, it would prove to be a partnership in the cost and losses of the struggle, but not in any ensuing benefit."

In fact it would not be easy to make up, by inference, a more complete repudiation of our doctrine of non-interference in European matters, as the complement of the non-interference of Europe in ours.

The new revised Doctrine now is, that we may interfere in European affairs when we see the European Powers plainly neglecting their duty to each other, or when in any part of Europe "the hand of fanaticism and lawless violence" seems to us too strong, or when "men and Christians" in any part of Europe seem to us to be deprived of due legal protection. But surely we ought not to refuse this sympathy to "men and Jews," and yet we have never threatened Russia for expelling her Jewish population under circumstances of great cruelty. Lastly, how are we to assert this right to look after the manner in which European Powers discharge their domestic duties, without granting them the right to pass resolutions and address exhortations to us about our negligences and failures—about our mob law, for instance, as expressed in the unpunished murder of the Italians in the jail in New Orleans a few years ago; in the massacre of the Chinamen in Wyoming; in the numerous, continued, and horrible lynchings all over the country? Are we prepared to accept meekly resolutions of reprobation on these topics from the British Parliament, and the Reichstag, and the Russian Chancellery, and the retort courteous from the Sultan? We doubt it greatly, and yet the probability that we shall have to put up with it, on principles of reciprocity, was never mentioned in the debate.

This vain talk was followed, as usual, by a stern resolve to "stand behind" the President in "the most vigorous action he may take for the protection and security of American citizens" in Turkey. What would or could "our most vigorous action" be? The whole of our fleet put together would not be more than sufficient to force its way up to Constantinople, if all the Powers agreed to stand aside and let it be done. Some of our ships would be sunk in the process. The others would arrive in a dilapidated condition. Both banks of the Bosphorus would be in possession of the enemy, and that enemy a hostile and fanatical population, which fights Christians with great fierceness. Without a land force, where would our coal and supplies come from, and how would the ships get back again after the Turks had time to prepare for their return? Suppose the Sultan, under threat of bombardment, were to agree to restore order in Armenia, how would this benefit the Armenians? They are hundreds of miles away from Constantinople, and they are being massacred by local Mussulmans who pay no attention to the Sultan's orders. *The Sultan has already made to the Powers all the promises which we could possibly extract from him by any action, however vigorous, without helping the Armenians in the smallest degree.* Moreover, there is no proof that we have received any injury from the Sultan, except the destruction of property, and for this, according to all accounts, he is willing to pay.

If we were talking to practical men of business, or serious diplomats, and not mere Jingoes, we should point out that there are only two ways in which we can do anything for the Armenians. One is to threaten Russia with war if she, the only Power which can act promptly and effectively in the matter, does not occupy Armenia and restore order. The other is to offer to support Great Britain in any measures she may take to carry out the Treaty of Berlin. She has undoubtedly been checked in her recent attempt to coerce the Sultan by the fear that she might find herself acting alone or in the face of a powerful opposition, for she is not a general favorite, and France wants Egypt, and Russia Constantinople. But such support, to be really effective, would involve the despatch to the Mediterranean of a powerful naval squadron and say 50,000 men of a land force. We have little doubt, speaking under naval and military correction, that this, with the troops which England could assemble from England and India, would carry everything before it in Asia Minor, and that the spectacle of the two great Anglo-Saxon Powers acting together, not for aggrandizement but for order and civilization, would be one of the finest the modern world has seen. But, Jingo brethren, it would involve the abandonment of the sacred Doctrine of "the immortal Monroe," and it would commit you to the cares and responsibilities and dangers of European politics, and—harder than all—it would compel you to be civil to the odious "Britishers." If you are not ready for something of this sort, the less you vapor and threaten, the more the civilized world will respect you.

POLITICAL DEVELOPMENT IN JAPAN.

TOKYO, December 28, 1895.

THE course of affairs in Japan since the treaty of peace with China has been on the whole different from what might have been expected six months ago. The immediate effect of the peace upon the foreign relations of Japan has been comparatively slight. Not even the Korean troubles have proved to be so fruitful of immediate consequences as seemed likely at first. With Russia and other countries her relations, at least for the present, have assumed all the smoothness and cordiality of the period before the war. Nor is it likely that in the near future this status will be disturbed. So many terrific contingencies lie concealed in the present situation that no government, however eager for success or expansion, will dare to rouse them.

The reflex action, however, of the war and its train of circumstances has given a most distinct impulse to the internal political development of Japan. It will be remembered that party politics in this country has always been in a state of confusion. At least three parties have existed between whom it is not easy to distinguish any essential political principle. All have been against the Government, all have been opposed to the Satcho combination, all have advocated a strong foreign policy, all have stood for the revision of treaties, for the reform of local government, for

the expansion of commerce, and for a large number of equally desirable objects. But while these parties have had so many objects in common, their attitude toward each other, except when a common enemy was to be attacked, has been anything but friendly. Each party has occupied its time either in attacking the Government or in denouncing the opposing parties.

A new step has lately been taken, however, which promises to put both the Government and the parties in a somewhat different position. It may be fairly said that no party in Japan can have much chance for success that is not opposed to the Satcho and strongly in favor of responsible party cabinets. The answer that the various statesmen in power, and especially Marquis (formerly Count) Ito have made to all demands for popular governments, is that the ministers are responsible not to the Parliament but to the Crown. The weakness of the argument, however, has been apparent probably even to the present premier. He must be aware that, under present circumstances, it is not the Emperor who summons a new cabinet when the old resigns, but a few statesmen who form an oligarchical faction in the state. Nevertheless, the means of fighting this system of government, powerful in its resources, ability, and past record, have not been within reach of the popular parties, and up to the present time all parliamentary warfare has attacked it in vain.

Early in November a rumor spread of a reconciliation between the Radical or Liberal party (Jiyuto) and Marquis Ito. It was stated that the party leaders of the Jiyuto had approached the premier with a view to harmonizing the differences which had so long separated the representatives in Parliament and the Government. Among all the statesmen of national reputation who have in recent years held the reins of Government, the Liberals could not have approached a more tractable man than the present premier. Of a compromising disposition, by nature disinclined to continual bickerings between the Parliament and Government, he has doubtless come to the conclusion, especially since the close of the war, that the old measure of dissolving Parliament was no longer practicable. Japan is certain to have a serious time of it in the next few years, even under the most favorable circumstances; and with an irreconcilable political system the danger of successfully working the Government and guiding the country through its difficulties would be immensely increased. Whatever the motives actuating him may have been, it is known that Ito did not long hesitate to accept the proposals of the Jiyuto. The latter agreed to support the Government in the next parliamentary session, and thus, for the first time since the adoption of the Constitution, the Government is to have an avowed supporter among the representatives of the people in the lower house.

The Kaishinto and other enemies of the Jiyuto interpret this political alliance in a most unfavorable sense. Their principal charge is that the Jiyuto, long deprived of the rewards of office, have at last fallen a victim to the wiles and bribes of the Government. In this and other ways the Opposition are trying to discredit the Liberals in the country. But it is doubtful whether these charges will have much effect. Most of the local political associations have cordially supported the action of the representatives of the party, and two or three members who have tried to play a double game by carrying on negotiations with the Opposition in case the alliance of their party

with the Government proved unpopular, have been promptly expelled from the ranks of the Liberal party. Whatever faults may be attributed to the Jiyuto, it can scarcely be said that they are double-faced, or ambitious for Government posts beyond the usual human measure. Their leader, Count Itagaki, has been called a political dreamer, a theorist; but no one has ever charged him with being other than a singularly honest and upright man. It is hard to say how far he controls the action of his party—in some cases his advice is certainly not accepted; but in the present instance it is almost certain that he wholly approves of the step taken by his party. His assurance on this point is almost a guarantee that the coalition between the Government and the Jiyuto is free from any political bargaining or personal gain to the leaders of the party.

Two motives are mentioned by the Liberals themselves for the coalition. The first of these is the obvious one that the Government work can be immensely expedited by the loyal support of a strong popular party in the lower house. Hitherto the Jiyuto, though at times it has given the Government a grudging adherence, has for the most part joined in the cry against the Government. But for this refusal of the party several years ago to vote any bills introduced by the ministers, the position of the Government would have been immensely stronger than it was in the late war. More than once measures to increase the army and navy, especially the latter, failed to pass because of the implacable temper of the popular representatives towards any measure bearing the Government stamp. It is generally agreed, both by the Japanese themselves and by foreigners who are in a position to know, that had the Government succeeded in putting the navy in the state of efficiency it proposed four years ago—had the Japanese navy, for instance, had two first-class battle-ships—the Japanese would have been at Pekin six months before the war actually ended. That the Government was so bitterly opposed by the various parties was one of the reasons why the Chinese were so eager for war, and why they were so confident of victory in the beginning of the struggle. Hereafter the Government is less likely to be placed in this predicament. As one of the spokesmen of the Jiyuto declared in a speech some days ago, "It does not require any uncommon intelligence to see that nothing could be more disastrous to the interests and dignity of the Empire than that the people should be engrossed in petty party disputes and contentions among themselves."

Another reason which the Jiyuto assign for their action is the influence their coalition with the Government will have in promoting true party government. Naturally their opponents, who are themselves aiming to introduce government by party, ridicule this assertion of the Liberals. It is declared to be absurd on its face that any party can give its support on this ground to what is not a national but a clan government. Yet, in spite of an apparent self-contradiction, there is no doubt that the Jiyuto have a strong case in this contention. Hitherto the Government has stood aloof from all parties. It has claimed to be the impartial arbiter between the conflicting demands of the popular representatives. To whatever extent *in fact* the Government may not have acted up to this assumption, yet it logically could present a strong front so long as it did not deviate grossly from this self-imposed rôle. But hereafter the cabinet ministers cannot fairly claim to be independent of party demands, for the simple reason that they

have openly admitted a definite party to support them. If they fail to get sufficient votes from their friends, it is difficult to see how they can continue in power. Marquis Ito must have understood this contingency from the moment he agreed to receive the Jiyuto as a Government party. Probably he even acted deliberately in this matter, believing that the time had come when the country would no longer brook the present Satcho administration. To quote another of the spokesmen of the Liberals in a recent speech:

"It is our conviction that, by taking this step (i. e., coalition with the Government), we shall effectually promote the introduction of a system of responsible cabinets—a consummation which has ever been the cherished hope of the Liberal party. For the attainment of that hope we have suffered much, but the sole result of our endeavor has hitherto been to strengthen the Government's resistance to the realization of our object. To continue the fruitless struggle at the present juncture would be not only to thwart the carrying out of various measures of paramount importance, but also to retard the attainment of our long-cherished object. We are confident of victory in the coming session of the Diet. But, should we be defeated, we should be ready to hand over the government of the country to our opponents, if they faithfully represent the sentiments of the people."

A last and most important point for consideration is how far the Jiyuto can give effectual support to the Government in the coming session. If the party had a clear majority over all other parties in the lower house, there would be little difficulty, either for the Government or for the Liberals. But the latter cannot claim more than 109 or 110 party representatives out of a total number of 300. The Progressionists, who are the most active opponents of the Government, claim fifty-three, and the National Unionists thirty-two; while the Independents, together with other minor political organizations, make up the remainder. It is conceded that the Jiyuto can count upon at least twenty or twenty-five of the independent vote, while the Kaishinto claim as many as seventy or seventy-five. From these figures it follows that the National Unionists, with a following of only thirty-two, hold the balance of power between the two larger parties. The Progressionists have made strenuous efforts to get this party to join them in opposing the Government, but so far without success. The National Unionists have little sympathy with the statesmen now in power; on the contrary, they are hostile to both the compromising temper and the personnel of the present cabinet. But they are backed by the military classes of the empire, and cannot join with a party eager to antagonize the Government even in its military and naval policy. Hence the National Unionists are on the horns of a dilemma from which they cannot at present find any escape. Common rumor has it that they will vote with the Opposition on condition that the latter agree to the necessary military and naval bills.

Under the circumstances the present Government is not in a position of security. It will probably be authorized to carry out large designs for the country's welfare, but by the same authority it will be declared unfit for the purpose of carrying on the administration. Should the Jiyuto and their friends have the requisite number of votes to save the Government from the attacks of the Opposition, the present cabinet will be more certain of its position than it has been for a number of years. But the opposing parties are already gathering their strength for an address to the throne, in which the whole policy of the Government will be

censured. If this succeeds in passing the House, the cabinet must necessarily dissolve the present Parliament and make an appeal to the country. If a hostile majority is returned, no other escape seems possible but for the present ministers to hand in their resignations. Even if a friendly majority should be returned, the Government will stand committed, and thus in either case party government would be an accomplished fact in Japan. G. D.

TASMANIA.

HOBART, November 26, 1895.

TASMANIA, somewhat smaller than Ireland, is the least in size, though not the least interesting, of the Australasian colonies. Most of its surface is mountainous and rocky and is not likely ever to be brought under cultivation. There are twenty-one mountain peaks 3,000 to 4,000 feet high, eighteen 4,000 to 5,000, and two slightly over 5,000. Unless where cleared, and with exception of the mountains over 3,000 feet in altitude, it is covered with forests constituted principally of different species of eucalyptus. There are coal mines; and gold, silver, and tin are being discovered in considerable quantities in the northern districts. Fruit farming is becoming a considerable industry. After ninety-one years' settlement, the population is but 155,000; less than one-third of the surface has been alienated, and but four per cent. thereof has been brought under cultivation.

It is practically an independent State, having an ambassador, under the name of an agent-general, in London, and, under the aegis of the British Empire, is relieved from the necessity of maintaining an army and navy. Its upper house consists of eighteen, its lower of thirty-seven members—the one elected by a somewhat restricted and partly educational, the other by a general franchise. The public debt has, within the last few years, largely under labor and sectional influences, been run up from £3,200,000 to £7,600,000. It now stands at £50 per head of the population, nearly twice the national debt of the United Kingdom. But then it has large effects to show, mainly in railways—not merely prestige, honor, and glory, as with us at home. These state-owned and state-worked single-track railways cover 476 miles, and, beyond working expenses, return little over one per cent. on capital. The main roads are excellently maintained, also by the state. The fiscal policy of the country is, under the plea of revenue requirements, mildly protective. To a certain extent, but in a lesser degree than her sister colonies, Tasmania is passing through a wave of commercial depression, consequent upon inflated dealings and engagement in unproductive works upon borrowed capital. "She has," to use a nautical term, "been brought up with a round turn," and artisans recruited from country districts and drawn from other countries have had to look for work elsewhere. The severe lesson is being learned that if there are born more sons and daughters than the country can, by a natural process of expansion, support, it is wiser that they should follow naturally expanding industries abroad than that they should, at the cost of others, find occupations at home by building up unnatural trade barriers. Cheap ocean transit has worked radical changes. Wheat land has gone out of cultivation, and ruins are to be met both of water and of wind-mills.

It was a delightful change from the heat and bustle and wide extent of Melbourne and from

the low-lying shores of Port Phillip, to find ourselves, after a sea voyage of twelve hours, steaming up the beautiful, winding, thickly wooded shores of the Tamar. Launceston, with a population of 17,000, is pleasantly situated thirty miles up this river. A railway connects with the capital Hobart, of 25,000, on the Derwent, at the south of the island. Both these are regularly laid-out, quiet cities, with more of an Old World air about them than others we have seen in the southern hemisphere. The line connecting Launceston and Hobart may be said to roughly divide the country into two-thirds and one-third. The two-thirds portion, lying to the west, is for the most part mountain, lake, and waste; that to the east comprises most of the settled districts. The mountainous character of the country is expressed in the Tasmanian railway time-tables, which give, in addition to the ordinary information, columns showing the height of the stopping-places above the sea. The main line between Launceston and Hobart attains an elevation of 1,400 feet. We never travelled on such a tortuous line apparently without sufficient cause. The explanation afforded is that it was constructed for a lump sum by a British firm which acted in the double capacity of engineers and contractors, and to which cheapness of construction, without regard to the future cost of working, was the main consideration.

On the more than one hundred miles of smooth waters of D'Entrecasteaux Channel, Derwent estuary and river, and Norfolk Bay, there is some really fine and much charming scenery. The eucalyptus forests at a distance appear somewhat sombre and uninviting; but, once in their leafy depths, a world of delight is opened up to the traveller. We spent many days lingering by the lakes and exploring the recesses of their ferny valleys. Now, in spring, the undergrowth of shrub and heath is bright with blossom; the air, redolent with scents, is fresh and pure; the coloring of the young trees is varied in different tints of green. To one subjected for long years to the storm and stress of public affairs there is a feeling of almost intoxicating delight in these leafy primeval shades. Fine strands are to be found on the shores of the Tasman peninsula and on the east coast—strands where the pellucid waters of the Pacific break on long reaches of sand, upon curiously formed terraces of basalt, against noble forest-crowned cliffs and promontories. Upon Maria Island, which we reached by a four-hours' crossing in an open boat, from Spring Bay, we found magnificent scenery. Ten miles long by an average width of five miles, clothed in forest and thick scrub, it is the abode of countless numbers of a small species of kangaroo. There are only two families residing upon it, amid the ruins of a former penal settlement and of extensive works connected with abandoned speculations in the direction of vine-culture and cement manufacture.

We have been most favorably impressed by the Tasmanians. There is, outside the towns, where there continue to be amusing gradations, much of that equality of class feeling and simplicity of dress and natural dignity of bearing to be met with in Switzerland, combined with perhaps gentler manners bred of a milder climate. We found travelling cheap and dealings open and fair. Drink-shops are neither many in number nor intrusive in appearance, and we have seen no drunkenness. Through several weeks of railway, coach, boat, steamer, and pedestrian travel, often glad to put up at simple inns where accommodation

was not always of the best, we have heard neither coarse nor even harsh language.

In the history of this interesting country there has been much of the tragic. Upon a small scale, but seldom elsewhere in a greater degree, have the horrors of the impact of civilized with uncivilized man been here illustrated. Seven or eight thousand aborigines inhabited the islands when it was settled in the early years of the century. Sunk in a low condition of barbarism, they went unclothed. But all competent authorities agree in testifying that they were endowed with many good qualities, and were capable, if fairly treated, of living harmless upon the borders of civilization. The desires of successive early governments that this should be, were frustrated by the intolerable outrages inflicted upon the aborigines by escaped convicts and semi-barbarous whites. The aborigines, unable to discriminate, made reprisals alike upon the peaceful settler and the murderous bushranger. The Government felt itself driven into a war of capture or extermination. The few who survived, taken by force or decoyed by false promises, were deported to the islands in Bass's Straits. Changes in modes of life, drink, disease, and neglect soon did their work. A miserable remnant were brought back to a settlement near Hobart. The last full-blooded native, a woman, passed away twenty years ago. Her skull, along with the bones of other extinct Tasmanian mammals, is preserved in the Hobart museum. A few half-castes live on the islands, where they make a living by curing fish and mutton-birds.

Tasmania was settled by the United Kingdom mainly as a penal colony. Here were deported alike hardened offenders as well as persons, of both sexes and often of tender years, who had committed offences for which now a few days', or at most a few weeks', imprisonment might be considered sufficient punishment. The wretched Irish peasantry, driven to outrage and violence under the iron heel of class and landlord rule, contributed in no small number to this latter class. Here settled down, after the Napoleonic wars, many British officers, who received grants of land upon easy terms. Among other advantages held out to these and other free settlers was the assignment to them of convict labor. The missionary labors of James Backhouse and George W. Walker have left the marks of Quakerism upon the society of the island. The convict system was here extended as it became apparent that it could not be maintained in the other colonies. Upon the Tasmanian Peninsula, at Macquarie Harbor, at Maria Island, and at Norfolk Island, a far-away dependency, the system was carried out in its concrete and severest form, unmitigated by the safeguards of a numerous surrounding free population. Escape was all but impossible: there was nothing available for the support of life in the forests. There are authentic instances of cannibalism among parties who did make the attempt. Chain-gangs were subjected to the severest labor in swamp and forest, cutting and deporting timber and mining coal. The lash was freely used. To the gallows were constantly consigned victims. Suicide, even among convict children, was not uncommon. A case caught our eyes in an old Hobart paper of a clergyman magistrate sitting alone on the bench, sentencing an unfortunate to thirty lashes and three years in a chain-gang for altering an order for sixpence into one for two shillings and sixpence. This system has long been swept away—all save the remembrance, and ruined walls and vacant barracks, and open

cells once impervious to light and sound, where men graduated for the madhouse or were done to death. The forest grows in upon them, and the lizards creep over them. "Such of us as were not bad were made bad," remarked to us an aged survivor of the system. At Port Arthur, a locality almost rivalling Killarney in beauty, we, the other day, rowed across to a lovely island where, in unmarked graves, lie 1,600 convicts. This system has found its 'Uncle Tom's Cabin' in Marcus Clarke's 'For the Term of his Natural Life,' a book the name of which is here in every one's mouth. Those who have lived through the scenes therein described, assure us that while they never could all have occurred in the experience of one connected set of characters, they are based on truth and have occurred "one hundred times over." By the upper classes here, many of whom have sprung from "old hands," everything is done to erase the memory of those times. Records have been destroyed, the names of places altered, conversation upon the subject is discouraged. Among the people the system is with loathing freely spoken of, and the escapes and adventures of Martin Cash and other outlaws give interest to many a locality and form the subject of many a story. To Irishmen, Port Arthur, Maria Island, Lake Sorell, Bothwell, and other localities will ever be associated with the names of W. Smith O'Brien, Mitchel, Martin, Meagher, and their compatriots, the exiles of 1848. There are sad and bitter memories connected with the history of Tasmania, but fortunately their continuity has been completely broken. In a certain sense Tasmania is the Ireland of the Australasian colonies, for the most enterprising and vigorous of her sons are likely, for a long time to come, to find wider scope for the exercise of their abilities abroad than at home. But this arises from natural and economic conditions. She is mistress of her own resources and of her own destiny, and has doubtless a happy future before her.

D. B.

Correspondence.

SECRETARY SEWARD AND THE MONROE DOCTRINE.

TO THE EDITOR OF THE NATION:

SIR: You early called attention to the fact that

"in the negotiations for the only application of the Monroe Doctrine to Spanish-American affairs which we have ever made—the expulsion of the French from Mexico—there was no mention of the Monroe Doctrine at all. . . . Mr. Seward said he did not undertake to dictate to the Mexican people what kind of government they should have. They might have Maximilian if they pleased, but they must be free to choose; and therefore the French troops should be withdrawn."

Mr. Seward not only felt himself not bound by the Monroe Doctrine, but on several occasions expressly repudiated it, being justified by a resolution of the House of Representatives, passed in 1835 (when the matter was fresh), which was surely intended to be a correct interpretation of the Doctrine. It reads as follows:

"That the United States ought not to become a party with the Spanish-American republics, or either of them, to any joint declaration for the purpose of preventing interference by any of the European Powers with their independence or form of government, or to any compact for the purpose of preventing colonization upon the continents of America; but that the people of the United States should

be left free to act in any crisis in such manner as their feelings of friendship towards those republics and as their own honor and policy at the time dictate."

In other words, the United States should not be fettered by any doctrine or programme (no true statesman ever acted on a doctrine or dogma), but were to be left free to act as occasion might require. Mr. Calhoun, one of the advisers of Mr. Monroe, who had taken most interest in the declaration, speaking of the Monroe Doctrine in the debate about the acquisition of Yucatan, asserted most emphatically that the United States was under no pledge to intervene against intervention, but was to act in each case as policy and justice required (see note 36, p. 97, Wheaton's 'International Law,' Dana's edition).

A resolution introduced by Mr. Clay, January, 1824, in the House of Representatives, "deprecating European combinations to re-subjugate the independent American States of Spanish origin, and thus giving support and emphasis to the declaration in the message of December 2, 1823," seems never to have been acted upon, and was not referred to any committee.

Now what were the views of Mr. Seward when France had invaded Mexico in 1838? In a dispatch (October 9, 1838) to Mr. Motley, the American Minister at Vienna, who had expressed great alarm at the expedition of Maximilian, and sought instructions as to asking the Emperor of Austria for explanations in allowing recruiting for Maximilian's army to go on in his states, and had referred Mr. Seward to the Monroe Doctrine, Mr. Seward instructed him not to interfere, using these remarkable words:

"France has invaded Mexico, and war exists between the two countries. The United States hold in regard to those two states and their conflict the same principles as they hold in relation to all other nations and their mutual wars. They have neither a right nor any disposition to interfere by force in the internal affairs of Mexico, whether to establish or maintain a republican or even a domestic Government there, or to overthrow an imperial or foreign one, if Mexico shall choose to establish or accept it."

Mr. Seward sent copies of this dispatch to our ministers at Paris, Madrid, and Brussels, undoubtedly for the purpose of advising the Governments to which they were accredited of his views. But, even before that dispatch to Mr. Motley, the writer of these lines was made acquainted with Mr. Seward's views regarding the Monroe Doctrine, by a dispatch received by him in April, 1838. The French expedition was very unpopular in Spain, and just at that time the Madrid press was full of articles denouncing bitterly the policy of Louis Napoleon. In an entirely unofficial and friendly conversation with Marshal Serrano, Minister of Foreign Affairs, we spoke about the Mexican trouble, and in the course of our talk I mentioned that the present events were quite parallel with those happening in 1823, and that I thought that the Monroe Doctrine would be quite applicable. Serrano did not seem to know much about this doctrine, which I explained to him. In reporting my official conversation with the Foreign Minister to Mr. Seward, I also spoke of our unofficial one, mentioning that I had brought the Monroe Doctrine to the recollection of Marshal Serrano. It was not long before I received a dispatch from Mr. Seward, that the President had approved of what I had discussed with Marshal Serrano officially, but he regretted to have to say that the President had by no means approved of what I had to say in relation to the Monroe Doctrine, and that he desired me to at once call upon Marshal

Serrano and assure him that what I had said regarding the Doctrine was only my private view, and did not express that of my Government. Before, however, I received this dispatch, the ministry of which Serrano had been a member was dismissed. I at once had concluded, on reading the dispatch, that it was not written for me, but for the French Government, and so I dropped the matter; and, sure enough, I found in the diplomatic correspondence of 1863, published by the State Department, in a dispatch from Mr. Washburn, our Minister to Paris, the following passage: "I read your dispatch, No. 51, to Mr. Koerner, our Minister at Madrid, to Mr. Drouyn de Lhuys (Minister of Foreign Affairs), and he expressed his extreme satisfaction with it."

Let me add that Mr. Calhoun has been reported to have said that when the draft of Mr. Monroe's message was laid before the Cabinet for consideration, it did not contain the colonization clause; that that passage was inserted by Mr. Adams, and had never been considered and approved by the Cabinet. The fact that this clause occurs early in the message, and is followed by much other matter before the non-intervention passage is reached, lends great probability to Mr. Calhoun's remarks, as certainly those two subjects in the message logically would belong together.

In conclusion, I desire to make another point. Great stress has been laid of late on the fact that the English Government received the message of Mr. Monroe with very great satisfaction—that the Liberal press rejoiced at it; and we are favored with extracts to that effect from English journals of that time. This is all very true, for it conformed to the views of the English Government; but it is equally true that Mr. Canning remarked to Mr. Rush, our Minister at the Court of St. James's, that he was very much displeased with the colonization clauses as being built on false premises; that the southern part of the continent was not settled by Christian nations, so as to exclude all further European colonization, but was the abode of roaming savages. Such countries had always been considered as a field for civilized colonization. In some of his speeches he expressed his dissatisfaction with that part of the message, while he enthusiastically approved of the non-intervention clause. That the other great Powers of Europe which had just planned intervention do not accept the Monroe Doctrine as binding upon them needs no proof.

GUSTAV KOERNER.

BELLEVEUE, ILL., January 30, 1896.

JINGO HISTORY.

TO THE EDITOR OF THE NATION:

SIR: In Mr. Cabot Lodge's late speech on the Venezuelan question are some statements that should not go unchallenged:

(1.) Speaking of the bill for the military occupation of Yucatan, to prevent its becoming a British colony, he says: "The war in Yucatan came to an end, and the bill never reached a vote."

Mr. Polk (1848) sent a message to Congress stating that Yucatan had declared its independence of Mexico, and had offered the sovereignty of the country either to the United States or to England; he further stated that the Indians there were conducting a destructive war against the whites, and he declared that the occupation of Yucatan by England would be an infringement of the Monroe Doctrine and that we should resist it. Our army was then in Mexico, and there was no

more necessity for an act of Congress to authorize it to protect the inhabitants from Indians than to storm Chapultepec. As the debate in the Senate shows, the real object of the message was to prevent England from occupying the country. When Mr. Hannegan saw the bill would be beaten, he let himself down easy by moving its postponement; alleging the very inadequate reason that the *Indians had stopped killing the white people*. Mr. Calhoun, John Davis (Senator from Massachusetts), and others denied that the Monroe Doctrine had any application to the case. Mr. Niles said there was no evidence that the designs of England had been abandoned, if they ever existed; the argument of humanity had been given up—the argument of policy remained. The appeal to humanity was a mere makeshift, and was not made an issue in the debate.

(2.) Mr. Lodge says of the Monroe Doctrine that "Mr. Calhoun is the only American statesman of any standing who has tried to limit its scope."

If he will read Mr. Adams's messages explaining the object of the Panama mission, and the debates in Congress upon it, he will see that all of the statesmen of that day repudiate the construction now put upon Mr. Monroe's declaration by Mr. Lodge. In his 'Life of Webster,' speaking of his speech on the Panama mission, Mr. Lodge says: "He made a full and final exposition of the intent of the Monroe Doctrine." True, he did make a full exposition of it, and he gave it the same limited scope and interpretation that Mr. Calhoun did in his Yucatan speech. It was not final, however, for Mr. Lodge has given an entirely different exposition of it. Both say that there is no general rule as to the circumstances that will justify armed intervention in the conflicts of other nations. Both Calhoun and Webster say that nothing but manifest, imminent danger can justify such interference. Mr. Webster thought that if a European armament were sent against Chili and took possession of the country, it would not be a *casus belli* with us because Chili is so distant, but that it would be different, by reason of its proximity, if it landed in Cuba. Mr. Calhoun said the same thing. Mr. Lodge says if England takes a strip of land in Venezuela to which the United States thinks she is not entitled, it would justify war. It is all the same to him whether she is near or far away.

(3.) Mr. Lodge quotes the two declarations of Mr. Monroe's message and joins them together, as if they related to the same subject-matter. He thereby perverts and distorts Mr. Monroe's meaning and creates a false impression. If read in connection with their context, it will be seen that they relate to entirely different subjects—one to the designs of the Holy Alliance in Spanish America, the other to the negotiation then pending with Russia about the Northwest (Oregon) Territory. It is supposed by many that Mr. Monroe said that the United States would not permit any European Power to colonize on either of these continents. He said nothing of the kind. He did say that there was no longer any territory subject to colonization by a European Power. Now, as Mr. Adams's correspondence with the American Minister to Russia, and his special messages to Congress explanatory of the objects of the Panama mission, and Mr. Clay's dispatch to Mr. Poinsett, show, the declaration simply meant that the whole eminent domain of the two continents had become vested in independent civilized nations, and was no longer subject to colonization by right of prior dis-

covery and occupation. But this would not exclude the right of acquisition by treaty or conquest.

(4.) Mr. Lodge says that slavery was the cause of the failure of the Panama Congress. It may have inspired some of the opposition to the mission; it had nothing to do with its failure. Bolivar had put the same interpretation on the Monroe message that Mr. Lodge does, viz., that it implied a promise of a defensive alliance and protectorate over Spanish America. Hence the United States were invited to participate in the Congress. The disavowal of any such purpose by the friends of the mission in the United States destroyed the illusion. The South American deputies never attended it; the American ministers went and found nothing but yellow fever and mosquitoes. One of them died. The mission was an abortion.

JNO. S. MOSBY.

SAN FRANCISCO, January 16, 1896.

AMERICAN HATRED OF ENGLAND.

TO THE EDITOR OF THE NATION:

SIR: Your editorial on American hatred of England omits two or three factors. One of these is the influence of the school histories in use a generation and more ago. Every one of these books that I read in my youth was pervaded with a distinct anti-British animus. The conduct of Great Britain in the Revolutionary war and the war of 1812 was placed in an odious light. It cannot be said that they were incorrect; but when the facts were presented without reference to the civilization of the times, the inevitable conviction produced in our minds was that every British soldier was a fiend of a peculiarly malignant type, and that every British officer was his abettor. When the antipathy thus engendered had somewhat subsided, the attitude of the English ruling class towards the North, and their outspoken sympathy with the South in the late rebellion, did much to kindle it afresh.

Again, Irish influence in this country is a perennial instigation to our hatred of the English. Nobody need be told what a powerful factor the Irish-Americans are in our politics, and five-sixths of them are animated by the most intense animosity against the English Government and the English people. How far this animosity is justifiable it does not here concern us to inquire—the fact is patent to the most superficial observer. There is, I imagine, hardly a community in any of the Northern States in which the Irish are not making an active propaganda of hatred against the English both by lectures and by newspapers. As our sympathies are always with the injured party, the effect of this crusade of words is easy to predict. As the defence is but feebly represented, or not at all, the resulting mental state of our public would be easy to imagine even if we did not see it.

CHAS. W. SUPER.

JANUARY 20, 1896.

TO THE EDITOR OF THE NATION:

SIR: Might I suggest, as an additional reason for the hatred of England in the United States, the Englishman's habit of giving his critical faculties full sway wherever he goes? He comes to this country for the first time under the impression that he is visiting his nearest relations, and may therefore speak as freely as if he were dealing with things at home. Only time teaches him that Englishmen are foreigners in America, while Americans in England are always Americans—the term "foreigner"

being generally reserved for non English-speaking peoples.—I am, sincerely yours,

HERBERT SKINNER.

COLORADO SPRINGS, COL., January 20, 1896.

ADAM SMITH ON PROHIBITORY DUTIES.

TO THE EDITOR OF THE NATION:

SIR: In spite of Mr. Rae's care, he has overlooked some interesting letters of Adam Smith. Among them, I think the following is of the highest interest. Much as he had written on bounties and prohibitions, I know of no confession of ignorance so pertinent as his discovery that not a rag of his clothing was on his back legally, but in defiance of the law. I believe this letter has been in print, and on my copy is marked "*Athenæum*, 7 April, 1860"; but it is sufficiently interesting to be again printed.

WORTHINGTON C. FORD.

WASHINGTON, January 20, 1896.

ADAM SMITH TO WM. EDEN.

EDINBURGH, 3rd of January, 1780.

DEAR SIR:

It gives me very great pleasure to hear of the success of your letters to Lord Carlisle. I acknowledge I was not a little anxious about the success of a pamphlet which abused no party and no person, and which represented the state of public affairs as less desperate than it is commonly believed to be. The nation, I hope, is coming both into better humour and better spirits than I believed it to be. Besides the editions you mention, your letters have gone through an edition even in this narrow country.

I do not know how to thank you for the very honourable mention you have made of me. It does not occur to me that much can be added to what you have already said. The difficulty of inventing new taxes, or increasing the old, is, I apprehend, the principal cause of our embarrassment. Besides a strict attention to economy, there appears to me to be three very obvious methods by which the public revenue can be increased without laying any new burthen upon the people. The first is a repeal of all bounties upon exportation. These in Scotland and England amount to about 800,000*l.* a year, exclusive of the bounty upon corn, which, in some years, has amounted to a sum equal to all the other bounties. It will probably amount to a very considerable sum this year. When we cannot find taxes to carry on a defensive war, our merchants ought not to complain if we refuse to tax ourselves any longer in order to support a few feeble and languishing branches of their commerce.

The second is a repeal of all prohibitions of importation, whether absolute or circumstantial, and the substitution of moderate and reasonable duties in the room of them. A prohibition can answer no purpose but that of monopoly. No revenue can arise from it but in consequence of its violation and of the forfeiture of the prohibited goods. Instead of encouraging, it commonly prevents the improvement and extension of the branch of industry it is meant to promote. Dutch cured herrings cannot be imported, upon forfeiture of ship and cargo. They are, however, vastly superior to British cured; you can scarce imagine the difference. The price of a barrel of British cured herrings is about a guinea, and that of the Dutch, I imagine, is nearly the same. Instead of the prohibition, lay a tax of half-a-guinea a barrel upon Dutch herrings. Dutch herrings, will, in this case, sell in Great Britain at 3*s.* or 3*d.*; a circumstance which will confine them altogether to the tables of the better sort of people. The British curers will immediately endeavour to get this high price, and, by superior care and cleanliness, to raise their goods to an equality with the Dutch, and this emulation will, probably, in five or six years' time, raise the manufacture to a degree of improvement which at present I despair of its attaining to in fifty or sixty years. Our fisheries may then rival the Dutch in foreign markets, where at present they cannot come into competition with them, and the manufacture may not only be much improved, but greatly extended.

Prohibitions do not prevent the importation of the prohibited goods. They are bought everywhere, in a fair way of trade, by people who are not in the least aware that they are buying them. About a week after I was made a Commissioner of the Customs, upon looking over the list of prohibited goods (which is hung up in every Custom House, and which is well worth your considering), and upon my examining my own wearing apparel, I found, to my great astonishment, that I had scarce a stock, a cravat, a pair of ruffles, or a pocket-handkerchief, which was not prohibited to be worn or used in Great Britain. I wished to set an example, and burnt them all. I will not advise you to examine either your own or Mrs. Eden's apparel or household furniture, lest you be brought into a scrape of the same kind. The sole effect of a prohibition is, to hinder the revenue from profiting by the importation. All those high duties, which make it scarce possible to trade fairly in the goods upon which they are imposed, are equally hurtful to the revenue, and equally favorable to smuggling, as absolute prohibitions. It is difficult to say what such a repeal of all prohibitions, and of such exorbitant duties as are scarce ever fairly paid, might produce. I imagine it would produce a still greater sum than the repeal of all bounties, provided a reasonable tax was always substituted in the room both of the exorbitant tax and of the prohibition.

The third is, a repeal of the prohibition of exporting wool, and a substitution of a pretty high duty in the room of it. The price of wool is now lower than in the time of Edward the Third, because now it is confined to the market of Great Britain, whereas then the market of the world was open to it. The low price of wool tends to debase the quality of the commodity, and may thus hurt the woollen manufacture in one way as much as it may benefit it in another. By this prohibition, besides, the interest of the grower is evidently sacrificed to the interest of the manufacturer. A real tax is laid upon the one for the benefit of the other. In old times a duty upon the exportation of wool was the most important branch of the customs.

I heartily congratulate you upon the unexpected good temper of Ireland. I trust in God that Administration will be wise and steady enough not to disappoint that people in any one thing they have given them reason to expect. Give them as much more as you will, but never throw out a single hint that you wish to give them anything less. Remember me to all friends, and believe me to be, with great esteem and regard, dear sir, most entirely yours,

ADAM SMITH.

CARELESS MAGAZINE WRITING.

TO THE EDITOR OF THE NATION:

SIR: In *Harper's Magazine* for November, which arrived here yesterday morning, I have just read Julian Ralph's second story of Anglo-Chinese life, entitled "*Plumblossom Beebe's Adventures*," illustrated by C. D. Weldon. The tale touches the seamy side of life in a Treaty Port, and to the great uninitiated public of America it will probably seem a picturesque and accurate delineation of facts. Julian Ralph is a clever journalist, well practised in taking superficial notes of what he sees, and in holding his pitcher-ear wide open for the yarns he may hear, all with a view to working up literary material of his own. I give him full credit for what he has accomplished, but it is the merest hack-work at best. We have all been laughing at his "*pidgin English*" out here—we call it *Ralphese*, for it is nowhere spoken in China as his characters speak it.

Pidgin English is not in the least like "*English baby prattle*," as Julian Ralph states on page 946 of the magazine. Of course, to a globe-trotter it may sound so for a few days, but as soon as he tries to obtain a serious knowledge of it, he should not fail to see that it is a very valuable compromise between Chinese grammar and phonetics and those of

European nations. It is not a haphazard, meaningless babble, invented to soothe the small children; it has regular rules of construction, and is not left to the individual whim of a globe-trotter.

On the first page of his story Ralph exhausts his smattering of the lingo, and says in excuse, "*The pidgin English is too confusing to follow farther*." Why did he begin? Let me give the *Ralphese* and the real *pidgin-English* of page 942 of the magazine, in parallel columns:

RALPHESE.

"He comes some other side, in country," said the go-between. "He belong kidnap girl—some man have tief her.* Been tained singsong girl, but no can do: no gottee good voice. He velly good girl—can plomiset healle time have been velly good."

"But she is not alive," said Sam. "No belong girl—belong wooden t'ing. What for she no move no laugh no belong alive girl? Have makee die? My wantschee one-piece gal can makee play-pidgin, makee laugh makee chin-chin."

*Nominative and objective cases are identical in Chinese, therefore in *pidgin English*. There is only one third-personal pronoun, which in Chinese is "*ta*," translated *he* in *English*, but in reality masculine or feminine according to context.

*"*Plomise*" is not *pidgin-English* but *Ralphese*. The word is *secure*, pronounced "*secuah*."

PIDGIN-ENGLISH.

"He have come other side countree. He belong stealum girlee—some tief man catches he. Have teachee he do sing song girlee pidgin, he no good, no can sing plover. That girlee heart velly good—can secure he allo time have velly good."

"He no belong 'live.'" "No belong girlee—belong one piecee wood. What for he no makes move, no makes laugh, no belong 'live girlee? He have makee die? My wantchee one piecee girlee can makee play, makee laugh, can talkee-talkee."

It is high time that the up-to-date journalist abroad were taught not to dabble in what he knows nothing of. On page 946 there is nearly a column of utterly uncalled for vituperation of foreign residents in China as a class. They, however, entertained him hospitably when he was here, filled him with food and drink and his literary knapsack with provender, which he has shamefully wasted. It is not true that we "repeat the silliest and most cruel lies that can be found in books upon China," such, for instance, as "that all Chinese eat dogs and rats, slaughter or sell their girl babies, beat their wives and often kill them, have no hearts, never show affection, never bathe or wash, and so on *ad infinitum*." These statements, it is true, appear in most books about China, because most books about China are written by folk who have spent three or four months in the country.

James Payn's "*By Proxy*" is absurd, so far as accuracy is concerned, and so is Hannan's "*A Swallow's Wing*"; but both those stories of China, written many years ago, are excellent literature compared with Ralph's realistic romances. Jules Verne's "*Tribulations of a Chinaman*" is also superior.

D. T.

SHANGHAI, December 19, 1895.

THE EXPLORATION OF CORINTH.

TO THE EDITOR OF THE NATION:

SIR: Since completing the excavations at the Argive Heraion and at Eretria, the American School at Athens remains without a field for explorations. The Germans are occupied with their work on the supposed site of the ancient agora of Athens; the French are still busy at Delphi; and the English are likely to begin

excavations the coming spring on the island of Melos. As yet the explorations of the Americans have not identified themselves with any of the chief centres of ancient Greek life. The work at Assos, Thorikos, Anthedon, Sikyon, Ikaria, Eretria was all of it admirably successful, and yielded results which are of permanent value. The excavations at the Argive Heraion were the most extensive and the most complete of any, and very rich in results, but they involved the exploration of a single cult-site, isolated from the city which names it by a distance of several miles. Though this comes nearest to being a site of first importance of all which the Americans have undertaken to explore, it cannot, of course, rank with the Olympia of the Germans nor the Delphi of the French.

In looking about for a place for further work, Dr. Richardson has been attracted to Corinth. Though the second city in general importance in ancient Greece, practically nothing has as yet been done toward its exploration. The Germans some years ago dug about the foundations of the ancient Doric temple, of which several columns are still standing, sufficiently to determine its ground plan. Nothing whatsoever has been done, however, to fix the topography of the ancient city, nor to locate with certainty even one of the many temples and monuments which Pausanias saw in the agora and its neighborhood. There is not so much as a well-established theory as to even the approximate location of the agora. The theatre, usually the easiest thing to identify among the ruins of an ancient city, has not yet been found, though Pausanias speaks of it twice, and locates it definitely between two temples standing outside and in general to the west or southwest of the agora. The ancient Doric temple mentioned above is frequently called a temple of Athena, but utterly without authority or competent reason. The entire site of this great city, whose walls, according to Strabo, involved a circuit of forty stadia, remains a totally unexplored field. And yet there are abundant evidences that excavations would be rewarded by immediate results. The ancient fountains of which Pausanias makes emphatic mention, and which he treats as landmarks, are still to be seen, together with the colossal aqueducts hewn out of the solid rock which conveyed their water supply. At one place on the vast terrace which probably formed the site for the central part of the city, there can be seen the outlines of the foundations of some great edifice making still a hillock in the midst of a wheat field; close beside, there protrudes from the earth, as if tempting investigation, a colossal column-drum.

Most of the territory which would invite the first exploration is free from dwellings. The ancient agora lies perhaps partly under a group of shabby huts grouped about an ancient fountain that may well represent the fountain which Pausanias speaks of as being in the agora. The only difficulty which could attend an attempt at excavation would be found in the fact that the land is private property; but, undoubtedly, permission to dig at different points in the field can be readily obtained sufficiently to make a beginning of the work and to secure the first orientations in the topography. The Greek Government and the local authorities have shown themselves friendly to the undertaking, and seem ready to help in every way.

The only question seems to be the one of ways and means. The school has but \$500 available for excavations this year. If it undertakes Corinth, it ought to have \$2,000 a

year for five years. The German and French Schools depend for such funds upon their respective Governments. We have a better and, I believe, a safer reliance in the generosity and public spirit of our citizens. It is a great opportunity and worthy to be ranked as a national cause.

The address of the treasurer of the School is Mr. Gardiner M. Lane, No 44 State Street, Boston, Mass. BENJ. IDE WHEELER.

THE AMERICAN SCHOOL,
ATHENS, GREECE, JANUARY 8, 1896.

Notes.

AN anonymous reply to Max Nordau, 'Regeneration,' is on the eve of publication by G. P. Putnam's Sons. Dr. Nicholas Murray Butler furnishes an introduction.

Charles Scribner's Sons announce 'Comedies of Courtship,' short stories by Anthony Hope, and 'A Lady of Quality,' in Queen Anne's time, by Mrs. Frances Hodgson Burnett.

Macmillan & Co. will publish Alfred Austin's new poem, 'England's Darling'; 'Social Interpretations of the Principles of Mental Development,' by Prof. J. Mark Baldwin of Princeton; 'An Outline of Psychology,' by Prof. E. B. Titchener of Cornell; and 'An Ethical Movement,' by W. L. Sheldon.

In view of the approaching revival of the Olympic games at Athens, a quarto album, 'Die Olympischen Spiele 776 v. Ch.—1896,' beautifully and copiously illustrated in the text, and edited by Profs. Lambros and Politis and Dr. Christomanos, has been undertaken by the University bookseller in Athens, C. Beck (New York: Lemcke & Buechner). The two parts into which the work is divided deal with ancient and modern athletics respectively.

A second, revised and greatly enlarged edition of Potthast's 'Wegweiser durch die Geschichtswerke des Europäischen Mittelalters bis 1500' will be issued in August by W. Weber, Berlin (New York: Dyssen & Pfeiffer). The Roman letter will be used, and the page will be remarkably clear for ready reference. The Bollandist 'Acta Sanctorum,' Bouquet's 'Rerum Gallicarum et Francicarum Scriptores,' the Abbé Migne's 'Patrologia,' the 'Monumenta Germaniae Historica,' Muratori's collections, etc., are some of the labyrinths threaded by this "pathfinder."

Mrs. Darmesteter's 'Froissart' (Charles Scribner's Sons) is a graceful sketch of a literary life five hundred years ago. By careful study, Froissart's poems along with the chronicles are made to yield the slender thread of narrative, and contemporary illustrations are reproduced. Through the scholarly courtesy of M. Longnon, the author is able to give an account of Froissart's long-lost poetic romance of chivalry, 'Méliador.' This work disappeared in 1440, and nothing was known of it until M. Longnon, by a combination of sagacity and good fortune, unearthed it in the National Library in November, 1893. Mrs. Darmesteter believes that M. Longnon and herself enjoy the singular but hardly enviable distinction of being the only persons in 400 years who have followed its "linked sweetness long drawn out" to the bitter end of its 80,600 lines.

Prof. J. Shield Nicholson has made some additions to his 'Treatise on Money and Essays on Monetary Problems,' in the third edition which now appears (Macmillan). The additions are directed to the further explanation of the "quantity theory" in the light of the great increase of the production of gold and its ac-

cumulation in the vaults of the Bank of England. This ought to bring about a higher level of prices, which in Prof. Nicholson's opinion has not been attained because of the continued depreciation of silver. In order to give room for this additional matter, two essays which had little relation to monetary science have been omitted.

In 'Missions and Mission Philanthropy,' by John Goldie (Macmillan), we have an ill-written but suggestive book. The author gives it as his conclusion, after twenty years of charitable work and meditation upon charitable theory, that what he calls "natural philanthropy" (which is philanthropy based on natural law and dispensed by individuals, not organizations) offers the only hope there is for the elevation of the needy poor. All organized charities, he maintains, create more impostors than the worthy they relieve. The philanthropic impulse he finds in general to be too sentimental and subjective, and philanthropists more in need of instruction than the poor. The air of paradox which these contentions wear, together with Mr. Goldie's very untrimmed style and decided weakness in exposition of what he thinks the true theory and practice of philanthropy, will doubtless repel the readers who would most profit by his critical chapters.

Many efforts at elaborate illustration of a volume by a number of associated artists have been made, but few of them have been very successful. The latest of these, 'A London Garland' (Macmillan), is, on the whole, no exception to the rule. We noticed, some weeks ago, the list of distinguished names among the draughtsmen who have contributed to this venture of the London Society of Illustrators, and, as might be expected from them, the volume contains much excellent work; as might also, perhaps, have been expected, it is quite lacking in unity and decorative harmony. The illustrations are not only in many styles and many mediums, but of very various sizes and of different relations (or no relation) to the page. We have here a large etching by Seymour Haden, ruthlessly shorn of margin, and near it a little one by W. L. Wyllie, which is an island in a sea of white paper; a long upright by E. H. New, and an oblong landscape by A. R. Quinton, each more awkwardly placed than the other on the square page; and the extremes of hard precision and vague softness in the drawings of Sandys and of Whistler and Arthur Tomson. The result is interesting, but it is not good book-making. What we like best in the volume is the truly decorative headings designed by Mr. R. Anning Bell.

The December *Portfolio* (Macmillan) is devoted to a monograph on the early Dutch painter and miniaturist, Gerard David, by W. H. James Weale, that artist's discoverer. This monograph is as dry reading as a catalogue, being crammed with little but exact and detailed description of David's works and some discussion of their authenticity. As art criticism it has no existence, but it should prove a useful collection of facts. The illustrations show us in David an interesting artist of about the rank of Van der Weyden.

The third and concluding volume of Dr. Heinrich von Poschinger's 'Fürst Bismarck und die Parlamentarier' (Breslau: Trewendt) consists chiefly of Bismarck's remarks during some twenty sessions of the Imperial Diet and the Prussian Assembly from 1879 to 1890. The last sixty-three pages contain addenda to the second volume, the results of recent researches touching the career of the German statesman from 1847 to 1879. There is a full index of

proper names and another of topics to all three volumes.

The last volume of Brockhaus's 'Konversations-Lexikon' has just appeared, completing the fourteenth edition, which is published in celebration of the hundredth anniversary of the Lexikon. The encyclopedia of one hundred years ago, with its six small volumes without illustration, has grown to sixteen volumes, each of which is twice as large as those of the first edition, making the whole thirty-two times as large as the original. The present edition is in every sense up to the times, and the efforts of the publishers and the four hundred contributors have made it a monument to German scholarship and art. It contains more than 126,000 articles, about 10,000 illustrations in the text and on 980 inserts, and 300 maps and charts. Throughout the work special attention has been given to Germany, Austria-Hungary, and Switzerland. Among the most interesting articles of the last volume may be mentioned "Vereinigte Staaten," with five maps, "Uebersicht des Weltverkehrs," "Vierwaldstättersee," and "Wien," with several maps and inserts.

Meyer's 'Nürnberg Faustgeschichten' is the publication of several stories which were recently found by Mr. Meyer in a manuscript of the library at Karlsruhe. This manuscript was prepared by the Nuremberg schoolmaster Rosshirt, who died in 1586, and it contains some Faust stories which Rosshirt wrote, according to the Nuremberg tradition, and which give us an insight into the manner in which the Faust saga developed from the death of Faust (1540) to the publication of the first *Faustbuch* (1587). Especially attractive is the story of how Faust, while lecturing at the university in Ingolstadt, took several of his companions on a journey through the air to the wedding of the King of England. There is also a new version of the events just before Faust's descent into hell. In these stories Faust has the given name Georg, as in the case of some of the earlier traditions. By way of introduction, Mr. Meyer reviews the history of the historical Dr. Faust and of the older Faust traditions, in which he brings out many points entirely new or heretofore not sufficiently emphasized.

The first parts of an illustrated history of Swedish literature by H. Schück and K. Warburg have recently appeared in Stockholm. The general treatment is similar to that of Koenig's German and P. Hansen's Danish work. A special feature is the division of the labor between the two authors; Prof. Schück, who contributed the article on early Swedish literature to Paul's 'Grundriss,' treating of the periods before 1718, and Prof. Warburg, who is the author of an excellent short history of Swedish literature besides a number of critical biographies, having charge of the periods since 1718. The names of the authors are a sufficient guarantee that this work will be not mere compilation, but a real contribution to Swedish thought.

Mme. Edgar Quinet, in 'La France Idéale' (Paris: Calmann Lévy), has set a worthy example of conjugal devotion and of love of country. Her high regard for the opinions of her husband (who died twenty years ago, at the age of seventy-two) is shown on nearly every page, if now and then to the disparagement of other men of letters (as Fustel de Coulanges and Renan). The tone of the essays is moralizing throughout, serious but in the main hopeful, liberal as to political and religious matters; and reminds one in various ways of the "Immortal Absent" from whom the writer draws so much of her inspiration. In spite of

several strange incongruities and inconsistencies, the author's evident desire to contribute to the moral elevation of the growing generation in France is likely to be fulfilled by this book.

Readers and students at the Bibliothèque Nationale in Paris have rather a gloomy outlook before them in respect of the new catalogue. They have just been told that they will be very lucky if the year 1900 finds them in possession of it. For more than twenty-five years the whole force at the library has been engaged in this enormous work. The subject catalogues have already been finished; the present question is, in what way these should be fused into a whole. Unhappily there has been much disagreement among the librarians on this point. It was determined at last, more than a year ago, to appoint a commission of eminent men of letters and of science, to whom should be submitted all the different plans, and the documents were placed in its hands. No report has yet been made by this commission, for the simple but somewhat astonishing reason that it has not as yet held a single meeting.

Among the new periodicals of the new year we remark *American Resorts*, published at No. 59 Dearborn Street, Chicago, on the 15th of each month, with abundant illustrations; and, in quite another vein, *Terrestrial Magnetism*, an international quarterly journal emanating from the Ryerson Physical Laboratory of the University of Chicago. All languages capable of being printed in the Roman letter will be admitted. No journal of the kind is now in existence.

In the current number of the *Virginia Magazine of History and Biography* Mr. Edward W. James has another slave-holding census to exhibit, for Abingdon Parish, Gloucester Co., Va., April, 1786. The largest number of slaves held by a single owner was 160, and 143 and 116 are also recorded. For 98 owners there were 1,151 slaves. We notice also an account of a judicial burning of a female slave for poisoning her master, in Orange Co., Va., in 1745; and a list of Virginia portraits by St. Mémin in the Corcoran Art Gallery at Washington.

Africa is the absorbing topic in the *Scottish Geographical Magazine* for January. Mr. H. S. Cowper gives an account of a recent journey in Tripoli made for the purpose of examining the remains of its ancient megalithic temples. In a comparatively small district he discovered nearly sixty sites, and learned of the existence of numerous others. The oldest structures are trilitheonic in shape, the only monuments now standing which parallel them being the great trilitheons of Stonehenge. The suggestion is made that they are "the work of Libyan races largely influenced by contact with the arts and crafts of Phœnician civilization." There is also a description of Ashantee and the Gold Coast, and an interesting notice of Hausaland by the Rev. C. H. Robinson, who states that the Hausa language is spoken by fifteen millions of people, and is one of the four great languages of the continent. Although this race is superior, both intellectually and physically, to all other natives of Equatorial Africa, there is no place in the world "where slavery and slave-raiding are being carried on on so large a scale." This assertion is borne out by the writer's observations during a journey through the country in 1894. "In the course of our march from Kano to Bida, we passed so many towns and villages that we ceased to keep count of them, all of which had been recently destroyed, their inhabitants having been sold as slaves, and this not by any foreign invader, but by the chief in whose ter-

ritory the places themselves were situated." To Kano, the Manchester of Central Africa, come two million people annually, chiefly for the cotton clothing woven there, and which is to be bought even in the Mediterranean ports.

The *Mouvement Géographique* publishes an interesting letter by M. Wauters giving an account of the new house which was disinterred at Pompeii last December. M. Wauters considers this house to be the most important of all that have been exhumed. The atrium and the peristyle, the mural paintings, the statuettes on their pedestals, and the marble furnishings are perfectly preserved. The peristyle is the chief and most interesting part. The interior court is remarkably large; its portico is decorated by eighteen fine Corinthian columns, supporting an ornamented cornice, which is almost intact. The walls are painted in black and red. Between the columns are set nine magnificent basins of white marble, four tables on chimeras' feet, and nine statuettes representing Bacchuses, Fauns, and Loves, holding geese. The mural painting of the principal room shows a charming frieze of little Loves engaged, some in striking medals, others in glass or coral work, and others still in pouring libations or driving chariots drawn by antelopes. The Directory of the ruins has determined to leave all these objects in place, and not to send them, as is usually done, to the museum at Naples.

The opening article in *Petermann's Mittheilungen* for December consists of notes by Dr. Philippson on his map of the Peloponnesus, showing the cultivated land, vineyards, orchards, gardens, forests, underbrush, meadows, and deserts. He draws rather a melancholy picture of the increasing sterility of the land through the cutting down of the forests and the destruction of the small growth. The map, though drawn from observations made only from six to eight years ago, does not represent present conditions. The cause, for which he can suggest no practical remedy, arises chiefly from the exclusive use of charcoal as fuel, and from the great number of goats kept by the peasantry. Prof. Ruge describes the monumental work published by the Italian Government commemorative of Columbus. It is in six parts in fourteen volumes, the last being a bibliography of all Italian works on Columbus and America. There is also the usual interesting survey of geographical literature for the past year. The number of works important enough to be noticed was 870, a little over a hundred more than last year; the chief gain being in works about Europe. America and Africa also show considerable gains, while there is a surprising falling off in works on Asia. A supplemental number is devoted to an account of a journey by Dr. Radde in the summer of 1894 in Daghestan on the northern slopes of the Caucasus. From it we learn that the recently built railroad connecting the Russian system with the Caspian at Petrovsk had not at that time developed the business which had been confidently expected from it. The new oil wells of Grosny were also proving something of a disappointment, though the daily shipment by rail was said to be over half a million pounds of crude petroleum.

The latest university to open its doors to women is the University of Athens. Five women were enrolled for the winter term, yet not without violent objection from some of the students. It was with difficulty, we learn from the *Academische Revue* of December, that the authorities could restore order. The question divided the students into hostile parties, and two of them went from words to

blows, until finally one shot the other with a revolver at the entrance to the chemical lecture-room. Strange conjunction of the barbarism of the East and of the West at a temple of science in Athens!

The last monthly summary of the 'Finance, Commerce, and Immigration of the United States' (Nov., 1895, corrected to Jan. 10, 1896) contains, in addition to the usual statistical matter, a large diagram of our foreign commerce for the years 1791-1895. The items given for each year are: the domestic exports and the total imports (with a per capita summary for 1795-1895 by decades), the imports free of duty, and the imports and exports of gold and of silver. The choice of a larger scale for presenting imports and exports of the precious metals than that used for presenting general exports and imports on the same chart is unfortunate. It does all that an appeal to the eye can do to emphasize the mischievous notion that exports of gold were somehow a matter of relatively greater importance, even before 1890, than were exports of pork or of cotton. For the rest, the diagram is admirably clear.

—A movement is now on foot at the University of Cambridge in favor of admitting duly qualified women to degrees. It is felt that so long as women are without status in the University, they lose the moral support which the University is able to give; that, without the dignity of the degree, intellectual efforts directed towards it are discouraged; and that all the benefits which the University has in its power to bestow upon education and learning should be made freely accessible to all students. A series of joint meetings between the Girton Executive Committee, a committee of the Council of Newnham, and certain resident members of the Senate have been held recently, and, as a result, a memorial has been agreed upon "requesting the Council of the Senate to nominate a Syndicate to consider on what conditions and with what restrictions, if any, women should be admitted to Degrees in the University." This memorial is now in circulation among the members of the Senate and has received many signatures. The meetings were presided over by Dr. Henry Sidgwick, Knightsbridge Professor of Moral Philosophy in the University, and by Dr. Pelle, the Master of Christ's College, who are guiding the movement. The success of the women students at both Oxford and Cambridge makes the question of admitting them to degrees daily more pressing, and, with a like agitation going on at this time at Oxford, the prospects of full University membership for women in England are brightening. Logically, there is but one solution of this problem—to admit women to degrees; but whether the fulness of time has arrived, it remains for this well organized and ably conducted effort to determine.

—In a book of a hundred pages, 'Social Changes in England in the Sixteenth Century, as reflected in Contemporary Literature: Part I, Rural Changes,' Prof. E. P. Cheyney has collected and arranged the material to be found in contemporary literature for the history of the agrarian revolution in Tudor England. This monograph, one of the publications of the University of Pennsylvania, issued by Ginn & Co., would, perhaps, have presented a more scholarly appearance if its author had made more clear to his readers the extent to which he builds on the works of previous writers, and if he had explained more explicitly the character of his own contribution. And

even if he did not deem it wise to enter into a discussion of the very difficult legal questions raised by the eviction of the customary tenants, it would have been well to indicate what the problems are which still remain for solution. But the collection of passages he has here brought together and printed, mostly in full, will be very handy for the student of economic history. It certainly shows that but little more light on the subject is to be expected from the study of Tudor literature. Mr. Cheyney has reaped that field pretty thoroughly; later gleanings are not likely to add much to our knowledge, and we must now turn to "sources" of another kind. The student of literature also—to whom, perhaps, the monograph more particularly appeals—will be thankful to get so clear and untechnical an account of a movement which vitally affected the life and thought of the English people.

—A French scholar of eminence, a really erudite critic, M. H. d'Arbois de Jubainville, member of the Institute and of many learned societies, makes a somewhat remarkable confession in a recent number of the *Revue Critique*. He says that he had often heard tell of Freeman, and many times had read in the English reviews high praise of his qualities as an historian, but that not one single word of his had ever come before his eyes until, happening by chance one day to be at the office of the *Revue Critique*, he saw lying on the table the first volume of the 'History of Sicily,' by the great English writer. This was not the original text, but the German translation published last year at Leipzig by Teubner. M. d'Arbois opened the volume and ran through some pages of it, and was "ravi par le talent de l'auteur, qui, chose extraordinaire, était à la fois un érudit et un grand historien." And so he asked the editor to intrust the volume to him for review, and carried it away with him. Mingled with the pleasure that he found in his new acquaintance, he found in himself also a certain sense of shame that he had not sooner known so remarkable a work, and that he was reading for the first time—in a German translation published at Leipzig in 1895—a book which had appeared at Oxford in 1891, and which covered, in part, ground which he himself had traversed in various studies and writings. A visit to the library of the Institute and to that of the University brought him some slight, but rather sad, consolation. He found in each the 'History of Sicily' in English, but the two publics which frequent these libraries had been as remiss in the study of Freeman as he himself. At both, the volumes were intact: not a leaf had been cut. This is a story which one word of comment would mar; but one may permit himself to imagine what would be said of an English or American scholar who confessed entire ignorance of any French writer who could be considered anything like Freeman's equivalent. With all the gain in patient work, and the accuracy that comes from patient work, which French scholars and writers have shown during the past five-and-twenty years, it is still Candide's maxim that they follow most. They cultivate their garden, but without looking over its hedge very much; and they seem not so conscious as it would be wise to be of its true breadth and length.

—A recent discovery made by the distinguished physicist, Prof. Wilhelm Conrad Röntgen of the University of Würzburg, is now exciting considerable interest in Germany, where it is being subjected to a thorough exam-

ination by scientific men. By means of the rays proceeding from Crookes's radiometer under the influence of electrical induction, Prof. Röntgen succeeded in photographing on ordinary photographic plates. These rays which are wholly imperceptible to the eye, and the existence of which has been hitherto unsuspected, have the power of penetrating all kinds of wood and other organic substances and solid bodies, except metals and bones, which are alone capable of resisting them. Thus the photograph of a wooden box in which iron weights are enclosed, shows only the iron weights; the box leaves no impression whatever on the photographic plate, the electric rays passing through it just as the ordinary rays of light pass through the air or any perfectly transparent object. The same is true of flesh. A photograph of the hand or the leg shows only the bones; the photograph of a man, whether clothed or naked, is merely a human skeleton with a watch or a ring, if he happens to wear them. Neither his clothing nor his flesh offers the slightest resistance to the rays, which are also unaffected by sunlight, so that the photographic process can be carried on anywhere in the daytime. The importance of this discovery in its application to surgery as an aid to diagnosis in cases of disease or fracture of the bones is apparent. The photograph would reveal immediately and unmistakably the nature of the disorder without the long and often painful examination which the patient is now obliged to undergo. In a case of complicated fractures another photograph can be taken after the bones have been set, in order to ascertain whether the dislocation has been properly reduced or the broken parts have been rightly replaced. The exact position of a bullet or the splinter of shell can also be easily found without the use of a surgeon's probe. In all probability the process can be perfected and modified so as to photograph the heart, lungs, liver, and other internal organs, and thus determine their precise condition; at present, however, these organs offer no resistance to the rays, and therefore leave no impression on the plate. Some months ago Prof. Röntgen read a paper on this subject entitled, "Über eine neue Art von Strahlen," and printed in the proceedings (*Sitzungsberichte*) of the Würzburg Physikalische Medicinische Gesellschaft. This report has now been issued in pamphlet form by the university publisher, Stabel, in Würzburg.

—A striking periodical, entitled *Biographische Blätter*, edited by Dr. Anton Bettelheim of Vienna and published by Ernst Hofmann & Co. in Berlin (New York: Lemcke & Buechner), has just completed the first year of its existence. It is a quarterly magazine of 180 octavo pages, dealing with the art, or, as we must henceforth call it, science, of biography, its methods of inquiry, its raw material, and its literary form. The list of associates who have pledged Dr. Bettelheim their permanent support contains many of the best-known names among the historians and literary men of Germany, and gives to the work an assurance of substantial value. The prospectus groups the subject-matter under four general heads: (1) treatises on the theory and historical development of biography and autobiography, with critical analyses of the methods pursued by the great masters of biographical writing; (2) biographical and autobiographical studies and essays; (3) confessions derived from unprinted or not easily accessible sources, in so far as they serve to illustrate the history of civilization and man-

ners (*Culturgeschichte*); (4) biographical miscellanies, necrologies, and a full bibliography of current publications relating to biography and autobiography, together with short reviews of the most important works. From the first three numbers, which are now before us, we may form some estimate of the value and scope of the undertaking, and it is much to be able to state that the rich promise of the ambitious prospectus is in large measure fulfilled. The enterprise seems to have had its origin in the conviction that the art of writing biographies, hitherto practised in all the irresponsible confidence of ignorance by any henchman of letters, should be scientifically formulated, and the laws of biographical technique be defined and established. With this purpose in view, Dr. Ludwig Stein of Berne has discussed in a tentative and modest way the "Methodenlehre der Biographik." Limitations of space forbid us to go into detail concerning other excellent articles. Of special interest to the English reader are the personal recollections of the Anglo-German artist, Rudolf Lehmann, who relates what he saw of men so widely separated in their walks of life as Liszt, Sir William Siemens, Pius IX., and Robert Browning. But to the student the most valuable, and henceforth indispensable, feature is the extensive biographical bibliography. This on the German and the Spanish side is particularly full, and it is to be hoped that the other literatures will be taken up in due course.

—The third section of Konrad Miller's 'Die Ältesten Weltkarten' (Stuttgart: Roth; New York: Lemcke & Büchner) covers the smaller maps of the Middle Ages, dating before the circumnavigation of Africa and the exploration of the Western Atlantic. The reproductions are some in sketches, others in photographic representations, and a few are in colored delineations on folded sheets. Most of them are already more or less familiar to such as have access to the atlases of Santarem, Lelewel, and Kretschmer; but they are nowhere else so systematically arranged together. Miller has a further advantage over most of the earlier editors in that he has availed himself of the exactness of the camera, though it must be confessed that the photographic reproductions of such old maps are a sore trial to all but the expert in the deciphering of names and legends. Dr. Miller does all that could be hoped for in aiding the student in this respect, and his collation of the inscriptions gives a distinctive character to his work for completeness and accuracy. Most of his originals are found in different copies, almost wholly as illustrative adjuncts of manuscript treatises, which are scattered over Europe in the larger libraries. While the author enumerates these various copies, as a rule, he commonly selects but one of each kind for his annotations. The series begins with a map from a Saint Jerome MS. of the fourth century in the British Museum. For the next century we have the type of discs used by Macrobius; for the sixth, those fashioned after the Cosmas figure. Beginning with the tenth century the specimens are more frequent. We find them annexed to psalters, like one of the thirteenth century in the British Museum; to encyclopædic treatises, like that of Canon Lambert of the twelfth century; to chronicles, like those of Matthew of Paris (thirteenth century) and Higden of Chester (fourteenth century); and, among various other sources, to codices of Sallust. The only one which Miller gives that has any direct interest for the student of the age of exploration west-

ward from Europe is the map of Andrea Bianco, of 1486, which has long been perhaps the most familiar of the entire series.

—The impetus given to the study of the Italian dialects by Ascoli and the foundation of the *Archivio Glottologico* has resulted in a long series of works most creditable to Italian scholarship. A recent publication belonging to this class may be briefly mentioned here, especially as it possesses a more general literary interest than usual. The popular sacred drama has always flourished in Italy, and it is one of the few countries in Europe where it still survives. How extensive these survivals are may be seen in the second edition of D'Ancona's 'Origini del teatro italiano.' These popular sacred plays are, however, rapidly dying out everywhere, and must be collected at once if collected at all. One of the few relics of the Piedmontese popular sacred drama has been rescued from oblivion by Rodolfo Renier in a volume before us, entitled, 'Il "Gellindo," drama sacro piemontese della Natività di Cristo' (Turin: Carlo Clausen). This play on the subject of the Nativity probably originated in the seventeenth century, and has since undergone many changes to suit it to the taste and dialect of the various places in which it was performed. The body of the play (which is made up of the legend of Ara coeli, the adoration of the shepherds, the adoration of the Magi, and the slaughter of the Innocents) is in Italian, but the seven shepherds and shepherdesses use the dialect of Upper Montferrat. It is well known that in the mediæval sacred drama a large place was allotted to the comic element. In the present play there was no opportunity for it except with the shepherds, who are represented as typical Piedmontese peasants carried back eighteen centuries into the miraculous life of Palestine. It is with the dialect of these characters that the editor deals in sixty-seven pages of *illustrazioni linguistiche*, treating phonetics, morphology, syntax, and lexicography in the most approved scientific manner. This is counterbalanced by a literary disquisition on the popularity of the play (which takes its name from one of the shepherds who has become proverbial in Piedmont), its performance (it is still acted every winter), various versions, chronology, and sources. Incidentally the representation of the Nativity in Art is touched upon, and the book closes with an appendix on the relics of the popular sacred drama in Piedmont. The whole work is marked by the fine scholarship which distinguishes recent Italian work in the fields of philology and literary history.

ENGLISH'S CONQUEST OF THE NORTH-WEST.

Conquest of the Country Northwest of the River Ohio, 1778-1783, and Life of General George Rogers Clark, etc. By William Hayden English, President Indiana Historical Society. Indianapolis, Ind., and Kansas City, Mo.: The Bowen-Merrill Company. 1896. 2 vols., royal 8vo, pp. 1,186, more than 125 illustrations.

THE "Northwest" is a fugitive term of widely varying connotation at different times. The American Northwest has receded to Alaska since Revolutionary times, when it first acquired political definition in the style of the "Territory of the U. S. N. W. of the River Ohio," as on the seal of July 13, 1787—that great region which in due course became Ohio, 1808; Indiana, 1816; Illinois, 1818; Michigan,

1837; Wisconsin, 1848; and a part of Minnesota, 1858. Across *la belle rivière* in those days was the Virginian county of Kentucky. On both sides of the same stream was George Rogers Clark, conqueror of the Northwest and founder of Louisville, hero of that great drama whose dénouement nearly doubled the area of the United States. The exploit was unprecedented, and has been but once repeated in that magnificent stroke by which Jefferson redoubled the United States from the Mississippi to the Pacific. The conquest of the Northwest of 1778-'83 is only another name for the life and times of Clark, who first finds his adequate biographer in the author of this great work. The materials were copious; their richness was almost embarrassing; and Mr. English has utilized them all to the utmost advantage. The result is a noble historical and biographical work of permanent value, which at once takes first rank. The story is told with precision and in great detail; it abounds in contemporaneous documentary material of the highest value, and is enriched with a great many facsimiles of letters and autographs, besides portraits, views, maps, and other illustrations.

George Rogers Clark was born November 19, 1752, on Rivanna River in Albemarle County, Va. We have much of his ancestry and early days, introducing us at once to the style of the author's narration—biography and history in minute detail, necessarily somewhat discursive and even diffuse in working up such a mass of materials, but always returning to the main thread after each digression. The famous Illinois campaign was authorized by Patrick Henry, Governor of Virginia, January 2, 1778. His private instructions are given in facsimile, together with the long and eagerly sought letter of the Privy Council of next day, signed by G. Wythe, G. Mason, and Th. Jefferson. The falls of the Ohio to which Clark repaired existed, of course; but Louisville did not. With the opening of the campaign there we are told not a little about the Bowmans, especially Major Joseph, who died August 14, 1779, of injuries received at the capture of Vincennes; of the Harrods, and many other local worthies. Clark wanted 500 men, but mustered only some 150. He reached the falls about May 27, 1778, and camped on Corn Island to organize his force; the small guard he left there became the germ of Louisville. Four of his captains were already Bowman, Helm, Harrod, and Montgomery; Ruddell, Lynn, and others were there added. There were some desertions when his destination was made known. Reckoning 35 or 40 additions, and 10 left as a guard, he prepared to move with about 175 men, and his very weakness spurred him to take desperate chances. He embarked June 24, at the moment of the nearly total eclipse of the sun of 1778, reached Fort Massac in four days, and went overland to Kaskaskia, July 4. The town and fort were captured without firing a gun, and Philip Rochblave made prisoner; Fort Gage became Fort Clark; Simon Kenton appears on the scene, and so does the patriotic priest Pierre Gibault.

Clark then sent a force under Bowman to "Parra de Rushi" (Prairie du Rocher, near the celebrated Fort Chartres); to St. "Phillips" (Philippe); to "Cohos" or "Cauhow" (Cahokia), whose fort became Fort Bowman on its capture. The whole line of posts and settlements along the Mississippi thus fell into his hands. At the time of this invasion of the Illinois country, Col. Henry Hamilton was Lieutenant-Governor at Detroit—the "hair-buyer general," as Clark called him—who be-

came the most odious and detested of all the British officers concerned in these operations. The news of the rebel invasion reached him August 8; he left Detroit October 7, with men said to have been 179 in number, went down the river, across the lake, up the Maumee to "Ome" (Indian village "aux Miamis," site of Fort Wayne), over to the "Ouabache" (Wabash), and so on to Fort Sackville in seventy-two days. This was the important Post St. Vincents, in the present Vincennes, Ind., which Clark had meanwhile garrisoned with a detachment under Capt. Helm, then reduced to twenty-one men, while Hamilton's force had increased to several hundred British, French, and Indians. Helm surrendered with honors of war December 17, and Hamilton held the fort.

Rochblave, the last of his Majesty's commanders in the Illinois, had been sent captive to Virginia August 4. The Governor communicated the news of Clark's successes to the delegates in Congress November 16, and that body voted a resolution of thanks November 23, to which Clark replied March 10, 1779. Virginia promptly organized the "County of Illinois," under John Todd, December 12, 1778; Gov. Henry also wrote to Clark the same day, and again January 1, 1779, but Clark does not seem to have been advised of these communications February 3, when he reported the whole situation to the Governor, and outlined his proposed Vincennes campaign; for, as he said, "we must either quit the country or attack Mr. Hamilton."

At Kaskaskia, Clark had but a few more than one hundred men, and could not have moved but for assistance from Francis Vigo (1747-1836), who furnished the sinews of war in an amount, \$8,616, which became with interest over \$149,898 when finally settled in 1875. On February 4, 1779, the *Willing* dropped down from Kaskaskia with forty-six men, under Lieut. Rogers: the land force was of four or five companies, in all about 170 men. The latter left next day under Clark, by the trail sometimes styled the "Applan Way of Illinois," en route to Vincennes, via present Sparta, Coulterville, Oakdale, Nashville, Walnut Hill, Salem, Mayesville, and Lawrenceville, a distance of some 160 to 170 miles, then called 240. The Wabash was crossed just below the mouth of Embarras River February 21, and Clark was on the heights back of Vincennes on the evening of the 23d, after a terrible march, in part over country flooded with icy waters.

It is disputed whether the fort which Clark took is of 1713, named for one Jean Sacqueville, or 1769, for a Lord Sackville; there may easily have been two of different dates, with similar names. The one captured stood on the east bank of the Wabash, between that and First Street, and between Vigo and Baronet Streets, at the foot of Church Street, close to the St. F. Xavier Church of that time, in present Vincennes, Ind. A night attack was made on the 23d; a peremptory demand for surrender next morning; a truce for three days was rejected, a conference held, and Post St. Vincent capitulated, the garrison marching out on the 25th. Clark changed the name to Fort Patrick Henry. The boat *Willing* arrived two days later. Insignificant as may seem to us now the forces in action, this completed the conquest of the Northwest in a short, spirited, and almost bloodless campaign, fraught with far-reaching consequences of great magnitude. It is sad to be obliged to add that the capture of Vincennes

proved to be the culminating point of Clark's career.

Chapter xii. continues with various important events on the Wabash in 1779. The cherished project of a campaign against Detroit was in abeyance, but one important expedition up the Wabash captured seven British boats and about forty men, with supplies intended for Fort Sackville. Bowman was dead. Clark returned to the falls of the Ohio and divided his troops between Vincennes, Cahokia, Kaskaskia, and the falls, by general orders of August 5, 1779, thus establishing possession of the country which had been for ever wrested from the British. The appendix to Volume I. is rich with contemporaneous documents of extreme value, relating to the events just sketched, some of them here appearing for the first time in print, and all being additional to such as we have in the main text. They include, among other letters and reports, Bowman's journal of January-March, 1779; Clark's own diary of December 25, 1776-November 22, 1777; the roll of officers and men captured at Fort Sackville, etc.

Volume II. opens with chapter xiv., pp. 605-663, giving a long and circumstantial account of the captivity in Virginia of Hamilton and other prisoners, harshly treated in retaliation for cruelties to American prisoners in other quarters. By the end of the summer of 1779 the little garrison Clark had left on Corn Island had removed to the mainland on the Kentucky side and built a stockade in present Louisville, probably at the foot of Twelfth Street, thus laying the foundation of the city agreeably with Clark's plans. Meanwhile, Jefferson had succeeded to the governorship of Virginia, June 1, 1778. On September 30, 1779, Clark issued orders for a fort on the Mississippi near the mouth of the Ohio, and Fort Jefferson was built early in 1780, when Clark went with a few men to Iron Banks, in present Bullard County, Ky. The American position was still endangered by Indian hostilities, and insecure by reason of an invasion of the British from Michilimackinac. The latter was repelled by Clark, who made a counter raid from his rendezvous at the mouth of the Licking, on to the old Indian town of Chillicothe, with less than 1,000 men, and attacked Piqua, August 8, 1780. This same autumn De la Balme's expedition, with a few men from Kaskaskia, Cahokia, and Vincennes, against British posts on the lakes, was defeated by the Miami chief Little Turtle, in the vicinity of the present Fort Wayne. Such operations brought up again Clark's long-cherished plan of an expedition against Detroit. Jefferson approved. Clark was made a brigadier, and arrangements were perfected by which he expected to leave Fort Pitt with 2,000 men in June, 1781. But he failed to secure Continental troops, and the failure of 700 others reduced his total force to about 400. He was to have been reinforced by Col. Lochry; but this officer reached Wheeling, August 8, one day after Clark left, and he was cut off by the Indians, who killed or captured his entire force. This was disaster in itself, and it also frustrated the Detroit campaign—probably the most bitter disappointment of Clark's life.

Cornwallis surrendered at Yorktown, Va., October 19, 1781. Indian troubles lessened when the natives were no longer instigated or led by the British; the provisional treaty of peace ensued, November 30, 1782; cessation of hostilities was agreed upon at Versailles, January 20, 1783, proclaimed by Congress April 11, concluded at Paris September 3, and ratified January 14, 1784. The cession by Virginia of all her lands northwest of the Ohio was effect-

ed March 1, 1784, and the Territory of the Northwest became organized under the ordinance of 1787. The seal bears date of July 13, 1787, with the motto, "Mellioem lapsa locavit." But before the great drama was ended, Clark was ordered off the stage of events. He was relieved of his command July 2, 1783—that is, he was simply dropped. He had never been an officer of the Continental army, and on the necessary reduction of Virginia troops he was thrown out "with thanks," but without the decencies or even the necessities of life. He retired to Kentucky to neglect, to humiliation, to dire stress of poverty, with the most injurious effect upon his health and morals. At that time the State actually owed him money; fifty years afterward there was judged over \$30,000 due the administrators of his estate; it was not till twenty years after his dismissal, and six before his death, when he had become a maimed paralytic, that he was allowed a pension of \$400 a year. In 1783 we have the spectacle of the conqueror of the Northwest in Richmond to beg for bread. In 1792 he was still struggling with poverty; a letter written to his brother Jonathan, May 11, 1792, speaks of his account against the State as being "as just as the book we swear by"; and bitter must have been the reflections of one who could then say with truth, "I have given the United States half the territory they possess."

No kindly light ever led Clark on after 1783. In 1786 he was put in command of some operations against Indians which resulted fruitlessly and ignominiously, by open revolt of his men from his authority. He retired to Vincennes, overwhelmed by this fresh disaster; his habits grew worse, and he did things which must have pained his friends then, even as they still make the judicious historian grieve. "Clark is playing hell," was the word on December 12, 1786; and though Jefferson remained his staunch friend, and tried in 1791 to bring him up again, it was impossible to do so. In 1793 Clark made probably the greatest mistake of his life, enabling his enemies to affix a stigma of dishonor and even treason to a name already tarnished by private bad habits. He accepted a commission with the high sounding title of "Major General in the armies of France and Commander-in-chief of the revolutionary legion on the Mississippi River," against the Spanish, in violation of international law and under governmental condemnation. He may never have meditated action against his own country, but any such expedition as he had in view was stopped by act of Congress of June 5, 1794, and proclamation of March 24, 1795, declaring the proposed operations unlawful. Clark's military career closed for ever, under a cloud.

The remainder of this extremely copious and intensely interesting work is largely occupied with minute details of the "Clark Grant," by acts of the Virginia Legislature of January 2, 1781, and of 1783, locating about 149,000 acres of ground for allotment in severalty to the officers and soldiers of the Illinois regiment. The survey of this land by one William Clark brings up the question of the three persons who bore that name, and Mr. English has succeeded in identifying them all. Surveyor William Clark, son of Benjamin Clark, brother of Marston Green Clark, and cousin of George Rogers Clark, deceased November or December, 1791, was not the jurist, William Clark, who died at Vincennes November 11, 1802, nor yet the William Clark of "Lewis and Clark" fame. A facsimile of the patent issued by Edmund Randolph, Governor of Virginia, December 14, 1786, is given, and also another, of the original

official plot, certified by Surveyor William Clark, with a roll of the men, sketches of the commissioners, and other biographical data of the greatest possible value. It seems that Gen. G. R. Clark attended the meetings of the board from 1784 to March 14, 1810, the date of his last signature, after he had become paralytic. This grant was the origin of Clarksville, Ind., and various other towns along the Ohio opposite Louisville and thence upward. The old general there dragged out many lonely years, in oblivion and intemperance. He was stricken with paralysis after a drinking-bout, fell in the fire, and so burned one of his legs before recovering consciousness that erysipelas set in and amputation became necessary. This was early in 1809, before the days of anesthetics, and the grisly old warrior lost his leg to the music of drum and fife, played to distract his attention from the misery of such an operation. One of the most persistent myths which have reached us is that when General Clark was presented with a sword, he cried, "Damn the sword!" etc., or said, "When Virginia needed a sword I gave her one. She sends me now a toy. I want bread." Mr. English's analysis of the traditions shows about as much truth in them as in the still more celebrated story of the "little hatchet" of Washington. General Clark was twice presented with a sword by the Virginia Legislature—June 12, 1779, and February 20, 1812—at which latter date he was placed on the pension list. He died at the house of his sister, Lucy Croghan, at Locust Grove, Ky., February 13, 1818.

Much more than we can possibly outline here is given in estimation of Clark's life and services; sketches of many men who served under him; and a full account of the handsome monument erected at Indianapolis February 25, 1895, mainly through the distinguished author's own efforts to that end. We have also much Clark genealogy, especially full regarding the brothers and sisters of G. R. Clark. The appendix to this volume contains a great variety of interesting matter, including in full Clark's account against the State of Virginia, and the strange history of the bill in chancery over his alleged will, filed May 6, 1835, and not dismissed till November 20, 1865. It also appears that the present work is but an installment of that which the author has in hand, and we trust sincerely that he will elaborate his other materials in the same fruitful manner.

STEPNIAK'S LAST WORK.

King Stork and King Log: A Study of Modern Russia. By Stepaniak. London: Downey & Co.; New York: Charles Scribner's Sons. 1895.

WHATEVER else can be said about the late Stepaniak's writings, it can never be asserted that they are not interesting as to matter and trenchant as to style. The very title of the book before us furnishes a proof, though some readers may question the propriety of calling the late Alexander III. "King Stork," and feel startled at the temerity which can decree to Nicholas II., after a reign of less than a year, the epithet of "King Log." If it is regarded as a valid excuse, in the case of Lord Salisbury, that a new Government inevitably inherits the policy and political debts of its predecessor, and must be allowed time to initiate gradual changes, it certainly is not unreasonable to claim some small measure of the same excuse for the corresponding autocrat in Russia. In fact, our author says in one place: "Alexander III. was not the

founder of that system, and cannot be held responsible for it." However, we will defer further consideration of that point until we have made a brief examination of what precedes it.

The fact seems to be, with regard to this book, that it is composed of articles published at various times during the last five years. The internal evidence proves this, but as no direct hint is given of this state of affairs, for the benefit of non-experts, the constant assumption that the whole has been written in the immediate present is frequently misleading to a serious degree; as, for example, when "the present Emperor" stands for Alexander III. instead of the actual occupant of the throne. Stepaniak admits that matters change so rapidly in Russia that it is not possible for the revolutionists who live abroad to direct operations; they cannot even understand the conditions from the other side of the border. Consequently, a difference of five years, or even of much less time, plainly renders certain utterances less valuable, when it does not nullify them altogether.

Very few writers are as insidiously persuasive as Stepaniak. He has the art of engaging our sympathies, and convincing us of whatever he pleases, unless we chance to be able to pin him down on one incontestable point, and so obtain the proper gauge of confidence which we must give to his arguments and illustrative anecdotes. It is very unfortunate that, in the hastily written first chapter, designed to introduce and bind together the scattered papers which form the book, he should have fallen into the grievous error of telling that anecdote about Count L. N. Tolstoy's drama, "The Dominion of Darkness." Stepaniak's "trustworthy source" has furnished him with a very good story, which runs, briefly, to the following effect: Alexander III. read and liked "The Dominion of Darkness." His daughter, Xenia Alexandrovna, who is the wit and literary critic of the family, liked it still more, and she proposed that the play should be privately performed in one of the halls of the Anitchkoff Palace. After the actors had been engaged, and all the arrangements made, Count Dmitry Tolstoy, Minister of the Interior, agreed with the Head Censor that its performance must be prohibited on the ground of its "immorality," and the imperial performance was stopped. When Xenia Alexandrovna mentioned the matter at a family party, at which some of the ministers were present, expressing her surprise, the Czar turned to his ministers and merely exclaimed, with a meek astonishment one does not associate with the idea of an all-powerful despot: "Yes, imagine! the play has been prohibited!" The date of this extraordinary tale is not given, but, as Xenia Alexandrovna was only fourteen years old when Count Dmitry Tolstoy died, in April, 1889, its apocryphal character is plain enough; an American girl would not be allowed to read that play at that age, much less a Russian girl. Thereafter the reader involuntarily questions the accuracy of every emphatic utterance, and all the utterances are emphatic. The anecdote is enlightening in another direction also, namely, as to the author's habit of using all arguments, no matter how contradictory, to assail the object of his dislike. He has already said of Alexander III.: "He had not the masterfulness of his grandfather, Nicholas I., a typical despot, and, unlike his father, he had a great respect for the laws passed by himself. His reign was the most lawless we have had since, perhaps, the time of the adventurers of the eighteenth cen-

tury"; and then he criticises him for submitting to the law like an orderly person and for an example. The interpretation given to the anecdote about the thanksgiving mass at the Kazan cathedral offers another instance of seeing things in diametrically opposite ways, according as one has a point to prove or is merely a disinterested spectator.

Nevertheless, with all our involuntary doubts, it is of the highest interest to have these clear statements as to important events and measures, as viewed by the revolutionary party. Some of them are, it is true, utterly irreconcilable with everything which has been authoritatively stated hitherto—such as the nature of the document which Alexander II. was on the point of promulgating when he was assassinated. In this connection, it is rather surprising that Stepaniak, while mentioning the Princess Dolgoruky-Yurievsky's pamphlet, does not also refer to the answering pamphlet which was written by one of the Court dames, and which might have furnished him with some telling points against the Princess, who misrepresented, as he thinks, his friends and the circumstances. His elucidation of the Slavophile doctrines is very good, and his exposition of the workings of the new District Commanders is extremely useful, and the most complete that is accessible. But why did he not do justice to the Government by stating the reason for the change contained in the appointment of these District Commanders? While no landed proprietor, in anticipation or in practice, approves, unreservedly, of that reform, it is certain that not one proprietor could be found who would not frankly admit that some radical change was necessary, owing to the peasants' abuse of electoral rights. Abuses of the same sort occur even in advanced republics, and it is not always easy to decide upon the best remedy for them under the most favorable circumstances—which is not the proper description for the Russian circumstances, it must be confessed.

"The establishment of the District Commanders is one of the sorest grievances of rural Russia. The emancipation of the serfs was not a great success. Even the partisans of the Government admit that now. It did not improve the material condition of the masses. But the former serfs became citizens; they recovered their personal independence and immunity from interference in their private affairs."

Americans who are conversant with the negro problem at the South will find no difficulty in understanding this.

More difficult to reconcile are such statements as those on pages 119, 120, in regard to the recent great famine, and the Government's efforts to keep it secret. "The editors of the papers received stringent orders not to publish, under the fear of suppression and other administrative penalties, any news about the famine likely to 'disturb the public mind.'" Yet it is asserted that Count L. N. Tolstoy's letter calling upon the Government to state plainly whether or not there was sufficient corn in the country to keep the Russian people until the next harvest, and to provide it, in case there was not, was not only printed but "quoted and endorsed by the whole press," and "Vyshnegradsky found it necessary to give it a reply."

Among the topics with which Stepaniak deals is that of the Jews. "The classes which are at the head of the Russian anti-Jewish movement have long ago outlived the period of religious fanaticism," he says.

"With them the hostility towards the Jews is purely racial. With the masses, also, the

racial antipathy is also a much stronger ingredient in the anti-Jewish feeling than religion. Thus we may fairly describe the anti-Jewish movement as racial. . . . Everywhere the Jews almost monopolize the most lucrative calling in the community—that of middlemen. They come to constitute a class apart as well as a race apart, and racial hostility comes to embitter the struggle between the classes. . . . In the Pale of Settlement the Jews, although forming but one-seventh of the population, have concentrated in their hands one-half of the wholesale trade of the region, and have almost monopolized the retail trade."

This is the explanation of a friendly writer, it is to be noted. Very curious is the explanation of the anti-Jewish riots. A year before these occurred, the Emperor issued a manifesto denouncing the Nihilists, and calling upon all his faithful subjects to assist the police in exterminating them. The official name for Nihilists is *kramolniki*, which means, in Russian, rebels, state criminals. But in the south of Russia the peddlers and retail traders, who are all Jews, are popularly called *kramorniki*. The illiterate peasants, not unnaturally, got the two words mixed, and believed that the Jews were at the bottom of the trouble. Notwithstanding this, they behaved in a friendly manner, as Stepniak relates, to Jews who had been friendly to them.

Naturally, Stepniak has a good deal to say with regard to the political exiles in Siberia, and his narratives are of the most thrilling sort. But he is not quite just, in many instances; men whose sentences were pronounced in 1874-6 can hardly be regarded as, primarily, oppressed by Alexander III., whose reign dated only from 1881. At one point, also, he speaks of an exile having died at Berezoff, and, immediately afterwards, remarks: "But under Alexander III. it [leniency] was entirely thrown aside, and the practice of exiling people to places utterly unfit for human habitation was introduced on a large scale." Berezoff is included in that category, as recently introduced, whereas it was used as a place of exile in the middle of the last century—for Prince Mentchikoff and for Ostermann, among others. Stepniak's disregard of his country's history does not, of course, mitigate the horrors of Berezoff, but it increases the uninitiated reader's indignation against Alexander III. Another very confusing result of carelessness in writing and proof-reading arises from the different dates assigned to various events: for example, the Emperor Nicholas II.'s wedding manifesto is set down as having been issued on January 26, instead of on November 26, thereby ruining the argument of comparison between it and another manifesto. Again, on p. 170, it is said: "Politically, the speech of December 20 [1894] marks an epoch in the history of our opposition movement." On p. 200 this speech is referred to as having been made on January 20 (1895). We must also allude to the errors which arise from Stepniak's imperfect mastery of the English past tenses of the verbs. Astonishing as was his knowledge of our language, he unwittingly leads the ordinary reader astray by inaccurate use of those tenses.

Among the other topics of vital moment which are here treated are: the situation in Finland and Poland; the character of the Russian peasants, to whom Stepniak pays the high tribute which is their just due, but which they rarely receive from foreign writers; Nihilism, of which he gives the first and best summary, in its strikingly varied phases, from its inception to the present day; and the revolutionary view of Nicholas II., and his brief reign to date. As to the spirit of the latter, it can only be said

that the judgment must, of necessity, be superficial and hasty; that it is not softened by even so much as the suggestion that a vast empire cannot be switched to another track in the course of a few months; and that, while the author hotly champions the cause of the peasants, he blames the Emperor for paying too much heed to them as well as for oppressing them. "Relentless, implacable hostility toward the whole of enlightened, educated Russia, and patriarchal benevolence toward the peasants, such is the policy of the new Czar," he says, just as he has violently attacked Alexander III. for being "the Peasant Czar" and upholding the peasants by entirely different methods. In short, it is unjust irrevocably to condemn Nicholas II. as "King Log" for inaction, and Alexander III. as "King Stork," the devourer of his people, when it is plain that no consistent canon of conduct exists even in the mind of the implacable judge who seeks thus to sentence them to eternal opprobrium.

We return, last of all, to our former assertions, that the two volumes are interesting and enthralling to the highest degree, but that we dare not accept them as finally authoritative, either as to concrete statements or as to the general impression produced, after the specimens of inaccuracy which we have selected for illustration.

Chess Sparks. By J. H. Ellis. Longmans, Green & Co. 1895.

Chess Novelties. By H. E. Bird. Frederic Warne & Co. 1895.

In a letter about chess written some years ago, John Ruskin remarked: "I may tell you one thing much in my mind—the possibility of assigning value to games, primarily by the fewness of moves, secondly by the fewness of captures. Exchange games, where, after a hundred and fifty moves, the victor wins by an odd pawn, may contain calculations enough for next year's almanac, but they are quite out of my horizon of chess." Impelled, no doubt, by similar views, Mr. Ellis has made a most fascinating collection of games in which a winning position was attained in twenty moves or less. Many of these games were played by celebrated masters, and are more or less well-known specimens of brilliancy, while others are perhaps more remarkable for brevity than scientific skill. Among the examples of eighteenth-century play is a delightful *giuoco piano* of sixteen moves, won by Jean Jacques Rousseau in 1760 from the Prince de Conti, another proof—if proof were needed—of the versatility of that remarkable intellect. Abundant diagrams make it easy for the reader to follow the more complicated games, and Mr. Ellis has further supplied him with an index of players, a table of solutions, and a chronicle giving the results of all the important chess matches and tournaments from 1824 to 1894. Typographical errors, of the kind so common in chess books, are pleasantly lacking.

This particular merit is not shared by Mr. Bird's book, which contains plenty of instances of K instead of Kt, and even K to Q3 instead of Kt to Q B3. Other merits, however, it certainly possesses. In the first place, the veteran author is an interesting personage in the chess world. As long ago as 1847 he was playing matches with that admirable performer Buckle, the historian. In 1851 he played on even terms with the great Anderssen, and in 1858 he made a very fair showing against the invincible Paul Morphy. From that time up to the Hastings tournament of

this year he has constantly taken part in tournaments and matches, and, while never in the very first rank of players, he has met with enough success to entitle him to a bearing on behalf of his particular theories. At the outset he disavows any claim to absolute originality in his chess ideas, but he has always been known as a believer in certain irregular openings—particularly P to K B4—and his book is a somewhat rambling but decidedly entertaining plea for such openings, and in general for brilliant as opposed to "drawing-master's" chess. He points out that whereas, in the great match between Labourdonnais and McDonnell in 1833, no less than sixteen different openings were tried, the modern masters rarely venture beyond the Ruy Lopez or the queen's gambit. This lack of variety he attributes to the high stakes now played for, which give an undue importance to the mere fact of winning, with a resulting unwillingness on the part of the players to risk any but the safest and most deeply analyzed openings.

It is certainly curious that so little that is novel has been attempted in the openings during the last fifty years. In the 'Modern Chess Instructor,' published by Steinitz in 1889, the only two original suggestions, viz: P to Q 3 in the Ruy Lopez, and Kt to K R 3 in the Two Knights Defence, have not stood the test of practice, and have been abandoned by their author. On the other hand, it seems very doubtful whether Mr. Bird's elaborate arguments in favor of his special openings will carry conviction to the minds of other players. Writing before the recent meteoric appearance of young Pillsbury, Mr. Bird evidently regarded himself as almost the sole survivor of the school of Anderssen and Morphy, who aimed to mate or win, while the other players of the day had become imbued with the theories of Steinitz, who aims to avoid losing and to be certain of a draw. But, since this book was printed, a second Morphy has astonished the chess world, and the St. Petersburg tournament just over proved that some of Mr. Bird's theories will probably require revision. None of the four masters engaged in that tournament will be found to have offered a P to K B 4 opening.

Two Years on the Alabama. By Arthur Sinclair. Boston: Lee & Shepard. 1895.

THIS book has a right to exist. Written by one of the line officers of the *Alabama* after a service coincident with the cruise of the vessel, it has certain advantages over Semmes's narrative in consequence of the subsidence of war passions and the settlement with England of the *Alabama* question. Semmes's narrative was in a turgid and inflated style, and bitter in partisanship and denunciation of the North. Sinclair, it is true, professes only to give a personal narrative of the cruise, but this practically includes all that is of general or professional interest, while in narration of facts he writes more pleasantly as well as more correctly than Semmes. He has taken considerable trouble to verify his statements, and he has also profited by data and criticisms that were probably unknown to Semmes.

After all that can be said as to the great vexation and pecuniary loss brought about during the civil war by the cruise of the *Alabama*, the fact remains, and stands out in clear light, that her career had no vital effect upon the course of the war. Semmes saw this, and laments it in his book, while Sinclair in turn remarks that, parallel with the success of the *Alabama* in her latter days, was the steady

failure of the war against the Union and the approaching downfall of the Southern Confederacy. Too much prominence cannot be given to the policy of Secretary Welles, steadily persisted in and so well justified by results, not to weaken the pressure of the blockade on the Southern States by a large diversion of force against the Confederate cruisers. The maintenance of this great naval operation was a vital element in the subjugation of the Confederacy, by destroying its commerce and depriving an agricultural country of manufactured articles which included military supplies of all kinds, and also gradually closing to it the market for its staple article, cotton, upon the sale of which it relied for outside aid and assistance—financial, political, military, and naval. The commerce destroying of the *Alabama* was insignificant in its results compared to this commerce suppression; and the command of the sea always with the North, despite the raids of the Confederate cruisers, not only kept the blockade intact, but brought the pressure from the sea responsive to that by land which encircled the States in rebellion and caused the success of the Union cause.

Lieut. Sinclair brings out more forcibly than most writers the English character of the crew of his vessel. The sympathy of English officials and of colonial authorities is an old story, but it is interesting to note what is said on page 146:

"The English," he says, "the foster-fathers of the *Alabama*, are naturally proud of their creation, and they appear to be also in sympathy with us and our cause. Our crew are about one half English man-of-war's men, and have found among the sailors of the English squadron here many old shipmates, and doubtless they have already planned a glorious time together on shore the first liberty day."

The author's criticism of the neglect of our Navy Department to station a vessel at such salient points as the vicinity of Cape St. Roque, the Cape of Good Hope, Singapore, and similar positions, is well founded, and the neglect reflects upon the good judgment and wisdom of the naval advisers of Secretary Welles. Credit is given to Capt. C. H. Baldwin, commanding the *Vanderbilt*, for the best display of judgment in the pursuit of the *Alabama*. Humanly speaking, had it not been for the detention of the *Vanderbilt* by Admiral Wilkes, and (at a later time) for the enormous consumption of coal by the *Vanderbilt*, the captor of the *Alabama* would have been Baldwin instead of Winslow, and its fate met off the Cape of Good Hope or in the Indian Ocean rather than in the English Channel off Cherbourg. The greater part of the cruising and most of the captures of the *Alabama* were made under sail. Excellent sailing vessel that she was, her powers of keeping the sea far exceeded those possessed by the cruiser of to-day—the so-called commerce-destroyer—whose sail power has disappeared, and whose coal consumption, reduced by modern improvements, is newly taxed by the daily domestic demands for distilling, heating, electric lighting, and auxiliary engines. We prophesy that the next great war will witness the commerce-destroyer principally occupied with the duty of scout and convoy, commerce itself being duly conveyed or carried by vessels having swift pairs of heels.

Agreeing with Bullock, the author pays a high tribute to the special qualifications of Semmes for the work upon which his fame rests. One of these special qualifications was his knowledge of international law, which stood him in good stead in the many controversies he was engaged in during his cruise. It is probable, as the writer states, that Semmes,

having made an especial study of this branch of naval training, had no equal in either navy. As a requisite for a well-educated naval officer it has not lost its importance in these later times, either in time of war or in the more extended period of peace.

The account of the final engagement of the *Alabama* is excellent. It is the best that we know of and is without hyperbole or exaggeration. The intention of Semmes to board the *Kearsarge* is dwelt upon, and the advantage that the superior speed of the *Kearsarge* gave in the avoidance of this purpose is well brought out. The failure to board, and the damaged condition of the *Alabama's* powder, the author seems to think were the principal causes of the defeat. The statement of the master of the *Deerhound*, the yacht which picked up Semmes, was, however, that "it was a fair stand-up fight. The two vessels were constructed of the same materials, and the chances at first seemed to be even enough." As to the use of the anchor chain of the *Kearsarge* for protection amidship, the author frankly acknowledges that Semmes knew of this use of the chain cable of the *Kearsarge*, and also that he could have adopted the same scheme from his own resources had he so desired. But the protection thus afforded was insignificant, as a perusal of Winslow's reports and the appendices giving the hits made and their localities will show. In regard to the mistake made by Semmes in consenting to an engagement, which in a large sense may be called a strategic mistake, the writer professes ignorance of its purpose. It was probably the mistake of a brave man stung by taunts as to want of courage to meet an equal. It is quite certain, too, as the author mentions, that a long detention for repairs at Cherbourg would have brought about that port a fleet of Union cruisers which would have prevented her safe departure.

The story of the cruise is as a whole well written, clear, and consecutive, excepting a pardonable repetition on page 114. This volume, with Bullock's account of the *Alabama's* origin and Semmes's account of her career, will probably constitute the definitive presentation of the remarkable cruise of the *Alabama* from the side of those who cruised in her.

Personal Reminiscences of Notable People.
By Charles K. Tuckerman. 2 vols. Dodd, Mead & Co. 1895.

THESE two costly volumes purport to be only a *réchauffé* of what has already appeared in various magazines. They cover very different ground, the first dealing with the reminiscences of the author's earlier life, encountering various great men in America; the second founded on his diplomatic experience in the East, at Athens and Constantinople. It is hardly necessary to say that the latter series of anecdotes is much more novel and interesting than the former. The chapters which show the incurable procrastination and chicanery of the Turkish Government are well worth reading at the present day, when the great Powers of Europe and America, untaught by the experience of generations, are waiting for the Sultan to keep his engagements—in other words, for the Bosphorus to run dry. The rest of the book is gossip, and of but little permanent value. A large number of stories, e.g., that of the Duke of Wellington (i. 271), are distinctly stale; others, as that of Butler (i. 89), pretty flat. But the whole book produces an uneasy feeling from the frequent insertion of anecdotes leaving a mean impression of the individuals to whom they relate,

with little or nothing to counteract it. Mr. Seward is almost the only person who, after passing under Mr. Tuckerman's eye, has not had some rip or tear in his moral garb exposed, or what is meant to appear such. Sometimes this effect is produced at the price of very inadequate knowledge. To say that Edward Everett "felt the leaden weight of disappointed ambition" (i. 33), that Abbott Lawrence (indicated as Mr. L——) acquired his manner by "studying his Talleyrand," is to convict Mr. Tuckerman of the most superficial knowledge of these eminent men.

These volumes, though generally written in good English, contain some disgraceful blunders—whether of author or printer is not always clear. "Blaine Washburne" appears (i. 84) as one person, between Thaddeus Stevens and Reverdy Johnson. Lord Ronald Gower becomes (i. 127) Lord Gower, by the eternal American blunder in similar titles. Two pages further on we have *statu quo* in the nominative for *status quo*. A well-known quotation has its point nearly spoiled by being given, "From grave to gay, from serious to severe" (i. 153). "Sonnambula" is twice printed "Somnambula" (i. 164, 190). "Maria Stuarda" becomes "Maria Stuarta" (i. 181). The famous answer, "Qu'il mourût," which our author puts into the mouth of Rachel, as *Cumille*, belongs to the part of the old *Horatius* (i. 185). The French word *embonpoint* is wrongly used (i. 305), and Simon Pure (i. 319). Joaquin Miller is printed Joachim, as if it were a real name (ii. 13). "*Petits Lundis*" loses an *s* (ii. 105), "*Le Japon*" becomes "*La Japan*" (ii. 166), "*Jeunesse dorée*" loses its final *e* (ii. 245). The phrase *genus homo* is used as equivalent to the male sex (ii. 281). "*Grande Rue*" is altered to "*Grand Rue*" (ii. 341). When one has to pay five dollars for two small volumes, this is an extra allowance of mistakes.

Mars. By Percival Lowell. Boston: Houghton, Mifflin & Co. 1895.

MR. LOWELL's book is charming in more ways than one. His facile pen would make easy reading of the driest subject; and when it deals with a theme so fascinating as that of the conditions of life on another planet, hard-hearted indeed must be the critic who does not find himself ready to embrace conclusions which he would have contemptuously rejected if reached by a rougher path. The author's enthusiasm for his subject is shown even more strongly by the enterprise on which the book is based than by what the latter sets forth. It is no commonplace spectacle, that of a man of not very easy leisure, perhaps in a situation where the ordinary mortal would have been completely engrossed in business, abandoning his home for nearly a year, and fitting up at no little expense an establishment in the deserts of Arizona, for the sole purpose of seeing from the best point of view what is going on in Mars. We feel that such an enterprise deserves some good result, and some more cheering word than that of the astronomer who remarked that Mr. Lowell had been very successful in discovering what he had announced his intention of finding before he set out.

From our guide over the oceans and continents of Mars we learn that our neighboring planet really has an atmosphere, though serious conflict with Prof. Campbell's opposite view is avoided by that atmosphere's being rarer than ours is at the tops of the Himalayas. Clouds rarely obscure the sunny skies, yet there is enough of watery vapor to condense into a snow-cap around either pole during its winter.

As spring advances, the cap slowly begins to melt away and form an ocean of blue water around its contracting boundary. Water is very scarce on the planet, and is growing scarcer from age to age, owing to its absorption into the body of the planet. The inhabitants have utilized the diminishing supply by an elaborate system of irrigation. Canals are dug which annually convey the water melting at either pole to the equatorial regions. A broad belt, thus watered into fertility, skirts each canal, and these belts, distinguished, by their vegetation, from the arid plains which form all the rest of the planet's surface, are seen from the earth as a network of fine lines.

The author cannot be charged with ignoring any obvious objections to his views. The latter are sustained by a wealth of illustration and a completeness of argument which leave nothing to be desired except credibility of foundation and conclusion. We do not object; we only feel that we know so little of the possible conditions on the surface of Mars that the chances are scores to one against any theory we can now frame being a true one. While commending Mr. Lowell's production to the general reader, we cannot deny that astronomers would everywhere have felt more confidence in his observations if he had been satisfied to confine himself to describing and picturing what he saw, without attempting to frame any theory, even in the innermost recesses of his mind. Without this precaution the most careful observer is liable to become a dupe of the "expectant attention" of the psychologists, and to see things in accord with his preconceived notions rather than with the facts. Especially is this the case in tracing markings so faint and shadowy as those on the surface of our neighboring planet.

New Orleans: The Place and the People. By Grace King. New York: Macmillan.

THE historian who, with impartial acumen, sifts a mass of documents in order to form a clear judgment of events long past, must speak with soberness of detail of the actors in a nation's life; their personality is lost sight of in the importance of the part they play. Yet if he confine himself exclusively to the broad lines of his subject, he will make his history very dry reading; if, running into the

other extreme, he attempts to delineate individual character on too extensive a scale, his work will be little better than a voluminous compilation of biographies. The history of a city—especially of a relatively young city—presents a more circumscribed field; but if the first danger is minimized, to avoid the last is still more difficult; the founders, the actors in the development of the city are so near to us that the story of their deeds, transmitted by word of mouth from one generation to another, has all the charm or force of actuality. Tradition has not had time to become legendary. Corroborative evidence is not lacking. Hence, the temptation to write of individuals rather than of events must be great.

Miss Grace King has avoided both dangers in her new work on New Orleans. The accuracy of the historical part of the book is unimpeachable, and the documentary proofs testify to the industrious researches of the author. But the facts are presented in Miss King's usual graceful style, and there is nothing dry about them. Nor does the history proper form, as it were, a separate chapter, a narrative, soon ended, to introduce biographical compilations—as is the case with some other books on New Orleans. Here, from beginning to end, from the first exploration of the Mississippi to the present day, we see a succession of panoramic views, of *tableaux vivants*, in which the dramatic persons—be they La Salle, Iberville, John Law, the Regent, Louis XV., O'Reilly, Villeré, Napoleon, Jackson, Lafitte the pirate, or Ben Butler, be they far or near—appear in a life-like delineation. It is history acted, not told. And while the eventful growth, the rise and fall of the old French city and its new life, are thus faithfully portrayed, the place itself, with its fading landmarks, its gayeties and days of mourning, its local celebrities and quaint characters, its heroes and benefactors, is described with a lightness of touch, a pathos and humor, which keeps the interest awake. The reader is loath to lay aside this handsome volume, profusely illustrated, with rare fidelity, by Frances E. Jones.

The Creoles are noted for their enthusiastic attachment for their city, and Miss King, herself a native, may be charged with partiality by those who do not know New Orleans; but to those who do, her book bears the stamp of truthfulness as well as of a generous enthusi-

asm. It will please the general reader also by the piquant show of manners and customs with which it abounds. Admirers of General Butler and of the carpet-bag régime, however, had better skip chapter xiii.—the only one which treats of "our late unpleasantness."

BOOKS OF THE WEEK.

Complete Index to Littell's Living Age, to the end of 1905. E. ROTH, 1185 Pine St., Phila.

NOW READY.

Volume III. of the Economic Studies
of the University of Chicago.

THE HISTORY

OF THE

Indian Silver Currency

By KARL ELLSTAETTER.

Translated from the German by Prof. J. LAURENCE LAUGHLIN of the University of Chicago. Large 8vo, cloth, 189 pp., with tables and charts. Price \$1.25 net.

Professor Laughlin has rendered all students of the Silver Question a great service in providing this translation of Dr. Ellstaetter's valuable work. No compendium on the history of the Indian Silver Currency and its industrial relations exists in English. To obtain correct facts hitherto one must have ransacked the voluminous pages of the English Blue books.

Dr. Ellstaetter's study effectively treats the effect of the Silver Question on the price of wheat; who her depreciated silver acts as an export bounty; and how the industrial and financial system of India affects prices and indebtedness. It is clear, brief, and comprehensive, giving the general reader a full insight into the Silver question as it touches India, Indian trade, and the policy of silver using countries. It deals with facts, not with theories.

PREVIOUS VOLUMES OF

THE ECONOMIC STUDIES

I. The Science of Finance.

An authorized translation of Gustav Cohn's *Finanzwissenschaft*, by Dr. T. B. VANLEN, of The University of Chicago. Now ready. Large 8vo, cloth, 12+800 pages. Price, \$3.50 net.

II. History of the Union Pacific Railway

By HENRY KIRKS WHITE. Large 8vo, cloth, about 150 pages. Price, \$1.50 net.

The Nation.

NEW YORK, THURSDAY, FEBRUARY 6, 1896.

The Week.

AFTER what the Senate has shown itself capable of in the way of resolutions respecting Venezuela, *fin-de-siècle* Monroism, and Armenia, its deliverances about Cuba cannot fail to strike one as unexpectedly and gratefully rational. True, the Cuban resolutions are as wanting in grammar as the Venezuelan resolutions were in sanity, or the Armenian in a sense of humor. The decay of statesmanship has, in fact, reached the point of inability even to draft a law or resolution in proper terms. But in this Cuban business it must be confessed that the Senate committee's report and resolutions show that their heart is right, like the camp-meeting preacher's, and that they are bound for the kingdom, even if the auxiliary verbs are too much for them. In refraining from urging the recognition of the Cuban insurgents as belligerents, they display good sense. That the Cuban insurrectionists have not as yet succeeded in attaining the actual status of belligerents is generally admitted, and must be the opinion of the Senate committee. Senators must have considered, moreover, the embarrassments to our own commerce with Cuba which would be certain to result from the grant of belligerent rights to the insurrectionists, and doubtless have found therein fresh reason for moving with caution. They have, accordingly, limited themselves to deploring the unnecessary barbarities of the Cuban war, and to requesting Spain, if the war must go on, to grant the insurgent armies the rights to which humanity, if not the abstract law of war, entitles them. The accompanying report is couched in moderate and humane terms. Concerning the actual posture of affairs in the island the Senate committee wisely say little. They do not affirm that the Spanish troops have been guilty of wanton cruelties. The charge that they have been has been widely circulated in the press, and has been held to be self-evident by many political conventions and orators. But the Senate report says nothing on this head, nor does it maintain that the rebel commanders have respected the lives and property of non-combatants.

There still remains a chance that the nation may be spared the full measure of humiliation threatened by the absurd deliverance of the Senate and House of Representatives on the Armenian question. The resolutions as passed attempt to "lay down the law" for Great Britain, Germany, Austria, France, Italy, and Russia, reciting what the Senators and Representatives consider "an imperative duty" in the premises; but these Powers

will never be informed of what our lawmakers think they ought to do unless the President complies with the provision that he be "requested to communicate these resolutions to the Governments" of the six European nations. The encouraging report comes from Washington that this request does not meet with the favor of the Administration, and that the President will exercise his discretion by doing nothing in the premises. It is to be hoped on every account that this report will prove true. The transmission of the resolutions would do no good to the Armenians, would make the Sultan less disposed to protect Americans in his dominions, and would simply secure us a number of snubs from the Powers whom we attempt to instruct in their duty. The worst thing about the "fooling" of the politicians with foreign questions like this is, that it publishes the shame of our Congress to the world. So long as Senators and Representatives "play politics" with our domestic questions, nobody abroad pays any attention to them; but when they try to regulate the rest of the universe, they disgrace the United States in the eyes of foreigners.

In 1890 that part of the country which lies north of the Potomac and the Ohio and east of the Missouri and the Red River of the North had a population of thirty-five and a half millions. There are in the Senate now thirty-five members from that section (one Delaware seat being vacant), each of whom, therefore, represents on an average something over a million people. Of these thirty-five Senators twenty-three are Republicans and twelve Democrats. On Saturday last thirty-two of them voted or were paired against the Jones free-silver substitute for the House bond bill. The three who voted for it were Senators Cameron, Turpie, and Voorhees. The fourteen States south of the Potomac and the Ohio are represented by twenty-eight Senators, two of whom are Republicans, one a Populist, and twenty-five Democrats. The population of these States in 1890 was 21,000,000. They therefore send to the Senate one member for every 750,000 of their people. One of the Republicans, Senator Elkins, and five of the Democrats, Faulkner, Martin, Caffery, Mills, and Lindsay, had themselves recorded against free coinage, while the remaining Republican, Senator Pritchard, and the one Populist, Senator Butler, and twenty Democrats were among its supporters. From the trans-Missouri States there come twenty-six Senators, five of whom are Populists, two Democrats, and nineteen Republicans. This whole region, including Oklahoma, New Mexico, and Arizona, had in 1890 a population of 6,000,000. It therefore has one vote in the Senate for every 234,000 of its inhabitants. Three of

the Republican Senators, namely, Thurston, Baker, and McBride, opposed the free-silver substitute, but the remaining twenty-three of the trans-Missouri Senators were all among its supporters. In other words, eleven-twelfths of the Senators from the States which in 1890 had a majority of eight and a half millions of the entire population of the country are opposed to silver monometallism, while its apparent majority is due entirely to the fact that it has among its advocates more than three-fourths of the Senators from the South and more than seven-eighths of those from the far West. In short, the two free-silver sections taken together have upon an average one Senator for every 500,000 people, the anti-free-silver section one for every 1,000,000.

It is worth while to notice also the progress of public opinion on this subject in recent years. On the 17th of June, 1890, Senator Plumb of Kansas offered the following section as an amendment to a House bill on the same subject:

"That hereafter any owner of silver or gold bullion may deposit the same at any mint of the United States to be formed into standard dollars or bars for his benefit and without charge; but it shall be lawful to refuse any deposit of less value than \$100, or any bullion so base as to be unsuitable for the operations of the mint; and said coins shall be a legal tender for all debts, public and private."

This amendment was adopted, and the bill passed the same day in the Senate by a vote of 42 to 25, the majority for free coinage being 17. The number of votes for free coinage on Saturday last was exactly the same, 42, but the negative had grown to 35; that is, ten votes had been gained for sound money in five years, notwithstanding the admission of Utah, Wyoming and Idaho, with six votes gained to the other side in an undemocratic way. Even this does not represent the whole strength of the sound-money forces. In 1890, too, one vote from Pennsylvania was given for free silver, that of Cameron, who will give place to an anti-silver man next year. The State of Kentucky also is to be put in the anti-silver column soon. So it appears that the vote just taken is quite inconsequential, representing not only a minority of the people, but a rapidly decreasing minority. For these reasons the vote in the Senate cannot have any adverse influence on the bids for the new bonds. The effect has been already discounted, and the present prospect is that the bidding will be higher than the price offered by the Morgan syndicate. Of course nobody can speak with confidence on this point until the bids are opened, but the opinion prevails that the bulk of them will be between 108 and 110. The higher price is most gratifying, and is undoubtedly due to the passing away of the war scare.

A correspondent, writing to us from Santa Barbara, Cal., asks whether it is true that Senator Stewart of Nevada was an advocate of the single gold standard in 1874, as stated in the volume of John Sherman's 'Recollections.' He was. In the *Congressional Record* for that year (page 1392), the subject under debate being an amendment to the national banking act, Senator Stewart, replying to a question from Senator Logan, said:

"I want the standard gold, and no paper money not redeemable in gold; no paper money the value of which is not ascertained; no paper money that will organize a gold board to speculate in it."

The "gold board" referred to was the Gold Exchange in New York, which existed during the suspension of specie payments. Mr. Stewart very properly desired that steps should be taken to "knock out" this institution by resuming specie payments. This debate on the national-bank amendment was somewhat protracted. Mr. Stewart came back to it on the 20th of February (page 1678). Senator Logan had stated that we could not get the gold to resume specie payments with. To which Stewart replied:

"When gold is invited to a country like this, with such an industrious people as we have, with our industry and our resources, I say there will be no difficulty about getting sufficient gold. . . . If you are going to have gold in this country, you must make a demand for gold by using it. . . . You have legislated gold out of your country. Invite it back, and forty million people will get you all the gold you want."

And much more of the same tenor, showing that the only kind of specie payments Stewart thought of or desired was gold payments.

The degradation of the Senate already seemed complete, but Tillman's performance on Wednesday week showed that in the lowest deep a lower deep was still left to be touched. A worse outbreak of blackguardism and incendiarism has never been witnessed in the upper chamber, and it is a melancholy reflection that the country has six years of such diatribes to look for from the same source. All of the conservative traditions of the Senate are now gone, and the new-comer no longer hesitates to begin talking with the frequency and profuseness of a Morgan before he has been two months in his seat. Even before Tillman's outburst, a terrible bore had been revealed in one of the new Senators from North Carolina, and the growth in numbers of the body makes the development of every fresh speechifier of this sort a sad infliction. The correspondents report that the Republican veterans from New England, like Morrill of Vermont and Hoar of Massachusetts, appeared shocked and wounded by the evidence of the decadence of the Senate that was afforded by "the spokesman of the new and degenerate South." But the Republican Senators of New England are not free from blame in this matter. It was Mr. Hoar who wel-

comed a repudiator from Virginia fifteen years ago as an evangel of a new South, and Massachusetts Republicans have regarded favorably, when they have not actively helped, the movements that have brought into the Senate Butler and Pritchard of North Carolina and Tillman and Irby of South Carolina.

Senator Thurston assures the country that Nebraska is ready for the horrors of a naval war, and this will surely make England think twice before ordering her flying squadron to Omaha. He also announces, with Roman firmness, that he is ready to sacrifice his son on the altar of country, so long as he remains in Washington to vote the family a pension. Such sound and fury serve a good purpose in the country at large by making the whole Davis-resolution intrigue ridiculous. In the Senate itself, however, the accession of a new incendiary will encourage all the others. Canning said that he did not dread the entrance of a firebrand member into the House of Commons, because, he declared, "firebrands as soon as they touch this floor hiss and expire." But that was because the general sense and conservatism of the House fell upon the firebrand like a dash of cold water. In our Senate the case is now vastly different. The floor of the Senate chamber is already filled with firebrands, and every new one that falls on the heap makes the flames leap higher. Instead of water it is oil which the old members fling on each new brand. There is indeed an immense hissing, as Canning said, both of the reptilian and asserine kind, but, unluckily, it shows no sign of expiring.

It is evident that the popularity of the Monroe-Davis-Lodge resolutions is rapidly on the wane. An attempt was made to assert them patriotically in the New Jersey Senate on Monday evening, but the motion was quickly laid on the table. In last Sunday's *Boston Herald*, the Hon. George S. Boutwell, whose stiff Republicanism will not be questioned, had a searching review of the whole conduct of the Venezuela business, in which the President and Secretary Olney, together with Lodge and the other New England representatives whom Mr. Cleveland stampeded, come in for weighty rebuke. Mr. Boutwell's Republicanism and ideas of public policy date back to the time when filibustering principles and highwayman's methods, such as Frye and Lodge advocate, were denounced in Republican platforms, and he is within his rights in calling the rash innovators of the present day to order. To give the finishing touch of farce to the whole business, it is now announced that the Senate will have the rest of the debate on the Davis resolutions held behind closed doors. This seems incredible. Can patriotism be hidden under a bush-

el? What would "the immortal Monroe" think of Senators who were afraid to mention his name except with bated breath and in secret? If there is a sense of humor beyond the grave, we fear he would smile a pitying smile, especially when he remembered how short a time it was since these same subterranean Senators were riding the whirlwind and directing the storm of war with what Dr. Johnson would call "easy volubility."

Mr. Harrison's announcement that his name must not be presented or used in the St. Louis convention calls attention to the extraordinary condition of our politics within half a year of the time when the two great parties must present their platforms and candidates in a Presidential campaign. The situation was vividly portrayed in this answer by Senator Brice of Ohio to a recent question by the correspondent of the *Chicago Times-Herald*, as to what was going to be the outcome of pending attempts at legislation:

"Nothing, nothing. We are going to drift along, that's all. The Senate is drifting, the Administration is drifting, the House of Representatives is drifting, the Democratic party is drifting, the Republican party is drifting, the Populists are drifting. Everybody and everything is drifting."

Yes; "everybody and everything is drifting." So far as parties are concerned, no one need worry; the country can get along if either of them disappears. But how long can the government of a great nation drift without danger of shipwreck? Mr. Harrison, who now takes himself out of the contest, has sometimes been called "the logical candidate" of his party; but where is the logic in nominating for another term the man who, in his first term, favored a tariff law which his own party is not now ready to revive, a silver-purchase act which his party had to help repeal within three years, and a force bill which no member of his party would now hear of? McKinley, too, is sometimes called the logical candidate, but the logic of taking a man whose policy has once been rejected by the country is only clear when at least his own party is unitedly and enthusiastically for trying it again.

Mr. Reed continues to be a tongue-tied candidate for the Presidency. What he thinks about the currency, about the tariff, about foreign policy, the public does not have the faintest idea. We are compelled, therefore, to infer his views from what he does and from the character of the men who are fighting his battles. In Louisiana his "manager" is the notorious ex-Gov. Kellogg, and the convention which he controlled was in favor of sugar bounties, free silver, and the Populist creed in general. Eight of the Louisiana delegates are reported to be certain for Reed. The question is, can he go on dumbly receiving and working for such support without alarming his friends in the North and East? If this Southern

support were given him in the face of open declarations against Southern financial heresies, the case would be different. But Mr. Reed has not committed himself on a single point, except that he consumedly wants to be President.

The Republican rising against Platt closely resembles, in cause and course, the Democratic rising against Hill four years ago. There were exactly the same objections to pushing that movement which Mr. Root makes to the punishment of Platt at this season. To the honor of the independent Democrats be it said, these objections made no impression on them. They said that the time to punish fraud was always the time when it was found out; that stays of proceedings were unknown in the forum of morals; that they would not let Hill alone in order to share his plunder. They accordingly went ahead, and Providence, who generally smiles on courage working in the service of honesty, rewarded them with complete success. It will not do for Republican moralists to have lower standards and fainter hearts than the Democrats. If parties are never to be purified in the Presidential year, the fate of this Government is certain, for all real power is rapidly passing into the hands of the men who boss the nominating conventions, and the Presidential year is always the one in which the chief frauds are committed. Mr. Root's plea for delay is very like a proposal never to punish housebreaking during the long nights; to wait always before arresting thieves for the pleasant summer weather, when they are off "tramping" in the country. Better news for the political rogues than that the laws of morality were suspended before every Presidential campaign there could hardly be.

The report of the committee on the Dunraven charges is most thorough and convincing. One knows not which more to admire, the acute sifting of the flimsy evidence upon which Dunraven based his monstrous accusations, together with the overwhelming array of rebutting testimony, or the tone of courteous restraint and impartiality in which the whole is pitched. There is not a word of fretting or fury, no calling of names or bristling of ears or mane. In a very excess of politeness, the committee express their conviction that Dunraven himself, if he had stayed through the investigation and heard all the evidence, would, of his own motion, have withdrawn the charges which originated in a mistake. The only man who comes in for "arraigning" in the whole report is the owner of the *Herald*, who is rebuked for the dishonorable action of that paper in stealing a part of the evidence taken, and who, we believe, under the rules of the New York Yacht Club, is liable to expulsion therefor. The best of all is that this report will convince the world that we still have gentlemen left in

this country, who know how to conduct an international controversy as gentlemen should. To hear both sides patiently and exhaustively, to seek every ray of light possible, and then to sum up the whole without a particle of passion, is the first instinct of a gentleman, and ought not to seem a wonderful thing at all. It does seem so only by contrast with the horrible manners and wretched ill-breeding, to go no further, which our professional diplomats have lately displayed. The thanks of the country are due to Messrs. Phelps, Morgan, Whitney, Mahan, and Rives, not merely for their excellent work in the matter immediately in hand, but for the great example they have set us of gentlemanly methods. They will have gone far, in the eyes of Europeans, towards rehabilitating the American character, and towards making the boorishness of Messrs. Cleveland and Olney appear, as it was, a break with our best traditions and wholly unrepresentative of the country.

It is hard to know whether to laugh or weep over the picture of the great Chicago editors, comparing notes after a year's experience, and finding that the net result of all their mad antics in the way of prizes and lotteries and guessing-contests and colored pictures and general endeavor to make the public buy what it did not want, was \$500,000 thrown away, stationary circulations, and degraded papers. They now swear they are cured, and beg to be let out of the madhouse. The great trouble with them, and all their frenzied kind, is that they have been keeping their eyes on each other instead of on the newspaper-reading public. One lunatic editor excites another to more extravagant madness, and the poor forgotten public suffers and grows unutterably weary. No man who has any means of finding out what his rational fellows think, can doubt that "the average man in every American city" would gladly and gratefully welcome "a newspaper that should give him only the news, and the news prepared in such a way as to make the marvellous enterprise of its publisher in getting it a secondary matter." What a blessed relief, too, would it be to thousands to dispense with "the witty reporter," who thrusts his gibes and flouts in your face instead of telling you what actually occurred or was said; to find a paper that preferred to be accurate rather than to startle; that would present general and trustworthy news in place of "exclusive" misinformation and indecency; that should be written for its readers, not for its rivals—that should, in short, display simply ordinary intelligence, manners, and morality. The opportunity for such a morning paper in New York is just now immense. The field for the other kind is more than full, as we understand those papers are finding out to their cost which are trying to trumpet their way into it.

It has long been the opinion of those who knew Lord Salisbury well that he was not a man of action; that his administration would never produce a policy in any direction except towards Ireland; that serious dealing with any other problems of the day was not and never would be his forte. He is, and always has been, a skilful critic, especially of Mr. Gladstone and the "Rads" and the Home-Rulers, a powerful dialectician, and, as Mr. Disraeli once said of him, "a master of flouts and sneers"; but he has really, in spite of the Tory confidence in him and admiration of him, never shown the slightest disposition to take great responsibilities on himself. Consequently none were so much amused by the extravagant promises made in his behalf by the Conservative orators at the last election as those who were best acquainted with his character. He has undoubtedly led the English public during the last six months to believe that he was going to bring the Turks to reason, that he had the means of stopping the Armenian horrors, that the Berlin Treaty, which he and Lord Beaconsfield brought home in such triumph, did assure peace and protection to the Christians of Asiatic Turkey. He now cynically announces that it meant nothing at all for them except England's approval of any reforms the Sultan chose to undertake; that England, since she cannot attack the problem from the land side, is utterly powerless to help them, without the concurrence of the Powers, and that the Powers will not concur.

This is all solemn truth, as we have been pointing out in these columns for months. England is and always has been powerless of herself. No Power can of its own motion, and unaided by others, do anything for the Armenians except Russia. But such an open avowal of impotence and helplessness, on behalf of a great nation, we presume, was never before made by an English minister. The feebleness of Mr. Gladstone's foreign policy used to be a favorite theme of Conservative orators, but Mr. Gladstone was a flaming son of Mars compared to Lord Salisbury. The worst thing Mr. Gladstone ever did in this direction was to make peace with an interesting and brave little people, the Boers, whom the Jingoos were trying to rob of their independence. What would they have said if he had vapored for a year and then confessed to mankind that there was no fight in him? There is no doubt that this astonishing speech will lower English prestige. Lord Salisbury cannot help the Armenians—granted. But to tell the Sultan and the world that he never thought he could, and tell the Turks that Christendom in the nineteenth century is powerless against them, is the worst of those "blazing indiscretions" of which John Morley has said Lord Salisbury is guilty every time he opens his mouth. It is enough to make Pitt turn in his grave.

SOME RESULTS OF THE TARIFF.

TWENTY years ago the opponents of the protective policy were just as convinced as they are to-day that it would in some way, but they could not exactly say in what, work enormous damage to this government, if it did not sow in it the seeds of positive decay. We think the precise way is now pretty clearly traced out. It was plain enough, *a priori*, at the period we mention, that the complete absorption of the leading political party in tariff legislation, its sacrifice of every other public interest to the tariff, and the rigorous use of the tariff test as a condition of admission to public life and office, would end in driving out of politics nearly all the thinking force of the nation—the class of men who were occupied with larger questions than the protection of manufactures, or who were capable of dealing with them. How many such men are left in public life to-day? Who is there in Senate or House whom anybody listens to with confidence and respect on any subject at all, and notably the great issues of war and peace? Who is the international lawyer in public life? Who is the great authority on currency and finance? Who expounds the Constitution, and stands for jurisprudence, and science, and art, or any of the great humanizing agencies? Who, in fact, has, on a pinch, a word to say for civilization itself? We shall be glad to call attention to any such gentlemen if, in the opinion of their admirers, we have overlooked them.

Now why should this be? The explanation is very easy. Legislation which enables a large body of rich men all over the country to calculate and enter in their ledgers the exact sum which a certain act of Congress will put into their individual pockets, is probably the greatest indirect incentive to corruption ever devised. No popular government could resist it for ten years. Not only does it give every manufacturer a direct commercial interest in the return of one type of man only to the Legislature, and that not a very high one, but it makes it a matter of business with him to resist and wage war on every other type. More than this, in a country of universal suffrage, it drives the employers of labor irresistibly into teaching not only their own employees, but all the poor and ignorant, that the chief function of Government is the making of profits and raising of wages, and causes all its other business to seem insignificant. Let a generation or two grow up under this teaching, and you soon have the devil let loose. You set every man who is not rich at work devising plans for making the Government give him more of the money which he thinks is due to him. You stimulate hatred and envy of the rich, because you make the masses think that they, through governmental carelessness and apathy, have got more than their share. You give all the manufacturers and corporations, too, an interest in estab-

lishing the boss system in all the States, so as more easily, through the boss, to control the nominating machinery and prevent men hostile to their interests from getting into office. In fact, the march of our politics under this system to its present condition has almost the order and sequence of a natural agency.

The recent extraordinary phenomenon known as "standing behind the President" in an ill-mannered, sudden, and unexpected attack on a friendly Power, accompanied and followed by a great outpouring of popular hate of a foreign nation, with disastrous effects on trade and commerce and public credit, is another direct result of the protective policy. In order to maintain the high tariff and justify the twenty-five increases of it, culminating in the McKinley bill, which we owe to the Republican party, hatred and suspicion of foreigners had to be embodied in the party creed and made the leading feature in popular education. Foreigners, and particularly Englishmen, had to be represented as constantly watching and plotting against the United States, as trying to influence our elections with money, and meditating designs against our prosperity. From this to rejoicing in the misery caused among foreigners by the loss of our trade, and predicting that, as our commerce grows, we shall have to keep a large navy for the purpose of fighting them, and finally to the development of deep hatred and desire to kill them in battle, among people who had never seen Englishmen at all, was a short step, and it was easily taken. Out of this, too, has grown the widespread delusion that America ought to be sufficient unto herself, ought to have a civilization of her own and currency of her own, and live apart from the rest of mankind on her own literature and ideas. It has been growing, curiously enough, just as the great Eastern empire of China is slowly laying this system of isolation aside, as a failure, after several thousand years of trial, and after the experience of many nations had shown that isolation ends in stagnation, and that contact with a variety of ideas and institutions is the first condition of progress.

Though last not least, the protective policy has brought on us the silver craze and its accompanying barbarisms. The plan of bringing in a number of small, scantily peopled silver States to keep down and counterbalance the rising anti-protective ideas of the East, or, as they frankly expressed it, to make sure of the McKinley tariff for ten years, was a device of the Republican majority in the Reed Congress of 1890. This plan, which really involved the submergence of our government under a tide of semi-barbarism from the mining towns, has now been followed for six years, and here is the result (we quote from the *Evening Post*):

"Nevada, with only 45,761 people, and most of them a barum scarum lot, has as many votes as New York with 5,997,853; Wyoming's 60,705 as Pennsylvania's 5,358,014; and Idaho's

84,385 as Ohio's 3,672,316. The ten States of North Dakota, South Dakota, Montana, Wyoming, Colorado, Utah, Nevada, Idaho, Oregon, and Washington, in one section and with a common interest, with only one-thirtieth of the population of the nation, have twenty of the ninety Senators, or two-fifths of a majority."

These men, reinforced by like-minded legislators from other States west of the Mississippi, while representing only a quarter of the population, are, when united, within eight of commanding a majority of the Senate. Most of them have brought with them the protective idea in its last and crudest and most violent form, for they are in favor of protecting even native money from foreign competition. They avow that they are not only in favor of the excision of America from the civilized world, but of enhancing in every way they can, by legislation, the silver which they wish to make the medium of exchange. The mediæval monarchs used to prohibit the exportation of the precious metals because they wanted them to be cheaper at home, and we laugh over it; but our barbarians "go them one better," for they propose to keep them at home to make them dearer. In fact, anybody who is lecturing at a Circle like Chautauqua, or any summer school, on the history of civilization, could not do better than take his class down to Washington, and converse with a Western silver Senator on currency, credit, and international exchange, as a means of getting a glimpse of the mind of Clovis, or Merovig, or any of the great barbarian chiefs of the fifth and sixth centuries. They will thus acquire more knowledge of the mediæval world in a couple of hours than by a year's study of chronicles or records. The silver craze, in fact, in its trans-Mississippian development, as well as the degradation of the Senate, which is now exciting so much alarm, is as direct a result of the Republican policy of the last quarter of a century as if it embodied it all in a single act of Congress.

THE POCKET VS. PATRIOTISM.

A Boston paper reported the President as marvelling greatly, in a letter to a banker of that city, that New England business men should have shown, in the Venezuelan flurry, so much more concern for their pockets than for patriotism. We know, at any rate, that, in the deadly rebuke of the Harvard professors levelled at them by the eminent youth who has more understanding than all his teachers, severe things were said of "stock-jobbing timidity—the kind of statesmanship which is clamored for at this moment by the men who put monetary gain before national honor." It is, indeed, a loathsome picture of the sordid spirit which is thus drawn for us—thousands of merchants and manufacturers, with good red blood to spill, meekly putting up with national insult and disgrace for the sake of a few miserable dollars. Contrasted with them, we are asked to admire the band of gene-

rous and full-souled men, thirsting for honor and despising the jingle of the guinea, who follow their country's flag right or wrong, and count all the rest the vile dross it is.

Everybody must feel indignant as he looks on that picture and then on this. What man so low as not to blush for the cravens who weigh their pocket-books against their country? But, to be consistent, and to insist upon making and keeping our patriotism entirely pure, we shall have to go farther. We shall have to consider the case of those who throw their pocket-books into the same scale with their country—who throw in a very flat and gaping pocket-book, in the hope of getting it back again plump and sleek. In other words, if sordidness is at deadly enmity with patriotism, nobody must be allowed to go to war or advocate war who will not solemnly agree in advance to come out poorer than he goes in. This would at once rule out all naval contractors, one of whom was lately heard to say that he hoped to Heaven there would be a war to give him a chance to make a fortune. It would prevent, also, all furnishing of supplies except at less than cost, all pensions, all promotions with higher pay, all paying of debts in the depreciated currency which war would be certain to bring. We must not have any scandalous getting rich out of the country's troubles, such as plagued us in the civil war. No one should be permitted to speak or vote for war who will not put on file an inventory of all his worldly goods, and give a bond to bring no more out of the war than he carries in. Only in this way can we get a Gideon's band of absolutely disinterested patriots before whom no enemy could stand.

Then we must revise our histories, and stop making patriots of our forefathers who went to war for their pockets' sake. It will never do to say that it is honorable to go to war for a few dollars, but dastardly to try to avert war for the same reason. The American Revolution was, as a philosophic historian tersely defines it, "a money war." The colonists, as Burke said, had no such wonderful love of liberty in the abstract, but were like the sordid English in having that love "fixed and attached" on the point of control of their own property. Now it cannot be at the same time patriotic to go to war for the sake of keeping the money that belongs to you, and recreant to country and all that is sacred to wish to avoid war from the same motive. Historically, all wars originate in a desire to plunder or to escape being plundered. But we have changed all that, and made war simply the nursery of manhood and all gracious and heroic qualities. As Senator Thurston and Mr. Roosevelt maintain, a base "money-changer" cannot live in the pure atmosphere of disinterested war. But this view, we repeat, will make our Revolutionary sires little better than stock-jobbers, and will go far to ac-

count for Washington's complaint that his ranks could not be kept full because the war was so mercenary in spirit and was carried on with so little patriotism.

How cleanly our off-hand instructors in war and love of country beg the whole question by their epithets about "the pocket," would be clear even to them if they would stop and ask themselves what is really meant by their pet phrase, the pocket. Does it mean a miserly clutching of creature comforts? Do the men who ask to be shown the reason and justice of war, before being driven madly into it, think only of eating and drinking and good clothes and social enjoyments, and cry out with the Persian, "Ah, take the cash and let the credit go"? Nothing of the kind. What staggers and dismays them in the thought of war, what outrages them in the wild war-talk of raw and silly boys, is the perception of the fearful blow to the whole fabric of civilization which war would strike. "The pocket," in a rational mind, means the most complicated and interdependent system of trade and commerce and industry the world ever saw; it means the daily bread of millions of men and women whom a great war would throw at once into beggary or burglary; it means the progress of art and literature and general refinement; the founding and support of colleges and churches and missions—in short, the chief things that make life worth living and the evolution of society aught but a terrible mockery. Yet it is the man who asks his fellows to stop and think of the imperilling of these great proofs and forces of civilization, who is to be held up as a selfish, spiritless, miserly wretch cumbering the earth!

But what about national honor and dignity? Yes; what about them!

"They tell you, sir," said Burke in the English Parliament, speaking of the mad rush into war with America, "they tell you that your dignity is tied to it. I know not how it happens, but this dignity of yours is a terrible encumbrance to you; for it has of late been ever at war with your interest, your equity, and every idea of your policy. Show the thing you contend for to be reason; show it to be common sense; show it to be the means of attaining some useful end; and then I am content to allow it what dignity you please. But what dignity is derived from the perseverance in absurdity, is more than ever I could discern."

There is the true answer to the raging of the heathen about "national honor." Honor that has no relation to justice, or good faith, or our own highest self-interest, or the only reason of government and national life at all, is but another name for what is base and savage. Between that kind of false and fraudulent "honor," and "the pocket" that really means the fairest fruits of civilization and Christianity, rational men will not long hesitate how to choose.

VENEZUELAN GOLD FIELDS.

If we may judge from paragraphs in the newspapers, there is a large stock of misinformation touching the gold mines in

Venezuela, or British Guiana, whichever the country they may belong to. An impression certainly exists that the desire to possess those mines is the ruling motive in Great Britain in the boundary controversy. A morning paper in this city, for example, says that the production of gold there reached £375,000 in 1891, and had risen to £510,000 in 1894, and then tells its readers that "these gold fields are, of course, the whole cause of the quarrel between England and Venezuela, and the prospect of their increasing production constitutes the chief difficulty in the way of arbitration." Turning to Lord Salisbury's despatch of November 28, upon which Mr. Cleveland founded his bumptious message of December 17, we read this:

"They [her Majesty's Government] have, on the contrary, repeatedly expressed their readiness to submit to arbitration the conflicting claims of Great Britain and Venezuela to large tracts of territory which from their auriferous nature are known to be of almost untold value."

He went on to say that they could not submit to arbitration territory which had long been settled by British subjects, who were accustomed to a quiet life and well-ordered government, and thus expose them to the chance of frequent revolutionary disorder. In other words, the very territory which maps, perhaps most, of our people consider the bone of contention, the British Government has always been ready to submit to arbitration. Now, what do these gold mines amount to *in esse*, not *in posse*?

The recognized authority on gold fields, foreign and domestic, is the United States Mint, which publishes each year, in addition to the regular Mint report, a volume on the "Production of the Precious Metals." Turning to this volume for 1894, we find the latest information then available concerning these mines. They are grouped under the head of British Guiana, which shows that our own officials, at a time when there was no boundary controversy raging, considered these mines to be in British territory. That these are the mines referred to in the current stock of misinformation is made clear by the statistical returns of the output as tabulated in the Mint report, which are nearly identical with those quoted above. There are other gold mines in Venezuela proper, but their total production in 1894 was only \$851,000, that of British Guiana being \$2,310,100.

The most important and direct information touching the mines of Guiana comes from Mr. Louis S. Delaplaine, United States Consul at Georgetown, Demerara. He tells us that there are five separate and distinct gold fields "in the colony," each of which is difficult to reach, there being no regular means of transportation in that region. Not only is transportation difficult, but there are no roads. There is not even a bridle-path, there is not even a footpath to the mining districts. The only way to reach

them is by open boats poled along the rivers by native Indians. "The fall of the rivers," he says, "is very steep, and there are numerous falls and cataracts to be passed which make the journey laborious and expensive, and also very unpleasant, with the hot sun continually beating down on the traveller's head; provisions and supplies of all kinds must be transported in the same way." It takes three weeks to reach one of these districts which is only one hundred miles from Georgetown.

These are only a minor part of the difficulties to be encountered in getting the gold out of the ground. The country is about in the centre of the tropical rains, which fall incessantly "for months at a time," says Mr. Delaplaine. One consequence is that the vegetation is dense and almost impenetrable, requiring a vast deal of digging and grubbing to get into the ground at all. Another is that the climate is unhealthy. Fevers are prevalent, and only the hardest constitutions can long survive there. There is no white labor to be had there, and no intelligent labor of any color. The negroes, who are employed to do manual work, "are about as worthless and lazy as can be imagined, not to speak of their moral and mental deficiencies, which are matters of no slight importance." There was only one quartz mill in operation there at the time when Mr. Delaplaine wrote, but another one had been ordered. The ore is not so rich generally as that of California, but it may prove richer when means are found to go deeper below the surface. It is estimated roughly that up to this time the gold taken out has not repaid the cost of getting it, but there is good reason to believe that there will be a credit balance soon. Gold mines exercise a powerful influence on the imagination, not only of the miner, but of the capitalist who never sees the mine. Only an insignificant part of the gold-bearing region has yet been explored.

Mr. Delaplaine neither advises Americans to try their luck in these gold fields, nor dissuades them. He thinks upon the whole that a man who thoroughly understands the business, and who can command a capital of not less than \$2,500, and who has a sound constitution, and who does not drink alcoholic or malt liquors, may go there with a reasonably fair prospect of success even under present conditions. The future prosperity of the mining districts, however, depends upon the introduction of capital, the maintenance of order, the making of roads, the education of the blacks, and, in short, the civilization of the country. What progress Venezuela is likely to make towards these ameliorations we may judge from what she has done in the past. There is a revolution overdue in that country now, which the intending reformers tell us is suspended only on account of the boundary dispute. When this is settled they will clean out Crespo in short order.

WILLIAM HENRY FURNESS.

THE earliest living graduate of Harvard College, pastor emeritus of the First Unitarian Church of Philadelphia, died without warning in that city on Thursday last. His faculties were practically unimpaired, and he had made elaborate public addresses within the last three months.

Dr. Furness was born in Boston, April 20, 1802. His earliest education at one "dame's school" after another was in company with Ralph Waldo Emerson, who was a year younger than himself. A happy consequence of this is the charming recollections of Emerson's childhood and youth in Cabot's 'Life of Emerson.' Dr. Furness says they were babies together, and, indeed, they were that at school. Before his third birthday we find Emerson's father complaining that he did not read very well. Later they went to the Latin School together and to a private school at the same time to learn to write, and Dr. Furness tells how his companion's tongue worked up and down with his pen, and thanks heaven that "he never had any talent for anything—nothing but pure genius, which talents would have overlaid." Inspired by the naval victories of the war of 1812, young Emerson wrote a romance in verse called "Fortus," and young Furness furnished the illustrations. It was a work of mutual admiration, and is still preserved by an appreciative friend. Another schoolfellow of the earliest times was Mr. Samuel Bradford. Emerson, in the seventies, wrote that the three "had agreed not to grow old, at least to each other." The agreement was well kept. Dr. Furness and Emerson had ever a very great affection for each other, but had little correspondence. There is a story current to the effect that once, when Furness had broken the long silence, Emerson regretted it—it had been so pleasant to be sure of mutual recollection without any sign.

From the Latin School Dr. Furness went to Harvard College and was graduated in 1820; from the Cambridge Theological School in 1823. Preaching as a candidate in various churches in and around Boston, he received no call, and was well pleased—"such a hearty dread," he says in his fiftieth anniversary discourse, the most considerable bit of autobiography he has left for our instruction, "had I of being settled in Boston, whose churchgoers had in those days the reputation of being terribly critical; and rhetoric then and there was almost a religion." Afterwards, while preaching in Baltimore for a few Sundays, he received an invitation to preach in Philadelphia on his way to Boston, and, doing so, was invited, before he left, to return and be the minister of the society. He had ever a suspicion that the committee which invited him comprised nearly the whole meeting they professed to represent. Philadelphia was a great way from Boston, the Unitarian centre, and ordinations were a solemn business in those days, so that six months were consumed in making the necessary preparations; but finally Mr. Furness was ordained, January 12, 1825. Those taking part in the service were mostly young men, but one of them was Dr. Aaron Bancroft of Worcester, Mass., father of the late George Bancroft, one of the Unitarian pioneers, then in his seventieth year. Dr. Furness was the first regular pastor of the Philadelphia society, though in 1825 it was already twenty-nine years old. It had been organized in 1796 by Dr. Joseph Priestley, who had come to this country two years before. He was living at that time in Northumberland,

Pa., and had gone to Philadelphia to deliver certain lectures on the evidences of Christianity. The interest excited by these lectures led to the organization of a Unitarian society, the first organized as such in the United States, though King's Chapel, Boston, had fallen away from Episcopacy into Unitarianism nine years before. Priestley could not be persuaded to remain in Philadelphia and become the pastor of the new society, but advised the regular lay reading of Unitarian literature, and this was kept up, with some lay and clerical preaching, until 1825. A small brick octagon church was built in 1813, which in 1826 was displaced by the pleasant and commodious building in which Dr. Furness preached till the conclusion of his active pastorate in 1875.

Dr. Furness had several qualities that made for his success in the ministry: a fine face and noble presence, a voice remarkable for depth and melody, a style of great simplicity. His was "a standard of pulpit reading which he himself exemplified without a peer," and no higher standard has been known among us. His work as a minister of religion was profoundly individual. Though his ministry began in the most heated period of the Unitarian Controversy, his own preaching was seldom negative or controversial. Its doctrinal part was mainly incidental. When he had occasion to oppose ideas, there was seldom a descent to personal polemics. Channing himself was not more unsectarian than he, or less denominational. Personally he kept himself aloof from all denominational organizations—a circumstance not a little irritating to Dr. Bellows and others with a like passion for organized activities; and his society followed his example. He could never be induced to attend the meetings of the National Conference until it came to Philadelphia, and fairly "roped him in," when he was eighty-seven years old. His ecclesiastical aloofness never prejudiced his Unitarian standing in the least degree; he was counted in while counting himself out, and the warmth of his personal affections made good the lack of formal fellowship. His friendship with Dr. Hedge was, perhaps, the closest of many that enriched his life. For many younger men he had the warmest heart; and while he had some pride in his discovery of Robert Collyer, Mr. Collyer was especially grateful to him as "the first minister in good standing who didn't patronize him." In Philadelphia as a citizen and neighbor his associations had no bounds of sect or creed. Orthodox liberality was always furnishing some fresh encouragement of his faith in the essential unity of all believing souls, and the Roman Catholic bishop was a favorite companion, and furnished him with some of the best stories in a repertory that was always full and overflowing.

Dr. Furness's preaching was not a circle with one centre, but an ellipse with two, from the inception of the anti-slavery conflict till the end of the civil war. The two centres were the naturalness of Jesus and his miracles, and the abolition of slavery. His interest and engrossment in the anti-slavery cause cost him much broken friendship and social disesteem; some that he loved and trusted most doing their best to keep him back from manly opposition to the nation's sin. But they could not do it. His courage grew with opposition, and, let who would hear him or forbear, his convictions found frequent and unmistakable expression in his Sunday speech. Maria Weston Chapman speaks of him as coming at length "into practical fellowship with the American abolitionists." To more than that, with his

distrust of all organizations, he could not attain. The proudest recollection of his life was of the meeting of the American Anti-Slavery Society in New York in 1850, signalized by the Rynders mob. He saw it all, and was a part of it as one of the speakers of the day. "Never before or since," wrote Dr. Furness, "have I been so deeply moved as on that occasion. Depths were stirred in me never before reached."

The other centre of Dr. Furness's enthusiasm as a preacher became the only one when slavery was at length abolished. Even before that it seemed to him, as he reviewed his life, that his interest in the anti-slavery cause did not divert him from his interest in the historical value of the Four Gospels, but rather made it more; helped him better to appreciate the human dignity of Jesus and the spirit of his work. Few lives have been so unified by a course of study flowing with unabated energy from first to last for more than fifty years. Six or eight major books, and scores of lesser books and pamphlets, were the literary products which this current bore along. All these had but a single two-fold theme: the historical validity of the Gospels proved by the naturalness of their contents; and the naturalness of Jesus, without exception on account of the miracles ascribed to him, and without questioning their actual occurrence. With each new volume, as he went on "still clutching the inviolable shade, with a free onward impulse," he thought he had done it better than before, only to become soon dissatisfied and set out on another quest. For many of his later years he seldom preached on anything but one or another aspect of his favorite theme. "I suppose you write many sermons," he said to a young friend about 1870; "I write only one, but I keep on writing it over." There was something pathetic in this long insistence, especially when more and more he failed to command the assent or even to catch the ear of his coreligionists or others, until at length the unique impressiveness of his serene and beautiful old age won for him the fresh attention of the younger generations.

The impulse of Dr. Furness's method probably came from Paulus's 'Life of Jesus,' published in Germany in 1828, or from his 'Exegetical Hand-book,' published in 1880-83. The fundamental rationalism was the same in either case, but Dr. Furness's handling of the principle was that of a poet, while Paulus's was that of a man absolutely prosaic and devoid of taste. Many of Dr. Furness's interpretations are real helps to a better understanding of the Gospels and the character of Jesus, and, where they are not, their ingenious subtlety and their unflinching beauty are a great delight. It is generally agreed that the volumes of 1836 and 1838 contain the best he had to give, though some of the other volumes, and especially 'Thoughts on the Life and Character of Jesus of Nazareth,' have very interesting and suggestive passages.

Dr. Furness was married August 29, 1835, to Annis Pulling Jenks of Salem, Mass., and she outlived by several years the conclusion of his pastorate in 1875. She was a lady of great beauty, and her portrait by Sully, painted in her early womanhood, is one of the most attractive examples of his art. Her face was imaged in her mind and in her heart. Their oldest son, William, a painter of great promise, died in his early manhood. The other children have all won distinction in their separate fields, Dr. Horace H. Furness as a Shakspeare scholar, Mr. Frank Furness as an architect, Mrs. Annis Lee Wister as a translator of German novels.

The happiness of Dr. Furness in his children was his crowning joy. After his retirement from the regular duties of the ministry he was regarded by his former people as their pastor emeritus, and often preached for them, and in a few years was formally invested with the office. His successor, the Rev. Joseph May, a son of the Rev. Samuel J. May, with a full portion of his father's spirit, was as well qualified as any one could be to take up Dr. Furness's work and carry it on with all the quiet earnestness and public spirit of the patriarch who laid it down.

THE ROYAL ACADEMY'S NEW DEPARTURE.

LONDON, January 6, 1896.

THERE has been much talk lately of the honor done to the Royal Academy by the bestowal of a peerage upon its President; but the Academy's true distinction just now is the presence upon its walls of the work of the French Romanticists, whose existence it has hitherto ignored. Their appearance at Burlington House is certainly a concession to those critics who, for long, have inveighed against the indifference shown to the great modern French painters by official representatives of art in England. Landseers and Friths may litter the walls of the National Gallery, but space never yet has been found for a Corot or a Millet; apparently, Directors labor under the delusion that French art came to an end with Claude, and Poussin, and Watteau. Year after year, in its winter exhibition, the Academy has resurrected "deceased masters of the British School" who had better have been allowed to remain in peaceful obscurity; but to the dealers has been left the far pleasanter task of presenting the modern French masters to the English public. This might seem the more unaccountable since it is to the English Constable that these men, in large measure, owed their inspiration, were it not remembered that Constable himself was misunderstood by the Academy, of which he was a member.

All these things considered, the new departure strikes one as little less than revolutionary within such conservative walls. But indeed, recently, Academicians have given several signs of a sensible desire to amend their ways, and to make the Academy something more than a pleasant club for genial gentlemen who happen to paint. Artistic discrimination has been manifested in the election of at least two or three Associates. Last winter a gallery devoted to the goldsmith's work was practically the first formal recognition of decorative or industrial art, which has been an unknown quantity in an Academy supposed to include all the Arts. The same sort of work was prominent in the spring exhibition; once more, in the winter show just opened, the sculptor-goldsmith is to the fore, now almost as a matter of course. And, as strongest proof of the striving after a more liberal policy, comes the present admission into Academical headquarters of the Romantic School so persistently overlooked. If the National Gallery but follow suit, the official reparation for years of inexplicable neglect will be complete.

Let me say at once that the chief interest of the French pictures now collected together lies in the fact of their being here at all. There can be small doubt that a better selection could easily have been made. At many of the dealers', at Bousod & Valadon's, at Mr. Van Wisselingh's, at Mr. Laurie's, I have seen far

finer and more representative series of Barbizon masterpieces. It would seem as if the Academy had half-repent of its unaccustomed liberality, and, even while admitting the Romanticists, had refused to show them in their most distinguished moods and moments. Besides, to hang just a chance Pater or Watteau, Boucher or Fragonard, charming as each may be, or just an occasional Meissonier or Bastien Lepage, is to introduce distracting elements without a sufficient compensating gain.

However, to imply that all the examples chosen are unimportant would be to give a false impression. Probably, among artists, few pictures of the Romantic period produced a greater sensation than Millet's "Wood-Sawyers," lent to the Academy by Mr. Ionides. To the public, the "Angelus," with its touch of obvious sentiment, may ever have been Millet's most notable achievement. But the artist who prizes certain technical qualities in a picture more highly than sentiment, could see in the "Wood-Sawyers," when first exhibited, a successful defiance to those academic restrictions that make for banality and commonplace. Judged by academic standards, the figures might be out of drawing, the action expressed by illegitimate means, the color-scheme a challenge to all tradition, and the indifference to detail might amount to an offence. To-day so much more daring have been the innovators that such a picture would create no special excitement in the studios. There seems no reason to question means when an impression of movement is so admirably recorded, when the mystery and rich shadowy depths of a forest background are so delightfully suggested. But, I must confess, to me the blue trousers of the central figure are so needlessly aggressive that there are times when Mr. Hole's quite wonderful black-and-white interpretation is more satisfactory than the original itself. However this may be, it is fortunate that the "Wood-Sawyers," of all the many Millets, should have been forthcoming when, for the first time, the Romanticists make their welcome intrusion into an Academy exhibition.

Of the other painters in the little group, there is nothing of equal significance, though the four Corots have the advantage of helping to explain the successive phases through which the artist passed before the final development of the style now most intimately associated with his name. To mark his earliest period, there is a tiny "Rome," the trimmed trees of the Pincian forming a sombre frame to the familiar, almost hackneyed, view of St. Peter's—a view here flooded with sunlight as brilliant as any that ever shone on the canvases of Fortuny and his followers. Already Corot's methods had broadened in a lovely "Avignon," town and river, and the vast plain that stretches to the horizon's low hills, seen from a near height—a harmony in the sad grays, pale silvery greens, and sunlit blues that fill the strange olive-clad land of Provence. But it is in the "Evening," a sketch probably for the large picture of the same name, and in the "Ville d'Avray," one of innumerable versions of the landscape Corot never wearied of painting, that he reveals himself the great master of tone, the idyllic poet whose medium was paint. Rousseau also is here, in a stately Valley of the Seine as he saw it from the terraces of St. Cloud; and, with him, are Courbet and Troyon—most inefficiently represented—Diaz and Daubigny, Delacroix and Decamps, Ingres and Géricault; in a word, all the men who brought to Romanticism its glory and its wide-extended influence for good.

The descriptions of these canvases, since they are mostly well known, would be superfluous. It is really more useful to note the value of the opportunity now offered for a very suggestive comparative study. In an adjoining room hang three large Constables, and by referring to these not only may you measure the debt of the Barbizon men to the most original of all English landscape-painters, but you cannot mistake the tremendous advance upon the old methods which they, in their turn, made. To emphasize still further the difference between the old and new schools of landscape-painting, two large Claudes are in the immediate vicinity of the Constables. In the Claudes, both nominally with a Scriptural theme, the classical convention is seen in its perfection. Here is the arrangement of rocks and rivers and classical architecture that never existed save on the classicist's canvas—perhaps it most nearly approached realization in the Chicago Exhibition; here, the light that never was, on sea or land. To look from them to the Constables, is to be confronted with the work of a man who felt the weakness of the classical convention, who objected to looking at nature for ever through the spectacles of the schools, and who, seeing things for himself, endeavored to record them as they are, not as they may compose by rule and compass. The naturalism of Constable is evident in "The Jumping Horse," the "Stratford Mill," the "Landscape," now exhibited. But evident, too, is that which is the great defect of many of his large landscapes—his undue, if conscientious, elaboration of detail until his canvas contains a dozen pictures instead of one only. You need go no further than to the stairway leading to the Academy's Diploma Galleries—all too seldom visited by the crowds who would not miss the spring's show or the winter's Old Masters—to be reminded what an incomparable master Constable was when he sketched. But he had a tendency, when it came to painting a large picture, to arrange upon one canvas half a dozen or more of his marvellous little studies. The effect of the composition as a whole is thus sacrificed to parts having all too little relation to each other, and the result is a certain restlessness that fatigues the eye. This the French Romanticists recognized to be a mistake, though their early canvases prove that they too could, and did for a time, devote to detail all the minute observation and elaboration of a Constable. But in their best work they carried his naturalism to its legitimate conclusion, and sought, not merely to render a landscape, but to render it as they saw it, preserving on their canvas the unity of their actual impression. To follow with intelligence, as you can now at the Academy, the development of landscape-painting from Claude to Corot, through Constable, is one way to finding a clue to what to so many people is still the enigma of modern impressionism.

I have dwelt upon this section of the Exhibition because, in other respects, the collection is much as it was last winter and the many winters preceding. There is a room full of Primitives, a so-called Giorgione conspicuous for the benefit of the foot-rule critic whose least concern is beauty in a picture. There are portraits by, or after, Velasquez and Titian and Tintoretto and Vandyck. There are several very lovely Turners: one, a "Monte Aventino," in which the color seems still fairly fresh in contrast to another called "The Blue Lights," which, like the great majority of Turners, has so suffered by the effect of time

upon bad pigments that its name becomes meaningless. And, as usual, there is an imposing array of Romneys, Gainsboroughs, and Sir Joshua's, a few especially famous: Gainsborough's "Blue Boy" from the Duke of Westminster's gallery, the painter's bold protest against academical color-schemes; Sir Joshua's "Tragic Muse" from the same collection, and a number of his portraits of children, charming in themselves, but responsible for a vast progeny of sentimental and silly babies; while preëminent in the chief centre of honor is Gilbert Stuart's portrait of Washington, who, by his timely presence, seems to be holding out the olive branch. As agent of peace, the Academy was not to be outdone by the Society of Authors. N. N.

PAINTINGS AT CHANTILLY.

PARIS, January 16, 1896.

ON the occasion of the centenary of the foundation of the Institute, a visit to Chantilly was made by the members of the Institute, and each of them was presented, on his arrival at the Château, with a tiny volume, published at the charge of the Duke d'Aumale, bearing this title: "Chantilly: Visite de l'Institut de France, 26 Octobre, 1895; Itinéraire." The volume was to serve the recipient as a guide, and gave a succinct account of all the works of art to be seen in each room in the galleries, the towers, the staircases, the chapel, the vestibules, the room which goes under the name of "Appartement de M. le Prince," the library, etc. This pretty volume, published by Plon, is a real guide-book, which will be of great use to all who are allowed to visit Chantilly, as the arrangement of all the works of art, pictures, statues, and tapestries may now be considered as definitive. But this catalogue will be some day supplemented by detailed works on all the valuable works of art at Chantilly. The series has been begun by a very magnificent volume, "La Peinture au Château de Chantilly," written by M. Gruyer, member of the Academy of Fine Arts of the Institute, who long ago achieved a great notoriety in the artistic and literary world by his volumes on Raphael, which are standard works of artistic criticism. He lived for many years in Italy, was for some time one of the "conservateurs" of the Museum of the Louvre, and is an occasional contributor to the *Revue des Deux Mondes*. Living at Chantilly, and honored with the friendship of the Duke d'Aumale, he was better qualified than anybody to give a description of the galleries of pictures formed by the Prince.

The volume just published is full of beautiful illustrations made by modern processes from fine photographs by Braun, and is devoted to the foreign schools, chiefly the Italian and Flemish. A second volume will be consecrated to the French school. The notices written by M. Gruyer concerning each painter have been placed by him in chronological order, and they may thus be said to belong to the history of art, of which they are successive fragments. We cannot here follow such a chronological order, and we can draw attention only to certain pictures which may be called the gems of the collection. "À tout seigneur, tout honneur," says a French proverb. Who would not, if he had only a few moments to spend at Chantilly, ask to see first the Raphaels? They are to be found in a small cabinet which goes under the name of the "Santuario." One is the "Virgin of the House of Orleans," a small panel, painted about 1506,

which is absolutely intact and has never been touched by any painter's hand but Raphael's. It was placed by the Regent in the Gallery of the Palais-Royal. The other represents the "Three Graces"; it was painted by Raphael about 1505. In 1503 Raphael was occupied in Siena in helping Pinturicchio decorate the *libreria* of the cathedral with ten frescoes which represent the principal traits of the life of Æneas Sylvius Piccolomini, who became Pope under the name of Pius II. In this *libreria* was at the time an old group of the Three Graces, which had been found in the excavations made for building the cathedral. Raphael was inspired by this group, and first made a drawing of two of the Graces (which is now in the collection of the Academy of Fine Arts at Venice). A year afterwards he made the admirable picture in which the Graces are seen in a landscape which recalls the shores of Lake Trasymene and the neighborhood of Spoleto. This small masterpiece belongs to what may be called the Umbrian manner of the painter. This picture, after having made a part of the Borghese Gallery, went successively through the hands of Reboul, Fabra, Sir Thomas Lawrence, Woodburne, and Lord Dudley. It was sold to the Duke d'Aumale in 1885 for the price of 625,000 francs.

The "Virgin of the Regent" possesses a marvellous simplicity and freshness. It belongs without a doubt to the Florentine manner or period of the immortal master. It was nevertheless most probably painted at Urbino, where it remained till the end of the sixteenth century. It was taken then to Flanders, and a legend will have it that David Teniers substituted for an open-air background the interior background which is now seen. This legend has no justification. The small vases on a shelf which are seen in the background have Italian forms. We lose sight for a time of the picture; it reappears in the eighteenth century in the Crozat, Tassart, and Decamp collections, and then enters the gallery of the Regent. During the Revolution it emigrates to Brussels, and remains in the hands of M. Laborde de Méroville. In 1798 M. Hibbert buys it for 12,500 francs; it was owned afterwards by M. Vernon, M. Delamarre, M. Aguado, M. François Delessert. After the death of M. Delessert, the Duke d'Aumale bought it in 1860 for 150,000 francs. If it was for sale now, Mr. Gruyer thinks that it would fetch a million, and there is no exaggeration in this statement.

Between the two exquisite Raphaels stands a panel of a marriage-coffer, painted over by Filippino Lippi. It represents the story of Esther and Ahasuerus. Filippo Lippi, commonly called Filippino to distinguish him from his father, was born in 1457 at Prato. He became the pupil of Sandro Botticelli, and it is impossible not to see a deep relation between their works. In 1484 Lippi was chosen for continuing, in the famous chapel of Brancaccio, the work of Masolino da Panicale and of Masaccio, which had been interrupted for nearly half a century. M. Gruyer says that "if Raphael admired Masaccio enough to borrow from him the figures of Adam and Eve for the Loggia, he marked also his esteem for Filippino by being inspired by the figures of St. Peter and St. Paul in the cartoon of the tapestry of Saint Paul at Ephesus. We could almost say that among the latest of the Florentine *quattrocentisti* there is perhaps none who can be considered the immediate precursor of Raphael so much as Filippino Lippi." He had two manners; the picture of "Esther and Ahasuerus" belongs to the first, which was un-

doubtedly the best, as the second manner was spoiled by ostentation of knowledge of classical antiquity. The younger works of the master were unaffected, and had a natural grace and poetry which is unparalleled. On a simple *cassone*, decorated for some noble daughter of Florence, Filippino Lippi has made a composition which is an admirable illustration of the story of Esther. In the background is seen the great repast given by Ahasuerus for his court; the residence of Shushan is represented by one of those charming Florentine palaces which were built by the Brunelleschis, the Michelozzis, the Albertis, with their porticos and their high columns. In the central portico sits the old Ahasuerus; he half rises to greet Esther, who is bowing to him. He is surrounded by the wise men of his council. Six virgins, guided by the guardians of the women, accompany Esther; three are behind her, on the left of the picture, three are before her, and have already passed before the King. The grace and angelic beauty cannot be sufficiently praised.

Fifty years ago the coffer, on one of the sides of which is this graceful composition, was still complete in the Palazzo Torrigiani, at the time when Luigi Torrigiani was beginning his collection. The panels had, however, been all detached, and were hanging like pictures in the gallery, and were afterwards dispersed. In 1877 the panel of "Esther and Ahasuerus" was sold by Prince Torrigiani to a French engineer, M. Leclanché, who made a fair fortune by the aid of an electric pile which bears his name. In 1892 Leclanché died, and the Duke d'Aumale bought the panel, which was a part of the very remarkable collection that had been formed by the French electrician. I remember visiting the collection at the time it was sold, and I was struck by the extraordinary taste which Leclanché, a scientific man, had shown in the choice of the objects which he had collected and bought with his savings; there was hardly an indifferent object in his collection.

The worshippers of the oldest Italian schools will find much to admire at Chantilly. I will notice only the portrait of Simonetta Vespucci, one of the most seductive women of her time, by Pallajuolo, who was one of the best sculptors of his time as well as a painter and engraver. This is the true Simonetta (we see her name in small capitals painted on the lower margin "Simonetta Januensis Vespuccia"), and the Simonetta of the Palazzo Pitti has usurped the name. Perugino is represented by a fine Virgin, called the "Glorious Virgin," sitting with the infant Jesus on a throne, with Saint Jerome on one side and Saint Peter on the other. The picture was made in the youth of Perugino, when he still kept the habit of modelling with lines, like an engraver. This picture left the Church of Saint Jerome to enter the collection of the Duke of Lucques, and afterwards the Northwick collection.

Botticelli shows us a life-sized figure of "Autumn"; a young woman with two young children. This "Autumn" has all the qualities as well as the defects of the great Florentine master. Bernardino Luini has an "Infant Jesus, Saviour of the World" which has all the grace of a Leonardo, so much so that, for a time, it was attributed to Da Vinci, and catalogued as such in 1823 in the gallery of Fonthill Abbey. It was bought by M. Frédéric Reisel and afterwards by the Duke d'Aumale. I know no finer picture by Primaticcio than the portrait of Odet de Coligny, cardinal of Châtillon. It is well in place in the old house of the Montmorencys. It was painted in

1548, when Coligny's brother was thirty-one years old; but is the portrait really by Primaticcio? M. Gruyer has doubts and would rather attribute it to the Florentine masters, to Bronzino or Pontormo. Another fine portrait is the portrait of an unknown gentleman by Scipione Pulzone, commonly called Scipione Gaetano.

In the Flemish school, we must notice the magnificent portrait of the great Bastard of Burgundy by Roger van der Weyden, a disciple of Van Eyck, and one of the glories of the school of Bruges. This portrait of the natural son of Philippe Le Bon was painted about 1460. It belonged to Gaignières, the celebrated collector, and was afterwards in the Duke of Sutherland's gallery till it was bought by the Duke d'Aumale. I can only mention rapidly some important pictures of the foreign schools: the "Virgin and the Infant Jesus appearing before Jeanne of France," by Memling; a portrait of the Cardinal of Bourbon by an unknown Dutch master; a portrait of Elisabeth Stuart, Queen of Bohemia, by Mierevelt; a life size portrait of Gaston of France, Duke of Orleans, by Van Dyck. The same master is represented by two beautiful portraits of Count Henri de Berghes and of Marie de Barbançon, Duchess of Arenberg. A charming portrait of the great Condé, made by David Teniers during the long sojourn of the Prince in Flanders, was added not long ago to the collection. We see in it Condé as a young man; the portraits of Condé in later years are very numerous at Chantilly. I cannot mention a number of other portraits which are all interesting in an artistic and in an historical sense.

There are few landscapes of the Flemish school, but two of them are masterpieces—the shore of Scheveningen, by Ruysdael; a calm sea, by Van der Velde, and a tempest by Everdingen. The English school has but few representatives—a portrait of Philippe Égalité in the uniform of colonel of hussars, by Sir Joshua Reynolds; the "Two Waldegraves," by the same; and Francis I., Emperor of Austria, by Sir Thomas Lawrence.

Correspondence.

"LIGHT": A DISCRIMINATION.

TO THE EDITOR OF THE NATION:

SIR: Attention should be called to Prof. Münsterberg's account in *Science* of the new kind of invisible light. It is in many respects the most comprehensible that has yet appeared. The agent is so new and so wonderful that it is difficult to find correct terms in which to speak of it. Should it be called light or not light? This is an instance of a state of things which is of not uncommon occurrence in those portions of science which do not reach the popular ear—of the necessity, namely, for revising what the logicians call the "formation of the concept." Our naïve ancestors, in making language, did not distinguish between light as an external something brought to us by the sun and candles and fireflies, and light as an internal sensation. The distinction was not very essential so long as the two things always coincided; and the cases of the sensation being produced by a push of the eye-ball, or by a fall on the ice (when one "sees stars"), were not of sufficient practical interest to be taken account of, at a time when mankind was too busy in living to waste time in useless speculations. But there came a time when it was necessary to *preciser* the meaning of the word more fully; it was found

that there was something which was invisible as *subjective* light, but which was exactly like *objective* light, except that it passed beyond a given limit in the swiftness of its motion. Objectively, green light is a more rapid wave-motion in the ether than red, and blue than green, and violet than blue; here was something that differed from a color only as one color differeth from another; should it be called light or not? By a weak evasion of the difficulty, this thing has been called nothing but "the ultra-violet rays." Rays of what—rays of light, or "rays" of wave-motion in ether? *Rays*, by itself, means nothing except that which moves in straight lines.

The new rays that have been discovered by Prof. Röntgen are not cathode rays, as they have been said by the newspapers to be, but they are what the cathode rays are turned into as they pass through glass; their discoverer has had the happy idea to call them X-rays until more is known about them. The most probable hypothesis in regard to their nature is, according to Prof. Münsterberg, that they are longitudinal vibrations in the same medium (the ether) whose transverse vibrations give us light rays and infra red rays and ultra-violet rays. The existence of such rays has for a long time been suspected by physicists; researches are in progress which, it is hoped, will prove that they have now been found.

I do not, of course, propose to discuss the question what this new thing shall be called; Röntgen vibrations might perhaps not be a bad name for it. But I do submit that it is now time to give a little consideration to the sense in which the word *light* ought to be used, and not to let the question be settled in the hit-or-miss fashion that too often prevails among scientists. To use the one word light for (1) ether vibrations that affect the eye, (2) ether vibrations that do not affect the eye, (3) the affections of consciousness that are due to ether vibrations, and (4) also those that are due to a pull on the optic nerve, and to an electric current passing through it, is to permit a degree of hopeless confusion which those who love exact thinking ought to blush for. The Germans have already adopted the compound word *light sensation* for the affections of consciousness, and nothing better could be desired. The "spirit of the English language" is a very backward spirit, and it is very averse to the formation of compound words; but this is an aversion which must be overcome if speech is to keep pace with knowledge. Who knows but that the English might have been as great metaphysicians as the Germans if they had given themselves the same liberty in the formation of long words?

The best use to make of the word *light* is to reserve it for those ether vibrations which cause the sensation of light; any other use of it which should avoid its present vagueness would interfere with the wealth of poetical associations which attach to the word. We should then say, when we receive a blow on the head, not "I see a light," but "I feel a sensation of light," or, better, "I feel a light-sensation." And, on the other hand, the physicist would cease to say that ether waves are not light while they are on their way to us from the sun.

The term "ultra-violet rays" should be given up, and the term *ultra-violet ether vibrations* should be exclusively used in its stead. The term *rays* is, moreover, being discarded by the new scientist on other grounds, and the thing meant by it is being discussed in terms of wave and wave front; it is therefore useless to attempt to preserve it for the ultra-violet rays. There is no help for it but to use

the term *ether vibrations* (as the general name for heat, light, ultra violet rays, and Röntgen rays) in common parlance as freely as it is already used in scientific language. The newspaper men would certainly find no difficulty in adopting this newly arisen requirement for accuracy, and then the whole thing would be settled for us, as far as popular language goes.

The reform that I propose is therefore, in brief, this:

(1.) For the psychologist, the use of the term *light-sensation*, instead of light, when the sensation is referred to.

(2.) For the physicist, the use of the term *ultra-violet vibrations*, instead of ultra-violet rays.

(3.) For the common man, the use of the term *ether vibrations*, instead of light, for light plus invisible light, when it is meant to speak indefinitely of the various phenomena which fall under this head. CHR. LADD FRANKLIN.

BALTIMORE, February 2, 1896.

AN UNPUBLISHED LETTER OF THOMAS PAINE.

TO THE EDITOR OF THE NATION:

SIR: The subjoined letter was purchased many years ago, at an auction sale in London, by Mr. Joseph Cowen of Newcastle-on-Tyne, formerly member of Parliament, to whom I am indebted for its use. There is no indication in the original of the person to whom it was written, but it was certainly to Colonel John Fellows, the bookseller in New York who had there copyrighted Part I. of 'The Age of Reason.' It will be remembered that Paine, on his way to prison in Paris, managed to see Joel Barlow, and intrusted to that ex-parson his MS., which was forwarded to his (Barlow's) own publisher in New York.

PARIS, JANUARY 30, 1797.

SIR, Your friend Mr. Caritat being on the point of his departure for America I make it the opportunity of writing to you. I received two letters from you with some pamphlets a considerable time ago in which you inform me of your entering a copy right of the first Part of the Age of Reason; when I return to America we will settle for that matter.

As Doctor Franklin has been my intimate friend for thirty years past you will naturally see the reason of my continuing the connection with his grandson. I printed here (Paris) about fifteen thousand of the second Part of the Age of Reason, which I sent to Mr. F[ranklin] Bache. I gave him notice of it in September, 1796, and the copy right by my own direction was entered by him. The books did not arrive till April following, but he had advertised it long before.

I sent to him in August last a manuscript letter of about seventy pages, from me to Mr. Washington to be printed in a pamphlet. Mr. Barnes of Philadelphia carried the letter from me over to London to be forwarded to America. It went by the ship *Hope*, Capt. Harley, who since his return from America told me that he put it in the post office at New York for Bache. I have yet no certain account of its publication. I mention this that the letter may be enquired after, in case it has not been published or has not arrived to Mr. Bache. Barnes wrote to me from London 29 August informing me that he was offered three hundred pounds sterling for the manuscript. The offer was refused because it was my intention it should not appear till it appeared in America, as that, and not England, was the place for its operation.

You ask me by your letter to Mr. Caritat for a list of my several works, in order to publish a collection of them. This is an undertaking I have always reserved for myself. It not only belongs to me of right, but nobody but myself can do it; and as every author is accountable (at least in reputation) for his works, he only is the person to do it. If he neglects it in his life time the case is altered. It is my intention to return to America in the

course of the present year; I shall then [do] it by subscription, with historical notes. As this work will employ many persons in different parts of the Union, I will confer with you upon the subject, and such part of it as will suit you to undertake will be at your choice. I have sustained so much loss by disinterestedness and inattention to money matters, and by accidents, that I am obliged to look closer to my affairs than I have done. The printer (an Englishman) whom I employed here to print the second part of the Age of Reason, made a copy of the work while he was printing it, which he sent to London and sold. It was by this means that an edition of it came out in London.

We are waiting here for news from America of the state of the federal elections. You will have heard long before this reaches you that the French government has refused to receive Mr. Pinckney as minister. While Mr. Monroe was minister he had the opportunity of softening matters with this government, for he was in good credit with them, though they were in high indignation at the infidelity of the Washington Administration. It is time that Mr. Washington retire, for he has played off so much prudent hypocrisy between France and England that neither government believes anything he says. Your friend, etc.

THOMAS PAINE.

I cannot forbear a few further words on this remarkable letter—not about the animadversion on Washington, for in my third volume of Paine's Writings there are documents enough to make that case clear—but concerning the strange outcome of Paine's purpose of publishing all his works. When he returned to America, near the close of 1802, the Federalists, furious at the election of Jefferson, and the persons, furious over the 'Age of Reason,' united on Paine for a scapegoat. Amid the storm that broke over him he could not publish his old works, and still less the two he had in manuscript. These were Part III. of the 'Age of Reason' and 'An Answer to the Bishop of Llandaff.' These he bequeathed to Madame Bonneville, who in Paris, with her husband, had nursed him in illness, and shared with him their home for nearly eight years. She was then an enthusiastic disciple of Paine's ideas, but no sooner was Paine dead than she began to revert to her original type—Catholicism. Strange irony of fate! The two large works to which Paine had devoted the best part of nine years fell into the hands of a Roman Catholic devotee, who did penance for her previous heresies by mutilating and erasing Paine's ideas, so that his two important volumes were well-nigh ruined. Madame's pious destructiveness was, however, in some degree limited by her need of money. It is due to the enterprise and means of John Fellows, to whom the above letter was written, that a number of important fragments were rescued, and in a good many cases he was able to recover striking passages despite the erasures of the zealous French woman.

MONCURE D. CONWAY.

LONDON, January 20, 1896.

PROTECTION—BY ANNEXATION.

TO THE EDITOR OF THE NATION:

SIR: Senator Cullom's speech at Springfield yesterday throws a new light upon the Venezuelan question. Speaking of the British possessions of Canada, British Guiana, British Honduras, etc., and of the American possessions of Spain, Denmark, France, and Holland, he says:

"But all these possessions lie within a radius of a few hundred miles from southern Florida and are naturally, by position and commercial relationship, of greater importance to the United States than to any other nation."

In the next paragraph he recommends the

annexation of Hawaii to the United States. Further on he says, referring to Cuba:

"Why, fellow-citizens, when the day comes that the possession of Cuba by any other Power bears adversely upon the interests and welfare of the United States, we shall cut the Gordian knot and take such action as will make Cuba an annex to this country. It naturally, politically, and commercially belongs to the United States."

And again, near the close of his speech, he says, after recommending many more annexations:

"We have never made a bad bargain in any of our acquisitions of territory. We acquired Florida, and what a gem she is and how great she bids fair to become. We bought Louisiana and the Northwest territory, the greatest and brightest jewel in our possession. State after State have been carved out of her territory. Then California, portions of the very garden of Eden, Texas, an empire of itself, New Mexico, Oregon, and Alaska have come to us. What would we have been without these principalities and empires which we now possess? It is to be the duty of the great Republican party to look into the future and shape our policy with wisdom and care, and to build up to its proper height and breadth the splendid nation committed to our care."

This speech is quite touching in its innocent and simple dishonesty. Now we understand the noble and self-sacrificing anxiety of Jingoism to protect "our brother republics"; their canting platitudes about the oppression of a weak by a stronger Power; their indignation against the covetousness and "grabbing" of England. Their real meaning seems to be: "Hands off Venezuela! Some day we hope to annex it ourselves. We are not quite ready yet, because we are first going to appropriate a number of other places, including Canada and your possessions in the West Indies. In the meantime, in the language of Bret Harte's Bill Nye,

"This poor Injun we protects from such sharps as you be."

When Uncle Sam is well out of this Venezuelan business, we trust he may not be found with "a dollar greenback in his hand" worth twenty cents in coin.—Yours truly, X. Z.

CHICAGO, January 29, 1896.

"THE SQUIRREL GIRL."

TO THE EDITOR OF THE NATION:

SIR: A friend in New York sends me a cutting from a local paper stating that a girl who has captivated the squirrel population of Central Park has had to ask for a home in the workhouse of Yorkville, having no home and apparently no subsistence. That such a phenomenon should excite rather amusement than interest in the busy population of New York is not surprising, but it is one which, to all lovers of nature and psychology, ought to be very interesting. If I were Mayor of New York I would give her a salaried position as Keeper of the Squirrels, with lodgings in the midst of her pets, and I think that, merely for the poetry of the thing, the Society for the Prevention of Cruelty to Animals should take note of it. As a lover of that most beautiful and intelligent of our lesser quadrupeds, and in default of the proper official action, I should like to open a subscription for the benefit of Mary Lyons to enable her to devote herself to the squirrels; and I beg you to put my name down for \$5 a year as long as I live. I would capitalize it if I had the means.

Yours truly, W. J. STILLMAN.

ROME, January 21, 1896.

Notes.

HOUGHTON, MIFFLIN & Co. have in press 'Joan of Arc,' by Francis C. Lowell; 'Visions and Service,' college chapel discourses by Bishop Lawrence of Massachusetts; 'The Spirit in Literature and Life,' college lectures by the Rev. Dr. Coyle; 'The Parson's Proxy,' by Mrs. Kate W. Hamilton; and 'Bayard Taylor,' by A. H. Smyth, in the American Men of Letters series.

Macmillan & Co. have in press a 'History of the Postal Packet Service during the French War, from 1798 to 1815,' by Arthur H. Norman, and Mr. William Astor Chanler's account of his exploring expedition to northeastern Africa with Lieut. von Höhnelt, illustrated by photographs.

'Biblical Character Sketches,' by Dean Farrar and other preachers, and 'Curiosities of Olden Times,' by S. Baring-Gould, will be published directly by Thomas Whittaker.

'The Song of Songs which is Solomon's,' being a Reprint and a Study, by Elbert Hubbard, will issue in a limited edition from the Roycroft Printing Shop, East Aurora, N. Y.

S. C. Griggs & Co., Chicago, announce 'The Non-Hereditary of Inebriety,' by Leslie E. Keeley, M.D.

Mme. Arsène Darmesteter, it is announced, is pushing to completion the edition of the entire works of her lamented husband. The last of these was an essay towards the reconstruction of the Champenoise dialect of the eleventh century. Darmesteter had gathered for this purpose nearly four thousand *foles*, most of which will be published. Mme. Darmesteter, who is an excellent painter, has just finished a portrait of her husband which is to go to the Sorbonne as a memorial of the life of one of its most esteemed professors.

The Hungarian Academy of Science has decided to publish a dictionary of the national language as it is now used in Hungary. It is estimated that twenty years will be devoted to the preliminary work alone.

A splendid facsimile of William Bradford's Journal, made from the original in the Bishop of London's library at Fulham Palace, has just been published. Its cost precludes the hope of a consummation one might wish, that it should find a place in every public library in this country.

'The Most Delectable History of Reynard the Fox,' edited with notes by the well-known folk-loreist, Joseph Jacobs, is the latest addition to Macmillan's dainty Cranford Series. The text is based upon Caxton's, adapted for the use of children by the late Sir Henry Cole, "Felix Summerly," and modified but slightly by the present editor. An introduction, addressed to adult readers, briefly summarizes the latest results of philological research concerning the origin and history of this old "Welshbible," whose rascally hero, in spite of his meanness and duplicity, yet commands our respect because, to adopt Froude's explanation, "he can do what he sets to work to do." Numerous illustrations by Frank Calderon, in the manner of F. S. Church, add to the charm of this pretty volume.

Charles Scribner's Sons have reissued George Augustus Sala's 'Life and Adventures,' written by himself. There is nothing on the title-page to show that this is a second edition, but the volumes are somewhat smaller, and clothed in brown instead of red. The price is also reduced, but the value is unchanged by the fact

that Mr. Sala has joined the majority since the previous issue.

Mr. Frank Preston Stearns thinks his 'Sketches from Concord and Appledore' (Putnam) will not have been written in vain if, among other achievements, they "succeed in restoring to Wendell Phillips a portion of the fame he lost by the wayward course of his declining years." Save us from our friends! On p. 205 Mr. Stearns says of Mr. Phillips that "he never appeared as an advocate of woman suffrage before the public, but he is said to have approved of it!" Had Mr. Stearns turned to the first series of Mr. Phillips's collected speeches he would have found one delivered in October, 1851, placed as nearly in the forefront of the volume as the Lovejoy speech would permit, based on a resolution of his own writing, in these words: "That while we do not undervalue other methods, the right of suffrage for women is, in our opinion, the corner stone of this [woman's rights] enterprise." On the same page Mr. Stearns states that Mr. Phillips would not vote because of his scruples against upholding a government maintaining an army and navy. But notoriously Mr. Phillips never adopted Mr. Garrison's non-resistance views, and in the second series of his speeches occurs that Phi Beta Kappa oration which Mr. Stearns describes without, apparently, having read it, and in which dynamite and the dagger are pronounced necessary and proper substitutes for peaceful agitation in an absolute monarchy like Russia.

Some picturesque legal antiquities are lightly sketched by Mr. Francis Watt in a rather dainty little volume entitled 'The Law's Lumber Room' (London: John Lane; Chicago: A. C. McClurg & Co.). To use his own metaphor, the author brushes the dust from a number of antiquated customs and legal fictions, and shows, not without a pleasant humor, how they arose, what uses they served, and how they came to be discarded. Such topics as Benefit of Clergy, Deodanda, Sanctuary, Trial by Ordeal, Wager of Battle, etc., are treated with sufficient detail for all ordinary requirements, and at the same time in a way to make their true significance appreciated.

Of 'Congressional Currency,' by Armistead C. Gordon, which appears in the Putnam's "Questions of the Day" Series, we need say little more than is said in the preface. "An outline of the genesis, growth, and condition of the existing currency system of the United States, a short account of each of the various kinds of 'money' or circulating medium now in use, and a consecutive statement of the most conspicuous or important acts of legislation in connection therewith, concluding with a sketch of the judicial interpretation which such legislation has received at the hands of the Supreme Court," is certainly a timely publication. It is also a well-written one, and the author deserves credit for setting forth clearly a confusion which is steadily growing worse confounded.

The general interest manifested in the improvement of our highways will be increased and intelligently guided by Gen. Alfred P. Rockwell's treatise on 'Roads and Pavements in France' (John Wiley & Sons). It gives in a condensed form, but clearly, all the necessary information as to the best materials for roads, their cost, maintenance, and repair, together with numerous diagrams, thus making a valuable *va-de-mecum* for persons having the care of highways and streets. It is interesting to note that wood-pavement is now the favorite in Paris, because "it is smooth, noise-

less, agreeable to drive over, easily kept clean, and is rapidly relaid when worn out."

Dr. Daniel Denison Slade of Harvard University adds to his many accomplishments a knowledge of horticulture. His interest in this has led him to review the early history of the art in New England, and to embody the results of his wide reading in a dainty, old-fashioned book of about two hundred pages ('Evolution of Horticulture in New England,' Knickerbocker Press, 1895). The paper, binding, and general impression carry the volume back about as many years as it has pages, and this effect is not lessened when one finds that the work is copyrighted at Stationers' Hall, London. The citations from the early records are well chosen and accurate, and render the book convenient for reference. The allusions to very recent horticultural successes in New England are meagre and unsatisfactory and the omissions many, but the latter may be overlooked, since the author speaks in a kindly manner of those whom he does mention. He deals with the past rather than with the present, with evolution and not with the evolved. We thank him for giving us a pleasant excursion into the days when the streets of Boston were leisurely assuming their unaccountable and unexpected directions under the feet of kine excluded from the fair flower-beds on Beacon Hill, and forced to wander to the Neck, or to the salt marshes on the Charles where now is to be seen that masterpiece of municipal horticulture and treasury of sculpture known as the Public Garden.

It is difficult to understand why Dr. M. C. Cooke's 'Introduction to the Study of Fungi' (London: A. & C. Black; New York: Macmillan) was ever written. The author says that "the pages are the result of an effort to supply an acknowledged want," but this statement is ambiguous. It may mean that the author feels the want, or that certain other people do. It sometimes happens that an author feels the necessity of preparing a book for people already well supplied with the same class of treatises, while the people themselves do not feel the same want at all. The present work is not sufficiently comprehensive and fresh to meet the demands of specialists, while it is, on the other hand, not particularly attractive to beginners or general readers. The defect lies in the plan and not in the treatment. Mr. Cooke has done too much excellent systematic work in mycology, and has been an editor too long, not to express himself clearly and positively in print. If he had divided the volume into two parts, relegating all the popular descriptions to an elementary work, leaving the rest to be brought rather nearer the present time and illustrated with drawings of a better character, the issue would probably have been more satisfactory to two classes of readers who may have some want as yet unsupplied. The whole work, as it stands, would be easier for reading and for reference if the chapters had been broken up more freely, and the discrete paragraphs provided with headings to catch the eye.

The 'Book of the Secrets of Enoch' (Oxford: Clarendon Press; New York: Macmillan), edited by W. E. Morfill and R. H. Charles, is an interesting addition to pre-Christian pseudepigraphic literature. Though abundantly cited by early Christian writers, it exists at present, so far as is known, only in Slavic versions. It appears to have been written by an orthodox but free-minded Jew, who not only sets down current Jewish opinions about religion, but adopts ideas from the Persian, Egyptian, and Greek thought of his time (between B. C. 50

and A. N. 50). He imitates the form of the Book of Enoch, but has noteworthy opinions of his own on the soul, the origin of death, the millennium, angels, Seraphim (*Chalkids*), cosmography, and ethics. Mr. Morfill has given an English translation based on a text carefully constructed from the various Slavic versions, and Mr. Charles (the well-known translator of Enoch) has added critical and historical notes and a general introduction. The names of these two gentlemen are a guarantee of the good performance of the editorial work.

The quarterly statement for January of the Palestine Exploration Fund contains the report of Dr. F. J. Bliss on the excavations at Jerusalem, and a paper on the site of the Temple, both of which are illustrated by diagrams. An account of a journey east of the Jordan in the spring of 1895 by Mr. Gray Hill is interesting mainly from its picture of the disturbed condition of the country, which made it impossible for him to visit Petra, as he had intended. Every tribe seemed to be at war with its neighbors, and the Turks were apparently passive, if not powerless, spectators. In the wilderness to the southwest of the Dead Sea he passed through some hills of dazzlingly white chalk by an "extraordinary winding passage of several miles in length, and in most parts of only the width of a very narrow lane. It is sometimes only 6 to 10 feet across, and the sides stand up on either hand as precipitous as the walls of a castle, varying from 50 to 150 feet in height." There is also an account by Col. Conder of inscriptions in the Syrian language discovered a few years ago by German explorers in the extreme north of Syria, and now published. Transliterations of two, dated about 800 B. C. and 730 B. C., and throwing some light on the Book of Kings, are given.

The last quarterly instalment of vol. iv. of the *Boletín de la Sociedad Geográfica de Lima* (Peru) is of more than usual interest. In addition to the contributions of members, which have for the most part been of a high order, the Society has now undertaken to make its official publication the medium for presenting to the world certain works of value which otherwise would remain entirely unknown, or hidden from all save a few select scholars. The current issue contains the first of a series of notes of travel by the savant Antonio Raimondi. The great work on Peru by this distinguished scientist having been cut short by want of funds, the Society has deemed it expedient to cull out from his literary remains the more important material intended for the future volumes of his *opus magnum*, and publish them at once. This enterprise is particularly commendable, not only as giving to the world desirable information, but as revealing the importance of the labors of Raimondi. In the same issue appears a translation into Spanish of the introduction to Dr. E. W. Middendorf's masterly work entitled 'Das Runa Simi, oder die Keshua-Sprache,' a treatise which had the merit of being written after the studies of a lifetime in Peru, during which its author enjoyed the advantage of friendly and familiar intercourse with the people of all classes in every part of the republic. Other notable articles in this number of the *Boletín* are "Plants and Other Products of China Introduced into Peru," by Manuel García y Merino, and a "Contribution to the Study of the Flora of the Cordillera of Peru, with Observations on the History and Origin of the Flora of the Andes," by John Ball.

Personal reminiscences of General Grant during the war, by Gen. Horace Porter, are to

appear in the *Century Magazine* and will be profusely illustrated.

This month sees the starting of a new illustrated magazine in this city, the *Parisian*, published by M. L. Dexter at Carnegie Hall. It will be devoted chiefly to the reproduction in English of contemporaneous articles from the leading French and other Continental periodicals, with a regular review of current European literature. The issue will be quarterly till August, when it will be monthly. The February number has a wholesome and serious aspect, and possesses an agreeable variety.

A new series of the *National Geographic Magazine* begins with the January number. It is henceforth to be an illustrated monthly, with a special concern for the geography, physical, political, and commercial, of this continent. The principal article is a comprehensive account of European Russia by Mr. G. G. Hubbard, interwoven with some personal experiences of an extensive journey in that country. This is followed by an interesting sketch of the Arctic cruises last summer of the United States revenue cutter *Bear*. Her principal employment, besides the prevention of smuggling by the whaling fleet, seems to be carrying supplies to the different stations in Northern Alaska, succoring the shipwrecked, and transporting domestic reindeer from Siberia to Alaska. The remaining contents consist of Gen. Greely's address on Arctic exploration before the London Geographical Congress, notes and notices of new books and maps, executive reports, and the proceedings of the National Geographic Society of Washington.

The evidence that the spirit of enterprise has received a new impulse from the recent war is indicated not only in the commerce of Japan but in her journalism. During the war two periodicals, edited in English, were started by Japanese. The first is the daily *Yorodzu Choho*, which has a few columns of English matter three times a week. The editor, Mr. Muramatsu, does not, however, possess a sufficiently thorough acquaintance with the English language to make his articles readable to English-speaking people. The second is the *Tai-yo* (*Sun*), a monthly magazine edited by Prof. N. Kanda. It is of a much higher grade than the *Yorodzu Choho*, and, while the style is not free from occasional errors, it has a character of strength and maturity that few writers can hope to attain to whom English is not the mother tongue. A new venture is the *Far East*, an English edition of the *Kokumin-no-Tomo*. The latter periodical was started in 1887 as a monthly, was soon after made a fortnightly, then a tri-monthly, and recently a weekly. Its general plan is confessedly on the lines of the *Nation*. The English edition is to be a monthly publication for the present. Its editor is Mr. E. Fukai, a graduate of the Doshisha. Though Japanese will write the bulk of the matter for the *Far East*, many Americans and English have promised to contribute, especially those living in Tokyo, where the periodical is to be published.

The Siberian University at Tomsk, which was opened in 1886, is to be enlarged by the establishment of faculties of law, of mathematics and natural science, and of history and philology. At present the only faculty is that of medicine.

The Trustees of the British Museum have begun the publication of autographs in the department of manuscripts. They are reproduced by photo-lithography, in the full size of the originals, in plates measuring about 10½ x 17 inches, and can be had for threepence per

plate. The first series, comprising thirty plates, has just been issued in a book, price six shillings. The first is a letter written September 16, 1513, by Katharine of Arragon to her husband, Henry VIII. (then in France), with the news of the battle of Flodden. Other royal personages represented are Edward VI., Mary Queen of Scots, Queens Elizabeth and Victoria, Charles I. and II., William III., and George III. From the Duke of Marlborough there is a French letter to George Louis, Elector of Hanover, afterwards George I. of England, giving an account of the victory at Ramillies. George Washington, in a letter to the Earl of Buchan, April 23, 1793, writes: "I believe it is the sincere wish of United America to have nothing to do with the political intrigues or the squabbles of European nations; but, on the contrary, to exchange commodities and live in peace with all the inhabitants of the earth." There are nine literary autographs, from Dryden, Addison, Coleridge, Wordsworth, Keats, Dickens, Thackeray, Carlyle, Browning. Thackeray's is a most beautiful specimen of penmanship. Browning says: "I never designedly tried to puzzle people, as some of my critics have supposed. On the other hand, I never pretended to offer a substitute for a cigar, or a game at dominoes, to an idle man."

Mme. Calmann Lévy's purchasing of Renan's books and presenting them to the French National Library is probably a delicate way of easing her conscience on account of the hard bargain which her late husband must have driven with the simple-minded (in money matters) Ernest Renan. For that the shrewd publisher must have got the best of the arrangement by which Renan handed over to the Lévy's all his writings, past, present, and future, there can be little doubt; otherwise the French Government would not have felt called upon to grant the late Mme. Renan a pension, and M. Airy Renan would be able to devote all his time to his brush and not have to give up a good part of it to art criticism, which brings in readier cash. Considering the plain way the Renans lived, the intellectual activity of the head of the family, the wide sale of his books, and the regular stipends—small though some of them were, when viewed from the American standpoint—which he received from the University, the Academy, etc., Ernest Renan should have left behind him a snug little fortune for a Frenchman and a scholar, whereas he may be said to have bequeathed to his son and daughter next to nothing, if we except his library, worth probably three or four thousand dollars, and his great reputation, which has opened to them many doors that would otherwise have been shut against them.

The unfavorable action last November of the Royal College of Surgeons, London, on a petition from the London School of Medicine for Women, praying for the admission of medical women to its examinations, has just been reversed at a meeting of the fellows, by emphatic endorsement (47 to 10) of the following resolution, "that, in the opinion of the fellows of this college, women should be admitted to the diplomas of the college." As the Council, the governing body of the college, is elected by votes of fellows only, their declaration in favor of granting diplomas to properly qualified women practically settles yet another case of educational discrimination against women students. It remains to be seen whether the Royal College of Physicians will also soon be stricken with a change of heart.

Since Dr. Wheeler wrote to us regarding the proposed excavations at Corinth by the Amer-

can School, we learn that formal permission to conduct them has been granted by the Greek Government, and work will be begun next month.

As is well known to all the archæologically minded, the architrave of the east front of the Parthenon used to bear an inscription in bronze letters fastened on by nails, of which now only the nails or stubs remain. At the suggestion of Dr. Dörpfeld, an attempt is being made by two students of archæology at Athens, one from the German Institute, the other from the American School, to decipher this inscription. One is using photography to obtain an exact representation of the nail holes, the other is making squeezes, being hauled up for the purpose some forty feet from the ground. The inscription may date from the time of Alexander the Great, and the archæological world will await with much interest the results of this attempt to decipher it.

—Even the most cursory of magazine readers will be disposed to linger over some illustrations, in the current *Scribner's*, of Miss S. T. Prideaux's bindings for books, and will be amply repaid for doing so, whether the fascinating designs that have been so admirably reproduced in black and white come as a fresh disclosure of Miss Prideaux's graceful art, or merely serve to recall examples that have been seen in frequent London exhibitions. The text that accompanies the dozen pictures of ornamented morocco bindings, though worth perusal, shows that Miss Prideaux is by no means so much at home in expounding as in applying the principles of artistic decoration. In the selection of the remaining articles for the month, account seems to have been taken rather more than ordinarily of the prevalent restless fancy for going to and fro in the earth—if not bodily, at least by means of copious views and descriptions of miscellaneous localities. A faithful but not graphic account of the fourteenth ascent of Mt. Ararat, by an Englishman, H. F. B. Lynch, and an article on life in the Colorado health plateau, by Lewis M. Iddings, respond to the demand made for them by the taste of the moment. Frank Russell's "Hunting Musk-Ox with the Dog Ribs," a compact and swiftly developed history of an expedition into the remote Barren Ground lying to the northeast of Great Slave Lake, has qualities which are likely to appeal to a perennial fondness for narratives of adventure well seasoned with danger. A successful appeal to the same permanent instinct is made by the story of "A Long Chase," of which the *donnée* is an escape from a pack of wolves, on a fifteen-mile ride across a frozen forest in Manitoba—believed by the writer, Owen Hall, to be in the "northwest" of Canada. The facts that the hero's mount is a bicycle, and that his deadly shots at his pursuers are supposed to be made as it spins over the snow, give novelty to the story, and secure a respectable place in current fiction for "the wheel."

—In *Harper's* the hunting of the musk-ox is the partial theme of the third instalment of Caspar W. Whitney's "On Snow-Shoes to the Barren Grounds." Although this is one of the most readable papers in a number which has no special features of distinction, it suffers by comparison with the corresponding paper in *Scribner's*, through lack of directness and singleness of aim. "A Mother in Israel" is interesting as a posthumous story of Prof. Boyesen's, and as a study of the two conflicting ra-

cial elements of cupidity and intellectuality which the Jews transplant to this country from the Ghettos of Old World cities. Henry Loomis Nelson's "Passing of the Fur-Seal," though not a new, is a stirring story, whether told from the standpoint of humanity or of commercial interest. Mr. Nelson contends that for nearly eight years the Dominion of Canada, in the interest of a few pelagic sealers, "has been able to oppose successfully the interests of the United States, Great Britain, and Russia in the seal herds."

—In the *Century* the article on Puvis de Chavannes, by Kenyon Cox, is not only charming to the eye on account of its illustrations, and timely on account of Puvis de Chavannes's connection with the Boston Public Library, but, if thoughtfully read, is an aid to general culture as well. Mr. Cox has not contented himself with cataloguing and eulogizing the several series of great decorations painted by his subject, but has furnished, in comments on their quality, tests for the valuation of mural painting that may be applied to the work of Abbey or Sargent equally as well as to that of the famous decorator of the Sorbonne, the Panthéon, and the Hôtel de Ville. The fundamental principle of Mr. Cox's teaching, that "the highest aim of art is to make some useful thing beautiful," is one on which the changes cannot, here and now, be rung too often. Readers who find a peculiar satisfaction in penetrating the privacy of persons high in place will be gratified by views of the sleeping and other apartments of the Pope. Marion Crawford writes of the Vatican household in the pleasantly rounded periods that offend no ear and carry little thought, leaving the intrinsically interesting features of the article the two portraits of Leo XIII., in youth and old age, each of which presents a face that no student of physiognomy could pass without admiration. "Perdita's Candle," by Martha Young, is a decidedly pretty little dramatic sketch, turning upon the feast of Candlemas; and Henry M. Stanley's résumé of the development of equatorial Africa is a useful addition to the encyclopædic information of the general reader.

—In the *Atlantic*, Henry James has contented himself with being ambiguous merely in the title of his story, "Glasses," and has, happily for the reader, been unusually clear and open in his dealings with him. Not only has he vouchsafed to carry his three characters to a dénouement of the drama in which he shows them engaged, but he has made them known with an intimacy that enriches the reader's acquaintance with types of human nature. To be dealt with in this way by Mr. James is to receive as rare a pleasure as the novel-reader can expect; and when, in addition, Mr. James's style becomes almost as perspicuous as it is distinguished and subtle, an equally rare literary pleasure is added to that of the novel-reader. The result of these fortunate conditions in the story of "Glasses" is a piece of fiction that bears no relation to magazine standards, and that will not easily be forgotten by any one who comes under the spell of its masterliness. A second pleasure, of a quality which the average literary capacity of contributors does not permit a magazine to furnish each and every month, is to be found in Leon H. Vincent's clever essay, "The Bibliotaph." This "portrait not wholly imaginary" shows the second-hand bookshops and odd restaurants of Boston, Philadelphia, and even Chicago, as harboring an habitué whose combi-

nation of whimsicality and ripe taste is of just the right stripe for literary portraiture. It was a delicate and difficult task to interpret by description, anecdote, and quoted epigram a figure so eccentric and delightful as that of this scholarly and genial vagabond among books, but fortunately a competent pen has undertaken it. Rose Hawthorne Lathrop's memories of her father, as consul at Liverpool, promise, in their first part, a continued attraction to readers of the *Atlantic*.

—Scheffel's 'Ekkehard' has been republished so frequently that one loses count of the editions somewhere in the middle of the second hundred. Two more have recently appeared in this country, one in the original, the other in English. From Henry Holt & Co. comes a compact, well printed volume in German, edited by Prof. Carruth of the University of Kansas. The first part of the introduction is reprinted from the *Chicago Dial*, and deals with the Historical Novel. Palgrave's denunciation of this form of fiction as "the most harmful of semi-poetic hybrids," and Howells's remarks in a similar vein, are seriously discussed. It is a pity that this should be necessary in the century which began with Scott and whose last decades are marked by the appearance of some of the great masterpieces of historical fiction, the Polish novels of Sienkiewicz. While the philosophers were denying motion, the artists have been walking to and fro. Scheffel, in his own charming preface to 'Ekkehard,' states his belief that "neither history nor poetry will lose anything by forming a close alliance." But it is not the nature of the elements, it is the genius of him who unites them, upon which success depends. What a Scheffel or a Sienkiewicz has joined together, neither documentary history nor dogmatic criticism can put asunder, for such men create living works of art, which continue to exist in defiance of their own defects. Plain men may still venture to enjoy in 'Ekkehard' the vivid and poetic presentation of a picturesque and interesting age, without danger either of blunting their æsthetic perceptions or of confusing their historical facts. An English translation of this novel, revised and furnished with a biographical sketch of the author by Nathan Haskell Dole, has been published by Crowell & Co. The work is in two handy volumes, displaying the beautiful typography of the University Press, and mounted in cheap but attractive form. Both these editions are welcome evidence of the book's unwaning popularity after more than forty years.

—The Goethe Gesellschaft of Weimar marks the end of the first decade of its history by issuing to its members a portfolio of sketches and portraits. They are from the ample treasures of the Goethe National Museum, and, of the twenty-four sheets, nine are by Goethe's own hand. A similar portfolio was published in 1888, consisting of an album of drawings, selected by himself, to exhibit, as he said, "my competence and my incompetence." It should be frankly admitted at the outset that Goethe's drawings possess little artistic value. Having thus rid the mind of cant, one can derive much pleasure from a study of this amateurish work. Emanating from one who stands in the foremost rank of the world's great men, the sketches have an interest for us of the human sort; they serve as marginal notes to the fascinating story of a many-sided life. With reference to the sketch of Schloss Kochberg, Frau von Stein's estate, there is a jotting in Goethe's diary, al-

most pathetic: "Began to hope I had a little talent." Up to the time of his return from Italy, he secretly believed that painting was his true vocation. Besides two little known portraits of Goethe, the portfolio contains several sheets from the Schmeller Album. This was the collection of 150 crayon portraits which Goethe brought together by the flattering device of requiring his friends and eminent visitors to sit to his Weimar protégé, Joseph Schmeller. Here are the fine heads of Von Knebel and Wilhelm von Humboldt, a striking portrait of Bettina von Arnim, and finally the delicately moulded features of the greatest poet of a singularly gifted race, Adam Mickiewicz. There is also a reproduction, from a preliminary sketch, of the Arcadian picture of the Goethe family, painted by See-katz in 1762, and now in the possession of Herman Grimm, which will remind the Goethe student of the amusing but kindly description of the odd old Darmstadt painter in 'Dichtung und Wahrheit.' Other portfolios are promised, to be, like this, under the editorial care of Dr. Carl Ruland, which will eventually give a fairly comprehensive idea of the rich collections of engravings, and other artistic memorabilia, around which the guests used to gather in the Juno room of the Goethe house three-quarters of a century ago.

—The fourth edition of Dr. George Bruce Halsted's translation of Bolyai's 'Absolute Science of Space' (The Neomon, 2407 Guadalupe Street, Austin, Texas), is enriched with many interesting particulars about the lives of the celebrated author of the Non-Euclidean Geometry, Bolyai János, and of his father, Bolyai Furkas. If we admit that there is any natural and important distinction between men's mental constitutions corresponding to the words genius and talent—if the man of genius is anything more than a man of high talent, plus a bold, adventurous spirit—then the father must be ranked high up on the list of men of talent; and not the smallest proof of this was his instant appreciation of that discovery of his son's which superseded his own principal life-work. The son, on the same system of parcelling, must be called a genius, though, being a man of one idea (for he survived his one revelation by thirty-seven years without any other remarkable achievement), he cannot be rated as an exalted genius. He inherited a valuable imaginative element from his mother. Lombroso sets him down as insane; but we find nothing in Dr. Halsted's present account to support that charge, unless it be the circumstance of his fighting thirteen duels the same day with as many cavalry officers, playing on the violin between every two successive duels, and getting cashiered for the performance. Dr. Halsted surmises a psychological connection between the muscular precision of the man, as fencer and violinist, and his mathematical precision. Even in this day of hardy psychological classifications, such a guess startles us. It is stated quite in the Lombroso-Nordau style of assurance. Would the muscular strength exhibited in the thirteen duels be connected with his mathematical strength? There is a winningly enthusiastic letter from Bolyai János to his father, telling him of the great step. He says: "I have discovered such magnificent things that I am myself astonished at them. It would be damage eternal if they were lost. When you see them, my father, you will yourself acknowledge it. At present I cannot say more than that from nothing I have created a wholly new

world." Dr. Halsted announces a life of Bolyai from unused Magyar documents. Our countryman as little shrinks from the Magyar tongue as from the Russian, in the pursuit of his valuable researches.

—A true poet passed away when Paul Verlaine died on January 8. He found life so hard and so unkindly that those who might wish to say many things of him may feel a certain sense of restraint now, as if any words would only seem to stretch him out longer on the rack of the tough world that he has quitted. In France he is truly mourned. Nothing is more noticeable than the note of sincere grief that is heard in all that is said of him. The least sympathetic say: "He was an *enfant terrible*, but still always an *enfant*." Coppée, his earliest friend—for whom he called, as he was dying, "François! François!"—took up the same strain beside his grave: "He was a child, a child always, a child and a poet." He had no concealments. Shelley, even, shows us less of himself. Every emotion of his storm-swept soul was revealed in his verse, and in it, too, were reflected his brief hours of serenity and his higher moods of religious devotion. His influence was great. Every young poet in France looked to him as to a master and leader in his art. To him, more than to any other, the present and increasing freedom of French verse is due. He struck the hardest blow at classicism. He struck with all his might, too, at the artificiality and rhetoric which have been besetting sins of the French muse. Preaching in verse he flouted, and oratory, and even eloquence—that good thing which in poetry is the enemy of the best. "Take eloquence and wring its neck!" he said. Of his own achievement in poetry it is perhaps too early to speak. We cannot yet tell how great the next age will count him, but that he will not wholly die appears to be certain. His friends parted from him in the cemetery of Batignolles, and left him in possession of the blessing that he needed most, *requiem eternam*.

ORIGIN OF THE FRANCO GERMAN WAR.—I.

Die Begründung des Deutschen Reichs durch Wilhelm I. Von Heinrich von Sybel. Siebenter Band. Munich: R. Oldenbourg; New York: Westermann.

In the concluding volume of his 'Founding of the German Empire,' the great German historian who passed away in the summer of 1895 presented his view of the genesis of the Franco-German war. Soon after the appearance of this volume, an anonymous book was published entitled 'Aus dem Leben König Karls von Rumänien,' obviously consisting of extracts from the diary of Charles—at the time Prince, since 1881 King of Rumania—and containing letters from his father, Prince Antony. This book threw much new light on the candidacy of Charles's elder brother Leopold for the Spanish throne. It was largely on the strength of the information furnished by this book that Sybel's narrative of the events of 1869 and 1870 was promptly attacked, not in France only, but in Germany. Sybel responded to his critics in a pamphlet published in the early part of last summer, maintaining and defending the positions taken in his book. Simultaneously with this last publication of Sybel's, or but little later, there appeared the 'Souvenirs militaires' of Gen. Lebrun, with interesting and important revelations regarding the negotiations between France and Austria in 1870. In October, 1895, after Sybel's death, Delbrück,

the editor of the *Preussische Jahrbücher*, published in his magazine an elaborate criticism of Sybel's theory of the origin of the war—a criticism based mainly on the two books we have just mentioned. Delbrück also sets forth his own theory. Briefly stated, Sybel's explanation is that the war was due to the hostile temper of the French people, stirred by the politicians to an unreasoning and unreasonable jealousy of Prussia, and to the stubborn folly of the Duc de Gramont, Minister of Foreign Affairs, who, supported (and himself urged on) by the popular passions he had awakened, dragged his colleagues and Napoleon into a needless war, in which, as Napoleon knew, France would have no foreign support. He maintains that the Emperor at no time wished for war; that it was Gramont's treatment of the Spanish candidacy that forced the war. Delbrück holds that it was really Napoleon's war; that the Spanish candidacy was a mere pretext—although a better pretext than Sybel is willing to admit; that Napoleon had good reason to believe that he would have the support of Austria and Italy if he needed it; and that he would have had it but for the unexpected rapidity with which the North German forces were thrown upon the Alsatian frontier.

The first half of Sybel's book is largely devoted to showing that there was nothing in the internal conditions of the two countries to necessitate war, and that France could not count upon either Austria or Italy as an ally against Prussia. The preceding volume brought the sketch of German affairs down to the year 1868. In the first and fourth chapters of the present volume Sybel describes the political struggles, from 1868 to 1870, in the Customs Parliament of all Germany, in the North-German Parliament, and in the Prussian Diet; and he shows that, in spite of constant friction and temporary setbacks, the Prussian Government secured, in one form or another, the acceptance of its most important projects. Irksome mediæval restrictions upon industry and commerce were swept away by federal legislation; a modern and humane criminal code was adopted; a compromise was reached upon the troublesome question of the military budget; the first steps were taken to develop a German navy; and the federal finances were placed upon a satisfactory basis. On the 26th of May, 1870, King William closed the last session of the first Federal Parliament with a recapitulation of these achievements and with warm words of appreciation and gratitude in behalf of the German people and the allied governments. These facts, the historian urges, dispose of the assertion made by a number of French writers that Bismarck kindled war with France "in order to escape from his internal difficulties and embarrassments."

In France the relation between the Crown and the people was much less satisfactory. The fear of anarchy, to which the Empire owed its establishment, had diminished, and the best and most intelligent portion of the French people were growing increasingly impatient of absolute government. The prestige derived from a vigorous and successful foreign policy, "which had suddenly placed France at the head of the European system of states," had been seriously impaired by the establishment of the kingdom of Italy, and was nearly destroyed by the unlucky Mexican expedition and the formation of the North German confederation. Two courses were open to the Emperor, each of which was urged upon him by influential advisers. He might make peace with his people by liberal reforms, by aban-

doing absolute rule and introducing constitutional government, or he might once more stifle internal discontent by successful war. The latter course was more popular with his nearest counsellors, but it was distasteful to Napoleon himself. The sight of the battle fields of Italy had left in his mind an ineffaceable horror of war. The establishment of constitutional government had been urged upon him by the ablest of all his advisers, his half-brother De Morny; and De Morny had discovered the man who was to lead the more moderate Liberals to the support of a constitutional empire—the Republican Deputy Ollivier. It seemed to Napoleon, however, that such a change in the form of government would imperil the future of his dynasty. Between these opposite policies he wavered for several years, adopting neither unreservedly. The historian (who was personally acquainted with the Emperor, but refrains from mentioning the fact) ascribes this hesitation partly to Napoleon's character, partly to the painful disease which developed itself in 1865 and afterwards repeatedly prostrated him. During acute attacks he was incapable of thought or will, without desire save for rest.

For a number of years, from 1866 to 1869, Napoleon cherished the hope of escaping from the dilemma by acquiring foreign territory without war. His attempts in this direction Sybel has described in the preceding volumes. After his failure to secure Luxemburg, he entertained the hope of so extending French influence over Belgium as at least to pave the way for annexation. The half-forgotten story of the purchase of Belgian railways by a French company, in 1869, of the refusal of the Belgian Government to permit the execution of the contract, and of Napoleon's abandonment of the scheme, is well and clearly told in pages 82-95. With the collapse of this venture, certain nebulous plans for a customs union with Belgium also disappeared.

Simultaneously with these schemes, Napoleon took up again the negotiations for a triple alliance between the three great Catholic Powers—France, Austria, and Italy. In 1867 the French and Austrian Emperors had reached some sort of an understanding at Salzburg. In 1868 Italy had offered to ally herself with France, or with Austria and France, if the protection of the Pope were intrusted to the Italian Government. Napoleon found this condition unacceptable. Now (in 1869) Napoleon proposed an offensive and defensive alliance between the three Powers to resist the aggressions of Prussia. In case of war, Austria was to be restored to her old place in Germany. The suggestion, according to Sybel, was not favorably received at Vienna. A German war, it was plainly stated, would not be popular among Austria's German subjects. All that Francis Joseph would agree to was a defensive alliance. Victor Emmanuel at first insisted upon the same condition as in 1868; he would not join even a defensive alliance unless a date were fixed for the withdrawal of the French troops from the Papal territory. Austrian mediation, however, persuaded him to accept an indefinite promise from Napoleon, and the draft treaties of alliance were prepared. At this point it was discovered that the Italian cabinet would not endorse the King's agreement. With the restriction of the alliance to reciprocal defence Napoleon had lost interest in it, and the matter was dropped. The only result of the negotiation was an interchange of personal letters between the three sovereigns, pledging themselves to concerted diplomatic action. In the spring of 1870, Archduke Al-

bert of Austria submitted to Napoleon a plan of campaign, to be followed in case an alliance should be concluded. It provided for a concentration of French, Austrian, and Italian troops in South Germany. Napoleon promised to send an officer to Vienna for further conference. In May he laid the plan before his cabinet; it was discussed and criticised. Gen. Lebrun was sent to Vienna; a new plan was worked out, but not definitively agreed upon. On the 6th of June the General had an interview with Francis Joseph. According to Sybel, the Emperor assured Lebrun that he desired peace, and warned him that France could not count on assistance from Austria.

It is at this point that Delbrück first takes issue with Sybel. He believes that the dual understanding of 1867 and the triple agreement of 1869 went much further than Sybel indicates. He shows, on Lebrun's authority, that the Austrian Emperor's conversation with Lebrun was by no means so pacific as Sybel represents. It appears that the Austrian Emperor did express his desire for peace, but that he did not say that France was in no event to count upon Austrian help. On the contrary, he said that if Napoleon appeared in South Germany not as an enemy, but as a liberator, public opinion in Austria would force the Government into war. It also appears that, in the discussion between Lebrun and the Austrian military men, a definite plan of concentration was arranged. If the French troops could make their way into Bavaria, they were to be joined by the Austrian and Italian forces at Nuremberg. At the outbreak of the war Austria would proclaim neutrality, but only for the purpose of completing the mobilization of her army. Lebrun, however, tells us—and this is a point which Delbrück does not mention—that the Austrian military men insisted that war must be declared not later than April; and that, since it was already too late to accomplish this result in 1870, the outbreak of the war was planned for April, 1871.

To return to Sybel's narrative: Napoleon, unable to restore his prestige by any peaceful extension of the French boundary or of the French sphere of influence, was forced back upon the path of constitutional reform. Ollivier had left the Republicans and formed a Centre party as early as 1865. In 1867 the Emperor had made a bid for the support of this group, but had not offered sufficiently liberal concessions. In the elections of 1869 the Centre and the Left obtained a majority of seats in the Chamber of Deputies. In 1870, after convincing himself that nothing less would be accepted, Napoleon acceded to Ollivier's demand for a responsible ministry, and charged the ex-republican with its formation. The necessary changes in the Constitution were voted by the Senate and submitted in May, 1870, to popular vote. While the ostensible question was the approval of the "liberal reforms," a proclamation of the Emperor called for a vote of confidence in himself and of attachment to the dynasty. The answer was overwhelmingly favorable; seven million votes in the affirmative to one and a half in the negative. The future of the dynasty, the succession of the Prince Imperial, upon which the proclamation had laid especial stress, seemed assured, without war, by the concession to the people of a voice in the government.

On the 30th of June, when the military budget for 1871 was under consideration, the Minister of War announced to the Deputies that he would be content with a levy of 90,000 men instead of the usual 100,000; and Ollivier declared that "the preservation of peace was

never better assured." At the same time, as Sybel points out, the German Parliament had adjourned; King William was taking the baths at Ems; Bismarck was undergoing a "Carlsbad cure" at Varzin; Moltke and Roon were both rusticated, the one in Silesia, the other in Brandenburg; and Camphausen, the Finance Minister, was visiting his relatives in the Rhine province. On neither side of the Rhine, therefore, was there any expectation of war. Within less than a week, nevertheless, France was in a flame of patriotic wrath over what was considered an act of aggression on the part of Prussia; deep indignation was slowly gathering in Germany because of what were deemed insolent demands on the part of France; and on the 15th of July, after the immediate cause of the quarrel had disappeared, France declared war to avenge her insulted national honor.

The different explanations given by Sybel and Delbrück have already been noted. In his fifth chapter Sybel lays a strong foundation for the development of his theory. He shows how the French war party, the "Arcadians," had labored since 1866 to excite and intensify the national distrust and dislike of Prussia and of her leading statesman; how they represented Bismarck as the omnipresent disturber and evildoer, restlessly busied, in every part of Europe, in subterranean operations for the destruction of the supremacy of France. He also notes the peril that lay in the appointment of the Duc de Gramont, in May, 1870, to the Ministry of Foreign Affairs. He shows how little reputation Gramont enjoyed in France, how little confidence Napoleon had in his ability or his discretion. For several years Gramont had been Ambassador at Vienna; but not only were the negotiations for an alliance in 1869 carried on over his head, but Napoleon expressly cautioned the Austrian negotiators not to let Gramont into the secret. He was appointed, Sybel thinks, at the desire of Ollivier, in spite of the fact that his sympathies were with the Right and not with the Centre. He was appointed because Ollivier desired as Minister of Foreign Affairs a man in sympathy with his policy of protecting the deliberations of the Vatican Council, and a man who would take a firmer attitude against Prussia. In both respects Gramont met his needs. The Duke was ultra-clerical and a known hater of Bismarck. In his strong anti-Prussian feeling and in his personal characteristics—in the combination of an active imagination with defective judgment, of ignorance with arrogance and of impulsiveness with obstinacy—lay, in Sybel's judgment, the greatest peril to the peace of Europe. Napoleon, he suggests, may have accepted the nomination "in the opinion that a man of so little intelligence would be easily guided; forgetting the fact that thick heads have at times proved to be hard and hot heads, and that by virtue of these qualities they have often dragged irresolute wisdom along with them."

Among the perils to peace in June, 1870, Sybel does not include the candidacy of Prince Leopold of Hohenzollern for the throne of Spain, although it was in this month that Leopold finally accepted the offer of the Spanish ministry to propose to the Cortes his election.

TWO NOVELS.

Jude the Obscure. By Thomas Hardy. Harper & Brothers.

The Emancipated. By George Gissing. Chicago: Way & Williams.

THAT hopefulness which perpetually affirms,

even out of evil good must come, seldom meets with such immediate justification as in the clamor of disapproval raised against Mr. Hardy's novel 'Jude the Obscure.' He appears to have done a thing so repugnant to modern English sentiment and taste that the extent of our supposed revolt against Puritanism may well be doubted—so far, at least, as the word is a symbol for manners that correct and restrain animal instincts, and for a decent reticence of speech. The toleration extended to inferior novelists who have for several years, under various hypocritical pretexts, been engaged in the glorification of sensuality, if not lust, may be ascribed, in view of this outburst of wrath, partly to surprise at their audacity, and partly to a belief that no permanent harm could be done by letting such very poor players strut their little hour upon the stage and prance off into secure oblivion. Mr. Hardy's 'Tess' made some people feel and say that our literature was in danger of corruption. The vehement denial by a serious and extremely competent novelist of some principles upon which rests as successful a social system as poor human nature has so far been able to evolve, was thought worth consideration and rational protest. Still, there was but little frank denunciation. The drama in 'Tess' was easily separable from the argument, and made a direct appeal to passionate emotion well adapted to confuse judgment, and even strong enough to win adherents to the author's unequivocal expression of belief that, in the question of society against Tess, society was flagrantly in the wrong. In 'Jude' the author makes no special plea for the righteousness of conduct which long experience has qualified as depraved—and, as a matter of fact, 'Jude,' judged by the strongest impression made on the mind, is a less immoral book than 'Tess'; but it is slightly coarser, many degrees colder; and therefore the average intelligence, unclouded by emotion, perceives its offensiveness and proclaims dissent.

Excepting pronounced hostility to marriage, whether regarded as a Christian sacrament or a permanently binding legal contract, the author's attitude towards the problems involved in his story is as obscure as Jude. He is very bitter about matrimony. When Jude and Arabella are swearing eternal fidelity before the parson, he remarks: "What was as remarkable as the undertaking itself was the fact that nobody seemed at all surprised at what they swore." When Arabella makes a hideous scene, which there is no reason to suppose she would not have made cheerfully and with great spirit even if unmarried, Mr. Hardy thus interprets Jude's thoughts: "Their lives were ruined; ruined by the fundamental error of their matrimonial union—that of having based a permanent contract on a temporary feeling which had no necessary connection with affinities that alone render a life-long companionship tolerable." Again, when Arabella is parading her second victim at a fair, the author's genial comment is, that "they left the tent together in the antipathetic, recriminatory mood of the average husband and wife of Christendom." Many more sentences might be quoted to show his fierce contempt for marriage, and we would believe that no more degrading condition could be imagined, were it not that he goes on to illustrate the pains and penalties of an illegal union and the madness of divorce. Therefore, he seems to stand as an advocate for celibacy and the extinction of the race. In this position we shall have no further occasion to worry about him; he may be

permitted to cherish his convictions unenvied and undisturbed.

Equally enigmatic are his opinions about the effect of modern education and modern opportunity on the masses. He seems to say that people who have ceased to be as dumb, driven cattle in intelligence remain so in instinct, and that, finding their intelligence inadequate to compete with power, wealth, and tradition, they fall back for satisfaction on their instincts, and are not to be pitied but admired for the relapse. He may not mean that at all, and, in a book so cleverly planned to pass for a particular instance, generalization is largely conjectural. His group of characters is singularly well chosen to bear the whole responsibility for its heresies, sufferings, and iniquities. In early youth both Jude and Sue Bridehead are detached by temperament and intelligence from the class in which they were born, and they never come in contact with any other class which might have tempered to advantage their feeling of ability to enlighten and guide the universe. The pity of such isolation is clearly seen in Jude's career, the evil of it in Sue's. All the poetic imagination and tenderness which novelists used (by mistake or civility, of course) to attribute to women, are by Mr. Hardy bestowed on Jude, and, added to these, a man's ability to know when he is beaten, and his strength to keep up the fight when dreams are dust and hope is dead. A man of large nature and fine ambitions, not a weakling doomed from the beginning to disaster, it is a pity that Mr. Hardy could not have used him to nobler purpose. Sue Bridehead differs only superficially from many of the author's women. She is not what he most admires, "a complete and substantial female human," but a graceful, ethereal person, possessed of an appreciable quantity of intellect, a taste for literature, and a theory that chastity is best preserved by roaming about the country and living temporarily with men whose conversation and tastes are congenial. After the tragedy brought about by a child from Australia, the dreadful offspring of Jude and Arabella, Sue presumably went mad; otherwise her acute remorse and self-reproach might have driven her to a convent or death, never back to the loathed divorced and adaptable Phillotson.

We find this return of all the divorcees to their original legal mates a humorous conceit, the only one in the book. Time was when Mr. Hardy had a gift for humor, acrid and ironic but efficient. Perhaps a too constant eye on the miseries and infamies of Wessex has destroyed his perception of the comic as it has of the relative position of a few English counties to the rest of the world. Some Norwegians vindicate Ibsen's atrocities by the contention that actual parallels abound in Norway, and that, through the people of whom he writes, he is striving to elevate the people for whom, first of all, he writes. If Mr. Hardy has come to believe that as it is in the "Ancient Kingdom" so it is in the rest of the English-speaking world, he may be excused of deliberate intention to shock or to offend; but before we could acquit him of traducing we should have to know what they think about it in Wessex.

If we admit that Mr. Hardy's conclusions have any general significance, we must agree with that genial but irascible old gentleman who said: "It's a damned wicked world, and the fewer people we think well of in it the better." If we permit Mr. Gissing's restricted observation to tinge our view of life at large, we can't escape the depressing conviction that it's a dull world, that the times are indeed out of

joint, also rotten, and that we are all going fast to the "demnition bow-wows." The scene of Mr. Gissing's 'Emancipated' is far removed from the somewhat dingy, commercial British home to which he has hitherto been bound in bonds not of affection; most of the action taking place in Italy, particularly in Naples. Change of scene has not perceptibly enlivened his sombre soul, nor has the blue Italian ether driven off grim spectres whose native element is smoke and fog and suburban gloom. He has unquestionably tried to cheer up and get rid of his bogies, but is overborne by the pessimistic temperament whose watchword is despair. Though not indifferent to the charm of southern landscape, his pen cannot express it. His descriptions are dry and chill, suggestive of phylloxera in the vineyards and frost upon the oranges. He perceives the softening effect of Greek art and Latin manners on rigid British prejudice and self-sufficiency, but does not succeed in transforming the stern patroness of a dissenting chapel in Bartha, Mrs. Miriam Baske, either into a gay figure symbolic of intellectual freedom, or a gracious, kind, and honorable woman.

There are a great many people in the novel: some emancipated from the beginning, and some seen undergoing the painful process of emancipation. Among the latter Mrs. Baske is the most conspicuous. When introduced, she believes art to be but a diversion of the profane, and literature, except in the form of lurid tracts, a device of the Evil One. The 'Improvisatore' and the 'Golden Treasury' have to be brought to her notice by craft. Her development is slow, even ponderous, but appears to be thorough. In the last stages she has a preference for the more liberal of the Latin poets, and marries Mr. Mallard, an artist who frequently forgets to brush his hair and to lift his hat to women, and who is tremendous in denunciation of those who are squeamish about the nude. The awakening of æsthetic sensibility effects no improvement in Mrs. Baske's character. Her inhumanity to her sinful brother, Reuben Elgar, rages unmodified, and her treachery to his wife commits her to hopeless dishonor. We are led to suppose that Mr. Mallard would be able to humanize her by giving her a taste of the happiness of "submission to a stronger nature than herself," but we feel that he would soon come to understand her ability for picking the bloom off any kind of happiness.

The contrasting figure to Mrs. Baske is Cicely Doran, beautiful in body, free in mind, and gay in spirits; blessed, moreover, with a wealthy aunt, who "devoted herself with artistic zeal to her niece's training for the world." We expect much from this fine modern flower, familiar alike with "Latin classics and Parisian feuilletons." Great, therefore, is our disappointment when, quite after the manner of the silly, old-fashioned girl, she elopes with Reuben Elgar, an unattractive man who she perfectly well knew was impecunious and disreputable. Here Mr. Gissing faces the much-vexed marriage question, and it cannot be said that he offers either enlightenment or consolation. From passion the pair pass to dislike, and thence through a series of degrading episodes to separation. Mr. Gissing's arguments against religious and social systems are most disingenuous. The Mosaic dispensation is not responsible for the appearance of Elgars on the earth. They are essentially weak and vicious, and doubtless flourished in Rome under the Caesars. There never was a society under the old order or the new which, cognat-

sant of Elgar's gross infidelity, would not have approved of Cicely's leaving him without ceremony. It is nonsense for Mr. Gissing to say that she was forced to stay with him by the undiscerning rigor of society; and the unkempt Mr. Mallard shows himself barren of expedients when he declares that, short of killing herself, there was no way out.

In drawing Mrs. Baske and Cicely, Mr. Gissing's limitations are clearly defined. Far greater facility than his for expressing mental moods and spiritual crises is needed to make them acceptable and convincing. In many of the minor characters, especially the Denyer family, he shines more brightly. The Denyers are among his best characterizations. Like the Frenches in the 'Year of Jubilee,' he knows them through and through, and detests as deeply as he knows.

BOOKS ABOUT THE LEVANT.

Constantinople: The City of the Sultans. By Clara Erakine Clement. Illustrated. Boston: Estes & Lauriat.

Constantinople. By F. Marion Crawford. Illustrated by Edwin L. Weeks. Charles Scribner's Sons. 1895.

Mentone, Cairo, and Corfu. By Constance Fenimore Woolson. Illustrated. Harper & Bros. 1896.

ALMOST anything which bears the name of Constantinople on its title-page attracts attention at the present moment. The Turkish capital is the centre of curiosity to every one who takes any interest in foreign lands and foreign politics, and all the world is eager to learn whatever it can about the city of the sultans, provided it can do so without too much mental effort or too great an expenditure of time. At first appearance, 'Constantinople: The City of the Sultans,' looks as though it were the very book to give the desired information in the most satisfactory manner. In outside appearance it is strikingly Levantine—brilliant, gaudy, adorned with stars and crescents and golden domes and minarets. Within it is equally charming so far as appearance is concerned. It is clearly printed on unglazed paper, soft to the eye, and illustrated with twenty admirably executed full-page halftones, reproduced, if we are not mistaken, from photographs of Sebah and Joaillier of Constantinople and Cairo. There are, however, some inaccuracies in the titles of these illustrations. The plate facing page 154 is incorrectly entitled "Dolmabatchke (sic) Palace and Mosque of Sultan Abdul Medjid." There is no palace visible in the picture, but, if there were, it would be the palace of Cheragan. Dolmabaghtshe is a mile or two further down the Bosphorus. The plate entitled "The Mosque of Sultan Ahmed" would be more properly designated "The Bull Column," that being the main feature of the photograph, while the mosque is rather an incident of the background. A "Street Scene," facing page 236, is called in Sebah and Joaillier's series of photographs, where it is No. 217, "Café Turc," which correctly describes the picture.

The contents of the volume are by no means equal to its outward form. The style is bad and illogical, and the statements inaccurate and unreliable. The history of the reigns of the last three sultans, Abdul Aziz, Murad, and Abdul Hamid, degenerates into the merest gossip, garnished after the pattern of the 'Arabian Nights.' Even in the transcription of Turkish words the author is careless and unmethodical, writing in one place *Medjid*, and in another

Majid, on page 153 *ferefeh*, and on page 246 *feridje*. With similar negligence she tells you in two consecutive sentences that "there is no longer a spectacle of the Selanelik [misprint for *Selamlık*] in Constantinople. It can, however, be seen by applying for an order at one of the embassies" (p. 164). Still, she makes some comments upon the government of the present Sultan which are worth reading by his apologists: "We perceive that nothing of importance can occur in the Ottoman Empire without the knowledge of Sultan Abdul Hamid II. What are we, then, to think of him when by general consent it is admitted that his government is of the very worst? Even the glimmers of light that had dawned upon Ottoman darkness before his accession have been extinguished." The first two parts of the book are devoted to the history, the last to the present life of Constantinople, meaning the objects of interest to the tourist, and the life and habits of the people. This part is somewhat better than the other two, but the author's acquaintance with Constantinople is too evidently superficial and inaccurate to make even this part of any value. In the closing chapter she pays a well-deserved tribute to the admirable educational institutions established in Constantinople by Americans, and the remarkable results achieved through them.

F. Marion Crawford's 'Constantinople' is a book of a very different type. It does not profess to be a history of Constantinople or a guide to the objects of interest. It is a graceful little work, meant to lie on your table, not to stand in your book-case, as even its outer form declares. It is light literature, the jottings of a lover of the curious, the outlandish, and the picturesque, of a literary man who studies men and places with a view to their possible utilization in some novel or magazine. You ramble about in out-of-the-way places; sit in a queer little café and study the Galata bridge; bargain, haggle, and drink coffee in the bazaar; eat Turkish dishes and drink Turkish drinks in genuine unadulterated Turkish cook-shops; float up and down the blue Bosphorus in picturesque kaiks; saunter through quaint cemeteries; and, wherever you go, Mr. Edwin L. Weeks goes with you and makes a sketch of the queer people that you see and the odd scenes which surround you, to keep you mindful of them always. It is a delightfully irresponsible book, looking at men and things from the point of view of the man away from home and its social and religious standards, awake to the artistic, the strange, and the effective, indifferent to the moral aspect. One is not surprised, therefore, when Mr. Crawford sighs to think that the Turk must soon give way to civilization, nor to hear him abuse the progressive and mercantile Greeks and Armenians. Massacres are blood-curdling and exciting, trade and industry are plebeian, commonplace, and tiresome. One is, however, somewhat astonished to learn that the Turk "is naturally a fair man, with blue eyes and of fresh complexion, well grown, uncommonly strong, and very enduring," and that the "Greeks, Armenians, Persians, and Africans" are responsible for the bad government of his country, having outwitted and robbed him, although "he himself is a fine fellow and belongs to the superior, dominant races of the world." Or again, that while the Greeks and Armenians and foreigners secure all the concessions, grants, and monopolies, the Turk must "ultimately pay for all these things." In point of fact, nine-tenths of all the Turks in Constantinople live from the public crib, as officials, sinecurists, or pension-

ers. The Ottoman Turks are not producers, but consumers. It is the various subject peoples, Christian and Moslem, who do the producing and pay the bills.

Owing to the Turkish method of marriage with Circassians, Christians, negroes, and all the outside world, the Turks of the upper classes have become such a mixed race that it is difficult to predicate of them any national type. For this purpose you must go far afield among the Turkish peasantry and small townspeople in Asia Minor. There you do not find the Turk fair-haired and blue-eyed, it is true, but you do find him a good fellow, honest, sober, stupid, and kindly. He conquered and endeavored to appropriate a civilized government while he was still a barbarian. He has remained a barbarian, and his governing classes have appropriated the vices and corruption without the virtues of the government which they conquered.

Miss Woolson's 'Mentone, Cairo, and Corfu' takes us away from Constantinople to travel and sojourn in other parts of the great Mediterranean basin. "The substance of this collection," as we are told in a publisher's note, "originally appeared in *Harper's Magazine*" at different times between the years 1884 and 1892. Now that the author is gone, the different articles are gathered together and published in book form; and they are well worth it. The first of these sketches, which is also the longest and the best, is entitled "At Mentone," and you cannot read it without feeling that you are there, living an out-door life in a balmy, lemon-scented atmosphere, without cares or duties of any sort but to amuse yourself, meeting and associating intimately with other holiday-makers and health-seekers, to separate from them suddenly and completely when the year grows warm again. Physicians who cannot send their patients to the Riviera should give them this book. It will make them think that they are there. It is a combination of guide-book and story, so clever and so just that neither part injures the other, and you obtain your information without being aware, unless you are a professional critic, that you are being informed.

"Cairo in 1890" has not the added charm of being a story as well as a sketch of travel, but it is a charming and graceful record of the impressions and experiences of an intelligent, observant, well-informed woman in one of the most fascinating cities in the world. It is both interesting and profitable reading. We notice a few slight slips in Arabic words, as, for instance, at the foot of page 155, where Miss Woolson transcribes and translates a part of the familiar muezzin call, and in doing so translates what she has not transcribed. Some of the descriptions are delightful, as, for example, where she undertakes to hunt down Assiut ware to its store-rooms, and finds herself in a lodging-house of native Cairo (pp. 224 ff). "Corfu and the Ionian" is not quite equal in interest to the other two sketches, perhaps because Corfu is not in itself so interesting as Cairo and the Riviera. Nevertheless, this also was well worth republication.

THE NICARAGUA CANAL.

The Key of the Pacific: The Nicaragua Canal. By Ross Colquhoun. Longmans, Green & Co.

THE second part of the title tells what this book is. It is a description of the Nicaragua Canal, with some account of the country which the canal will traverse and of the business

which it may be expected to accommodate. The author, whose life has combined that of a civil engineer, a Government commissioner, and a newspaper correspondent, has devoted somewhat more than 300 pages of well-printed matter to this general subject. He begins by considering the three main schemes which of late years have been proposed for the passage of the American isthmus—the Panama Canal, the Nicaragua Canal, and the Tehuantepec Ship-Railway. Panama and Tehuantepec are quickly dismissed. The former lost whatever merit it may have had when the tide-level canal was abandoned; the latter ended with the life of its illustrious promoter. The Nicaragua route remains, and the author regards this as the sole practicable line of isthmian transit. Two chapters are devoted to concessions and organizations, and the author concludes that "it is certain that the project must be under the auspices of some strong Government, and without doubt that Government must be the United States." Two chapters are devoted to the engineering problem, including therein both the construction and the physical conditions which affect construction; two more are of an historical character; four relate to the general features and resources of Nicaragua; one chapter takes up the general subject of ship-canal, and the two last confirm the value of the canal and its far-reaching effects. While written by an Englishman, and in fact an English publication, printed also in America under the international copyright provisions, the work is apparently intended for American readers quite as much as for English, and it is an interesting and readable account of a subject of very great importance which is but imperfectly understood.

The Nicaragua Ship-Canal differs very materially from the other great ship-canal of the world. The Suez Canal is simply a level cut from the Mediterranean to the Red Sea, opening an artificial strait between two great bodies of salt water. The Corinth Canal is of the same nature. The Panama Canal, as originally projected, was of the same kind. The North Sea Canal, though provided with guard-locks at both entrances, is constructed on a single level from the Baltic to the North Sea. All of these canals are throughout salt-water canals. At Nicaragua, on the other hand, a fresh-water lake of an area of nearly 3,000 square miles and about 100 feet above the level of either ocean, lies midway between the Atlantic and Pacific. The problem consists in connecting this fresh inland sea with the oceans which are so close at hand. The present outlet of the lake is by the San Juan River to the Caribbean Sea, though there are reasons to believe that the outlet was once in a northwesterly direction to the Bay of Fonseca on the Pacific. The lake is a beautiful sheet of water surrounded by mountains and embellished with volcanoes, some of which rise as islands in the lake.

Although the outlet is to the Atlantic, the chief difficulties in construction lie on the Atlantic side. The distance from the lake to the Pacific is only eighteen miles, and this portion of the canal presents no difficulties of an unusual nature. The Pacific terminus would be at Brito, which is at present barely worthy to be called a roadstead, but a fairly good harbor can be constructed there by artificial breakwaters. On the Atlantic side the case is very different: the air-line distance from the lake to the ocean is about seventy miles, and the general course of the San Juan River seems to be the only feasible route. The early plans, which contemplated a canal of much less capacity than is now proposed, were based upon a system of

slack-water navigation on the San Juan River. The plans adopted by the Nicaragua Canal Construction Company are of a radically different character: they contemplate the construction of a great dam across the San Juan River at Ochoa, which shall not only raise the present level of the river above the dam to that of Lake Nicaragua, but, by extending this summit level through other valleys north of the San Juan, carry it to within twelve miles of the Caribbean Sea. Not only is it proposed to extend the lake by means of the Ochoa dam, but it is expected to raise its present level about four feet, so that the lake would become a great fresh-water basin reaching within a dozen miles of either ocean. The principal difficulties of this scheme lie in the extension of the basin eastward. The Ochoa dam is in itself a work of great magnitude, but the range of hills which would confine the southern boundary of the extended basin are not continuous, requiring a long series of embankments, some of them of great dimensions, to sustain the basin; besides which, it is proposed to cut through a divide between the drainage of the San Francisco and Desado Rivers, both tributaries of the San Juan, involving a cut of a maximum depth of more than three hundred feet. The Ochoa dam would be about seventy-five feet high, and some of the valleys on the San Francisco embankment are crossed at almost an equal height. Three locks of unusual dimensions, exceeding any yet constructed, make the descent on either side from the great fresh-water summit basin to the ocean. After leaving the basin on the Atlantic side, except the magnitude of the locks, no special difficulties are found. The Atlantic terminus would be at Greytown, which was once one of the best harbors in Central America, but is a fearful illustration of the dangers of shifting sands. One of the most uncertain problems which the builders of this canal will have to face is the reopening and preservation of Greytown harbor.

The climate of Lake Nicaragua is delightful, and the general features all that are needed to make a tropical climate attractive. Between the lake and the Caribbean Sea the rainfall is excessive; the rainy season extends through the whole year and the total rainfall is nearly 300 inches annually. While this excessive rainfall is less objectionable in the tropics than in a colder zone, it adds to the difficulties of a task which at best requires the most careful examination and the most skilful engineering.

The general idea of a canal of this kind is most attractive. In a few hours after leaving the ocean, a ship would pass through the three locks and reach the great interior lake. The passage through this lake would have the same charm that belongs to the Inland Sea of Japan, while delightful watering-places would be built around this great fresh-water harbor. But the attractiveness of a tropical lake is an unimportant incident: the real questions are, whether the plans now proposed are feasible, what they will cost, and whether the results will justify the cost.

So far as the feasibility of the plans is concerned, the author accepts them as thoroughly satisfactory. The only features in which he sees any difficulties are the Ochoa dam, the East Divide cut, and Greytown harbor. As to the dam, he is simply not fully prepared to accept the plans already made as the best; the East Divide cut may require flatter slopes, and possibly a tunnel may be desirable; of Greytown harbor he feels more doubt. The next question is that of cost, and the writer doubles

the estimates of the canal company, considering it probable that the cost of the enterprise may be \$150,000,000. As to the value of the completed work, the author has no doubts whatever; he believes it reasonable to estimate the net income two years after the opening of the canal at about \$9,000,000, which would be 6 per cent. on the \$150,000,000 which he thinks the canal may cost, and this income he expects to increase from year to year, as has been the case at Suez. But the mere income is by no means the whole value of the canal; its value from a strategic point of view in enabling naval vessels to pass from one ocean to another in a minimum time, and its value from a commercial point of view in enabling coasting vessels of one ocean to be utilized on the other, are of the utmost importance.

All this is very interesting and very important. The book, however, is in many respects superficial, and the reader feels that, before accepting the conclusions, he ought to verify some of the facts. One special defect should be pointed out: any book of this character should be accompanied by a full and accurate map which may be carefully studied by the reader. A number of sketch-maps are printed in the body of the book, and a very poor folding map is placed at the end; profiles in rather inconvenient form, with no vertical scale and apparently not very accurate, are given of the two canal sections between the Ochoa dam and the Caribbean Sea, and between the lake and the Pacific, while a small profile, with no scale whatever, gives an unsatisfactory view of the entire canal. A few inaccuracies may be cited which show the carelessness with which the book is prepared: on page 40 it is stated that the Maritime Canal Company of Nicaragua has the only charter which Congress has ever granted except that of the Union Pacific Railroad, whereas at least two other railroads now running are operated under charters from the general Government; on page 74 the Quaker Bridge dam, which appears to be ninety feet higher than any dam ever built, is included in a list of constructed works; on page 107 the statement is made that on the Atlantic and Gulf coasts practically only at the mouth of the Mississippi have American engineers succeeded in deepening the channel into a harbor, ignoring the fact that the depth on Sandy Hook bar has been increased until there is now thirty feet at low water, that the depth on the bar at Galveston has been doubled, and that equally great improvements have been made at Charleston and at the mouth of the St. John's River. On page 273 occurs the extraordinary statement that a canal a thousand miles long to connect the Baltic with the Black Sea, following up the Dwina and down the Dnieper Rivers, would be without locks. Such statements cannot fail to shake the reader's confidence in the accuracy of the whole book.

An Old New England Town: Sketches of Life, Scenery, and Character. By Frank Samuel Child. Charles Scribner's Sons. 1895.

BOOKS that relate to life in New England towns are always interesting to New Englanders, wherever the latter may abide. This book is no exception, though in many respects it is of a somewhat slight and sketchy character. It is exceptionally neatly printed, and the binding is in good taste, even in what is termed the "regular" (i. e., cheaper) edition. The author evidently worked *con amore*, and, in the lectures which preceded and formed the

original material of the book, he was applauded by the approval of the local community. Both text and illustrations are largely taken up with the natural scenery of the "grand old town." Many of these descriptions might have been omitted, for, however grand the town might have been in the past, or may be at present, in many features, the natural scenery is not imposing. Besides, whatever quiet beauties it may present are all visible to the present generation as they were to those who have passed away.

While the book is often pleasing and instructive, we think it might easily have been made more so by giving a fuller account of some of its former inhabitants, especially those who were distinguished in their day. The only notable biographical sketch in the work is that of Roger Minot Sherman, whose portrait is the frontispiece to the volume. But the sketch of this distinguished gentleman is, to say the least, somewhat imperfect. He was, for at least thirty years, the most accomplished lawyer at the Connecticut bar, and, as an advocate and jurist, he had few equals in the United States. No one would claim for him the "majestic intellectual power" often displayed by Mr. Webster, but few who are competent to speak on the subject would hesitate to say that Mr. Sherman was the more accomplished and thoroughly equipped lawyer of the two. The author cites President Woolsey (no mean judge) as saying that "Roger Minot Sherman came nearer his conception of Cicero than any other human being he had ever heard speak." Then occurs the following: "He [President Woolsey] said Mr. Sherman was unwilling to speak anywhere but in court in his own county." The authority for this is Senator Hoar, cited by the author. Though the Senator is a distant relative of Mr. Sherman, either he or President Woolsey (one of the exactest of men) was mistaken. Very likely Mr. Sherman declined all invitations to address public bodies or miscellaneous audiences on literary or historical themes. He was not singular in this. His relative, Roger Sherman Baldwin, one of the ablest and most finished lawyers of Connecticut, habitually refused to employ his talents in that field of intellectual labor. A few legal opinions and briefs and one or two great arguments are about all that has come down to us from either of these eminent lawyers. But the statement attributed to President Woolsey, that "Mr. Sherman was unwilling to speak anywhere but in court in his own county," is clearly erroneous. The reports of cases and the records of litigation in Connecticut from as early as 1810, at least, till 1839, conclusively show that Mr. Sherman was constantly arguing causes in nearly every county in the State. Like the English lawyers, he "rode the circuit," trying causes whenever he was offered retainers, which was very often. This was inevitable, for his fame, both as an advocate and a jurist, transcended that of any lawyer in the State. Though not a florid or, perhaps, in the popular sense, a brilliant forensic orator, he was a finished advocate, both on matters of fact to the jury and on the most intricate and subtle questions of law presented to the court. An eminent Chief Justice of Connecticut (now deceased) once told the writer of this notice that Sherman's logic was so cogent and faultless that the most distinguished of the judges before whom he appeared felt it unsafe to fail to examine carefully his premises, or to remit for a moment their attention to the course of his argument, lest they might be lured to a wrong conclusion.

After referring to the fact that Sherman declined a nomination for Congress, the author remarks: "At a later date the opportunity came when the State would have been glad to choose him to represent her in the United States Senate; but certain views which Judge Sherman held were not agreeable to his party, and he was not willing to compromise his position." Now we apprehend that the real reason why he was not elected to the United States Senate was because he had been a member of the Hartford Convention, a body which the Democrats had for years denounced as treasonable. Certain small men in the Whig party were afraid to elect Mr. Sherman to the Senate for fear that it would hurt the party, so that once august legislative chamber lost the services of one who would have been one of its most useful members as well as one of its brightest ornaments.

Mr. Child, after stating that in 1823 a "young man by the name of 'Ellsworth' wrote to Sherman for advice about the choice of a profession," and giving the substance of his reply, adds: "It is pleasant to remember that Mr. Ellsworth continued to shine with the light of Christian manhood in the legal profession, and that he became famous as professor of law, member of Congress, Governor of Connecticut, and *Justice of the Supreme Court of the United States*." This is rather an unfortunate slip. The writer does not give the full name, but, clearly, he refers to the late Hon. Wm. W. Ellsworth, who was a member of Congress, Governor of the State, and judge of the Supreme Court of Errors of Connecticut; but he was never a justice of the Supreme Court of the United States. His father, Oliver Ellsworth, was for a time Chief Justice of the latter court, a man of great intellectual endowments. He drafted what is known as the "Judiciary Act of 1789," which to this day is the foundation and framework of our Federal jurisprudence. It was a masterly piece of judicial legislation, second only in usefulness to the lucid and luminous expositions of the Constitution of the United States by Chief Justice Marshall.

We are rather surprised that no more is said in this book of Gen. Gold Selleck Silliman of Fairfield. He was, especially during the Revolutionary war, one of the most conspicuous figures in Connecticut. He was a man of untiring energy, and his discreet and efficient management of the military posts assigned to him won the lasting confidence and approval of Governor Trumbull. His wife was scarcely inferior to him in skill, energy, and force of character. They were the head of one of the most distinguished families in the State, their descendants including two eminent professors at Yale. The senior Professor Silliman won a fame not only in his native State, but in the whole country, as well as abroad. The family is well represented at this day in the person of the Hon. B. D. Silliman, an eminent lawyer in this city, a resident of Brooklyn, where he is enjoying a green and cheerful old age.

This book, pleasing as it is in many of its features, reminds us that Connecticut still lacks any adequate history or biographical record of its distinguished men. Some son of hers who may combine the industry of a Dryadust with the literary gifts of a true historian, might well undertake the task which has thus far remained unperformed.

A History of Money and Prices, being an inquiry into their relations from the thirteenth

century to the present time. By J. Schoenhof. G. P. Putnam's Sons. 1896. 12mo, pp. xvii, 352.

In his latest book Mr. Schoenhof renews his attack upon the theory that the quantity of money in circulation determines money prices. His present argument is chiefly historical. Many figures from Thorold Rogers, D'Avenel, and Beissel are cited to prove that prices "from the thirteenth century to the present time" have not increased proportionately to the contemporaneous increase in the volume of money. The fact is indisputable, but it is not, as Mr. Schoenhof asserts, conclusive against the quantitative theory. Completely stated, that theory is complicated to the verge of unintelligibility. In practice it is simplified into the truism that quotient equals divisor into dividend; or, in other words, that the supply of money and the demand for money—Walker's "money-work"—determine the goods price of money, and therefore the money price of goods. The formula is perhaps true, it is certainly useless. Nobody has measured the supply of money more accurately than to say that it is the number of pieces multiplied by the (indeterminate) rapidity of their circulation. Nobody has ever pointed out a way of ascertaining how great the "amount of money-work" may be. Until these preliminary steps in defining the quantitative theory of money shall be taken, no appeal to statistics or to history can either prove or disprove it. At present we have not the materials for testing its applicability during even the last twenty-five years, to say nothing of the thirteenth century.

In the latter part of the book, dealing with "the true price-making factors," namely, the material and intellectual processes of production, Mr. Schoenhof's knowledge of business enables him to support his contentions by much fresh and apposite illustration. These pages are distinctly stronger than the more theoretical portions.

Elementary Physical Geography. By Ralph S. Tarr, B.S., F.G.S.A. Macmillan & Co. 1895.

THIS book is in part an attempt to carry out the suggestions which were made by the majority of the Committee of Ten, but the author has deemed it unwise to attempt to do more than partly follow out those suggestions. In his preface he very frankly says that he anticipates much criticism, and in a measure he forestalls unfavorable comment by confessing that he is far from being satisfied with his attempt. In its treatment of "The Land" the book is a decided advance upon any physical geography heretofore published. The various physiographic processes which have shaped the earth's surface are described in some detail. The cycle of erosion, in connection with the development of a river system, is well brought out, and the various accidents which commonly interrupt the normal cycle are well described. The author has apparently been reluctant to use terms, such as "peneplain," "river piracy," and others, which, although new to many teachers of geography, nevertheless have become well established in scientific literature. He has, we may add, put himself in opposition to the authority of the best geologists in discussing weathering and erosion as two separate and coördinate processes. It would have been more in accord with the best usage to have discussed weathering as one of the elements of erosion, and to have used the term "corrasion" in many cases where he has used "erosion." Mr. Tarr's treatment of lakes is inadequate in

that he has failed to emphasize the place which lakes occupy in the cycle of river development, some types being characteristic of the youth and others of the maturity or old age of a river system. Much the same criticism may be made of the author's discussion of plateaus and mountains.

The book contains a few errors which ought to be corrected. Hadley's inaccurate explanation of the deflective force of the earth's rotation is repeated by Mr. Tarr. As has been shown by Ferrel, this force is dependent solely upon the latitude and the momentum of the moving body, and not at all upon the direction of motion, whereas Hadley's explanation demands that there be no deflection in the case of bodies moving in an east-and-west direction, and that the amount of deflection diminish with the departure from a north-and-south direction. According to the diagram on page 49, the temperature in the southern hemisphere is higher in June than in December, an error probably due to carelessness in preparation. The text seems to have been hastily written, and in places it is marred by careless expressions, such as, "a river valley transformed into a lake" (p. 209), and "we have in this, the Malaspina glacier, an instance of a well developed forest" (p. 313). The illustrations are profuse and in general well chosen, many of them being new to text-books. Unfortunately not a few of them are poorly reproduced.

But praise much more than censure is due to

the work as a whole, which is of the nature of a pioneer. The author has in preparation a larger work, which will be awaited with much interest.

English Essays from a French Pen. By J. J. Jusserand, Ministre Plénipotentiaire. London: Unwin; New York: Putnam. 1895.

M. JUSSERAND is certainly one of the most vivacious of antiquaries. A book from his pen is sure to be curiously instructive and not to be heavy, and we hope he may long continue to keep to his present average of a volume a year. Of the essays brought together in the little volume before us, "The Forbidden Pastimes of a Recluse" is by all odds the most entertaining. It consists of a string of extracts from a manual for anchoresses written in the twelfth century by the Englishman Allred, Abbot of Rievaulx, for the guidance of his sister. The manual has interesting points of comparison with the well-known 'Ancient Riwle' of the following century. Some of the scenes depicted are highly characteristic—particularly that of the tattling old woman at the recluse's window, telling tales and keeping her informed of the town gossip. The second paper is a brief and lively account (from an unpublished manuscript) of the journey of Regnault Girard to Scotland in 1435. Girard's errand was to fetch the little Lady Margaret, the betrothed of the Dauphin, and he had some amusing experiences. We are glad to learn that Mr.

Andrew Lang is preparing an edition of this important manuscript for the Roxburghe Club. Two other visits to England—that of Sorbières in 1663 and that of Voltaire in 1726—are briefly treated. The longest paper in the volume is that on Scarron, which is reprinted from the Lawrence & Bullen edition of 'The Comical Romance.'

SIR QUIXOTE OF THE MOORS

By JOHN BUCHAN. Buckram Series. 75c.

"Is full of humor and vitality, and deserves to be successful. . . there is an individual quality in his work, and a certain bewitchment which belongs to the higher forms of imagination. . . the heroine becomes a living memory long after the book is closed. . . told with great delicacy and grace of diction. . . the power of reserve which is evident on every page makes us hope great things of the author."—*The Bookman*.

HENRY HOLT & CO., N. Y.

THE FEBRUARY

Book Buyer

Contains a Frontispiece Portrait,
 Printed from a New Wood
 Engraving, of

E. L. GODKIN,

accompanied by a sketch of his life and
 work by

Wendell P. Garrison

of the Nation.

The number also contains the usual attractive literary features.

Sent to any address on receipt of 10 cents.

Charles Scribner's Sons

153-157 Fifth Ave., N. Y.

Complete Index to *Littell's Living Age*, to the end of 1895. E. Roth, 1185 Pine St., Phila.

LONGMANS' ENGLISH CLASSICS.

Edited by GEORGE RICE CARPENTER, A.B., Professor of Rhetoric and English Composition in Columbia College. With full Notes, Introductions, Bibliographies, and other explanatory and illustrative matter. Crown 8vo, cloth.

NEW VOLUMES

SHAKSPEARE'S A MIDSUMMER NIGHT'S DREAM.

Edited, with Introduction and Notes, by GEORGE PIERCE BAKER, A.B., Assistant Professor of English in Harvard University. With Frontispiece—the Imitation of an Elizabethan Stage, used in the revival of Ben Jonson's *The Silent Woman* at Harvard College, March, 1895. 60 cents.

COLERIDGE'S THE RIME OF THE ANCIENT MARINER.

Edited, with Introduction and Notes, by HERBERT BATES, A.B., Instructor in English in the University of Nebraska. With Portrait of Coleridge. 45 cents.

A circular describing the series, its objects and scope, with specimen pages, announcements, etc., will be sent to any address upon application.

 Puerto de Santa Maria.

The Nation.

NEW YORK, THURSDAY, FEBRUARY 13, 1896.

The Week.

THE reference in the Queen's speech to the Venezuelan difficulty is pacific enough. Parliament is informed that the Government of the United States have "expressed a wish to coöperate in bringing to a close" the Guiana boundary dispute, and that "I have expressed my sympathy with the desire to come to an equitable arrangement." This seems to give ample confirmation to the rumors that negotiations have been going on between Washington and London since the bellicose message of December 17, and have been much more amicable in tone. Certainly no ministry could describe the Olney-Cleveland threat to settle the whole thing ourselves as the expression of "a wish to coöperate." It must be, then, that our Washington fire-eaters, after their theatrical display, went quietly back to the methods of Evarts and Frelinghuysen and Bayard and Blaine and Gresham, and tried the effect of good offices instead of bludgeons. This will be hailed as good news on both sides the Atlantic, and all will hope, with the Queen's speech, that "further negotiations will lead to a satisfactory settlement."

The speeches of Mr. Balfour and Lord Salisbury, as well as those of Sir William Harcourt and Lord Rosebery, following the Queen's speech at the opening of Parliament, further indicate that the Venezuela controversy is in a fair way of peaceable settlement. The sense of the English nation, like that of the American people, is clearly against even the thought of the possibility of war between Great Britain and the United States. Mr. Balfour reiterated in the Commons his hope that out of the late evil the great good may come of a permanent arbitration agreement between the two countries. Certainly this is the auspicious time to strike for such a consummation; and the Washington authorities cannot bring forth works more meet for repentance than a hearty closing with any and every advance made to them along this line. Mr. Olney's extremely polite and gracious note of February 3, though a little late, was received with equal graciousness; and nothing seems now to remain except an exchange of compliments and a speedy adjustment of the whole miserable Venezuelan dispute, with our Commission probably, and to their own great satisfaction, left high and dry to one side. Of far greater interest to Parliament and the British nation is the Turkish situation. All Lord Salisbury's skill in dialectics cannot save him from the appearance of having suffered a great diplomatic defeat in this affair.

President Washburn of Robert College, Constantinople, has an interesting article in last week's *Independent* on the Armenian deadlock. He seems to be convinced that Salisbury could not have done any more than he has done without imminent danger of bringing on a European war. That danger President Washburn thinks should have been faced with "faith in God and the Right." But that, on merely political and statesmanlike grounds, Salisbury could not have gone forward without the Powers at his back, appears to be admitted. When he has threatened, or intimated, as he did last summer, armed intervention, he meant intervention, perhaps by England alone, but with the consent and moral support of the Powers always understood. Mr. Washburn is fair and frank enough to concede that the "difficulty with the United States" must have hampered Lord Salisbury enormously. The depression which our brief war madness of December last wrought in thoughtful Americans living abroad is well expressed by the President of the American college in Constantinople, when he says:

"The present hope of the world is in America; but we have more reason to fear than to boast. I know both countries very well, and I should not like to say that the standard of morality and Christian living is any higher in America than in England, or that the worship of Mammon is more frantic in London than in Chicago, or that our courts administer justice more fairly and surely than here, or that our moneyed aristocracy is of purer morals or more unselfish spirit than her hereditary nobility. But as a nation we have made no final choice of evil. I thought we had a month ago when I read the President's message, and heard of the enthusiastic cheers which went up all over the land at the prospect of war. I am glad to believe that I was mistaken, that the President did not mean what he seemed to say, and that the cheers for war were only an unhappy way of expressing our patriotism."

The *Rio News* has some striking and truthful remarks about the total confusion of mind of many of our public men, with Secretary Olney at their head, in regard to what we ought to think of South American institutions, and what South Americans themselves really think of us. The power of words to mislead mankind was never more conspicuously shown than by the effect on the imagination of the term "republic" chosen to describe governments which are truly, for the most part, nothing but military oligarchies. England, a republic in everything but name, we must hate as the home of "alien institutions," but South American governments, which are republican in nothing but name, we must hail as sisters on the strength of what we call them, not what they actually are. Equally factitious is the idea that the South Americans have any especial fondness for us, either as republicans or human beings. The *Rio News* tells the exact truth on this point; and so does the Buenos Ayres

Herald when it affirms that the Argentines are of "a different race, of different language, customs, and interests, having no sympathy with American thought or commerce, having neither affection nor any especial friendship for Americans." Ah, but these are the opinions of jealous foreigners, violently suspected of having their pockets filled with British gold. Not at all. Both the *News* and *Herald* are edited by Americans—only they happen to be Americans who have lived long in the countries they write of, keep their eyes open, and speak the thing they think, unaffected by the fumes either of a Presidential ambition or of the after-dinner wine-cup too long looked upon.

It appears that the advocates of the admission of Arizona and New Mexico as States have about half of the House committee on Territories on their side, and are hopeful of pushing the scheme through Congress at this session. Public sentiment ought to pronounce so emphatically against this proposition that Congress will drop it. Neither of the two Territories is fit for statehood. The only effect of admitting them will be to strengthen the champions of every financial folly by four more votes in the Senate. Sound-money Representatives and Senators ought to be notified that their constituents will not pardon them if they help to consummate such an outrage.

There is a sort of poetic justice in the action of the Senators from the silver-mining States who have voted to substitute a free-coinage bill in place of the House tariff bill. Those States were admitted to the Union for the express purpose of keeping the Republicans in control of the Senate and of preserving the blessed tariff. Both of these dishonest aims have failed, but the republic has received no detriment in consequence. The House tariff bill is a bill of false pretences from beginning to end. It was not expected to become a law when it was passed in the House, but merely to commit the party to passing it at some future time when the party should be strong enough to shape legislation at its own pleasure. The silver extremists have said, through Senators Teller and Jones, that in any such game they hold the winning cards. The country is much benefited by non-action at the present time on the tariff as well as on the silver question. It would be even more benefited if Congress would adjourn as soon as the necessary appropriation bills can be passed. But if it is to remain in session for purposes of general legislation, it can do nothing less harmful than to substitute a free-silver bill for the tariff bill and then kill the former.

The address of Mr. Wharton Barker to the manufacturers on the subject of silver and the tariff is not a very weighty document. It amounts to saying that there will be no more protective-tariff bills passed unless the free coinage of silver is made a part of the measure. But this threat carries no terrors to any manufacturers who are satisfied with the present tariff, and we have heard of no movement for increased duties except among the Ohio wool-growers, who are hardly to be classed as manufacturers. Accompanying Mr. Barker's manifesto is a paper signed by sixteen Republican Senators (all of them, except Cameron, from States west of the Missouri River), saying that they favor rescuing the people of the United States from the impending danger of being overwhelmed by the industrial competition of China and Japan, "by removing the difference of exchange between gold-standard countries and silver-standard countries by the only method possible, which is the free and unlimited coinage of silver at the ratio of 16 to 1 by the independent action of the United States." This is not exactly the same thing in terms as Mr. Barker's pronunciamiento, but it probably means the same thing. If so, it means that the House tariff bill will not pass the Senate at this session of Congress, and probably not at any session. Yet it is possible that the manufacturers may not tremble.

We are glad to record the practical defeat of the movement in the Senate to divide up the appropriation bills among a lot of committees, instead of giving the control of nearly all of them to a single committee. The object of this attempt to destroy a centralized and responsible oversight of the national expenditures was scarcely concealed. Much fine talk was put forward about the need of relieving the committee on appropriations from a part of its arduous labors, and of securing more deliberate consideration for important bills; but behind all this was an evident plan, both to increase the power of other committees and other chairmanships, and to make raids on the Treasury easier of execution. The very character of the men engineering the affair was enough to make it extremely suspicious; and though they began with great confidence and with an apparent large majority of the Senate, the sober sense of the older members, together with a little manoeuvring of their own, appears to have squelched the whole scheme. It would surely be a pity to abandon one of our few remaining checks on reckless and extravagant legislation, and to make our system of voting money in and out of the Treasury still more chaotic than it is.

Senator Lodge's \$100,000,000 bill for coast defences, about which he has been so long mewing and caterwauling on our roofs, was stranded worse than the steam-

er *St. Paul*, on Saturday week, and will not be got afloat again so easily, we think. He had his scheme nicely prepared and printed, to be offered as an amendment to the House bond bill. It proposed to authorize the Secretary of the Treasury to issue bonds to the amount of \$100,000,000, drawing interest at 3 per cent., the principal payable twenty years from date in "coin," with an annual sinking fund of \$3,000,000, the proceeds of the bonds to be kept in a separate fund and applied solely to the fortification of the seacoast and lakes of the United States, for the manufacture of guns, the purchase of sites, and the erection of forts and batteries according to plans to be hereafter prepared by the War Department. When this amendment was offered, Senator Teller moved to lay it on the table. Mr. Lodge called for the yeas and nays. To order the yeas and nays a vote of one fifth of the Senators present is required. Only three or four votes were cast for this motion. Senator Teller's motion to lay on the table then prevailed without a division.

The debate in the House on Thursday showed that the silver element among the Republicans in the lower branch of Congress is as bent on declaring itself as is the case with Republican Senators who believe in free coinage. Mr. Johnson of California openly and strongly denounced the Reed programme of inaction. He declared that "a do-nothing policy, or a policy confined to action on non-essentials, such as self-constituted leaders of the House say is proper, will not serve," and he criticised Chairman Dingley of the ways and means committee for offering nothing as an alternative to free coinage, urging that at least provision be made for the coining of American silver. "The silver Republicans," he announced, "are ready to set lance in rest now or at any time upon this question." In taking this position Mr. Johnson, and the silver Republicans who stand with him, feel that they have their constituents behind them. Upon the passage by the Senate of the free-coinage substitute for the bond bill, the *Denver Republican* declared that "the Republican majority in the House ought to have sufficient intelligence and patriotism to pass the bill exactly as it went through the Senate." Although it is generally assumed that there is a "goldite" majority in the House, the *Republican* questioned the correctness of that conclusion, and wanted to see a fair test made in order that every member may be forced to go on record. It expected that Speaker Reed and the Republican members who favor his Presidential aspirations would attempt to smother the measure in committee or elsewhere, but insisted that this should not be permitted, but that the bill should be forced to a vote on its merits, "in spite of the opposition of possible Presidential candidates, and the jugglery of two-faced representatives who profess to be bimetal-

lists at home and act as the tools of the Money Power in Washington."

A significant speech was delivered in the House on Saturday by Mr. Hall, a Democratic Representative from Missouri, who has hitherto been a strong free-coinage man, but now declares his conversion to the cause of sound money. Mr. Hall made the interesting statement that eight of the Senators who voted for free coinage a few days ago have said privately that they believe the adoption of this policy would destroy the commercial prosperity of the country. This is entirely credible; indeed, nobody has ever been able to believe that all, or a large proportion, of the Senators who have voted for free coinage were such fools as to believe in it. It is impossible, for example, to suppose that such a man as Wolcott of Colorado seriously thinks that the prosperity of the United States would be promoted by the adoption of this policy; but he knew that anybody who questioned its wisdom would have stood no chance of being elected a Senator from Colorado. Many other Senators who voted on the same side have had less excuse for their attitude, since their constituents have no selfish interest in silver mines, and might have been shown the folly of the silver delusion if the public men whom they trusted had done their duty. One of the most striking signs of the decadence of the Senate is the readiness of its members to shirk responsibility, as evidenced by the willingness of many who believe that free coinage would ruin the nation to vote for it because they think it popular with their constituents, and leave the House of Representatives or the President to block a scheme that they ought to have defeated themselves.

People may freely speak their mind, as they are speaking it, about the wretched incapacity and recreancy of Congress in all matters of domestic legislation. Nothing is commoner than to hear the Senate, especially, denounced as a collection of knaves and imbeciles, a fearful incubus on the country which it totally misunderstands and misrepresents. The vast majority of the intelligent citizens of the nation would be indignant if told that they must not question the wisdom of Congress about the currency, about taxation, about copyright, about banking. What! that body of adventurers and trucklers represent the country? We must all "stand behind" it? Treason to talk against it? But, excited brother, is not this just what you were saying about the action of Congress on the vastly greater question of peace or war? Were you not almost ready to mob anybody who said that Congress was as ignorant and cowardly in that matter as you now admit it is in all others? It would be strange, indeed, if a Congress which has shown itself wholly incapable of laying taxes or ordering the currency,

should suddenly develop the loftiest patriotism and purest wisdom in a crisis affecting the very life of the nation. Men are not built that way. If they are trimmers or incendiaries in that which is least, they will be in that which is much. No one suddenly becomes wise and virtuous, any more than base. The men at Washington whom we now speak of with disgust and loathing, are the very men who, we were told six weeks ago, accurately represented the deliberate judgment of this nation. They were precisely the same men then that they are now, and they trifled with the vast issues of peace and war, with the very destiny of the country, in the same reckless and barbaric spirit which they now display in dealing with the national credit. They did not put more character or intelligence into that work than they are putting into this, though in the frenzy of the moment they passed as wise patriots. Luckily, that frenzy is now overpassed, and thousands of ashamed people are ready to admit that their worshipped heroes of last December were really the same ignoble and incapable set that they now despise.

That the proper study of mankind is war is maintained with great power in the last *North American Review* by Capt. H. C. Taylor of the Naval War College. He is pained at the widespread "prejudice against its study," admits with shame that "soldiers and sailors hardened in battle" have called war "unnatural," just as if they were no clearer-eyed than "philosophers of a certain ability," and points out that the ravages of "the anti-war spirit during the nineteenth century" have gone to such an alarming extent that some men can "soberly suggest the possibilities of the nations of the earth ceasing to war with each other." Against such a horrible thought he lifts a manly voice. War, he maintains, is necessary to the whole man—to "the artistic spirit," to "the moral nature," to "the fervor of religion." It is a serious mistake to think of Christ as the great non-resistant; for "the willing effacement of the stubborn ego in the flood of fellow-humanity which the head of Christianity demands," is possible through war alone. The duty of a Christian nation, mindful of "the dignity of her high estate," is clearly, therefore, to keep fighting as constantly as possible, so that we may retain "the idea of war as a permanent factor of life," and prevent peace from "generating doubts as to the wisdom of the Providence that sways the universe." All this makes the plan of salvation plain and beautiful, but Capt. Taylor seems to confuse matters by a weak admission that "war is cruel and brutal, disposing men to a state of savagery." We do not see that he saves himself by adding that "the corrupt ease, the luxurious immorality of life, towards which a total absence of war always leads nations, has in it something more degrading for the human race than simple sav-

agery." If war makes us savages, and the absence of war something worse than savages, it would seem to be all up with us. But it must be confessed that Capt. Taylor's thesis that war disposes men to a state of savagery, he certainly proves in his own person.

The last New York Legislature passed an act which places the 12th of February, the anniversary of Lincoln's birth, on the same footing as New Year's, Washington's Birthday, Decoration Day, the Fourth of July, Labor Day, Election Day, Thanksgiving, and Christmas. The States of New Jersey, Illinois, and Washington have taken similar action, while Connecticut has established a Lincoln holiday in the month of October. It is a mistaken policy. A general observance of two holidays within ten days of each other in February is impossible, while the Connecticut idea of picking out a day that has no relation to any event in Lincoln's life is absurd. The consequence must be that the anniversary will secure but small recognition, while it introduces a fresh disturbance of business. Lincoln himself, with his shrewd common sense, would have put a quietus on the suggestion if he could have had his way about it. The mischief is that, as revolutions do not go backward, holidays are not revoked, and that the granting of them seems as easy to procure, and as difficult for legislators to resist, as the generality of demagogical measures.

John Morley gave a definition of the Jingo, in his speech at Arbroath the other night, which has a philosophical neatness and accuracy about it. He rightly said that your Jingo is known to the fauna of all countries, infesting Great Britain as well as America. The "born Jingo," said Mr. Morley, evidently having in mind the many artificial, for-this-campaign-only Jingoos, is "a man overflowing with the old Adam of violence and force, who would not be a bad fellow if he could only recognize two things—first, that there is a relation between cause and effect, and, second, that there is a difference between right and wrong." It is almost cruel now to recall the aptness with which our Jingoos have lately illustrated the definition. To shriek for war one day and bewail a smashed stock market and chilled business the next, could be possible only in beings of a deficient sense of causal relations. Great Heavens, they said, we never meant that! But godlike reason is given to mortals precisely that they may foresee the consequences of their own acts. The difference between right and wrong is a subtler thing, which bluff Jingo minds perhaps ought not to be expected to grasp on all occasions; but even they ought to find it incredible that we should always be right, and the other fellows always wrong, and that, anyhow, we can whip them.

The Anglo-French convention, signed January 15, relating to Siam, appears to have given satisfaction on both sides of the Channel. Its effect is not so much to partition Siam as to determine the respective English and French "spheres of influence," and to neutralize the Menam valley—say, one-third of the entire territory of Siam. In this region each country will enjoy the same commercial rights, and Lord Salisbury made it clear in his letter to the Marquis of Dufferin, that he did not doubt the ability of English merchants and traders to compete with the French on even terms. No one seems to have inquired how the Siamese would like the arrangement. It was apparently thought superfluous to question Siam's perfect willingness to be cut up into spheres of influence and neutralized regions. Anyhow, it is now reported that the Siamese authorities are quite content. They may be making a virtue of necessity, or reflecting how much worse it might have been.

Protection, masquerading as hygienic regulations, is taking a novel turn in Germany. The demand is made that Russian grain be excluded on the ground that it is a deadly vehicle of infection. A professor has found in one-tenth of a gramme of Russian oats, barley, and rye, anywhere from 500,000 to 1,000,000 bacilli, and from 400 to 12,000 mould fungi. This is enough for Count Kanitz and the Agrarians, who are loudly demanding that the national health (not, of course, their farm products) be protected against the new danger. Meanwhile, it is safe to say that all attempts of bacteriologists to put German grain under the microscope will be severely frowned upon. Such a thing, on a pinch, could be made out *lèse-majesté*.

What a serious business the trade of Emperor has become in the modern world may be inferred from some statistics recently published in the German papers regarding William II.'s distribution of his time during the past year. He spent 159 days away from Berlin. Of these, 52 were taken up by hunting parties, 38 by visits to allied princes, and 28 by military parades and army manoeuvres—what has been called the "defilium tremens" of the Kaiser. The remaining days of his absence from the capital were passed in different German cities, haranguing the burgomasters, and in various royal châteaux, doing "suthin' in the pastoral line." Even when in Berlin, William keeps up his pathological activity, counting that day lost whose low descending sun has not seen a garrison alarmed, a minister rebuked, Socialists threatened with the sword of the Lord's anointed, or an imperial finger thrust into some international pie. To such a life a young man must feel that he has a "serious call" before daring to undertake it in this degenerate age.

THE BOND SALE.

THE success of the new Government loan has surpassed the expectations of everybody, in both the amount offered and the price obtained. The oldest and most experienced heads in Wall Street were as much astonished as the neophytes. The whole amount subscribed for was in excess of \$500,000,000. This casts in the shade everything else previously attempted. The loan of February, 1894, was practically forced upon the New York city banks after the public had failed to subscribe. The 5 per cent. bonds it offered were taken at 117.223, a rate which made the interest equal to 3 per cent. The purchasers lost money on them. The loan of November, 1894, was of the same kind, and the results were the same. The syndicate loan of February, 1895, was a sale of 4 per cents at 104.50, which made the interest equal to $3\frac{3}{4}$ per cent. The present bids averaging about 111, the rate of interest will be about $3\frac{3}{8}$, which is more favorable to the Government than the syndicate loan of last February, but not so favorable as the loan of February, 1894. Nor must we fail to remark that the credit of New York city is higher than that of the United States. On the 26th of February last year, \$3,265,000 city bonds sold above par, the bids ranging as high as 103.25. These were 3 per cents, but they were specifically payable in gold. This accounts for the solecism that the nation's credit is inferior to that of one of its cities which contains not more than a fortieth part of its population. If we look abroad for comparisons, we find that British consols bearing $2\frac{3}{4}$ per cent. interest are selling at 108 $\frac{1}{8}$, or nearly as high as our 4 per cents. When the Government bond contract was pending in February, 1895, the syndicate offered to take the lot at a price equal to 3 per cent. if the loan were made payable in gold, but Congress refused to pass an act to that effect. It cannot be doubted that if such a law were now in force, the present sale would have been made on far better terms for the Government. The bid would probably have been as high as 125.

Of course this sale will be drawn into comparison with that of February, 1895, and to the disparagement of the latter. It should be borne in mind, however, that the syndicate contract was made at a time when the Government was within three days (some say three hours) of suspension. It was made in the very teeth of a panic. The Government came as a borrower at a time when ordinary borrowers could not get money on any terms. To have delayed thirty days then would have involved both public and private bankruptcy. Under circumstances of that appalling kind it was impossible to wait, and we think still that the offer at the time was a reasonable one, considering the syndicate's engagement to protect the Treasury gold reserve for ten months, and their actual protection of it for a year. It should be remembered, also, that the

elections of last autumn, so disastrous to the silverites in parts of the country where they were supposed to be strong, have had an improving effect on the public credit, so that, barring any war scare, the bonds ought to sell higher now than then. If we make a further comparison with the recent offer of the Morgan syndicate to take \$100,000,000 at 105, we must bear in mind that that offer was made in the shadow of a panic caused by Mr. Cleveland's Venezuelan message, which has since been measurably cleared away. On certain days after that message was sent to Congress, no bid could be obtained for Government bonds in Wall Street. Nobody could have anticipated then that there would be such a clearing up of the financial atmosphere within so short a time.

The effect of what has happened on the silverites must be blighting. When the business interests of the country come forward, at thirty days' notice, and offer to bet five hundred million dollars that the gold standard will be maintained, and to put up 20 per cent. of that sum as a pledge of good faith, the bragging and blackguardism of the silver majority in the Senate disappear like loose straw in a hurricane. It would be impossible to produce by any other means such a profound moral effect. It was only a few weeks ago that their chief men assembled in Washington and prepared a political programme for the Presidential year. They called a national convention to meet at St. Louis on the same day as that of the Populists. They declared it to be their purpose to compel one of the great political parties, if not both, to adopt a platform in favor of free coinage at the rate of 16 to 1, by this country alone, failing in which they would nominate a Presidential ticket and create a new party in all the States, based upon that single idea. They could have done nothing more gratifying to the friends of sound money. The strength of the silver faction all along has consisted in their ability to pose as a balance of power between Republicans and Democrats. In this way a minority as small as one-tenth may exercise a preponderating influence over a wide region of country and over national affairs, whereas if they should take the field as a separate force, relying on their own numbers and the merits of their particular scheme, they would win nothing but ridicule. This will be the situation of the silverites as soon as they begin a separate 16-to-1 campaign.

The "first gun" in this campaign has been fired. It is a far more telling shot than the numbers of the persons concerned would imply. Its force consists in the demonstration that the capital of the country is determined that the gold standard shall be maintained, is ready to put up, not \$100,000,000 merely, but as much money as may be needed at any future time. The effect of such a demonstration upon political parties must be very great

and very beneficial. It must also serve to brace up the financial nerve of the Administration if it needed any bracing, and it may lead to a still further accumulation of gold. Indeed, it would have been better if the loan had been for \$200,000,000 instead of half that sum. With the gold now in hand, that would have given the Treasury a reserve of nearly \$270,000,000, which is not too large for the total amount of fiat money outstanding. When the gold reserve was collected preparatory to specie resumption in 1878, it was about 30 per cent. of the legal-tender notes to be redeemed. Since that time we have added to the stock of fiat money, in round numbers, \$400,000,000 of silver and \$150,000,000 of Treasury notes, bringing the total up to \$900,000,000. If 30 per cent. was the proper proportion of reserve to demand liabilities in 1879, it must be considered so now. In fact, that percentage is much smaller than is held by the great banks of Europe which are charged with the duty of keeping the ultimate gold reserve of their respective countries.

It may be said that the \$100,000,000 of greenbacks now in the Treasury vaults should be deducted from the total amount of fiat money. It is true that as long as they remain there they cannot be used to draw gold from the Treasury, but, since they are liable to be paid out in consequence of any excessive appropriations by Congress, and must be so paid if, for any reason, the Government's expenses exceed its receipts, they cannot be ignored. They are liable to be rushed into the circulation at any time, and hence, in any prudent calculation of the future, must be considered as a part of the nation's demand liabilities. The \$110,000,000 or more of gold to be realized from the new bond sale, added to the stock in hand previously, will carry us to the end of the present year, without any commotion resulting from financial causes; but if the reserve should fall below the traditional \$100,000,000 at any time during the term of the present Secretary, he will be justified by public opinion in making a new loan equal to the present one, which would be large enough to constitute a permanent infallible reserve, needing no further additions and dispensing with all further anxiety.

NATIONAL INSANITY.

THERE is a story told of Bishop Butler, the author of the 'Analogy,' that, walking in his garden one night with his chaplain, he asked him whether "public bodies might not go mad as well as individuals," adding that "nothing else could account for most of the transactions in history." The question is an exceedingly interesting one, and seems to grow more so with the passage of time and the increase of intellectual activity; and yet there has been but little discussion of it by either historians or alienists. For instance, if we were to examine Socialism—or rather the various schemes which are laid before

the world under that name—with the aid of tests and standards which a professional alienist applies to signs of mental disease in individuals, it would be almost impossible to avoid placing it in the category of morbid symptoms. It may be true that men would behave under a Socialist régime in the manner which its champions predict, and in which they must behave in order that it should succeed, but there is nothing whatever, either in our experience of human nature in the past, or in our observation of the human nature we see around us, to warrant us in expecting anything of the kind. Approached from the point of view from which we approach all the ordinary affairs of life, and examined under the same guidance, nearly all Socialist proposals appear to be the product of a disordered imagination. If the Socialists are sane, the rest of mankind is insane, or *vice versa*, and yet an immense body of people, all told, who are leading ordinary lives, are given up to this (apparent) delusion, and hold it with a certain morbid fierceness.

The Crusades, the extermination of the Albigenses, the wars of Edward III. with France, the French Revolution, and the recent sudden outbreak of war worship among ourselves, are all historical illustrations of the theory that large masses of men may be seized with mental disturbance, which, examined as individual aberrations are examined, yields undoubted proofs of what alienists call mania—such as expectation of things which there is no experiential ground for expecting, absence of that regard for consequences which is the leading regulator of individual conduct, great suspicion of the designs of some neighbor, great fear of stupendous and calamitous events, and great dislike of the ordinary pursuits of life, such as steady industry.

In the beginning of the Crusades, a movement in which whole nations took part, and mobs 600,000 strong started for the Holy Sepulchre, the mental condition of the crowd undoubtedly closely resembled that of our Jingoos. They had, in the first place, a "doctrine," and this doctrine forbade them to discuss the probability of success or the possible effect of their enterprise on their own lives or on their own country. In the second place, they suspected and hated every one who tried to dissuade them, as either "heretics" or "infidels," which was the mediæval equivalent for Mugwumps or Anglomaniacs. There is in Joinville an interesting account of the way in which the reign of reason began slowly to return among the Crusaders. The very first sign of it was a consideration of consequences, of what had happened *at home* after the first Crusades, and of what would probably happen after another one. This is, in both national and individual madness, the earliest sign of recovery. Joinville was urged to go on the second crusade. Says he:

"The King of France urged me strongly to

go crusading and follow the road of the pilgrimage of the cross. But I answered him, that while I was abroad in the King's service, the King's officers had so levied on and oppressed my people that they were impoverished to such a degree that I did not think either they or I should ever recover from it. I saw clearly that if I went on another pilgrimage of the cross, it would be the total destruction of my poor subjects, and I have since heard many say that those who advised it did great wrong and committed mortal sin. As long as the King remained in France, all the kingdom lived in peace and justice reigned. But as soon as he went abroad, everything began to decline and run down."

Now Joinville, in refusing to go crusading for these reasons—that is, in order to prevent the impoverishment of his people and the desolation of his territory—was doing the exact thing which our Jingoos call "considering the pocket before patriotism." He was bound to crusade by the same order of considerations which bind us to fight for the Monroe Doctrine; and in sacrificing the Holy Sepulchre for a life of quiet peace and industry, he was giving up honor for comfort. But he was nevertheless recovering his sanity in the sense in which the word is used by mental pathologists.

It is impossible not to look on the sudden longing for war as a means of moral culture or amusement which has taken hold of large masses of people among us, as another remarkable outbreak of the same disease. War differs as an agency for the elevation of character from all other agencies for a similar end. Every other means of human culture is as permanent as the race itself—religion, science, art, literature, instruction, discovery, invention, social intercourse, trade, commerce, industry, family affection. Some of these things began their work as soon as man became self-conscious; all of them will continue their work as long as the globe lasts. War alone can do its beneficent work by fits and starts only, and at long intervals, and has to kill large bodies of the people it is trying to improve. There is no fact in human history better known than this. Every Jingo is perfectly aware that, owing to the enormous cost of war in life and treasure, no nation can use it for educational purposes for more than a year or two at a time; but somehow the fact does not make the least impression on him. He tells you that he feels a process of moral deterioration going on within him which nothing but war can arrest, and though he acknowledges that a very short period of war is all he can get, and that tens of thousands of men must die to give him a few months of elevation, he yearns for it just the same. Now, is there not in this a striking resemblance to that form of insanity known as alcoholism? The dipsomaniac knows his pleasure will be short, that the ultimate result will be frightful suffering, that some of the worst consequences will fall on his family; but none of these considerations turn him aside.

Another striking symptom is the disregard of human experience. No Jingo can point to any war which has had the re-

sult which he says his war is going to have. He has only to open the history of any of the great military nations to see what the ordinary results of war have been, in the following order: (1) great loss of life among the younger and more vigorous men; (2) tremendous destruction of property; (3) great disorder in the finances and currency; (4) wide diffusion of the spirit of speculation and aleatory gains, and distaste for steady industry among the population; (5) increased contempt for legality and for thinkers, writers, speakers, and for all scientific men, except inventors of explosives; (6) great increase of tramping and of crimes of violence; (7) greatly aggravated hatred for the particular people against whom the war has been waged, and great rejoicing over any calamity that may overtake them; (8) wide diffusion of the belief that a young man who wears a sabre and spurs all day, and passes his time training himself to fight, is a nobler young man than one who labors daily to increase the stock of human comfort, to advance the arts, and support helpless people.

These are among the most notorious facts, as we have said, of human experience. If total indifference to them be not a very important phenomenon for any one who is attempting a diagnosis of mental disease, whether in the public or the individual mind, then all the researches that have ever been made into the pathology of the brain are worthless. We may depend upon it that such manifestations as we are now witnessing in politics mean some lesion of the nervous system in the nature of an epidemic, and Crookes's tubes could not be better employed than in locating it.

INTERNATIONAL ARBITRATION.

A LETTER written by the late Secretary Gresham on December 31, 1894, implies that he then expected that a permanent treaty of arbitration with Great Britain would be reduced to terms and be ready for ratification within six months of that time. As nothing came of it, we must conclude either that Great Britain declined to enter into it, or that the death of Mr. Gresham was followed by a change of policy, or that the matter became complicated with the Venezuelan boundary dispute and was therefore laid aside. If the Venezuelan question interfered, the untoward result may be chargeable to either side or to both. That must be left to conjecture, yet we can easily see how the most hopeful negotiations may have been brought to a standstill if it were sought to bring in other countries which were not parties to the negotiation.

Whatever may have caused the suspension or failure of the plan which Secretary Gresham had on foot, and notwithstanding the Venezuelan difficulty, we are convinced that there never was a time when both countries were better disposed to such a treaty than now. Certainly there

never was a time when so much popular interest was felt in it on this side of the water as now, and, apart from the Venezuelan dispute, we do not believe that any ministry in England could long sustain itself if it should refuse to enter into such a treaty on fair terms. Arbitration cannot deal with all the questions that may arise between nations. One nation may claim the hitherto undisputed territory of another, or may make a demand inconsistent with the other's sovereignty. For such cases there must be reservations. The Pan-American conference reserved all cases where, in the judgment of the country concerned, its independence was at stake. In order to give the principle of arbitration a fair start it would probably be necessary to name distinctly the class of questions which the two Powers concerned would agree to submit to such a tribunal, leaving them free to deal with other cases as they should see fit at the time when they arise. It would probably be found in practice that no questions could arise which would not be susceptible of such treatment, and which the public opinion of the two countries would not insist upon referring to impartial judges, rather than go to war over them.

The last arbitration we had—the one on the Bering Sea question—was hinted at by Lord Salisbury in his dispatch on the Venezuelan boundary in a tone which implied that he had not much faith in arbitration anyway. He said that, after its decisions were made, the execution of them was not exempt from difficulty; referring, no doubt, to the refusal of our Congress to appropriate the sum of \$450,000 to pay the damages agreed upon by Secretary Gresham. This was not a good argument against arbitration, even in that particular case. The Paris tribunal did not fix any sum to be paid as damages. It did provide a means of determining the sum in case the two governments could not agree upon the amount. By the two governments is meant, of course, the branches of government in each whose concurrence is necessary. One of these was our Congress, which refused, as it had a right to do, to adopt the short path to a final settlement which was recommended by our own Department of State. If Congress should further refuse to pay the money for the final award, then the nation would be deeply humiliated, and the cause of arbitration might be properly made a butt of ridicule by anybody.

It may be said that it is not a propitious time for bringing up the question of an arbitration treaty with Great Britain when the relations of the two countries are strained as they are now. On the contrary, we think that this is the best of all times, when the eyes of the people on both sides of the water have had a glimpse of the awful chances of war. The losses caused by the mere penumbra of that calamity have amounted to an incalculable sum—more, probably, than was bid for Government bonds at the sale last

week. The anxious days and sleepless nights that men have passed since that dreadful pall fell upon us, have quickened the consciences of men, and have aroused the better classes of society and of the press, the clergy, and all God-fearing men and women, to a more active interest in public affairs than they have taken in many years. They have seen on what a slender thread hang the most momentous issues, and how a few reckless words may set the country on fire without any respectable reason, and perhaps without the intention of the person uttering them. What has happened once may happen again. The circumstances the next time may be less favorable to composition or pacification. Therefore no time should be lost in putting the relations of the two countries on a better basis if one can be found. The common opinion on both sides of the water is that a better basis may be found in a permanent treaty of arbitration.

The opponents of such a treaty tell us that the difficulties in the way of negotiating it are so great that in a majority of cases war would probably be a preferable solution. The answer is that the latter solution is always open. International arbitration cannot prevent a nation from fighting if it really wants to. It only diminishes the chances of war. Its great merit lies in the fact that it gives time for thought and discussion, which in most cases is all that is needed to bring about a pacific solution. It gives "the whip hand" to the sober-minded classes. It puts a new obstacle in the pathway of Jingoes, demagogues, and madmen. In any given case it starts a discussion of the question whether the difficulty in hand is a suitable one for arbitration, and whether it falls within the established rules or not. In most cases it would be found perfectly adapted to such treatment, and in all doubtful cases it would give the advantage to the friends of peace by establishing a national habit of mind in favor of arbitration. While not absolutely interdicting war, it would put greater responsibilities on any country resorting to it, and this would of course diminish the chances of war.

We trust that the movement so auspiciously begun in this country may be earnestly and systematically pushed till we have a society for the promotion of international arbitration in every county in the United States intent upon realizing what Mr. Blaine, in the Pan-American Congress, called "the new Magna Charta, which abolishes war and substitutes arbitration between the American republics"—a condition which is equally fitted for all nations, and is desirable exactly in proportion to their powers of destruction.

THE GERMAN QUARTER-CENTENNIAL.

BERLIN, January 20, 1896.

THE imperial capital has just been celebrating on a grand scale, with parades, illuminations,

religious exercises, and speech-making, what the German nation very properly regards as its twenty-fifth birthday. It was on the 18th of January, 1871, that the King of Prussia, through a proclamation read by Bismarck to a company of men assembled in the Hall of Mirrors at Versailles, formally assumed the imperial title, pledging himself "to protect the rights of the Empire and of its members, to guard the peace and independence of Germany, and to strengthen the strength of the people"; and praying devoutly that he and his successors might be "at all times increasers of the Empire, not by military conquests, but by the goods and gifts of peace, in the domain of national prosperity, freedom, and morality." At that time there was much doubt, both in Germany and outside of it, as to the durability of the structure thus ideally called into being. The memory of the old Empire, the long history of impotent disunion, the fiasco of 1848, the well-known prejudices of the South Germans, all seemed to bode ill for the future of a federal state under Prussian hegemony. But it was even as Friedrich Wilhelm IV. had prophesied and Bismarck had foreseen: blood and iron—Sadowa and Sedan—had done the work. The problem of federal consolidation, which a few years before would have been endlessly difficult, had become so easy that the history of it forms perhaps the least interesting chapter in the annals of the New Empire.

To-day, whatever one may think of the present status of European politics, and of Germany's share in bringing it about and maintaining it, the founding of the Empire stands out clearly as the most momentous political event of the century. Even Waterloo must yield to it in far-reaching importance and in dramatic interest. In creating a powerful and united Germany, with Bismarck for a Chancellor, it shifted the political centre of gravity and led to a new grouping of forces. At the same time it profoundly affected the national character of the Germans themselves. It brought them under the sway of a powerful sentiment to which they had long been unused, save as something to dream of and write verses about. It turned their energies and aspirations in a new direction, opened fresh avenues for their industry and art, and furnished new criteria for judging both present and past. No wonder, then, that the recent jubilee filled them with enthusiasm.

I shall not write of the celebration itself further than to say that it was sufficiently interesting in spite of bad weather and the absence of Bismarck. My purpose is rather to comment briefly upon the span of history which closed on Saturday. The view-point is that of an American scholar who has a warm regard for the German people, but stands aloof from their partisan politics.

The proclamation of 1871 professed to restore a name and dignity that had existed before. In fact, however, there was to be little resemblance between the new fabric and the one which had fallen to pieces in 1806; and, as if to dispel illusions on this subject, the first serious problem of the "German" Empire was to make clear that it would be neither "holy" nor "Roman." The *Kulturkampf* probably settled that question for good, in spite of the subsequent relaxation of the Falk laws. There was no surrender in essentials. The new government had shown its will and its power, but it had also discovered that the clericals were too strong to be kept safely in a state of chronic exacerbation against the Empire. And really it is one thing to "go to Canossa" as the foun-

tain head of all authority, and quite another to keep Canevas in sight as a quarter whence votes may be had in a parliamentary exigency. Imperial statesmanship will yet have to learn the same lesson with respect to the Social Democrats.

Aside from the *Kulturkampf*, the history of the New Empire is most instructive along the lines of its military policy, its attempts to deal with socialism, and its measures of internal consolidation. In this last direction a remarkable success has been achieved. To an American or an Englishman, accustomed to see the political situation dominated by the one or the other of two great parties, the constitution of the German Reichstag, representing, as it now does, no less than fourteen different parties, with contingents ranging from one to ninety-five votes, is apt to suggest a dangerous incohesiveness. And yet I venture to express with some confidence the opinion that the federal sentiment is to-day as strong throughout Germany as in the United States. Jealousy of Prussia, the danger most dreaded in the early days, still exists to a degree in the South and Middle German States, but it cuts no figure as an element of disunion; is in fact less ominous than our own well-known sectional antipathies. The military successes of Prussia, the elimination of Austrian intrigue, the mingling of North and South German blood upon the battlefield, the conciliatory attitude of Prussian statesmen in reference to federal representation and reserved rights—all tended from the outset to disarm suspicion and spread the feeling that Prussia deserved her primacy, and would use it not to overreach her sister states but to bind them together for mutual benefit and safety. Even the decisive vote of 1877 in favor of Leipzig as the seat of the Imperial Chamber of Justice was directed not so much against Prussia as against Berlin. Other centrifugal forces of a sectional character are, in a broad view of the matter, hardly worth considering. The "Polish" faction in the Reichstag has averaged pretty steadily about sixteen votes and now stands at nineteen. The "Alsatian" contingent remained constant at fifteen down to 1890, when it dropped to ten. It now stands at eight; that is, the time has already come when the representatives of the annexed provinces are no longer as a matter of course "Alsatians."

The real Alsatian danger proceeds, as is well known, from another quarter, namely, from France. Was it then a mistake to annex Alsace and Lorraine in 1871? It seemed to many at the time, and no doubt many still think, that for once Bismarck was short-sighted in urging this particular demand at the peace of Frankfurt. The argument was that the Germanization of the provinces after their two centuries of French allegiance would be a slow and difficult task, which in the end could bring little strength to the Empire and would meanwhile furnish French "patriotism" with a standing pretext for war. It seemed to cast doubt from the start upon the sincerity of Bismarck's vaunted peace policy that he should deliberately put his countrymen in a position which would require them to keep saying constantly (the present Emperor has lately been saying it again): "We want peace, but we will defend to the last man what our swords have won." Was it not an occasion for the waiving of ancient historical claims, or at least for letting the people of the two provinces decide for themselves to whom they would belong, even if it thus became necessary to draw entirely new boundary lines?

To an outsider, especially to an American,

this might seem to have been the just and also the politic view of the matter; but there is another view which is taken by the great mass of the German people. They believe that they must be prepared to fight the French any way. It was a home-thrust of Bismarck when he drew attention to the fact that within 200 years French armies had invaded Germany thirty-five times. This showed that, with Alsace and Lorraine, a pretext for war upon Germany had never been wanting to the French kings; and the cries of "Revenge for Sadowa," in 1866, and "On to Berlin," in 1870, demonstrated the same important fact for the French populace. The Iron Chancellor foresaw that, make what terms he might, Germany would have to face continually the danger of a French war of revenge, if not for Alsace and Lorraine, then for the milliards, for the bombardment of Paris, for anything or for nothing. And this danger would not be lessened, but rather increased, by the establishment of the republic. The nobler spirits of France might be touched by the memory of generous treatment at the hands of a conqueror who had them in his power; but the nobler spirits of a nation seldom determine its war policy, and there was no counting either upon a long memory or upon a high degree of chivalrous susceptibility in the Parisian populace. Add to this that the historical claim of Germany to Alsace and Lorraine is perfectly sound if you only go back far enough, and consider also the immense strategic importance that could be given to Metz and Strassburg in the event of another war, and we have justification enough, from the German point of view, for the drastic policy which was adopted. And the Germans believe that this kind of peace policy has vindicated itself after a trial of twenty-five years; in proof whereof they refer to the Boulanger scare of 1886-7, and the promptness with which it subsided after the overwhelming vote in favor of the septennate by the newly elected Reichstag in the spring of 1887. The only way we can keep France from our throats, they say, is to be ready for her and to let her know that we are ready for her.

Speaking as a humane idealist, to whom war is savagery, militarism calamitous folly, and Jingoism the abomination of desolation, I confess with pain that, in the present stage of civilization, this seems to me also the only safe course for the Germans. One may pine for better days, but one must not blink the facts; and for Germany the most momentous of all facts is the danger to which it is exposed from its neighbors, but especially from France. It has had experience of the weakness of disunion, and out of that experience grew the New Empire. Centuries of invasion and devastation by hostile armies, of impoverishment, insult, humiliation, self-contempt—all this, and not the illusion of military glory, formed the real soil from which grew that intense desire for national unity which carried everything before it twenty-five years ago. No doubt some were captivated by the glamour of the mediæval empire; and no doubt militarism has begotten a class—not all of them Prussian officers, either—to whom the rôle of bully would be acceptable for its own sake. But these persons are in a refreshing minority; what the great majority of Germans want is to be let alone. They have had more of war at home than any other great civilized nation, with the possible exception of Italy, and in consequence are less open to illusions on the subject. There are Jingoism among them, but their warriors of mouth and pen are less numerous and less hysterical than in France,

England, or—alas that it should be so!—the United States of America.

During the past few months I have read a pretty large amount of jubilee literature in books and pamphlets and in newspapers of every shade, and I can testify to the moderation that has pervaded it. Very little of bellicose mouthing has come to my attention. Everywhere prominence is given to the fact that peace, the peace of Germany and of Europe, has been from the first the great aim of imperial statesmanship. The Germans believe heartily in the candor of Bismarck's peace policy and in the pacific intentions of the present Emperor. Even during the recent Transvaal excitement they kept their heads remarkably well. There were fire-eaters here and there, but the prevailing tone was one of satirical amusement at the bad logic of the English press. For, they said, the British Government itself repudiates Dr. Jameson as a lawless invader; how, then, can the Emperor's telegram be reasonably construed as an act of hostility to Great Britain? And is there not a measure of sanity in this view of the matter?

But if the Germans want peace, they also believe that an iron necessity requires them to be prepared for war, and that their army is their only sure guarantee of safety. In respect to this subject the Emperor fairly represents an overwhelming majority of the people, although there are, of course, wide differences of opinion as to how much is the least that will suffice. This accounts for the hostile attitude of the Government towards the Social Democracy, and for the wildly absurd proposal of last year to disturb the boasted *Lehrfreiheit* of the German universities. Official circles would not so dread the ventilation of radical ideas concerning the "sacred foundations" of society if they did not fear that the gradual spread of socialistic doctrines would presently undermine the bulwark of national defence. And this fear is well grounded, if we accept as a finality the doctrine that the bigger your army and navy are, the less is the likelihood that you will have to use it. For of late the Socialists have been turning their guns more and more upon militarism, which they characterize as the systematic fleecing of the workingman in the interest of a soldier class. They are about right. Whatever we may think of their Utopian programme in general, we must give them credit for the sagacity of this particular discovery; and so it is hardly too much to say that international socialism is at present about the most promising influence that is making for the disarmament of Europe. If the time shall come—and the thing does not appear unthinkable—when capable representatives of real workingmen, with their minds cleared of cant and chimeras, shall meet in international congresses for the calm discussion of their own interests, the idea can hardly fail to gain ground that those interests are in no way subserved either by war or by the maintenance of enormous armies and navies.

What, then, is the plain lesson of experience for the New Empire with regard to the Social Democrats? It is that they are not to be put down by the sop-to-Cerberus method, and still less by persecution. Their contingent in the Reichstag has steadily risen from nine in 1874 to forty-five in 1893, and it is not unlikely that the Emperor's recent passionate deliverance against them may net them a few more seats at the next election. They thrive best under the operation of laws specially aimed at their particular propaganda. This, if nothing else, should suggest that it will not do, in a country where men are to vote at all, to treat a large

body of voters as enemies of the country and "without a fatherland," because of opinions which they honestly hold respecting the sanctity of existing social and economic arrangements. Their propaganda must be met with argument, and not with force, or blind denunciation, or annoying police intervention. The foolish muzzling of the press and abolition of unions must cease. The Socialists must be recognized as a legitimate party, having the same right to its opinions that other parties have. In other words, the party must be made respectable by being treated as if it were respectable. With increased prestige will come a heightened sense of responsibility, a better leadership, and a keener sense for the practicable in legislation. It is a matter of general experience that nothing tames a radical like responsibility.

But, above all, as the best means of meeting the Socialists, and for other and broader reasons, imperial statesmanship should begin to use its influence for the mitigation of the disgraceful condition of affairs in which Europe is now living. Granted that Germany cannot disarm alone, and cannot disarm first; still, it can show a little more unequivocally that it desires peace, and only peace, and it can exert itself by diplomatic means for a general reduction of the peace footing of European armies. It can make a little less conspicuous its reliance upon force and the show of force. It can take a firm stand for international arbitration. It can work for the extension of the Triple Alliance to a general European alliance for the preservation of peace on the basis of the *status quo*. It has shown that it is not afraid, and that it can take care of itself, and has made a winged word out of Bismarck's famous saying in his great speech of 1888: "We Germans fear God and nothing else in the world." This was not a bad motto for the Empire in the first quarter-century of its existence: but a better one for the second would be: "We Germans fear God alone, and the God that we fear is the God of humanity"

CALVIN THOMAS.

THE EASTERN QUESTION IN CRETE.

BOSTON, January 20, 1896.

At the partition of the Eastern Empire, Crete fell to Boniface of Montferrat, who sold it to Venice; and from Venice, after twenty-four years of bitter resistance, in 1669, the Turks wrested it. Under the Turk its fortunes have been varied, but they have always been stormy and the state of things unsettled. The Venetians left some accounts of their rapacity in Crete, and an English adventurer of the seventeenth century had a stirring experience there. In the eighteenth we hear little about the island. There was a great insurrection in 1821, lasting some years; in 1830, France, England, and Russia intervened to place Crete under the rule of Mehemet Ali, viceroy of Egypt. In 1840, back it went to the Sultan. Heralded in 1859 by a slight revolt, in 1866 began the great revolution which lasted three years and exhausted both parties. For this struggle, the book of Mr. Stillman, then American consul, is the authority. In it and in a little Greek volume, 'Outrages in Crete in the Year 1867,' by an English volunteer, Mr. Hilary Skinner, you may read stories like those of Armenia—the usual incidents of Turkish warfare; insult, rape, and massacre. In 1870 a new era began. Pressure from the Powers, and the narrow escape from losing Crete entirely, compelled the Porte to reforms

which have resulted in a kind of constitution, the appointment of Greek governors over Greek districts, etc. Notwithstanding, there have been occasional risings—in 1889, in particular, a rather threatening *émeute*; and these, I believe, are likely to continue.

So much of history seems necessary for an understanding of the present condition of things, and, brief as this sketch is, it contains nearly all the characteristic history of the isle—a record of changing masters and of steady opposition by the subjects. The various foreign masters have conquered, but the islanders have never submitted. The physical character of the place has much to do with this. Three great mountain ranges form the backbone of the island, and in a length of 160 miles there is only one plain of any extent. Mountains and their ready refuge; the proved courage, world-wide, of mountaineers; the very isolation—assist the struggle. Crete is hard to conquer, hard to keep.

The traveller from Europe meets at Candia the old order. A steamer bears him there, but, on landing, he enters a life framed in an Old-World walled city, innocent of this era and of modern improvements. The population is two-thirds Mohammedan, but the Greek third is a select body, the best of the isle. In a sense, the Greeks are the masters of affairs, the merchants, landholders, physicians of the town. Politically it is another thing. The Greeks are energetic and prosperous; the Turk is willing enough to have his work done for him. Many of the Greeks are graduates of the fine university at Athens; some, of the European universities; and all, eager for progress with the intellectual keenness of their race. Numerically a small body, they are the real citizens of the town, their influence preponderating in nearly every way. All that may be called "society" is Greek. To this element, continually restless and progressive, is opposed the sluggish, unyielding mass of Turkish population, with its leaders of the official class, Mussulmans from various parts of the empire who are billeted in Crete. The Greeks are, in all respects, European, western, in education, life (so far as is possible), religion, aims. Their intellectual outlook is westward; Islam faces for ever to the East. Such facts as follow may show how it happens that a Christian population can never dwell in peace with a Mohammedan, most of all if the latter, whose creed knows no tolerance, is in the saddle. A Turk may come to your house, may see your wife and family. His wife you may not even allude to; and while she is within, you cannot step across his threshold. Your Sunday is on the first day of the week; his is on the sixth. All the progress and history of Europe is your heritage; he remembers the day when his armies beat at the gates of Vienna—the day when the Sultan lost the fair province of Greece. The whole harem system, with its seclusion of women, makes any fusion of sects or mutual sympathy impossible. By the Turks themselves it is even felt to be a burden; in Crete the rule is, one wife. To maintain the lawful four wives and attendants almost implies a city house and a large income. In the country, where the Turkish peasants have to work, both sexes in the fields together, any real seclusion of women is impracticable. They have had to compromise. Before men of the same village women do not veil themselves, but only on the approach of a stranger.

The life of the Greek women is still more constrained. Those of the upper class rarely step upon the street. On winter evenings they are taken to the performances at the

Greek theatre; in summer, to a small esplanade to hear the garrison band play. In the early morning, while the streets are empty, they attend church. Velled Turkish women throng the bazaars, but I remember the sensation caused by the appearance, one day, of a lady in European dress in the square. It was the wife of the Austrian consul. Two facts of daily life connote much in this connection. The ladies never go to walk because of the risk of insulting remarks by passing soldiers; at the theatre they never enter the body of the house, to which Turks of the upper class resort, but sit alone in a gallery. The monotony of their life is appalling. Their recreations are domestic only, and the years pass away in trifling pleasures, in the absence of all that is considered indispensable by the modern woman in free lands.

In the country the proportion of the races changes, and the Greek is vastly in the majority. In Crete the real Oriental Turk sticks to the cities; the country Turk is nearly always the descendant of Greek renegades, Oriental only in his creed. Ethnically the eparchies or districts are checkered by villages of the two religions. Some are wholly appropriated by one party; others contain distinct settlements of both. Rarely a Turk lives in a Greek village; but the converse, I believe, never happens.

The life of the Cretan peasant is civilization at its lowest degree. To strike the average, I take a typical family. The village, say, is situated inland twenty miles from the city. There are no roads. All communication must be by horse or donkey over a rough trail. If it is near the shire town of the eparchy, our village will receive a weekly mail brought from the city by a mounted soldier. But this service is liable to frequent interruption, and, in time of trouble, is remitted entirely. The village itself is built of stone, uncemented and unplastered, the interiors with dirt floors and ungleazed windows: in short, it consists of rude, smoky, dim hovels alive with vermin. In most houses there is no bed. A low platform of masonry and coverings of dirty rugs serve. The occupants sleep in their clothes, and personal cleanliness is disregarded. Our typical family rise at four daily, and go out to the fields at some distance from the village to care for the vineyard, the olive grove, or the barley-field. By these they live. Their food is black bread, olives, vegetables, wine, coffee. At night the lamp is a wick flickering and smoking in a cup of oil. Pleasures there are none. Perhaps the place has its school. Out of their scanty store the folk support what they call a "Hellenic school"; i. e., one where elements of ancient and pure modern Greek are taught. The Government discourages but does not positively forbid such schools, but the text-books have to be smuggled in from Athens.

The effect of religion on a people is apt to tally with the character of the clergy. Apart from the cities, the Greek Church in Crete does not appear to advantage. The bishops and higher clergy are men of sanctity and learning. With the exception of an hereditary hatred of Rome, their views are broad and liberal. Throughout the country the priests are of the peasant class, illiterate, dirty, and unrespected. Some are even criminals who have taken sanctuary in the profession. Others deal openly in magic. Churches are very common in the country-side. Every mountain-top and desert-place has its shrine, built ages ago, and often opened only on the saint's anniversary. The village churches are built afield, usually at some distance. Services are held before sunrise. The men seldom go; the

women, as the world over, are regular attendants. There are no seats and no preaching. The service is a mumbled ritual, lasting but a few minutes. Religious teaching and its effect on character, the doctrine of good works, the ethical value of the Christian faith, are unreflected in the lives of the peasantry. The Greek mind has been and is practical and unemotional with respect to religion. This appears in the Greek rite, which, although highly ritualistic in many ways, is yet, as compared with the Roman, austere and Puritan. The Greek attitude is distinctly intellectual, unmoral. The real value of the Church to the people has been ethnical—to unite the race in a solid front against the Turk. In actual fighting, the priests have often held command; and the cross, in default of a country and a flag, has been the symbol to rally under.

The resultant character of the peasantry is better than the environment. The Cretan virtues are courage, intelligence, hospitality; the defects—superstition, hard-heartedness, and an ineradicable lust for blood. In a life of misery and uncertainty men grow callous, lack sympathy for others, and do not expect it for themselves. For centuries the people of Crete have lived under oppressive and despotic aliens. Masters not of their choosing have been forced upon them, and, although the Venetians were hard drivers, the latest comer has been the worst. At no period has the tenure of life been secure. Every passer upon the road might prove an enemy. The mountains and Turkish justice are lenient to the murderer. Like all southern races, the Cretans are quick to anger; the knife flashes close upon the word. Their antecedents have made them fighters. Male children are ardently desired by parents, not so much as bread-winners as defenders of the cause. The skirmish is the only excitement. The extraordinary value attached to the name *palikári*, "fighting-man," and the habit of bearing arms, are significant. We have the middle ages here. Accustomed to frequent uprisings and the sacking of his home, the peasant does not care for improvement. Men and women move in a sad world—where there is no hope and no great desire for life; their courage is partly that of indifference and despair. In the case of the Sphakiote, the western mountaineer, into whose precipitous province no Turkish army has ever forged, it becomes aggressive and picturesque. "Sphakiote," as an epithet in Crete, is almost as great a compliment as "*palikári*."

The trade of the island to-day is trifling, and consists chiefly in the exportation of crude olive-oil to Italy and England. The imports are from Trieste, a traffic built up and maintained by the Austrian Lloyd Company. Under good management Crete could become the most prosperous of the Greek islands, being especially adapted to vine-culture, and, indeed, famous so recently as Shakspere's time for the Malmsey wine. As yet the phylloxera has given little trouble. Improvements that are of prime necessity are a system of roads, the dredging of the harbors, regular mail-service, and a railway inland. At present, steamers cannot enter the haven at Candia, and whenever the wind blows hard from the north, as it does pretty regularly in winter, they cannot even anchor off the port. At Candia, the small political capital at the western end of Crete, the Bay of Suda creates a natural harbor. Consequently the Candia mail is landed with regularity, but letters for Candia, for lack of roads, cannot be brought overland. Thus the largest city of Crete and centre of commerce, although but thirty-six hours from

the Piræus, is often without a mail for seventeen or eighteen days. Post-offices are maintained both by the Government and by the Austrian Company; at each office only one clerk distributes the mail of 24,000 people. The Eastern Cable Company has a station at Candia, but no messages may be in cipher or in terms unintelligible to the Turkish censor. Candia and Candia each issue fortnightly a tiny Greek newspaper, rigidly muzzled by the authorities, a mere straining of expurgated news. Newspapers from abroad and books, even school-books, are nominally contraband; but they usually make their way through the mails.

None of these things can be bettered until security of life and property is established. Revolutions and disturbances occurring every few years preclude any material advancement. The rising of 1889, as described to me by many participants, is a type of these affairs. Precipitated largely by the jealousies of local politics, the Turks, however, soon turned it into a race quarrel. Men were found murdered in the fields about the city, and reprisals by both parties immediately began. On the outgoing steamers the Greeks of the upper class hurried their wives and daughters off to Athens for safety. All shops conducted by them, with the exception of one, were closed, and street fighting was of daily occurrence. Under the flags of the consuls hundreds of women and children took shelter. The principal nations of Europe, much to the Turks' disgust, are represented in Candia, nearly all the consuls being Greek. For the moment these are the only persons secure in the city. As a result, consulships are eagerly sought, but they are obtained only after great difficulties. The present representative of Spain waited eight years for recognition, and the accomplished gentleman appointed two years ago as the representative of the United States, at this writing has not received his exequatur. In spite of consuls, in 1889 no European was safe on the street. An Italian from a ship in port, strolling up town, was shot at sight by a passing Turk. An indemnity was paid to Italy, the murderer sent to the Turkish prison in Rhodes, and pardoned out at the next celebration of the Sultan's birthday. *Ex uno disce omnes!*

In this difficulty the Government troops, for the first time, took no open part. A mob of lower-class Turks, armed surreptitiously with military rifles, controlled the city and even sallied out to attack the fine Greek village of Arkhanis, nine miles away. After some sharp fighting they were repulsed. Meanwhile, the influential Greeks were haggling at Constantinople, a new Pasha was set over the island, and a kind of truce was arranged. It is all quite conventional in Crete. A few villages sacked, much rape and bloodshed, appeals to the Porte, indemnities and reforms promised, and life goes on as before.

In February, 1894, the Government, for the first time since 1866, decided to execute some of the murderers with whom the jails were crowded. And so, one night, five criminals—picked apparently at random, except that four were Christian and one Ottoman—were taken out and hung in the midnight hours. At Candia, only one of the five suffered—the gallows being a tree in the central square, where all must pass on their business; and here, in the morning, the astounded and enraged Greeks found their countryman swinging, without any mitigating circumstance of black cap, his sentence in Greek and Turkish

pinned upon his breast. When this came to the ears of the country, there was great excitement. Within a week the bodies of three Turks were found murdered by the wayside, and once more the account was squared.

Turkey will never willingly let Crete go. Pride and policy, the clinging of the "Sick Man" to his diminishing dominions, forbid that. Since 1889 he has also strengthened his hold by erecting barracks in each province and a military telegraph, the use of which is practically prohibited in Greek districts, since all messages must be in Turkish. The island is heavily garrisoned by about eighteen thousand troops, including regulars and the local forces of gendarmes. A party in Crete, moved by the fine things done by England for Cyprus, are all for English occupation; another goes so far as to prefer the Turk to the Englishman. "Once here," they reason, "England will improve, develop, fortify; but she will never loose her grasp." And yet they might remember the Ionian Isles. The great majority are for Greece, as Greece is for Crete, although aware of the present impossibility of their desire. "Greece wants Crete but cannot get her," a Cretan said to me on the steamer, and it is the keynote of the situation. "Manifest destiny," to use a phrase of the politicians, points to the union of two peoples alike in race, religion, and speech, still more closely bound by a common experience of Turkish oppression; and to the revived glories of the Byzantine Empire, the "great idea" in which all good Greeks live, Crete as well as Constantinople will be indispensable. As the case stands, a European war and the dismemberment of Turkey, so likely to follow, is the hope of the island. While Europe hesitates and wavers at the frontier, Crete awaits her hour.

JOHN ALDEN.

THE RECOGNITION OF CUBA: GRANT'S PRECEDENT.

TO THE EDITOR OF THE NATION:

SIR: No doubt a great pressure is being brought to bear upon President Cleveland to make him take strong action regarding the Cuban revolution. The great sympathy of our people with the Cubans who desire independence forms the groundwork for this pressure. But as to what the President should do there is considerable difference of opinion. Some friends of the Cubans propose the recognition of belligerency only, others insist on recognizing at once the independence of the revolutionary Government, the seat of which appears to be at present in the city of New York. Some go so far as to advocate immediate annexation, whether the Cubans wish it or not.

The action of President Grant in 1875 in regard to Cuban troubles is frequently referred to as a correct precedent, which President Cleveland should take for an example. Surely those who thus point to it must be little acquainted with its history. It may not be without interest to make a brief review of the proceedings at the time regarding events in the island of Cuba; and in the first place it may be as well to compare the situation then and the condition of things now. The Cuban revolt at the time Grant brought the matter before Congress (December, 1874) had lasted nearly seven years, during which time Spain had acted very provokingly, had confiscated property of inoffensive American citizens, had arrested American

citizens suspected as filibusters, had tried them by court-martial and had shot them. Both parties, Spaniards and Cubans, had carried on the war most cruelly, and had laid waste great parts of the beautiful island. The struggle is now carried on in about the same way. Martinez de Campos was then, and was until a short time ago, the commander of the Spanish forces. But the present outbreak is not quite one year old, and the chances of success are quite uncertain as yet, the bulletins of both parties deserving but slight credence.

Now as to the facts of the case as they transpired in 1875 and 1876. In his message President Grant briefly stated his views of the question of Cuba, transmitting at the same time a dispatch to the Spanish Government written by Hamilton Fish, Secretary of State, a copy of which (as stated in the dispatch) was also sent to the principal European Powers, inviting them to coöperate with the United States in putting an end to the cruel war then raging in the island of Cuba. The message and dispatch were rather coolly received, particularly on account of the invitation to foreign Powers to join the United States in an intervention in the war between Spain and the Cubans. This request was considered as against our well-established principle to keep aloof from foreign alliances. Secretary Fish appeared before the committee on foreign relations of the House of Representatives to explain his dispatch. The newspapers at the time published substantially the dispatch itself. It alleged that the insurrection in Cuba had lasted some seven years; that Spain had been entirely unable to suppress it; that the President was convinced that the final issue would be to break up the bonds which attached the Cuban colony to Spain (this view of the case was in various ways repeated over and over again in the dispatch); that the American people naturally deeply sympathized with the Cuban people, who desired independence; that no effective steps had been taken to reform abuses; that material interests of trade and commerce of the United States in the meantime had been impaired to a degree which called for remonstrance, if not for another line of conduct, on the part of all commercial nations; that the United States were the principal customers for Cuban products, and therefore more interested in arresting the wanton destruction of property; that it had become a serious question how long this condition of things should be allowed to exist, and whether the point had not been reached when longer endurance would be impossible; that in the opinion of the President the time had arrived when the interests of this country demanded the speedy and satisfactory end of the strife which was devastating Cuba; that a disastrous conflict of more than seven years' duration had demonstrated the inability of Spain to maintain peace on an island lying at our door. The dispatch then referred particularly to the celebrated case of the *Virginius*, which, while professedly sailing under American colors, was seized by the Spaniards; American citizens being taken out and shot by judgment of a court martial. The President hopes (continued the dispatch) that Spain will spontaneously adopt measures looking to a reconciliation and speedy restoration of peace; but, in the absence of any prospect of a termination of the war or any change in the manner in which it has been conducted on either side, he feels that the time is at hand when it may be the duty of other governments to intervene. He had accordingly submitted the subject in this light to the consideration of Congress.

Secretary Fish further stated to the committee that the foreign Powers had been invited to exercise only their moral influence to settle the troubles in Cuba as soon as possible. At the same time the Secretary said the foreign Powers had been assured that nothing was further from the President than the idea of an annexation of Cuba, as the President believed that such annexation would have a very injurious effect on his own country; that the foreign Powers had received the request of the United States kindly, and had promised their moral support, except Austria, which had declined any sort of interference.

Spain did not long delay an answer to Mr. Fish's dispatch to Gen. Cushing, our Minister at Madrid. This answer appears only in the journals of that day. It would seem that neither the dispatch nor the reply was ever published in the diplomatic correspondence of our State Department. Mr. Fish is reported to have stated to the committee that Spain had replied in a manner "quite inoffensive." The language may have been very polite, but, if the papers give the reply correctly, it was really a sharp one. It set out with the allegation that the statement in Mr. Fish's dispatch, that material interests as to trade and commerce had been so impaired as to call for remonstrance if not for another line of conduct, was not founded on fact; that, on the contrary, the trade with Cuba, as concerned both imports and exports, had, since the insurrection, not decreased, but greatly increased, thus striking at the very basis of the principal complaint of the United States. (This fact, as stated by Spain, was admitted by some of our leading commercial papers.) The reply is said to have further alleged that Spain had tried to satisfy all just demands that had been made by people who had suffered from the disturbances in Cuba; that the *Virginius* incident had been already amicably settled; that no important question was pending between the two countries, and that therefore the action of the President was wholly inexplicable; that the insurrection was confined to the mountainous regions of the island, which were almost inaccessible, sterile, and without any commerce; that but for the sympathy shown by the American people and the active help which the insurgents had received from North American filibusters, peace would long ago have been restored; that Spain would, however, make every effort to pacify the country.

Here the matter appears to have been quietly dropped. Martinez de Campos not long afterwards succeeded in settling the seven years' struggle. It would seem, then, that President Grant's intervention was not a success, and certainly in many respects cannot be commended as a precedent to President Cleveland. It is well known that the latter some time ago expressed his opinion that the recognition of the insurgents as a belligerent Power would be of no benefit to the Cubans or to our country. We have every confidence that the President will carefully consider the question of recognition, for, should he decide in favor of independence, it would, if Spain felt herself strong enough, be certainly followed by a declaration of war.

G. K.

BALTIMORE UP TO DATE.

TO THE EDITOR OF THE NATION:

SIR: Something may be allowed for the time which evidently elapsed between the writing of Mr. Stephen Bonsal's article on "New Baltimore" and its appearance in the February

issue of *Harper's Magazine*. This will account for the reference to the old court-house as still standing, and to the long term of office of our late Mayor as still continuing. It will not account, however, for the negro hackmen and policemen whom the writer has been able to discover at the Camden station of the Baltimore and Ohio Railroad, nor for some of his statements regarding several of our institutions. I read twice the account of the library with which I am connected, to be sure that the writer was not intending to be humorous. The beautiful picture of the 400,000 books to which "the readers of Baltimore have had access" for "seven years," and of the "supply wagons" of the library "dashing through the streets of Baltimore, like express wagons during the Christmas season," is very effective, but it is not quite accurate. We have not, and never have had, any "supply wagons"; consequently, there is no danger that any citizen will be run over by these wagons "dashing through the streets." We have bought books more rapidly than any other public circulating library in the world, to the best of my knowledge; but although we have collected them and circulated them for ten instead of "seven" years, we possess only about 165,000 volumes instead of 400,000. Mr. Pratt's gift to the city was made fourteen and not "some ten years ago."—Yours respectfully,

BERNARD C. STEINER.

THE ENOCH PRATT FREE LIBRARY
OF BALTIMORE CITY, JANUARY 23, 1896.

THE NEED OF A NEW REVIEW.

TO THE EDITOR OF THE NATION:

SIR: Permit me to call attention to the fact that the new *American Historical Review* has already been obliged to print a second edition of its initial number. Before it was issued, one of its most sanguine promoters said it was hoped that in two years a subscription-list of one thousand might possibly be secured. Evidently, the willingness of the American people to support what is clearly shown to be the best of its kind was as much underestimated as was its willingness to subscribe for Government bonds last year.

If such men as Profs. Lounsbury, Shorey, Kittredge, Woodberry, Gayley, Marsh, Winchester, and others would but formulate a plan for an "Inter-University Review of Literature," the money to guarantee it for a few years would easily be found, and within that time its proper *clientèle* would gather to its support as soon as it showed its claim upon them.

WM. C. LAWTON.

ADELPHI ACADEMY, BROOKLYN, February 9, 1896.

Notes.

It is announced that the Dunlap Society of this city has been reorganized under the presidency of Douglas Taylor. The treasurer is Daniel Frohman, and the secretary Evert Jansen Wendell, No. 8 East Thirty-eighth Street. Its first publication will be issued from the De Vinne Press in the spring, and will probably be a paper upon Early American Theatres by the Hon. Charles P. Daly.

S. S. McClure is about to publish a Life of Lincoln based upon the material already accumulated in *McClure's Magazine*, but much extended. The number of portraits will be very large.

The Life of Phillips Brooks undertaken, but left unfinished, by his brother, the late Rev.

Arthur Brooks, will be completed by Prof. A. V. G. Allen, of Cambridge, Mass., and published by E. P. Dutton & Co.

We are to have from Charles Scribner's Sons a new Life of Madame Roland, by Miss Ida M. Tarbell; 'The Jewish Scriptures,' in the light of the latest criticism, by Amos K. Fiske; 'Sunrise Stories,' essays on the literature of Japan, by Tozo Takayanagi and Roger Rioridan; and 'The Book of a Hundred Games,' by Miss Mary White.

Houghton, Mifflin & Co. promise 'The Life and Letters of Oliver Wendell Holmes,' by John T. Morse, jr.; 'William H. Seward,' by Thornton K. Lathrop; 'The Life of Thomas Hutchinson,' by James K. Hosmer; 'The Life, Public Services, Addresses, and Letters of Elias Boudinot,' by J. J. Boudinot; the fourth volume of the 'History of Prussia,' left unfinished by the late Prof. Herbert Tuttle of Cornell, and treating of the early part of the Seven Years' War, with a biographical introduction by Prof. Herbert B. Adams; 'Quaint Nantucket,' by William Root Bliss; 'In New England Fields and Woods,' by Rowland E. Robinson; 'Spring Notes from Tennessee,' by Bradford Torrey; 'Four-handed Folk,' by Mrs. Olive Thorne Miller; 'Kokoro: Hints and Echoes of Japanese Inner Life,' by Lafcadio Hearn; 'The Browning Phrase-Book,' by Marie Ada Molineux, M. A., Ph.D., uniform with the Riverside Browning; 'Moral Evolution,' by Prof. George Harris of Andover; 'The Expansion of Religion,' by E. Winchester Donald, D.D.; 'Pirate Gold,' by F. J. Stimson; 'Tom Grogan,' by F. Hopkinson Smith; and the Complete Works of Burns, edited by W. E. Henley and T. F. Henderson, a centenary edition in four volumes, limited to 150 copies.

One cannot too much congratulate the schools on the ever-extending "Riverside Literature Series" of Houghton, Mifflin & Co.; the quadruple numbers forming Quaker-like linen-bound duodecimo volumes in the best of print, and extremely moderate in price. Five of the latest of these are 'Robinson Crusoe,' 'Uncle Tom's Cabin,' 'Ivanhoe,' 'Tom Brown's School Days,' and Dana's 'Two Years Before the Mast.' But the public at large is equally interested in knowing of these editions, which meet all conditions except the luxurious.

Another series deserving attention in and out of school is the "Arden Shakspeare," of which the American publishers are D. C. Heath & Co., Boston. Half-a-dozen volumes are before us. They are convenient to the hand or pocket, clearly if compactly printed, and very fully annotated—not for the youngest minds.

Macmillans continue their little reprint of Charles Kingsley's novels with 'Yeast,' and of Dickens's novels, edited by his son, with 'A Tale of Two Cities' and the 'Mystery of Edwin Drood,' after the editions of 1869 and 1870 respectively. The younger Dickens vouches, in his introduction, for the story that Carlyle, in response to a request from the author of 'A Tale of Two Cities' for the loan of a few authorities on the French Revolution, sent him two cartloads. Dickens repaid this courtesy in his preface by averring that "no one can hope to add anything to the philosophy of Mr. Carlyle's wonderful book." He cherished the vain idea of having the story dramatized for representation in France in the first decade of the Second Empire. As to 'Edwin Drood,' the editor sets at rest any speculation that the hero of the story was not actually murdered. His comments on Mr. Forster as a literary executor (in connection with both stories) are consonant with earlier ones in this same notable series.

From the same firm we have Peacock's 'Headlong Hall, and Nightmare Abbey,' in the one-volume reprint of standard novels of the early part of the century. Mr. Saintsbury furnishes an introduction.

The welcome to be accorded to a new edition of Sir George Dasent's 'Tales from the Fjeld' (Putnam) is not, in our opinion, because of Mr. Moyr Smith's "more than a hundred illustrations." These we cannot praise in gross or in detail. It is the "mother English" into which the translator "tried to turn his Norse original" which has made and will preserve this collection a classic, remarkable among all translations for its idiomatic purity.

By omitting episodes and detailed descriptions, and replacing them occasionally by brief summaries in smaller type, Mr. A. de Rougemont of Chautauqua University has compressed Victor Hugo's 'Les Misérables' into one volume, leaving the story intact (New York: W. R. Jenkins). Five hundred pages of large print are sufficient for this achievement, and there are twenty pages of notes.

Books about book-plates approach very near the category of *biblia abiblia*, consisting as they do, in the main, of formal and informal lists diversified only by exemplary illustrations. The latest is 'Ladies' Book plates, for Collectors and Book-lovers,' by Norna Labouchere (London: George Bell & Sons; New York: Macmillan). General considerations and detailed descriptions, quite unreadable except by way of reference, occupy two-thirds of this pretty volume. Formal alphabetical lists follow English, foreign, and "joint" plates—these last of husband and wife. The reproduced designs are abundant and suggestive; many of them beautiful. Not a few are by women as well as for them.

Three periodicals, each excellent and unique, reappear on our table in a bound volume for the past year—namely, the eighth of *Garden and Forest* (New York), the seventh of the *Green Bag* (Boston Book Co.), and the eleventh of *Babyhood* (New York). They are all capable of profiting those who do not, as well as those who do, profess a special interest in things suburban and horticultural, legal and infantile.

Two more volumes, xlv. and xlv., of the 'Dictionary of National Biography' (Macmillan) extend the work from Paston to Pockrich, and are peculiarly rich in great names, as Peel, the Pitts, William Penn, St. Patrick, the Plantagenets; besides William Paterson, founder of the Bank of England, Sir W. Petty, Isaac Penington, Mrs. Piozzi, Gen. Picton, Mark Pattison, Walter Pater, and Samuel Pepys, who (like Mrs. Piozzi) falls to Leslie Stephen, and is treated with delicacy and characteristic pungency. Another excellent example of restraint is shown in the sketch of that shady character, Cora Pearl; and another adventure, Teresa Constantia Phillips, is commemorated not without reason, as her memoirs "exercised a considerable influence upon Bentham's youthful imagination, especially their account of the chicanery incidental to law proceedings." The American section is unusually strong, embracing—in addition to Penn and Chatham and Shelburne—Sir William Pepperell, Sir William Phipps, Hugh Peters, George Phillips (ancestor of Wendell Phillips), Abraham Pierson, founder of Newark, N. J., George Percy, one of the founders of Virginia with Capt. John Smith, and the Pennsylvania pilgrim Pastorius, whose inclusion in the Dictionary seems somewhat difficult to account for. The Irish forger Pigott is among the baser characters admitted to this equal sky.

It has been to the advantage of the public, as it must be to the satisfaction of the author, that a new edition of Col. George E. Waring's 'How to Drain a House,' originally published in 1885 (D. Van Nostrand Co.), is brought up to the standard of to-day by a few annotations, not by rewriting, the last chapter excepted. This little book, whose sub-title is "Practical Information for Householders," is in the author's clear and practical style. He wastes no time in the discussion of varieties of method, but dogmatically expresses his opinion as to the best. That is what the ordinary house-owner wants, and as this opinion is the outcome of intelligence and experience, he is perfectly safe in adding it to his library of practical economics as an untechnical, straightforward, useful book.

'Outlines of Legal History' (Macmillan) is the title of a manual prepared by Mr. Archer M. White, an English barrister who has not only fitted large numbers of pupils for legal examinations, but has also passed many himself with distinguished success. The amount of information which Mr. White has contrived to pack into a duodecimo of less than 250 pages is certainly extraordinary. The book is of course unreadable except by those over whom examination impends, but it answers the purpose of an encyclopedia of courts and procedure, while containing much detail concerning the development of law. The method adopted is to describe first the legal system now existing, then the conditions out of which it developed, and then to trace the history of some of the more important doctrines of the law. The severe compression necessary is not always favorable to the clearest exposition, but we have noted little obscurity except that due to condensation. For its chief end the work must be regarded as remarkably well adapted, as it will be found valuable by others as well as students cramming for examination.

'The Child and Childhood in Folk-Thought' (Macmillan) is a voluminous collection of everything that has been said about children by the anthropologists, in the first instance, and by writers of every sort after that. Children appear under the head of magi and medicine-men, priests and oracle-keepers, physicians and healers, teachers and judges, saints and heroes, poets and musicians. The influence of the child idea and its accompaniments upon sociology, mythology, religion, and language is matter for discussion. The subject is of peculiar interest now that the scientists have informed us that the child alone possesses in their fulness the distinctive features of humanity, that the highest human types as represented in men of genius present a striking approximation to the child type, and that adolescence is to some extent progress in degeneration and senility. There is an index to this volume which should be the emulation of all future makers of books.

Brentano sends us a French whimsey, a child's library of inch high volumes in a glass cabinet "style Louis XV."—fables from Perrault, La Fontaine, Fénelon, and Florian, tales from Canon Schmid and Moreau, 'Aladdin,' 'The Forty Thieves,' 'The Wandering Jew' in verse, etc. Happily the type of these Lilliputian volumes is not proportionate to their size, but is readable without straining of the eyes.

In the *Temps* of January 9 there is an account of an interview with M. Ary Renan, which throws some pleasant light on the life of his illustrious father among his books. Renan was a book-lover, but not in the least a bibliophile. He cared nothing for rare editions. He loved books, not for any beaut-

ty of print or binding, but for their contents alone. They were his tools, which he used every day. It was with great reluctance that he ever sent any of them to the binder. He could not get on without them even for a day, and it is remembered that once, when he was absolutely obliged to send a volume to be bound, he bought another copy of it to use during the few days of its absence. All his life, books surrounded him, overwhelmed him, shut him in. They gradually overflowed from one room to another until the whole story on which he lived was full. M. Ary Renan says that he still remembers with horror the several occasions when the family removed from one house to another, and especially one dreadful time when the *déménageurs* heaped the books together in a vast number of baskets, having classified them cleverly, as it seemed, in accordance with their size.

The priority in the method of photographing through solid bodies recently discovered by Prof. Röntgen is now claimed by the Hungarian physicist Lenard, who in 1894 succeeded in photographing through pasteboard by means of the rays emanating from the cathode or negative pole of a galvanic battery. He published an account of his experiments at that time in the *Annalen für Physik und Chemie* (vol. II., p. 225) with plates showing the results, but does not seem to have pursued the subject further or to have made any practical application of his discovery. Prof. Röntgen explains the purely accidental manner in which his discovery was made, and denies that he is under any indebtedness whatever to the researches of Prof. Lenard.

Dr. Parker of Harvard gave the result of some interesting experiments on the sea anemone at the recent meeting of the Morphological Society, as reported in *Science*. The oesophagus of this little animal is lined with cilia whose constant wavy motion causes the food to pass onward from the mouth into the stomach. But their action can be reversed when occasion arises, and by this means innutritious substances can be thrown out from the stomach. If an anemone is fed with fragments of meat and pieces of paper soaked in meat juice, both are taken into the stomach, but the paper fragments are afterwards thrown out by means of the backward action of the cilia. More than this, the organ of sense in the tentacles is capable of a certain degree of education. After a number of trials (seventeen or more) the animal learns to discriminate, the paper being rejected and the meat swallowed. The memory is, however, short-lived, for on the following day the lesson must be learned anew.

—The question of the admission of women to the University for the study of medicine has lately excited considerable discussion in Vienna. The well-known professor of surgery, Dr. E. Albert, being no longer able to ignore this movement, published a pamphlet against it, entitled 'Die Frauen und das Studium der Medizin' (Vienna: Hölder), and written with the same spirit that animated John Knox more than three centuries ago when he blew 'The First Blast of the Trumpet against the Monstrous Regiment of Women.' He begins with the assertion that all works of the human hand which we see around us and which minister to our comfort, were made by man. When we rise in the morning, he adds in illustration of this proposition, all the dishes in which our breakfast is served we owe to masculine ingenuity and invention; hence the female is intellectually disqualified for the study of

medicine. Not only is the logic of this syllogism exceedingly faulty, but also the premises are false or at least highly problematical. All prehistoric researches tend to prove that woman contributed more than man to the growth of primitive civilization. It was her feeble attempts to cultivate the soil and to raise grain that gradually effected the transition from nomadic to sedentary life; it was because she learned to spin and weave that cloth was substituted for skins as raiment, and there is hardly any doubt that the first rude pottery was formed by her hands. A clear and cogent reply to Albert's inconsequent lucubration is Prof. Dr. Emanuel Hannak's 'Die Frauen und das Studium der Medizin kritisch beleuchtet' (Vienna: Hölder), in which the author shows the injustice of excluding women from the most efficient means of culture and then censuring them for being uncultivated. He reviews Dr. Albert's pamphlet in detail, and proves that the objections urged by him simply beg the whole question at issue, and declares in conclusion that it is the duty of the state to furnish every facility for academical and professional education without distinction of sex.

—Many strange things have been done, first and last, in the way of devising, and adapting, and modernizing some of the great books of the world. Shakspeare has been Bowdlerized and, less offensively, Hudsonized. The 'Summa' of Thomas Aquinas has been put into doggerel Latin verse to be used as a cram book. Dante has been turned into quatrains, and Molière's 'L'Avare' has been versified; the 'Contes' of Voltaire have been put into alexandrines, and the 'Profession de foi du Vicaire savoyard' has been arranged in chapters and verses, like a Bible. The late Bishop Hopkins was once inspired to write a church history in the "common metre" of the hymn-books. But the latest venture of this kind, and the strangest, is surely that of a certain M. Boizomont, who has just produced an expurgated Rabelais—for the use of Sunday-schools, perhaps. Two or three times before now Rabelais has been put into modern French—once by the Chevalier Lureau, in 1849, and again by Prof. Martial Lureau. But these versions, it would seem, are completely overwhelmed and sunk when set beside the work of M. Boizomont, if one may judge from extracts from it which were given lately in the *Jour*. We can give but one specimen of it, and that shall be the well-known jest about Panurge's means of living. Rabelais says: "Toutefois, il avoit soixante et trois manières d'en trouver toujours à son besoing, dont la plus honorable et la plus commune estoit par façon de larcin furtivement faict." This M. Boizomont turns thus: "C'était, toutefois, un individu rempli de ressources, dont quelques-unes frisaient l'indécence." This is the converse of a sea-change. Prof. Sophocles used to say sometimes that, if Virgil were obliged to restore what he had conveyed from Homer, there would be nothing left of him but the proper names; M. Boizomont leaves to Rabelais even a scantier residuum.

—The dynasty of the Mikados of Japan is the oldest in the world, being sentimentally 2556, and in historic certainty 1600 years old. A conspectus of their names, age at death, dates of reign, and order of succession may be seen on page 123 of 'The Mikado's Empire.' Now, however, it is possible at a glance of the eye to see the graphic counterfeits of six score or more men and women who have borne the title of Mikado. We have before us a sheet of

heavy brocade paper (42x21 in.), on which are engraved the vignettes of 120 mikados; the ruling Emperor, Empress, and Crown Prince being in the centre. The sixteen divine progenitors of the line are set on either side of Ten Shō Dai Jin, or the sun-goddess, at the top, and all under the golden disc and rays of the sun. The portraits are printed on paper which has been first printed upon in bank-note style with an engraved plate bearing tracery-work of clouds, dots and the *Kiri* (*Paulownia Imperialis*) leaf and flower—the Emperors' insignia. From the artistic, historic, archæologic, and purely contemporary points of view this publication is interesting and marks an epoch. The beings of "the divine age," as well as the first thirteen of the seventeen mikados to whom Occidental criticism refuses to ascribe historic reality, wear around their necks the *magatama*, or carved jewels which belong to the prehistoric era. These, now fossil or in museums, were often made of jade, which is not found in Japan, but only in China. The sun-goddess and the divine beings wear also the eight-pointed mirror on their breasts; and beneath the central lady, aureoled and flower surrounded, the ancestress of Everlasting great Japan, are the three sacred jewels or palladia—sword, crystal sphere, and metal mirror. Between the Empress of A.D. 1869-96, in golden crown, low neck and short sleeves, Parisian coiffure, bodice, sash jewels and decorations, and the aureoled lady in *magatama* and unbound hair, there is suggestive but not unpleasant contrast. Considering the antiquity of Japanese art in both sketching, painting, and carving, credence can be given to most of these representations as portraits.

—The mutations of government, religion, and partisan politics are shown in the helmet and mail-clad warriors, the cowed and shaven-pated monks, the baby puppets, the girls and women, and in the varied degrees and insignia of rank and office held when promotion to the throne came. Nine of the mikados were women, the first (if we except Jingu—261-269 A. D.), being Suiko (593-628 A. D.), and the last Go-Sakuramachi (1763-1770); two of the female emperors reigning twice. The Constitution of 1889 limits succession to the male line. The head-dresses and bust-costumes are a study to the archæologist, but the most striking point is the addition of the six "Northern" or "false emperors." These were the nominees of the Ashikaga shoguns during the civil war ("the war of the chrysanthemums") which desolated Japan from the year 1336 to 1392. Heretofore by most Japanese historians denied legitimacy, and their names printed in various styles of *odium typographicum* in the books, it is a sign of the times to see them here set with, though beneath, the recognized dynasty, and this with the permission of the censor. We hail it as a sign of increasing national pride, indeed, but of improved ethics in historiography. The number (121) of regular occupants of the throne is reached by omitting the names of Jingu, the Amazonian Empress and legendary conqueror of Korea, and one of the twice-reigning empresses. The average length of the reigns in the whole line is twenty-one years, or in the historic portion, fourteen years.

—The latest number of the *Bulletin de Correspondance Hellénique* shows that a pause in discovery at Delphi has been reached. There is, however, a rich harvest of material still to be threshed out; and of this process M. Homolle gives a valuable specimen in his restora-

tion and discussion of an inscription of the fifth century B. C., which is here photographed. It contains the regulations of the Delphic phratry of the Labyadae, the conditions of admission into the community, the prescriptions for sacrificial ceremonies and for funeral rites, embracing even such details as the expense of funerals, the manner of laying out the dead, the times and places in which lamentation may be permitted during the burial ceremony. The inscription, with M. Homolle's discussion, throws new light on the Attic festival, the Apaturia, at which young men and married women were admitted to formal citizenship in their respective phratries; the most characteristic part of the ceremony being the cutting and the consecration of the hair—a rite practised by Semitic tribes on similar occasions. The language of the inscription is a highly interesting example of Delphic Dorian, illustrating certain forms in Hesiod, in Pindar, and in Theocritus, and retaining the digamma at the beginning of some words as well as a special sign for the rough breathing. M. de Ridder's elaborate report on the excavations at Orchomenus should be mentioned, but does not admit of summary. We may note, however, M. Chamounard's interesting description of the frieze of the temple of Hecate at Lagina in Caria, on account of its relation to the well-known sculpture of Pergamum. The fragments have been lately conveyed to the museum at Constantinople. They reveal an evident but awkward imitation of the famous Gigantomachy. The poses are borrowed from this; but the artist, not daring to attempt the bold and original pell-mell arrangement of the combatants, has reverted to the old-fashioned device of isolated groups of two adversaries. The monotony of this device is repeated in the details of armor, of gesture, and of costume. The workmanship is also somewhat rude and clumsy in many particulars. The date may be referred to the early part of the first century B. C., when, in all probability, the temple was repaired and restored, after the invasion of Mithridates, to commemorate Sylla's successes and to symbolize the protection of the Roman people toward the Carians, who had suffered for their fidelity to the Republic.

—The after-dinner amusements of the Greeks of the sixth century are suggested by a curious toy preserved in the Louvre and described and figured by M. E. Pottier. It consists of a seated satyr holding in front a crater-shaped vase, of Corinthian style and polychromy. The satyr has small perforations on the head and back, and his interior is so connected with the vase that his owner, whose name, Kolodon, is inscribed, could, by stopping one orifice or another with the finger, represent the satyr as alternately absorbing the wine or restoring it to the crater. This performance doubtless afforded a surprise and entertainment to his guests less likely to strain their intellects than the Platonic symposium; but it is further interesting as showing that some slight knowledge of the effects of air-pressure had reached the artisan class within a century of the date of Thales. A link in the history of ceramics is contributed by M. Joubin's discussion of a group of painted sarcophagi from Clazomenae, two fine specimens of which are contained in the Louvre. They are decorated with animals painted in silhouette in a style resembling the early pottery of Camirus and Naukratis. Though belonging to the sixth century, they represent an Ionian tradition of animal decoration and painting in transparent

silhouette which flourished as early as the eighth or ninth century, and was itself a development of the Mycenaean motives and technique. This Ionian style finally prevailed over the taste for geometric decoration, and restored the "Oriental style" to Rhodes, to Corinth, to Athens and Boeotia; and the sarcophagi of Clazomenae may thus be regarded as the forerunners of the François vase.

HANS VON BÜLOW'S LETTERS.

Briefe und Schriften. Von Hans von Bülow. Vols. I., II. Leipzig and New York: Breitkopf & Härtel.

ALTHOUGH Hans von Bülow was considered one of the foremost pianists of his time, his best work lay in the line of orchestral and operatic conducting. Thirty years ago Wagner referred to him as the only conductor then living in whom he had full confidence, and showed that he meant what he said by choosing him to preside over the first performances ever given of "Tristan und Isolde" and "Die Meistersinger." In later years Bülow achieved unique fame in the concert hall by taking an ordinary orchestra and training it so thoroughly that he could play on it at will as on a piano. To posterity he will be chiefly known—since his own compositions are of no lasting value—as a pedagogue, by his admirable editing of various classical and romantic masters, and as a wit and letter-writer. In the latter capacity he has just become extensively known through the publication of two volumes of his correspondence, under the editorial supervision of his widow, the actress Marie Schanzer, whom he married twelve years after his divorce from Cosima Liszt, who subsequently became Wagner's wife. These volumes extend only from Bülow's eleventh year to his twenty-fifth (1841 to 1855), but it is announced that two further volumes, containing the best letters of the remaining thirty-nine years of his life, and a selection of his newspaper articles and musical essays will appear in the autumn. The editor not only has prefaced the first volume with a biographic sketch, but has added an occasional page of comment and footnotes where needed, so that this correspondence has the aspect and value of a complete autobiography.

Inasmuch as Bülow wrote enough letters in fourteen years to fill 900 printed pages (and many have been omitted or abbreviated), it is amusing to find him apologizing to Raff for his "unbounded indolence in letter-writing," in which indolence he boasts of having reached "a high degree of virtuosity." During all these years the world showed so little appreciation of his talent that he can hardly have thought that his letters would ever be printed, and there is no evidence anywhere that he wrote with an eye to such a contingency. He is known to have kept a diary, to which there are several allusions, but no trace of it remains. He was repeatedly urged to write his memoirs, but always replied that life was too short, and that it was better to let the past be past and devote one's time to new labors. The majority of the letters in these two volumes are addressed to his parents (who were divorced after 1849); other recipients are Liszt, Raff, Uhlig, Cornelius, Pohl, Radecke, Kroll, Ritter, Wieck. There are also printed here a few letters of Berlioz to Bülow, and of Wagner and Liszt to Bülow's parents. Those written in French are printed in that language. The footnotes are not obtrusively numerous; in one case, at any rate, an addition to their number would have been welcomed. Bülow

states, under date of January 21, 1853, that he was carrying on, partly on his own behalf and partly for the busy Liszt, "a not very brisk but continuous correspondence with Wagner." What has become of these letters? Is the widow Cosima guarding them at Bayreuth, together with the three-volume autobiography of Wagner and other Nibelung treasures?

As might have been expected, the most interesting letters in the present collection are those relating to Bülow's intercourse with Wagner, whom he simply worshipped. It was Wagner's operas that induced him to give up the study of law and devote himself to music, even though by so doing he alienated the affection of his mother, so that she broke off all correspondence with him for half a year. He was only twelve years old when Wagner's music, in "Rienzi," first made an impression on him. At that time Italian opera was still a fashionable monopoly in the cities of Germany; from Stuttgart Bülow wrote to Wieck (Schumann's father-in-law) that "classical taste prevails here as little as in Dresden. Mozart, Beethoven, Weber, can be performed only in the absence of the King." Hans, as a boy, did not dislike the operas of Bellini and other Italians—indeed, he frequently refers to the "heavenly" pleasure they gave him; but at fourteen he had come to the conclusion that Mozart's "Don Juan" "is, after all, the opera of operas." Then followed his growing adoration of Wagner, to which there are numerous references. At seventeen he seems to have sent some of his own efforts at composition to Wagner, who delighted him with this amiable reply:

"Your pieces, my dear Mr. Bülow, have given me much pleasure; I was loath to send them back to you through your friend Ritter without enclosing a word of encouragement. A criticism I do not wish to add, nor is it necessary; you will find plenty of others ready to criticise you, and I feel the less disposed to enumerate flaws and details I do not like, because I can see from all the rest that you will soon be quite capable of criticising your own early efforts. Persevere in your efforts, and let me hear from you again soon."

To Ritter, Wagner said personally that Bülow's work showed "unmistakable talent." Such recognition from his idol was oil on the flames of his enthusiasm. In a letter to his mother he gives vent to his indignation on hearing that the famous poet Tieck had utterly condemned "Lohengrin" as a poem. If he remembered this indignation in later years, it must have gratified him to know that every child in Germany now knows "Lohengrin" by heart, and Tieck by name only, if at all. His friends did not share his admiration, for he tells us, on one occasion, how "Livia offered to go over 'Tannhäuser' with me, but she finds everything bad or crazy, while Waldemar usually leaves the room—in haste." Letter 37 (to his mother) is largely filled with lamentations because "Tannhäuser" was given in Dresden while he was in Leipzig. He would gladly have walked to Dresden had it been possible; and he adds:

"I thank God that, unlike the Pharisees, I am able to feel the holiness and divinity of the art of music as exemplified by this work, and to understand Wagner's mission as its apostle. I do not despise Wagner's enemies for this reason, unless they are guided by a personal prejudice; but I pity them for not being able to rise from the dust."

A few months later he again wrote to his mother, who had missed an opportunity or two to hear "Tannhäuser": "You will pardon me for saying so, but if I should hear that you

had missed it again, I should be furious." On learning that "Lohengrin" might possibly have its first performance at Weimar, he wrote: "If that should happen, it would be a colossal thing, and Weimar would become the capital of the world." In September, 1850, he went to Weimar to hear that opera, and when he found that the performance was postponed, he wrote: "You cannot possibly conceive my mortification; I wept in my disappointment and rage, and not in the privacy of my room, but right before Kroll's eyes." At last he heard the opera, and that sealed his fate. He took the diligence for Zurich, had an interview with Wagner, returned to his father, fell on his knees before him, and begged to be allowed to become a musician, under Wagner's guidance. The father consented on condition that his mother also would approve the step. So he wrote her a long letter, in which he explained that Wagner had proposed to him to come to Zurich and take part as pianist at the concerts and as assistant conductor at the opera there. Wagner himself wrote a long letter to his mother pleading for Hans. "I have observed," he says, "that your son's love for art, and especially for music, is not a mere fancy, but is based on great, nay, exceptional talent," adding that he had advised him also to continue his scientific studies, "because nothing is more unsympathetic to me than a learned musician without general culture." Liszt, too, pleaded for him, yet the mother remained obdurate; she feared that the rebel and revolutionist Wagner might corrupt her son's character. His father, in consequence, forbade him to even visit Wagner at Zurich. Wagner heard of this, and wrote to the father that, nevertheless, since he had discovered in Hans "an extraordinarily gifted and precocious artist," he sympathized with his desire, and was willing to risk his (the father's) displeasure, feeling sure that he would some day thank him for it. Hans had in the meantime been almost persuaded by his father's counsel to return to his legal studies in Berlin, when a letter from Wagner, which Ritter brought him, finally decided him. With Ritter he returned to Zurich, going on foot for two days and avoiding the public conveyances for fear of being pursued by his father.

Wagner welcomed his young pupil cordially and invited him daily to dinner, "which was always very good," Bülow writes, "as his wife is an accomplished cook." She also made herself useful by mending things for him, etc. He went to work at once rehearsing operas, concerning which he says: "It is not such an easy thing as it might seem; it requires a thorough study of the scores, amounting almost to a complete memorizing of them, and that is exhausting work." In another place he states that he is memorizing the "Freischütz," because such a work, where every detail is of importance, can be properly interpreted only if the conductor knows by heart every note, and does not need to look at the score. Some months later his placated father had the pleasure of seeing him, a youth of twenty, conducting an opera in that way without any assistance from the score; but the mother persisted in her resentment, as already stated, half a year, before the reports of his progress reconciled her partially to his chosen career.

That career, however, was by no means a bed of roses. There was a great deal of hard work to be done, in which Wagner usually took the lead. For instance, they devoted three days and evenings to correcting and arranging

the score of "Don Juan" for performance. On this occasion Bülow was

"overcome with indignation in recollecting how Wagner's enemies at Dresden had said that he 'intentionally conducted Mozart's operas badly because he did not like them, but cared only for his own music.' I say, on the contrary, that none of these pseudo adorners of Mozart will ever be able to manifest such a warm, vital admiration and artistic intelligence as Wagner has shown by his unselfish devotion. It is clear that 'Don Juan,' as given to day everywhere, cannot produce the effect of which it is capable if his reforms are carried out."

In another place he writes regarding Wagner's editing of Gluck's "Iphigenia in Aulis":

"If he had never done anything but this work, so admirable from every point of view, his name would deserve to be held in the highest honor. To discover and learn to appreciate the significance of the details of his editing is in itself a rare pleasure. So far from showing a lack of respect for the great master whom he revised, Wagner has, on the contrary, given by his deed the noblest and most positive proof of his respect for him. True, the old maxim, *Quod licet Jovi non licet bovi*, remains in force."

Columns might be filled with similar outpourings of enthusiasm for Wagner as an artist and as a man—"the noblest, most amiable and adorable of men." He declares that his Wagner-worship is the best trait of his character; that he is proud of having been one of the first to recognize the genius and historic importance of the greatest artist of the century; that the possibility of being such a man's apostle gave an object and goal to his own life. "I love and respect him more every hour." "He has behaved toward me in such a kind, noble, fatherly way that I shall be eternally indebted to him. . . . In no case can my separation from Wagner be more than temporary." Unfortunately he was not able long to enjoy this friendly intercourse and artistic guidance. The most important singer in the Zurich company quarrelled with the young conductor, and her ultimatum was that one of the two must leave. So Bülow went to St. Gallen, where he presided over a small opera company, which gave him a great deal more experience than pleasure. The orchestra, it appears, consisted largely of amateurs—honest men, but poor players—and the hall used for rehearsing could not be heated, for economic reasons. The result—a performance of "The Daughter of the Regiment"—as described by him, is so amusingly and characteristically Bülowesque that it must be quoted in his own words:

"I had been unable to get a sufficient number of rehearsals, or all the necessary instruments, so that I had to make various changes to fill up the gaps. I was frightened to death as I stood at my desk, expecting every moment a fiasco, which did not fail to appear, not in the form of a collapse but of an ear-splitting cat's music. I refused stubbornly to conduct the second act and was with difficulty persuaded to go on. After the performance I had a disagreeable scene with the manager, to whom I declared I was too good for such a piggery. Such oxen as I had to deal with in this orchestra is beyond human experience to imagine. If I could only have made myself understood by these brutes! I would gladly have learned to grunt or bellow, but even that would have been useless."

His one consolation was that "one can learn more from a bad orchestra than from a good one." But he soon gave up this job and went to Weimar to study the piano with Liszt. The greater part of the two volumes is devoted to accounts of his intercourse with that great musician, who, as he told his mother, loved him like a son (long before he became his father-in-

law), and to his (Bülow's) pitiable and pathetic efforts to make his mark as a pianist. But we have quoted enough to show how entertaining these volumes are. It may be added that they are adorned by two portraits of Bülow, a facsimile of one of his letters, and several programmes. There is also a good index, and the book is beautifully printed; but it should not be bought unbound. Why do German publishers persist in putting together their unbound (and usually expensive) volumes so that they come to pieces after a few hours' use? The ten-cent books of our department dry-goods stores are better stitched.

ORIGIN OF THE FRANCO GERMAN WAR.—II.

Die Begründung des Deutschen Reichs durch Wilhelm I. Von Heinrich von Sybel. Siebenter Band. Munich: R. Oldenbourg; New York: Westermann.

THE French have always maintained that the candidacy of Prince Leopold was the result of a Prussian intrigue; that Bismarck started it in order to provoke France to war. All the evidence, as Sybel points out, goes to show that the first thought of the candidacy was purely Spanish. He shows also that the offer of the crown was three times refused by the Prince, with the assent of his father and the approval of King William; that, in 1869, Bismarck also advised refusal; that Leopold's acceptance of the fourth offer, in June, 1870, was given without King William's knowledge or approval, although, when notified of the Prince's decision, the King declared that he would interpose no objection. Sybel also insists, as the Germans have always insisted, on the fact that the authority of King William over this remotely related South German branch of the family was not such that he could forbid Leopold's acceptance of a foreign crown. On the other hand, Sybel himself states that when a "family council" was held at Berlin, in March, 1870, to consider the third offer, Bismarck strongly urged the acceptance of the candidacy; that its rejection for the third time, early in May, when he was lying ill at Varzin, was a disappointment to him; that he wrote to Gen. Prim. at the end of May, that the candidacy was an excellent thing which must be kept in view, but that negotiations should not be carried on with the Prussian Government but with Prince Leopold. Sybel leaves it to be inferred that the fourth offer was due to this encouragement, and he indicates that the Prince's acceptance was largely due to Bismarck's arguments. The Rumanian revelations do not in any way contradict Sybel's story. They simply give additional evidence of Bismarck's interest in the candidacy. In March, 1870, Prince Charles of Rumania notes, in his diary, that Bismarck has submitted to King William a memorial urging the acceptance of the candidacy. On the 26th of March, Prince Antony writes: "Bismarck is very ill content with the failure of the Spanish combination." Early in June Prince Charles notes that Leopold is beginning to regard it as his duty to accept the Spanish crown. Prince Antony has informed the Prussian Crown Prince of this change of sentiment, with the suggestion that it be made known to Bismarck. The latter, on receiving this information, has written to Prince Antony urging him to persuade his son to accept. Privy Councillor Bucher and Major von Versen "have brought back" very satisfactory accounts of the prospects of the candidacy in the Spanish Cortes.

and in the country. The final offer and acceptance, Delbrück concludes, were obviously the work of these Prussian agents. Writing for Germans, Delbrück does not think it necessary to point out that Lothar Bucher, the ex-revolutionist, was one of Bismarck's most trusted assistants in the Prussian Foreign Office.

Sybel holds strongly to the position that the candidacy was really a family matter, with which Prussia and the Prussian Government, as such, had nothing to do. Delbrück admits that this is technically true, but maintains that the opposite view, the French view, is substantially just. Sybel insists that the matter was never laid before the Prussian ministry; Bismarck was called into the family council not as Prussian Premier, but as King William's personal adviser. Delbrück points out that at the most important meeting of this family council not only Bismarck, but his under-secretary, three other Prussian ministers, and Moltke were present, all of whom favored the acceptance of the candidacy.

As regards Bismarck's motives, Sybel declares himself incompletely informed. He says, however, that Bismarck explained his change of views by pointing out that in 1869 Spain was in a very disturbed condition; that the subsequent suppression of the Carlist and Republican movements had strengthened the Government and created a firmer basis for a new throne. Sybel conjectures that Bismarck anticipated political and commercial advantages from the establishment of a German prince upon the Spanish throne—a conjecture which Prince Antony's letters show to be correct. That Bismarck did not expect that the candidacy would cause war between France and Germany is affirmed by both Sybel and Delbrück. As they both point out, there was really reason to anticipate that Leopold might secure the throne without decided opposition from Napoleon. The Sigmaringen princes were more closely connected with the Bonapartes than with the house of Prussia, and the French Emperor was well-disposed towards them. He had supported the candidacy of Charles for the throne of Rumania. He had indicated no personal opposition to Leopold's candidacy, although he was aware of the negotiations. He had only indicated, through Benedetti, that the French people would resent it. The French people, however, had already resented many things which Napoleon had decided to tolerate. Confronted with the *fait accompli*, he might accept it; the more willingly because the only important rival candidacy, that of the Orleanist Duc de Montpensier, was regarded by him as "anti dynastic." Should he object, however, there need be no trouble. Bismarck's treatment of the whole question as a matter between the Spanish Government and Prince Leopold, in which the Prussian King was interested only as head of the house of Hohenzollern, and in which he had only advice to give, not commands, left the road open, as Delbrück reminds us, to a withdrawal by the Prince himself, in which Prussia would appear as little concerned as in his candidacy.

Further than this Delbrück does not go, and it is hardly to be expected that a good Prussian should go further. Outsiders, however, may naturally inquire whether Bismarck's mind was not probably running beyond this point. It would be absurd to attribute to him any accurate forecast of the extraordinary blunders of which the French Government was afterwards guilty; but it does not seem too much to say that he must have realized that, if France decided to object, the controversy would re-

quire careful handling by the French Government, and might be mismanaged. Of Napoleon's ability Bismarck had a low opinion; years before he had confidentially described the French Emperor as "une grande incapacité méconnue." Of Gramont he had frankly remarked in 1866, "He is the greatest blockhead (*Dummkopf*) in Europe." The appointment of Gramont, of course, was made after the Berlin "family council," but it was prior to Bismarck's successful effort to revive the candidacy and to secure Prince Leopold's acceptance of the fourth offer. If, as Bismarck had steadily declared since 1866, he believed war with France to be inevitable; if, as Delbrück insists, and we may readily believe, he apprehended an alliance between France, Austria, and Italy, and the outbreak of war at the time and on the issue which should best suit these Powers, it is not incredible that it seemed to him good policy to create a situation from which Prussia could not well draw disadvantage, and which might cause France to strike prematurely and under circumstances which would alienate the sympathies of Europe. Such a line of reasoning would have required no greater foresight and power of combination than were exhibited by Bismarck in the Schleswig Holstein imbroglio in 1864. If he considered these possibilities, it is most improbable that he discussed them; and it may be set down as certain that he did not unbosom himself to King William. Sybel and Delbrück agree that in the "family council" no mention was made of a possible objection from the French Government.

In describing the events from the 8d to the 15th of July, Sybel maintains that neither Napoleon nor Ollivier desired war; and that Gramont, although the intemperance of his declarations and despatches made the preservation of peace extremely difficult, probably desired at the outset only to inflict upon Prussia a diplomatic defeat. This he really had in his grasp when, in the absence of Prince Leopold, Prince Antony withdrew his son's candidacy. It was, of course, a disappointment that King William had refused to command or even counsel the withdrawal; but the King's complaisance in discussing the matter with Benedetti—a course which Bismarck strongly disapproved—the King's admission that he had given a passive approval to the candidacy, his further admission that he was in communication with Prince Antony, and his statement that if Leopold withdrew he would approve the withdrawal—concessions which caused Bismarck to think of resigning—all this left it open to France to assert and to Europe to believe that Prince Antony's action was really the result of the pressure brought to bear on King William. At this point Gramont made his great blunder. Instead of contenting himself with what he had gained, he undertook to increase his diplomatic triumph over the good-natured and pacific King. He suggested to Werther, the Prussian Ambassador at Paris, that the King should send to the Emperor a letter explaining that he had not imagined that the candidacy would arouse such opposition in France, and he gave Werther a draft of such a letter. Gramont afterwards protested against this being called a "lettre d'excuse"; but he prints the draft in his book, and it is not easy to see how it could be regarded as anything else. He then, with the concurrence of Napoleon—obtained, according to Sybel, only because the Emperor was prostrated by one of the attacks to which he was subject—directed Benedetti to obtain from King William a distinct pledge that he would not permit the candidacy to be renewed. In view of the King's

repeated declarations that he could not forbid the candidacy, it seems impossible that Gramont should have expected to obtain such a pledge. He asserted, however, that he did expect it. Meanwhile, the news of these additional demands had produced a decided revulsion in the sentiment of Europe, which up to this point had been almost wholly in favor of France. The English ambassador protested; the Austrian premier, Beust, sent an energetic remonstrance. At this, Gramont himself wavered, and the French cabinet had virtually decided to abandon the demand for guarantees of the future, when the news of Bismarck's action turned the scale for war.

Bismarck, as we have seen, was far from satisfied with King William's diplomacy. He solicited and received a summons to join the King at Ems. Reaching Berlin on the 12th, he was met by the news of the withdrawal of the candidacy. Regarding the episode as closed, he decided to remain in Berlin, at least for the night. On the 13th he received information of the additional satisfaction required by France. He at once explained to the English Ambassador, Lord Loftus, that the action of the French Government clearly showed that the candidacy of Leopold had been merely the pretext for a quarrel; that Prussia must now demand explanation, satisfaction, and guarantees from France. He telegraphed to Werther that his conduct in entertaining Gramont's demand for an apology was not approved, and directed him to take leave of absence on the ground of ill-health. At six in the evening, sitting at dinner with Moltke and Roon, he received a telegram from Ems, announcing the presentation of the French demand that King William should not permit the renewal of the candidacy, and the King's refusal to bind himself "à tout jamais." After this interview, the King had received from Prince Antony the formal notice of the withdrawal of the candidacy. As the King had promised Benedetti to inform him of any such communication, a consultation was held as to whether the French Ambassador should be admitted to another interview. In view of what had passed in the morning, it was decided that the news from Prince Antony should be conveyed by an adjutant, who should inform Benedetti that the King had nothing more to say.

The despatch closed with the suggestion, on the part of the King, that Benedetti's new demand and the King's refusal should be communicated to the Prussian legations and to the press. This suggestion Bismarck proceeded to carry out in the most literal fashion, drafting a report which recited, with perfect accuracy, Benedetti's demand and the King's refusal to grant a further audience. The omission of all the intermediate details contained in the telegrams of course gave Bismarck's abstract a very different tone. There was a suggestion of a more abrupt termination of intercourse than had really occurred. Roon said: "That sounds better." Moltke added: "It sounded before like a signal for parley (*chamade*); now it sounds like a fanfare." Delbrück adds that when, the next morning, King William saw Bismarck's speech on the bulletin board, he read it carefully twice, and said: "That means war." Sybel and Delbrück agree in treating the French charge of "forgery" with contempt. Sybel remarks that the details telegraphed from Ems were for Bismarck's information only; that it would have been improper to publish them. Delbrück takes higher ground; he maintains that Bismarck's report gave a truer picture of what had happened

than the longer original telegram. The King and the Ambassador had of course conducted themselves like gentlemen. Champions of opposed causes do not open a conflict to-day, as the Homeric heroes did, with reciprocal discourtesies. In the broader sense, however, Benedetti's famous statement that nobody was insulted at Ems is untrue. The German nation was insulted by the substance of the French demands. The attitude of the French Government throughout the controversy represented the tradition of a French primacy in Europe, and this tradition Germany could no longer accept. Under the form of a question of national etiquette lay, in reality, the question that had been awaiting solution since Sadowa.

On the 18th the French Cabinet was informed of King William's refusal to give the desired pledge; but this refusal had already, so to say, been discounted; and it seems that the Ministers as well as the Emperor were still disposed to accept the situation and terminate the controversy. On the 14th such a course seemed to them impossible. The compulsory furlough given to Werther, the publication of King William's refusal to hold further conference with Benedetti, had abruptly changed the aspect of affairs. It was no longer possible to regard Prussia as having submitted to a diplomatic humiliation. The use which Bismarck had made of Gramont's mistakes had completely turned the tables. To preserve peace, France must now back down, as was clearly indicated in Bismarck's conversation with Lord Loftus. Had the French Ministers already heard of this conversation? Sorel long ago conjectured that they had. Sybel thinks the assumption impossible. Delbrück gives reasons for thinking that the report might have come to them by way of Vienna. With or without this last incentive, the Government resolved upon war, and on the following day war was declared.

Ever since this war the French have been looking for a scapegoat. Sybel's whole narrative seems intended to direct their choice to Gramont. He maintains that Gramont withheld important information from his colleagues and the Emperor; that at one critical moment, at least, he disregarded their decision; that he made false statements to the Deputies. There were moments, Sybel thinks, at which he shrank from the responsibility he was incurring, but the popular passions which he had been largely instrumental in arousing were too strong for him to resist. Gramont started his brief and disastrous diplomatic campaign on the assumption that the Spanish candidacy was the work of Prussia; he concluded it and plunged France into war on the assumption that Austria and Italy, although bound by no formal treaty, would take up arms for France. Both of these assumptions Sybel regards as baseless, and ascribes to Gramont's "constructive imagination."

Delbrück insists that both assumptions were justified. As regards the first point, we cannot but agree with him. As regards the second and more important point, Delbrück not only maintains, as we have seen, that the understanding between the two sovereigns was a complete one, but asserts that, even after the declaration of war, it was in Napoleon's power to convert the informal understanding into a binding treaty. Why, then, was this not done? Bismarck once said that, even after the declaration of war, Prussia could have made peace with France if the Prussian Government had been willing to sacrifice Belgium. In return for this concession, Prussia would

have obtained free hand in South Germany. With a million of men under arms, the two Powers could have imposed their will upon Europe. This, Delbrück believes, was really Napoleon's plan, and this explains his postponement of a definite agreement with Austria. He wished to hold himself free to the last possible moment for such an arrangement with Prussia. For all this, however, Delbrück has no other evidence than Bismarck's statement, which does not go nearly so far. Even if Bismarck meant to say that a proposition of this sort was actually made by Napoleon, it does not follow that Napoleon's whole policy was meant to lead up to and culminate in such a proposal. Delbrück's theory would do very well in an historical romance; in the present state of our knowledge it is out of place in an historical essay.

As regards the serious part of Delbrück's criticism, the difference between his views and Sybel's rests mainly on their different interpretations of the material furnished by Beust, Vitthum, Prince Napoleon, General Lebrun, and others of less note. Lebrun's recent revelations, published since Sybel wrote, tend to support Delbrück's contentions, but they are not conclusive. They are not irreconcilable with Sybel's theory that the Austrian Government, though really resolved upon peace, was temporizing with Napoleon, ready to join him if victory seemed assured, but determined not to be involved with him in a common disaster. As to Italy, both writers agree that Victor Emmanuel wished to support Napoleon, but that his ministers were of a different opinion; and both agree that Italy's action was practically dependent upon Austria's. Delbrück, we think, underrates the influence of the Roman question in preventing concerted action by the three Powers—an influence which Prince Napoleon declares to have been decisive. Delbrück also makes too little of the restraint imposed upon Austria by the menacing attitude of Russia.

In this concluding volume of Sybel's great work, as in the sixth, we miss the certainty of tone which characterized the first five, and which resulted from the use of the Prussian archives—a privilege accorded to him until 1890 and then withdrawn. We find, however, the same breadth of view and felicitous clearness of presentation; and these two last volumes will always have the value of a contemporary account by an historian of the first rank, to whom sources of information were open that were inaccessible to nearly all others. In these volumes, for example, he cites verbal communications from persons of no less consequence than the Crown-Prince Frederick and the Emperor Napoleon.

The Pilgrim Fathers of New England and their Puritan Successors. By John Brown, B.A., D.D. Fleming H. Revell Co. 1895. Pp. v, 368.

ENGLISH writers have naturally essayed the story of Congregational beginnings less frequently than American students; and a volume on this theme by a prominent English Congregationalist therefore appeals to a home public less acquainted with the details of colonial history than are readers on this side of the Atlantic, while its angle of view is likely to be sufficiently unfamiliar to awaken the interest of the American into whose hands it falls, even though the facts that it presents are for the most part well known. Such a volume is that in which Dr. Brown of Bedford traces the Congregational movement down to the union of

the four New England colonies in 1643. Its attractiveness has been enhanced by a number of illustrations of scenes and buildings associated with the English experiences of the Plymouth Pilgrims, drawn by Charles Whymper; and the printed sheets imported by the American publishers are prefaced with an introduction by the Rev. Dr. A. E. Dunning of Boston as the volume is put forth in this country.

Dr. Brown's work is an exceedingly readable narrative, written in a style that sometimes savors a little of the lecture-platform, but is never dull. It exhibits, especially in the portion which has to do with experiences in England, wide reading and much skill in the presentation of facts. The chapters which set forth the life that centred about Scrooby and the persons engaged in founding the Pilgrim church are noteworthy, and evidence much acquaintance with the scenes described. The early experiences of the Plymouth colonists, including the not very remarkable adventures of their first exploring parties, are told with fulness from the pages of Mourt's 'Relation' and Bradford's History. Indeed, by far the greater portion of Dr. Brown's book is devoted to the story of Pilgrim life—no less than 235 of the 343 pages of his text being occupied with the narrative of the Scrooby company from its beginnings to De Rasières's visit in 1627.

This apportionment compresses the sections of Dr. Brown's volume which relate to the Puritan colonies into disproportionate narrowness, and these chapters are the least satisfactory in the book, probably because the author is on less familiar ground. A New Englander will be provoked to a smile when Dr. Brown tells him that "no one living now" can read Eliot's Indian Bible, or that the Concord of which Peter Bulkeley was the first minister was "on the banks of the Merrimac." But such slips are not many, and the volume may be commended as a vivacious presentation of the external features of the early Congregational movement.

What the reader misses most in Dr. Brown's pages is a clear presentation of the causes of that movement itself. Congregationalism was something much more definite than "the struggle for spiritual freedom on English soil," though Dr. Brown fails to make it evident that such was the case, and begins his account of the precursors of the Pilgrim Fathers with the weavers condemned by the Council of Oxford in 1165, William of Occam, and Wyclif. The nearest approach to a statement of the religious principles which underlay the Pilgrim enterprise is in his summary of Robinson's controversial volumes in the chapter on Robinson's writings, and in his account of the formation of the Salem church after the story of Plymouth has been fully told. Such an omission is a distinct loss of force to the impression which the narrative makes.

In his preface, Dr. Brown remarks, "Where one has been making notes extending over a lengthened period, it is not always easy to remember the source from which many points of detail were taken." The discriminating reader, without thereby refusing hearty recognition to the substantial merits of the volume under review, will regret the absence of the customary signs of quotation from some passages where they might appropriately have been employed.

Recollections of Lord Coleridge. By W. P. Fishback. Indianapolis: The Bowen-Merrill Company. 1895.

THE circumstances under which the author of

this volume established an acquaintance with the late Lord Coleridge have never hitherto been clearly understood by the world. Indeed, it is highly probable that the existence of this acquaintance was known to few, and in a short time it might have become impossible to procure sufficient evidence to establish it as a historical event, while its details would have been irretrievably lost. This danger, we can assure our readers, is now averted. Mr. Fishback lays before us an array of facts sufficient to strike scepticism dumb. The acquaintance was brought about by means of a letter of introduction from Mr. Justice Harlan of the United States Supreme Court, to whom Mr. Fishback very properly dedicates this book. The presentation of this letter drew forth a reply from Lord Coleridge which is printed in the text and a facsimile of which appears in the appendix, including the letterhead of crest and motto. This must be accepted as conclusive proof of the existence of the letter, as well as of the invitation to dinner that it contained.

It may well be that future historians would not have hesitated to infer on general principles that such an invitation was accepted; but the array of facts is enough to make it unnecessary to resort to presumptions. The very hour of the dinner is named, and the fact that the Lord Chancellor was late, owing to his having been kept at the House of Lords until the Duke of Argyll yielded the floor, is a most convincing bit of circumstantial evidence. Then it is quite incredible that in a spurious narrative Lord Coleridge should be represented as answering the inquiry—"Was Mr. Arnold true to his teachings as the apostle of the gospel of sweetness and light?"—with "Perfectly and always." Such conversation as this cannot have been invented. We could easily point out a number of other details of most persuasive character, but it would require the patience of a Paley to demonstrate the cogency of these cumulative probabilities. On the whole, we incline to think that when posterity shall undertake to reconstruct our life, the Fishback-Coleridge intimacy will be recognized as one of the best authenticated facts in history.

We cannot let it be supposed that Mr. Fishback dined with Lord Coleridge but once. Thrice, as we reckon, did they dine, and twice take luncheon together. Moreover, the number of notes and letters received by Mr. Fishback from Lord Coleridge must have been at least ten, besides one from his brother-in-law—the letters themselves in great part being produced in evidence. On one or more occasions Mr. Fishback occupied a chair beside Lord Coleridge as he sat on the bench, and by his special invitation. We are bound to add that Mr. Fishback reports some conversations with the Chief Justice which are interesting, and that he has some good stories to tell, new as well as old.

We have perhaps said enough to suggest that entertainment is to be had from this book, and we cannot find it in our heart to speak altogether harshly of any writer who promotes hilarity among mankind. Whatever his weaknesses may be, Mr. Fishback is an intelligent observer, and many of his reflections on ways American and English indicate a broad and genial nature. His style is clear and flowing, his book is charmingly printed, and the Coleridge crest and motto are stamped on its cover.

Early Rhode Island Houses: An Historical and Architectural Study. By Norman M. Isham, A.M., Instructor in Architecture, Brown University, and Albert F. Brown,

Architect. Providence: Preston & Rounds. 1895. Small 4to, pp. 100 and 60 plates.

THE preface of this very interesting book closes with an expression of the hope that it will be found to supplement, by "accurate measured drawings," what are properly called the "vague descriptions of too many of our town histories." This it will surely do. It will also serve to supplement and complete the rather numerous books on "old colonial" architecture which have been published within a few years. Those books are almost wholly confined to free-hand drawings of details intended chiefly for daily consumption in the architect's office, and photographic process prints of exteriors. They are also devoted to the more elaborate structures of the period before 1800. The book before us, however, is devoted to serious study of humbler and therefore more purely traditional and, in a sense, autochthonous buildings. It takes up two houses of the period before 1675, five of the next twenty-five years, and four more of the quarter-century before 1725—all in the region of northern Rhode Island; and these it treats in an exhaustive manner with drawings of what exists, drawings of restoration, and descriptive text.

"Northern Rhode Island" is not a large district, and none of the old houses which our authors have discovered there are elaborate, or offer details which the modern architect is likely to convey. Their interest for the student of architecture is in the simplicity and freedom of their design, the traditional and unschooled work of the village carpenter. In this respect they are a most valuable help to an understanding of the natural evolution of architecture, and of the architecture that was so brought into being, whether before or after the fifteenth century. Besides the houses of the Providence region, to which the book is especially devoted, those of Newport are treated in chapter v., and those of "the Narragansett country" in chapter vi. Chapter vii. is given up to construction. In this the analysis of the framing in the old houses is of extraordinary value, and the seven plates which illustrate it, Nos. 54 to 60, are excellent in their intention and almost all that could be asked in execution. This book is probably the most valuable historic architectural treatise that has as yet appeared in America.

The Utopia of Sir Thomas More, in Latin from the edition of March, 1518, and in English from the first edition of Ralph Robynson's translation in 1551, with additional translations. Introduction and notes by J. H. Lupton, B.D. Oxford: Clarendon Press; New York: Macmillan, 1895.

Thomas Morus Utopia. Herausgegeben von V. Michellis und T. Ziegler. Berlin: Weidmann. 1895.

THE unflinching interest of Thomas More's brilliant sketch of the ideal state is again proved by the appearance almost simultaneously of an English and a German edition. The former, in a stately volume of three hundred and fifty pages, gives the text from the Basle edition of Frobenius published in March, 1518. The editor explains his choice of this, the third, edition as that one among the very earliest which most nearly represents the author's own wishes. On the other hand, he has taken the earliest edition of Robynson's translation for two apparently very good reasons—one, that it has never before been reprinted, and the other, that, just because it is the earliest, it best gives the flavor of antiquity which is its

especial charm. We have here also a short but carefully written introduction, giving a sketch of More's life and of the circumstances under which the 'Utopia' was produced, together with an account of the several editions, and a comparison of the 'Utopia' with other sketches of ideal commonwealths, both earlier and later. The editor comes to a very sensible conclusion in regard to the seriousness of More's intentions. So far as the general idea of bringing out into bold relief many of the political, religious, social, and economic evils of his own time is concerned, the purpose is a perfectly serious one. To suppose, however, that More wished to present a serious solution of these difficulties, such as might be put into execution by practical reformers, is to ignore the character of the man and the real significance of his place in literature. His seriousness is that of the man of imagination, whose vision of the future wanders on in half-playful fancies, which are seen to be prophetic only when they have been realized by the very unimaginative logic of events.

Besides the letters about the 'Utopia,' which were given in translation by Robynson, Mr. Lupton prints and translates three others, one by Erasmus to the printer Frobenius, one by Budæus to Thomas Lupset, a young Englishman, who had published a rather hastily prepared edition of the 'Utopia' in Paris in 1517, and one by Busleyden to More. The text, especially that of the translation, is beautifully printed, and is accompanied by very full and scholarly notes. A glossary of old English words and a thorough index are added to make this the most complete and useful edition of the 'Utopia' now to be had.

Quite different in outward appearance is the modest German edition, a cheap little paper volume containing only the Latin, and that from the earliest edition of 1516, corrected, however, by comparison with that of Frobenius. The editors agree with Mr. Lupton in thinking that this later edition had probably the advantage of More's personal corrections. A careful introduction concerns itself chiefly with the question, how far More was an imitator of Plato, and how far he was an independent and even a distinctly modern man; with a very decided leaning toward the latter view. The text is neatly printed, uniform in its style with the series of "Lateinische Literaturdenkmäler des xv. und xvi. Jahrhunderts," of which it forms a part.

The Last Cruise of the Miranda. By Henry Collins Walsh. New York: Transatlantic Publishing Co. 1896. 8vo, pp. 232. With many illustrations.

IN 1894 Dr. F. A. Cook organized an excursion party to Greenland from New York, purposing to visit the glaciers and Melville Bay, touch at Peary's camp, hunt, study Eskimo, and have a good time generally. The plan was a good one, provided proper attention had been given to details necessary for such a cruise. First of all a suitable vessel was needed. When it is explained that an iron tramp steamer was selected, no one who knows anything about navigation in Arctic waters will be surprised at the subsequent experiences of the party. The *Miranda* left New York July 7 with a large company on board, including several well-known men of science, geologists, zoologists, literary men, and travellers. They touched at North Sydney and St. John's, Newfoundland, and on the 17th ran into an iceberg, crushing in the bows of the vessel and necessitating a return to St. John's for repairs.

Some of the party decided to confine their explorations to dry land for the rest of the season, but on the 28th of July the *Miranda* with the others made a fresh start for South Greenland. After an unsuccessful attempt to reach Frederikshaab, the expedition brought up at Sukkertoppen, where several days were spent agreeably. In endeavoring to proceed to Disco the *Miranda* ran upon a reef and seriously injured her bottom. By great good luck the American fishing schooner *Rigel* of Gloucester was finally communicated with and induced to give up her voyage, take the party on board, and accompany the unseaworthy steamer to a port of repair. For this service the sum of \$4,000 was agreed upon, being a fare of about \$63 per head. On the 21st of August the two vessels left Greenland. Two days later the steamer was abandoned in a sinking condition, and with her loss the legal claim of the rescuing fishermen for remuneration also vanished. On the 5th of September the party were landed in North Sydney by Capt. Dixon, who seems to have done all that man could do for his unfortunate passengers. The owners of the *Miranda* stood on their legal rights and declined to pay the salvage, but contributed \$250 to a subscription which was made by the party, the total amounting to about half the original contract. Mr. Walsh states:

"This little volume has been issued in the hope that the profits arising from its sale may at least amount to a fair portion of the balance morally, if not legally, due to the Captain and the crew of the *Rigel*."

The party divided at North Sydney, a portion of them leaving Halifax for New York on the steamer *Portia*, and, as if their previous adventures were not enough, off Cuttyhunk in a fog the *Portia* ran down and sank the schooner *Dora French*, by which four lives were lost.

Fourteen of the party, including Professors Brewer of Yale and G. F. Wright of Oberlin, have contributed to the book, which is profusely illustrated. While rather a record of adventure than a contribution to geography, Mr. Walsh's narrative is lively and interesting, and many of the pictures are excellent. In an Arctic library the book's chief use will be to point the very obvious moral implied in the inscription said to have adorned a sawmill, "Don't monkey with the buzz-saw."

From Manassas to Appomattox: Memoirs of the Civil War in America. By James Longstreet, Lieutenant-General Confederate Army. Illustrated. Philadelphia: J. B. Lippincott Co. 8vo, pp. xxii, 690.

Few if any corps commanders on either side in our civil war had so long or so continuous field service as Gen. Longstreet. He was commandant of a brigade in the first battle of Bull Run, and more than half of all who surrendered with Lee at Appomattox were under his orders. With Stonewall Jackson he shared the honor of being Lee's principal subordinate, and for energy in field fighting he was brilliantly conspicuous throughout the war. He served continuously with the Army of Northern Virginia except when sent to reinforce Bragg prior to the battle of Chickamauga, and in that sanguinary engagement he commanded the left wing of the Confederate army, whose fortune it was to break and roll back Rosecrans's right. The winter campaign in East Tennessee against Burnside, in which Knoxville was besieged, was made by Longstreet with a small army detached from Bragg. This was Longstreet's only service as an independent commander;

and though unsuccessful, it is doubtful if success in the peculiar task assigned him was possible for any one. The spring of 1864 found him close to the Virginia boundary, and he was recalled to Lee's army in the general concentration of forces preliminary to the great campaigns which were to end the war.

In this long and arduous service Longstreet established a reputation for impetuous courage, united with cool-headed composure and tactical judgment on the field, second to none. His capacity to command as general-in-chief of a large army was not tested fully, and no discussion is more useless than that which deals with the probable success in independent commands of men whose work has been subordinate. When peace came, he established himself as a cotton-factor in New Orleans, and, for a time, business success seemed likely to compensate him for the loss of his military position. In 1867, however, he declared in favor of Southern acceptance of the logical results of the war, including the political enfranchisement of the freedmen. This was followed by ostracism on the part of his old friends, which quickly caused his business ruin. His conscientiousness was proved by the fact that, both then and since, he showed no political aspirations, nor has he sought to make profit by his change of party associations. The modest office of Surveyor of Customs was bestowed upon him by Gen. Grant unasked, moved by his personal generosity.

To the political enmities thus engendered, Gen. Longstreet attributes the attacks upon his military fame which have since been made by officers who served with him in the Confederate army; and the circumstances seem to justify him in doing so. The form of these attacks, however, has generally been that of depreciation. No one has ventured to deny his lion-like courage, his power to discipline his troops and to infuse his own invincible energy into them, or his devotion to the cause he was almost the last to despair of. But they say he was slow in the beginnings of action, that he was stubborn in sticking to his own ideas, and that thus he thwarted his chief and was the proximate cause of disaster on notable occasions, especially at the battle of Gettysburg.

While, therefore, General Longstreet's memoirs cover the whole period of his military career, we find, as we might expect, that his vindication from aspersion becomes the most stimulating part of his book. As to the battle of Seven Pines in front of Richmond, his chief critic was General G. W. Smith, who succeeded to the Confederate command in the interval between the disabling of General Johnston and the appointment of Lee to the vacant place. Longstreet, who commanded the right wing, not only narrates fully the progress of the battle from his standpoint, and argues for the intelligent generalship with which the plans of the General-in-chief were carried out on the right, but he uses his old aggressive tactics, and turns the tables on his critic by asserting that it was the feeble and timid conduct of the left, where Smith commanded in person, that prevented a decisive success for the Confederate arms.

As to Gettysburg, the dispute hinges upon the orders for the second day, when, it is asserted, Lee commanded an attack at sunrise by Longstreet, who did not make it till afternoon. Longstreet peremptorily denies that such an order was issued, asserts that Lee knew that the troops could not possibly reach the field and attack at any such hour, gives evidence that the contingency on which Lee ordered any attack did not occur till late in the fore-

noon, and that Lee personally and by his staff controlled the preliminary movements, which extended far beyond the time at which it was pretended the attack was to be made. Events on other parts of the field are made to throw light upon and to support his case. His principal critics here have been Gens. Early, Pendleton, and Fitzhugh Lee.

In the West he condemns the generalship of Bragg at and after Chickamauga, and especially the separation of his own troops from Bragg's army when Grant was preparing for the aggressive campaign of Missionary Ridge. The forces with him, he asserts, were too few for a quick and successful *coup de main* against Burnside, yet so many as to imperil by their absence the position of the main army, and so gave to Grant double chances of victory.

As the criticisms upon Longstreet impugn the value of his services to his chief, it was natural that he should give the evidence of Lee's confidence in him as a soldier and his trust in him as a faithful comrade and friend. The frank and free correspondence between them seems to establish this beyond reasonable controversy. It is not too much to say that Lee had fullest faith in Longstreet's ability and character. He listened to his subordinate's suggestions with respect, and continuously intrusted to him large responsibilities in the execution of his plans. When Longstreet had been separated from the Virginia army, Lee welcomed him back to his old place with a cordiality which left no room to doubt the confidence between them. At Appomattox itself Lee delayed his own consent to consider the necessity of surrender till Longstreet was convinced that the last hope was gone.

The memoir is a work without which the literature of the war would be incomplete. The personal views of so prominent a character are part of the evidence which cannot be spared. The revelations of his own character are a great help in judging of every event in which he had a part. His methods of action and of thought, his canons of military judgment, his influence upon officers and men, are all worthy of careful study, because his prominent position made them all factors in the results of the campaigns in which he fought. It is impossible within the limits of this notice to examine all the evidence which the official records contain, and to attempt to judge adequately the controversies between Longstreet and his critics. That will be the work of historians in the future. But it is safe to say that no investigator will fail to reckon the memoir among the most important sources of information on which the history of the Confederacy must be built.

It is evident that Longstreet has not availed himself of literary help as much as in some former papers of his which have been published. His book is not as smooth in style as those papers, but it gains as a personal presentation of himself. His very mannerisms are characteristic and smack of the camp. Blunt, careless, sometimes even egotistic, he "says his say" with a kind of defiant earnestness which commands attention and rouses sympathy. The references in footnotes to the official records are made under the name of 'Rebellion Record,' which is somewhat misleading, since there is a well-known and voluminous private publication with that name, and the author's intention is to refer to the 'Official Records of the Union and Confederate Armies,' published by the Government.

Molecules and the Molecular Theory of Matter. By A. D. Risteen. Boston: Ginn & Co. 1895. Pp. 238.

MR. RISTEEN'S object is to give, in elementary form, a complete and connected account of what is known of the constitution of matter. Such a book has long been wanting, for a very good reason—namely, that there are few physicists who are not painfully aware how far they fall short of competence to produce such a treatise. In the main, Mr. Risteen has done very well. He has taken account of almost all the greater contributions, mathematical and experimental; he has so put them together as to render his pages intensely interesting, by virtue of the thread of cunning reasoning and apposite observation that surely leads to the heart of the great puzzles which he follows out; and he argues some points with real power. The work will prove extremely useful to all who wish to know what the scientific theory of molecules is in detail, and what are the grounds upon which it rests.

The great memoir of Helmholtz upon the conservation of force assumes that all material forces are between pairs of particles—in short, are attractions and repulsions. But measurements upon the elasticity of bodies have thrown grave doubts upon that assumption; and some writers upon elasticity profess to demonstrate that the forces between the parts of solids cannot be of that description. In reprinting his memoir, Helmholtz undertook to modify his expressions, so as to give room for the modern doctrine; but such modifications leave his arguments without much force, and deprive the theory itself of the greater part of its significance. It is on account of those observed facts about the elasticity of solids that Kelvin invariably expresses himself with reserve about molecules—saying that he believes that matter "has some kind of grained structure." It is not too much to say that this question is the principal question of to-day in natural philosophy. If central forces will suffice, so that the conservation of energy is to retain its full meaning, then the Boscovitchian conception (it ought not to be called a hypothesis) is the only rational way of thinking. But if central forces will not suffice, we are driven, it would appear, to conceive of matter as continuous, and therefore as a fluid in some respects homogeneous, throughout space. Thus we come to that order of ideas about media for the action of forces, the attraction of force-lines, etc., which have marked the physics of Great Britain since the time of Faraday. Here we find a rational motive for the vortex theory of atoms. Something of this great discussion might well have been allowed to appear in the introductory chapter of a work on the constitution of matter; but Mr. Risteen finds no place between his covers for any portion of it. Though he touches upon crystals, he never speaks of any doubts as to the sufficiency of central forces. He never mentions the name of Boscovitch. He speaks of the vortex theory, but does not show in what its real peculiarities consist, nor where the suggestion really came from.

The kinetical theory of gases, which now begins to take on the highest degree of certitude and something like completeness, is very well elucidated in Mr. Risteen's second chapter; yet we are surprised that the vast researches of Amagat should be passed by without mention (except that one constant is borrowed from him).

In the molecular theory of liquids nothing is said, either *pro* or *con*, in regard to the theorem of the virial of Clausius, which, it seems to us, ought to be the cynosure to guide our speculations upon this subject. In one passage

we are said to be ignorant what the quadratic mean of the molecular translational velocities in a liquid may be at a given temperature; in another place it would seem to be assumed that the velocities in liquids and solids are less than in the gases of the same constitution at the same temperature. If the theorem of the virial is true, this question is easily answered; if it is not admitted, the objections to it ought to be stated. A strong attraction between the molecules of a liquid is manifest in its surface-tension, its heat of vaporization, etc. Its definite density is an effect of equilibrium between this attraction and the translational velocities of the molecules. It would thus seem to be evident that the velocities of molecules in the liquid cannot be less than they are in its saturated vapor above it. Mr. Risteen very promisingly commences an explanation of the incompressibility of liquids, by attributing it to the centrifugal force of the molecules. No doubt he is right, as far as he goes; but a more precise elucidation is desirable.

The molecular theory of solids appears to be beyond Mr. Risteen's present powers. At all events, he has not entered into the considerations which are prerequisite to any serious attempt at an outline explanation of the properties of these bodies.

In a chapter on the size of molecules, the author calls attention to the extreme vagueness of the idea of the size of a molecule. One might as well attempt to measure in inches the diameter of a crowd of people before a street show. It has no definite limits. We measure the length of a bar, because if we attempt to compress it we meet with a counter-pressure which, before we have sensibly reduced its length, exceeds any force we can bring to bear upon it. But it is not likely that molecules have this property to anything like the same degree. When we speak of their size we do not know what we mean; and one method of determination might perfectly well give one result, and another a widely different result, and yet both might, in their several senses, be correct. It is, therefore, a very remarkable fact that different calculations of the size of molecules based upon the most widely diverse considerations turn out to agree very well. Nobody ever supposed that in asking how large a molecule was, he was asking anything much more definite than if he had asked what the average size of an ordinary portable object is. The answer in the latter case might be, its size is somewhere from a fraction of an inch to a few yards. The size of molecules seems to be known quite as definitely. The diameter is somewhere about a ten-millionth or hundred-millionth of an inch.

A final chapter is devoted to speculations in regard to the constitution of molecules. Mr. Risteen defends very ingeniously the equation by which the number of "degrees of freedom" of a molecule is supposed to be determined. He has, on the whole, proved that he has the power to produce a treatise upon the subject adequate to the needs of students; and if the weak spots of his first essay receive the necessary attention, we may hope that a perfected edition will meet every desideratum.

Egyptian Decorative Art: A Course of Lectures delivered at the Royal Institution. By W. M. Flinders Petrie, D.C.L., Edwards Professor of Egyptology, University College, London. G. P. Putnam's Sons. 1895. 12mo, pp. ix, 128.

PROFESSOR PETRIE is the most active popularizer of Egyptological subjects at the present

time, and is, in this line, a worthy successor of the late Amelia B. Edwards, for whom his professorial chair is named. He lacks something of the literary charm which belonged to his patron, but the greater stores of his special and detailed knowledge make ample atonement in the mind of those who desire first hand facts more than figures of speech. His own diction, moreover, has often a personal and rugged character, resembling a natural conversational tone, which is not lacking in attractiveness.

Professor Petrie won his spurs as an explorer and excavator rather than as a professor, and has paid special attention to the forms of characters, signs, art-motives, and architectural designs, with a view to discovering their origin and genesis. We are all familiar with most of the artistic forms and devices portrayed by him in this volume, and the charm of his treatment is to be found in the tracing of artistic motives from their historical origination down through their successive stages of development and then into the art of other lands. This last is done to only a limited degree, yet sufficiently to show that a wide, varied, and interesting field is opened to view. The stages of decoration treated are the geometrical, the natural, the structural, and the symbolic. In each case the text is well illustrated with appropriate drawings taken from printed books, public and private collections, and from a fund of personal knowledge which has resulted from long-continued and varied observation at home and abroad.

The office of the critic is very circumscribed in connection with the actual contents of such a work as this. It is the fruit of investigation in which the author stands well-nigh alone, and the reader must almost of necessity stand in the place of the learner. Nevertheless, the reader cannot but wish that the author had seen fit to go into greater detail at some points, and one feels sure that far more of fact and information might have been added had the call been made. Much of the information might be found scattered through other works, but that which is new is welcome and valuable. The principal difficulty is that the subject announced in the title is not exhausted, and more remains to be told than here comes to expression. For instance, a most interesting observation upon scarab decoration, made in the first volume of his 'History of Egypt' (p. 119), is not so much as mentioned, though it is one of the most suggestive that have been made in any book in recent times. One may therefore be justified in criticising the author for failing to take his task seriously enough, and for being satisfied to put forth a book that skims the surface, rather than a treatise. At the same time it must be acknowledged that Mr. Petrie was writing for popular reading rather than with the purpose of instructing specialists. Those to whom this is sufficient excuse may read the volume with profit and interest.

A NEW ERA IN BOOKSELLING.

BRENTANO'S, 31 Union Square, announce an important change of policy. Hereafter they will sell books at SWEEPING REDUCTIONS from PUBLISHERS' PRICE. Bookbuyers will thus be afforded the opportunity to purchase from an unrivalled stock of Classic, Standard, and Current Literature, at PRICES as LOW as prevail ANYWHERE, with the added advantage of prompt and intelligent service.

ALL the BOOKS of THE DAY at LOWEST PRICES. Foreign Books. Mail orders receive special attention. Send for Brentano's Monthly List of New Books. Free on application. BRENTANO'S, Publishers, Booksellers, Stationers, New York, 31 Union Square, New York.

F. W. CHRISTERN
(DYRSEN & PFEIFFER, Suc'rs),
254 Fifth Ave., between 28th and 29th Sts., New York.
Importers of Foreign Books; Agents for the leading Paris Publishers; Tauchnitz's British Authors, French and Latin Classics. Catalogues of stock mailed on demand. New books received from Paris and Leipzig as soon as issued.

The Nation.

NEW YORK, THURSDAY, FEBRUARY 20, 1896.

The Week.

THE final vote in the House on the free-coinage issue on Friday was considerably larger than in committee of the whole on the previous day—305 on both sides, as against 270—but equally disastrous to the silverites, who fell considerably short of polling one-third, only 90 out of 305. An analysis of the vote shows how deceptive is the apparent strength of free coinage in the Senate as an index of popular sentiment. The nine States in the Rocky Mountain region and on the Pacific Slope—Colorado, Wyoming, Montana, Idaho, Utah, Nevada, California, Oregon, and Washington—were solid for free coinage in the Senate save for one nay vote from Oregon; and those nine States have one-fifth of all the Senators. The same nine States were solid on the same side in the House on Friday, but they have altogether only one-twentieth of the Representatives. The utter hopelessness of the silver cause is demonstrated by the fact that the great States east of the Rocky Mountains and north of the Ohio and Potomac, which dominate the popular branch, are already overwhelmingly against it, and growing more pronounced against it in each Congress. Even in the Senate the changes already assured will deprive the silverites of their present narrow majority after the 4th of March, 1897.

Senator Davis of Minnesota has made his speech in favor of the Davis resolution reported by the committee on foreign relations. This resolution has fallen so dead in the country at large that few people now remember its existence. Mr. Davis has drawn attention to the reasons for its early demise and speedy interment. The resolution, of course, had its rise and its very *raison d'être* in the Venezuelan boundary dispute. But as this dispute was over a question of fact, viz., Where did a certain boundary run? and did not necessarily involve the acquisition of new territory by a European Power, still less the introduction of a European system on this continent, the Monroe Doctrine was not concerned in the matter one way or the other. Mr. Olney and the President lugged it in, however. In order to leave themselves a line of retreat, they said that if Venezuela and Great Britain should come to an agreement as to the boundary, of course we should have nothing to say against it. "What's that?" exclaims Davis. "Beg your pardon; that gives away Monroe completely. Venezuela must not be allowed to cede her territory. It is the getting of the territory, and not the method of getting

it, that threatens our security." That notion shuts off one method of ending the dispute. What is the alternative? Arbitration, says Davis. But suppose the arbitrators should give away the very same territory that Venezuela offered to give without arbitration. It is still the giving of the territory, and not the method of giving, that threatens our security. So there is logically no way of settling the question. After you have once introduced the Monroe Doctrine where it does not belong, then in order to reach any solution whatever you must go back to the beginning and reexamine your premises. You pitchforked it in and now you must pitchfork it out. It is gratifying to learn, however, from the author of the Davis resolution that there will be no war.

Congress cannot stop to debate about going to war, but it can spend days in denouncing attempts to save money and put an end to governmental abuses. The agricultural appropriation bill is making slow progress in the House on account of the mad rush of speakers who want to expose Secretary Morton for cutting down their supplies of seeds. Things have reached such a pass that, as one indignant member said, he had but fifteen grape cuttings and twenty-five strawberry plants to distribute among 216,000 constituents. Can the Government long continue or conventions be packed under such a system? The only remedy was pointed out by Mr. Livingston of Georgia. Get a Secretary "in touch with the people"—above all, with the people that plough all the week, then unhitch their mule and ride him ten miles on Saturday night to get their mail in which they find a few papers of Government seeds, and cry out, "I am a citizen of a great country, and I am not forgotten, though never so humble!" There is no answering this, but the trouble is that Mr. Livingston and his kind have so many other awkward and expensive ways of reminding the plain people that they are citizens of a great country. A little while ago he was having us declare war with England for this purpose; and for the same end he says we must build the Nicaragua Canal, spend millions on a navy, and debase the currency. If seeds alone would do it, we might not object; but the entire process of making us citizens of a great country is certain to be so ruinous that we had better draw the line firmly even at worthless and expensive seeds.

The movement for a treaty of arbitration with Great Britain is gaining ground rapidly, and many newspapers which were hot for war on the subject of Venezuela a few weeks ago, are now urging the negotiation of such a treaty. One of the advantages of arbitration, which has

not received the attention it deserves, is that it would largely dispense with the need of fleets and fortifications. The only object of battle-ships and heavy guns is fighting. The object of arbitration is to avoid fighting. Fighting is expensive, while arbitration is cheap. It may be assumed that a treaty of arbitration with England would enable us to dispense with 90 per cent. of the forts and fleets that the Jingoes are calling for, because none of them ever talk of war with any other country. We never hear any speeches from Lodge or Frye about war with France or Germany or Russia. If the Jingoes were deprived of the chance of war with England, they would be reduced to silence or compelled to address themselves to the arts of peace. A chance occasion might arise two or three times in a century for trouble with second or third-rate Powers like Spain or Chili, but these would not serve as a basis for a permanent Jingo party, or for extensive seacoast defences and a corresponding increase in the regular army. We are glad to learn that a conference of the friends of arbitration is soon to be held at Washington city, at which the various branch societies will be represented and the work of organization laid out on a large scale.

The *Evening Post* has taken some pains to procure a history of the Venezuelan concessions to American citizens which have cut some figure in the boundary dispute with British Guiana. We are glad to be able to say that at no period in the history of the Manoa Company, or of its successor, the Orinoco Company, so far as these researches go, has the existence of American interests in Venezuela had any influence with our Government in the premises, or any bearing in the dispute. On the contrary, it appears that when Mr. Olney's attention was attracted to those interests by a rather loud-sounding newspaper interview or letter of one of the Manoans, he took pains to let the Government of Venezuela know that such interests could in no way affect the treatment of the boundary question by us. The late Secretary Gresham, we have reason to believe, went a little further and warned certain persons in official life not to connect themselves privately with matters in which the Government might be publicly concerned. While it appears that our Government was entirely clear of influence or bias on this score, it is equally plain that the Venezuelan authorities expected to enlist political influence in this country by grants of land with indefinite boundaries, and that the grantees, construing "the limits of British Guiana" to suit themselves, entered upon the disputed territory; that when the British authorities warned them off, Gen. Gusman

Blanco complained of this act as an assumption of British authority over the territory in question, in violation of the agreement to consider it neutral ground, and ignored completely the fact that the concessionaries had first invaded it and were acting under Venezuelan authority; that Blanco was himself a stockholder of the Manoa Company; that when he found out in 1886 that the Manoans were without influence at Washington, the land grant was cancelled and given to George Turnbull; and that Mr. Turnbull went to work to develop the property or some portion of it. Affairs ran on in this way until last June, when the Turnbull concession was revoked and that of the Manoa Company revived. It was then turned over to a Wisconsin corporation called the Orinoco Company, in which Mr. Donald Grant of Faribault, Minnesota, was the most important partner. The stock of the new company was fixed at \$25,000,000, but, aside from this rather imposing capitalization and one or two journeys to Venezuela by the new proprietors, nothing of much interest has been done. It is said that the Government of Venezuela agrees that, in case the disputed territory goes eventually to British Guiana, it will grant territory of equal extent and value to the concessionaries, but in view of the frequent revolutions in that country such a promise cannot be considered a very safe one for the investment of money.

One of the pending proposals of the Senate is to kill all the seals on the Pribyloff Islands, to save them from the pelagic sealers—evidently a reminiscence of the famous policy of the beasts which "committed suicide to save themselves from slaughter." The seals are, however, not to be saved in this way without an attempt to get Great Britain to agree to more stringent regulations. It is difficult to see what Great Britain can do, however, in view of the fact that we have found out, since the Bering Sea arbitration, that a large proportion of the early sealers who made the trouble were Americans. Will not these wicked Americans continue their operations no matter what Great Britain can say or do? We fear they will, and therefore the seals must go. We shall be only too thankful if they go without causing war. We were very near saving these interesting beasts by a slaughter of men which would have beaten that of the pelagic villains hollow in numbers and atrocity.

We are now within four months of the Republican national convention, and the choice of delegates has already begun, "snap" conventions having been held in some Congressional districts of New York, Pennsylvania, and two or three Southern States. The time has therefore arrived when the political arithmeticians begin to construct tables of the probable totals for the various candidates, and the outlook is

really becoming sufficiently clear to justify an opinion as to the probable outcome. The most striking feature of the situation is the strength of McKinley, particularly in the West. The *Chicago Tribune* and some other leading Republican newspapers in that section have made canvasses in several important States which seem to leave no doubt that the Ohio candidate has, at present, more support than all his rivals together. In Indiana he seems likely to secure two-thirds of the delegation; in Illinois, 98 out of 151 editors of Republican organs throughout the State, including the country weeklies, which usually reflect correctly local sentiment, are for him against the field; in Wisconsin, out of 53 well-known Republicans in different parts of the State questioned by the *Milwaukee Sentinel*, 34 are for McKinley, as against 10 for other candidates and 9 who express no preference; in Michigan, Republican editors in 34 counties report him first choice in 22; in Missouri out of 57 Republican editors 51 favor him. A curious and somewhat unexpected feature of the canvass is the fact that McKinley is stronger in the agricultural States of the West than in the manufacturing States of the East. This is due in part, of course, to the facts that New England has a candidate in Reed, and that the New York and Pennsylvania delegations are going to St. Louis nominally for Morton and Quay respectively; but even as second choice the Ohio aspirant is less of a favorite in the East than might have been expected.

McKinley's prominence as the representative of a high tariff gives him a tremendous advantage over his rivals in "the sinews of war." Since slavery was abolished, and a small class of rich planters in the South ceased to have an immense pecuniary interest in the control of the Government, we have never seen a time when so much capital saw its own advantage in the election to the Presidency of one man as the protected interests have to-day in the elevation of McKinley. His managers consequently can spend money with profusion in all of the many ways that contribute to the control of caucuses and conventions, and to the holding in line of delegates at St. Louis. This last is a matter of great importance as regards delegates from the South, who oftentimes can be bought more than once. In any such contest the representative of the protected interests is pretty sure to come out ahead. Already the Reed men complain that some of the delegates from Louisiana whom ex-Gov. Kellogg supposed that he had "fixed" for the Speaker, are out for McKinley. The latter has still another advantage over his rivals in the fact that he is now out of office, and can be "all things to all men," without being compelled to make choice between claimants for the privileges that the Speaker of the House dispenses, or to vote either for or against the silverites, as the Iowa Senator had to do the other

day, or to decide whether he will stand with the boss or with the people, as the Governor of New York will soon be required to do. As regards silver especially, this helps McKinley in the silver States, which have delegates enough to be worth considering.

There is no question whatever of the truth and accuracy of the *Tribune's* statement of Platt's Greater New York plans. No other scheme of political rascality ever planned against the people of this city equals this. Lauterbach was so delighted with it when Platt unfolded it to him that he could not keep still about it, but at once told the Republican Boys of it. It means political places and plunder to an extent never dreamed of before, and for that reason not only the Republican politicians of this city, but those of all parts of the State, will be in favor of it. This is the danger which confronts the city. Platt's power over the Legislature is absolute. He holds up before all the Republican members and politicians from the rural districts the prospect of rule by Republican commissions of the great cities of New York and Brooklyn for an indefinite period, and they cannot resist its attraction. Then he proposes to create, with his liquor-tax bill, a State machine with "places" for hundreds of men, with control of the vast liquor interests of the whole State, and with the large cities taxed for the benefit of the rural sections. In the presence of all this gain for the rural sections, the "hayseed" legislator does not "stand dumb," but becomes vociferous with enthusiasm for Platt.

It must be realized by all opponents of Platt's designs that he is by far the most powerful boss this State has ever seen. Tammany bosses have had merely local power. They have had no strength behind them outside this city. Platt has the State behind him, with a large Republican majority, for it is in the rural sections that his machine is most powerful. For the first time now he has full control of the city machine, and his control of the Legislature is making it possible for him to plunder the cities for the benefit of the country. There has been much talk about Republican opposition to him in Brooklyn, but it is suspected that he has been able to overcome this during the past week. In fact, a boss with such a magnificent programme of plunder as he is unfolding is invincible in his own party. No politician can hold out long before so dazzling a vision. If the programme is to be carried out, if all the plunder is to be gathered into the hands of the boss for distribution, the first thought of every practical politician is not to be "left" when the distribution begins. It behooves all inhabitants of the two cities who do not wish to have their power to govern themselves filched from them, to wake up to the danger

which menaces them and prepare at once to ward it off.

The proposal to abolish the institution of a Congressional and legislative chaplain of course encounters the opposition of conservatives who always stand for the maintenance of old traditions, but it is really not so radical a suggestion and not so unlikely to be accepted as was the idea of abolishing Fast Day in Massachusetts when it was first brought forward a few years ago. Indeed, it is entirely in keeping with the whole tendency of the age towards the disappearance of the public prayer. Col. T. W. Higginson, in the *Christian Register*, notes the revolution that has come about within his recollection in the matter of saying grace at the table, or "asking the blessing," as it is commonly called in New England, and having family prayers. In his boyhood there was scarcely a family in the First Parish of Cambridge which did not observe each of these customs; he thinks that twenty would be a large estimate of the number which still keep up the practice. At a public dinner over which Col. Higginson presided last winter, he asked "one of the most eminent of Unitarian clergymen," who sat near him, whether he had better invite anybody to say grace, and was promptly informed that it was ceasing to be customary, and advised against it. Last summer "another eminent Unitarian minister" dined with him, and the host, as a matter of courtesy to him, requested him to ask a blessing. "He did so; but it seemed as if he did not expect it, and I thought it would be better not to take the thing for granted again." Col. Higginson adds that in a somewhat frequent stay at private houses on lecturing trips he has been very much struck with the almost entire disappearance of these external signs of devoutness among Unitarians, and their diminution among orthodox Christians.

Mr. Chamberlain's dispatch of February 4 to the High Commissioner for South Africa, reference to which has been made in telegrams, and which has played an important part in the Parliamentary debates on the Transvaal question, was published in full in the London papers of February 8. It is certainly an extraordinary document, and that it should have awakened the Calvinistic wrath of President Krüger is not wonderful. It consists of two parts, the first being a long explanation of the attitude of the Colonial Office towards the Jameson raid, which Mr. Chamberlain easily shows to have been at once correct and vigorous. But he thereupon, directly after declaring that the South African Republic is "a free and independent government as regards all its internal affairs," goes on to suggest a number of sweeping changes in the Transvaal constitution and laws. These relate not

only to naturalization and the franchise, but to the conduct of the finances and to taxation; to the hardships of the working classes; the "resentment" caused by monopolies; the "grievances" in connection with the "labor question"; and, to crown all, Mr. Chamberlain rather imperiously advises Krüger to give the Rand district at once "a modified local autonomy." This unprecedented interference with "a free and independent government" Mr. Chamberlain defended in the Commons as the untrammelled methods of a fresh and direct mind applied to diplomacy, going straight to the point without regard to musty conventions. However, if President Krüger was offended, he would withdraw his remarks. No thing could be handsomer. Meanwhile, it will be gratifying to the bewildered friends of Chamberlain, the ex-social-reformer, to find him enthusiastic in enforcing a social programme in the Transvaal, no matter how England may suffer from his neglect, and to learn that he is strong for home rule in the Rand, whatever be the fate of Ireland.

An interesting discussion is in progress in England as to the exact time at which a man can be said to become a candidate for office. The question has arisen at the trial of election petitions under the corrupt-practices act, which makes certain the unseating of any candidate who can be shown to have used influence of any kind to promote his own election. In one case the Justice conducting the inquiry held that "no definite period could be stated as to when an election began." In another, the Justice held that the election began "when it was first known that the candidate had announced his intention to present himself as a candidate at the next ensuing election." In another, the Justice held that "an election begins as soon as a candidate begins to hold meetings." A correspondent of the *London Times*, citing these somewhat conflicting rulings, asks if any gentleman is at liberty, in every possible way, and for any length of time before the actual day of issuing an election address, to "nurse" a constituency with a view to having a field well prepared when he takes the field formally later. There have been many decisions under the English act which have unseated members of Parliament for "nursing" which was followed by a candidacy later, but in all instances a connecting link has been established between the preliminary work and the subsequent campaign. In this country the "nursing" begins very early, and is at once universally recognized as the preparatory step to a candidacy, prompting some such general inquiry as "What's his game?" or "What is the old man running for now?"

There is a doleful account in the *Contemporary Review*, from Mr. Eubule Evans, of the existing condition of the

government in Germany as the result of the great military triumph of 1870. Editors guilty of *lèse-majesté* are no longer allowed out on bail pending their trial. They are brought up for trial in prison dress, in heelless slippers, to prevent their running away, and with metal numbers on their breasts. *Lèse-majesté*, or *Majestätsbeleidigung*, is a queer thing. A man in Cologne last October was discussing the American Constitution. He had just returned from this country, and was eloquent in praise of our system of government, and then was going on to discuss the Kaiser, and said: "As for the Kaiser"—when he suddenly realized his danger, and stopped short. But he was overheard and denounced to the police, arrested, tried, and sentenced to three months' imprisonment for what he was evidently going to say. At Danzig, a man was called on to appraise a plaster bust of the Empress. He said it was not worth a mark. *Majestätsbeleidigung*. He was tried but acquitted. Last summer, at Bonn, a man in a pleasure party said: "What a fool that Kaiser is!" He was overheard. *Majestätsbeleidigung*. He was arrested and taken to the police station, but was able to show that he meant a man named "Kaiser."

A common mode of concealing *Majestätsbeleidigung* in conversation from the servants is to allude to the Kaiser as "Herr Müller." Speech was, in fact, freer under Louis the Great in France two hundred years ago than it is in Germany to-day under William the Wise. And it must be remembered that a great people have been brought into this condition through war. The tremendous military successes of 1866 and 1870 have turned the state into an army, turned a large portion of the talent of the country into the invention of quicker modes of killing people and destroying property, have made the writers and thinkers and debaters seem paltry fellows, who ought not to be listened to, and have converted a rather light-headed young man, who in a private station would be an unsuccessful "crank," into a terrible "war-lord," who has to be protected from even a breath of obloquy by all the terrors of penal justice. If we became a warlike military nation we should lay in a supply of *Majestätsbeleidigung* much quicker than the Germans. We should go twice as crazy over victories, because we train ourselves in excitability; and we should lock up or expel from the country people who differed from us or criticised our madness far more readily than the Germans, for a similar reason. We should soon have a young man like Mr. Roosevelt for a "war-lord," and he would keep us fighting continually and lock us up whenever we said we did not want to be killed. "Dogs," he would say to us, as Frederick the Great said to his soldiers when they shrank from a desperate charge, "do you want to live always?"

THE VENEZUELAN SURPRISE.

THE speeches in Parliament, combined with Mr. Olney's application for British assistance for our commission, show that after much trouble we have at last got back to the position in which we stood before Mr. Olney wrote his despatch on the 20th of July last—or, if any one prefers it, in which we stood before the President wrote his message on the 17th of December. A gentlemanly note, such as Mr. Bayard wrote the other day to Lord Salisbury, would have undoubtedly secured the information we are now asking for, without the alarm and loss which have since intervened. In fact, if, as we suggested in December, the President had taken the threat out of the message by a letter of pacific instruction to the newly appointed commission, the trouble might have been allayed at once.

The speeches in Parliament show clearly that there is a strong desire on both sides not to quarrel with the United States on any subject, and least of all on the Monroe Doctrine. They show, also, the great surprise which both sides have felt on hearing that the Monroe Doctrine was involved in the Venezuelan dispute. But their surprise was probably no greater than ours here. It must be remembered that the appeals of the Venezuelans to us to take part in the controversy began in 1870 and continued with little intermission down to last year. Six American secretaries answered these appeals over a period of twenty-five years, both through correspondence with Great Britain and with Venezuela, and not one of them ever suggested that Great Britain was infringing on the Monroe Doctrine. Every one of them took up the attitude of the common friend of two quarrelling Powers. The discovery that Great Britain was threatening Venezuela with a violation of the Doctrine was made suddenly by Secretary Olney immediately after his accession to office. The American public had no idea of what was impending. It is true that for nearly a year Lodge, Chandler, Frye, the *Tribune's* Old Pensioner, and one or two others, had been engaged in a sort of antiphonal caterwauling about Venezuela, but as they caterwauled in just the same way about the Nicaraguan affair and the *Alliança* incident, the general impression was that they were merely preparing the country for a Jingo Presidential canvass. Few or none imagined that the State Department was taking them seriously. Senator Lodge and the Pensioner tried to give an air of seriousness to their labors by frequently describing the true Anglo-Venezuelan boundary line in print, and the exact nature and extent of Great Britain's encroachments, but nobody paid them much attention. If Senator Lodge knew as much about the matter as he said he did, it was to him, and not to Great Britain, that the Commission should have addressed itself for "documentary proof, historical narrative, unpublished archives, and other evidence." But no-

body supposed that the State Department was paying any more heed to him than were other sensible people.

The whole affair having now got back to the region of civility and friendliness, it will do immense good if it brings home to our public the uselessness and unseemliness of what the Pensioner used to call a "vigorous foreign policy"—that is, the plan of addressing violent, menacing, if not ruffianly, despatches to foreign Powers. There is nothing in the field of international politics better established than the readiness of European Powers to put up with anything from us except direct and palpable insult or seizure of ships or territory. A quarrel with us is something from which they all shrink, because it promises no advantage and plenty of expensive fighting. Everything which has happened since Monroe's day, except the invasion of Mexico during the civil war, proves this. The stories the news agencies invent every now and then of a determination of Great Britain to assume a bellicose attitude towards us, by purchasing Cuba from Spain, or seizing Hawaii from the missionaries, are childishly silly. There is nothing which practical men in Europe view with more wonderment than our naval preparations and our apparent desire to fight somebody, because the ocean which surrounds us is in itself worth four of the largest fleets and four of the largest armies in the world. We cannot, in fact, have a quarrel except by undertaking war as an educational agency. Consequently there is no nation which needs less to vapor and threaten or crow in its diplomatic correspondence.

Our State Department might safely and ought always to illustrate to the world the majesty of moderation, the dignity of good manners. The great difficulty in the way of such a consummation is the press, which with few exceptions is apt to call for violent language in terms which shake the nerves of secretaries of state. Worse than this, it does its best to prevent the settlement of any international dispute on terms which will not hurt the foreigner's self-respect by always representing, when he meets us half way, that it was our "vigor"—that is, our insolence, abusiveness, and brutality—that brought him to terms. It is at this devil's work at this moment, by proclaiming that it was Mr. Cleveland's coarse threat which has "brought England to her knees," that it is our swagger which has drawn forth the pacific and friendly language of both the Ministry and Opposition in England, and the civil treatment accorded to our Commission; that, in short, in international affairs the ruffianly way is the more excellent way. It is impossible, when one reads this stuff, to avoid the conclusion that the widespread desire for war, the existence of which there is no denying—war with somebody, but especially with England—is largely newspaper work; and we know of nothing which reflects or has reflected

more discredit on our civilization—not slavery, not lynching, not corruption, not lawlessness. We do not believe there is anything which has during the last century done so much to discourage the believers in human progress as the revelation that "Time's noblest offspring" was as full of desire to kill and wreck, for the fun of the thing, as the savage races on the site of whose corn-patches and torture-stakes we are erecting churches and colleges.

THE FUNCTION OF DISCUSSION.

Now that the Venezuela question has, after fearful uproar, passed into the field which it should never have left, that of investigation of facts, it is time to ask who is hereafter to discuss these differences with foreign nations. There can be no doubt that our government is framed on the assumption that it will be carried on by discussion—that is, by the practice of oral or written persuasion. The President is elected by a majority vote, after prolonged discussion. Both houses of Congress are supposed to resolve and enact after discussion. The regulation of discussion has become an important art, known as parliamentary procedure, in which every American youth is proud to be versed. The duty of hearing both sides has become an elementary principle of public morality. We take pains to teach our young men in colleges the art of debate—that is, the art of producing the two views which may be taken of nearly every social and political problem. All this, too, is done not as a means of sharpening the wits, like the controversies of the Schoolmen, but as a means of preparation for action of some kind. To discussion which does not pretend to prepare for action, we give the name of "academic," and everybody who wishes to be considered practical, or a man of business, declines to engage in it. And in discussing as a preparation for action, we are following an unbroken tradition of the human race since governments were first founded. The Greeks and Romans debated on public affairs much as we do, and even the Oriental despots were apt to have an inner council, whose advice they sought, which contained men who would produce the cons as well as the pros of any undertaking on which the sovereign was inclined to enter. That very ancient and much quoted saying, that "in the multitude of counsellors there is safety," does not mean that everything that a large number of men hurrah for is sure to be wise, but that what many men have decided on, after discussion from different points of view, is likely to be a good thing to do.

The thing which our Government seemed to consider wise in December last, a challenge to a first-class Power to fight over the untraced boundary of a semi-barbarous state in a tropical wilderness, was the third most solemn and serious proposal ever made in the name of the

American people. The first was the Declaration of Independence. The second was the opening of the war for the subjugation of the South in 1861. The two former were the result of great and protracted debate. The war of independence was prepared for by about ten years' discussion; that of 1861 by about thirty years' discussion. The challenge of last December received no discussion at all. The framers of the Constitution copied many things from the European monarchies, and in some particulars made the President more powerful than the King of England. But one power possessed by all European monarchs they denied him—that of declaring war. This was something they refused to trust to any one man's judgment or caprice. They gave it to the Legislature, with the evident design of making war a debatable subject—that is, of insuring public deliberation on it before it took place. To give a power to a legislature means that it shall be exercised only through public discussion, for in no other way can a legislature act.

But, oddly enough, although the framers of the Constitution made the change, it seems never to have been fully accepted mentally by the American public. It held on, and holds on to this day, to the old monarchical idea that when the King decides to go to war, it is no business of his subjects whether he is right or wrong. All they have to do is to "stand behind him" when he is defying the foe, and to follow him to the field when hostilities have begun. In all our recent disputes with foreigners, Congress and the politicians and the *prés* have acted on this view. It found full expression in the Chilian trouble, in the Bering Sea dispute, and the other day in the Venezuelan affair. We were all expected either to keep silent when these controversies were being carried on, no matter what might be our opinion of their merits, or to take sides as vehemently as we could with our own Government. The Executive was to be allowed to occupy whatever positions it pleased, provided they were likely to promote hostilities, and our business was simply to help it to defend them. During the Chilian trouble the press, both daily and monthly, teemed with curious and absolutely novel doctrines of law and ethics, concocted solely as weapons of war. In the pending Venezuelan trouble, too, although we have seen hundreds if not thousands of newspaper comments, we cannot recall more than three or four which admitted that there was any question about the right or wrong of the matter, or that Great Britain had a leg to stand on. In fact, the vast majority of the newspapers contented themselves with roundly abusing people who thought the President ought not to fight England on a week's notice.

It is plain to be seen that under this system the relegation of the war-making power to Congress does us no good what-

ever. For all practical purposes the Constitution might as well have empowered the President to declare war for such reasons as might seem good to him, and to procure from Congress as much money as he might think necessary for the expenses of the fight. But a state of things which would entail no great inconvenience on the community under Edward III. or Henry V., when the nation was made up of small farmers, and had neither commerce nor credit, has very serious inconvenience in modern times, when every great nation has vast dealings with all others, and when, instead of hoarding gold, it relies on its credit to supply it with funds for emergencies. To such a nation no event is so grave as a war with a Power of nearly its own strength. Nothing can occur in its daily life needing so much debate. Its readiness for the contest, and the possible consequences of defeat, are among the most serious concerns of a civilized community. Instead of "standing behind" a man who proposes such a thing, and egging him on, the place of the patriot is in front of him, so as to demand a full account of his reasons. The more Congress, too, refuses or fails to discuss the situation, the more incumbent on the press is it to step into the gap and take up the neglected work of the Legislature; but it seems to be the last thing our press thinks of. What it has for the most part done during the late excitement is to "holler" that everything that anybody did which made for war was wise and good, and that whatever anybody did that made for peace was asinine, or corrupt, or English. This may be true, but such decisions should be reached through discussion—that is, after hearing what was to be said for peace. No man who advocates peace is, *ipso facto*, foolish. Peace is so earnestly desired by the bulk of men that there must always be some excuse for it which will bear stating.

A SPECIMEN SPANISH-AMERICAN REPUBLIC.

At the close of last year appeared a work, 'Il Guatamala,' by Tommaso Caivano, a Florentine lawyer who has spent many years in Central and South America, and has written several works which have had a wide circulation among Spanish-Americans. We count it timely that by the publication of this latest volume, Sig. Caivano enables us to see exactly what a Spanish-American republic is like to-day. Recent experience shows that we may be plunged without warning into difficulties, perhaps even into war, through entanglements with one or other of the sanguinary governments to the south of us; it is fortunate, therefore, that we should have put within our reach, by an intelligent and impartial foreigner, information which strips off illusions. During the past few months we have heard a great deal of effusive praise of our noble fellow-republicans in Venezuela and in

other parts of Latin America, and of condemnation for British monarchists. Let us see what one of these republics really is.

After giving a rapid history of Guatemala from the time of its conquest down to last summer, Sig. Caivano describes very clearly the various elements of population by which the destiny of the country has been determined. These elements are three in number, viz.: (1) the creoles, or pure-blooded descendants of the Spanish settlers, who now form only about 5 per cent. of the whole; (2) the *ladinos* or *mes-tizos*, half-breeds, sprung from the intermingling of the Spaniards and Indians, and numbering about 15 per cent.; (3) the Indians, virtually serfs, who make up the remaining 80 per cent. In 1821 Guatemala declared herself independent of Spain, and called herself a republic. With Salvador, Honduras, Nicaragua, and Costa Rica she formed a confederation whose character can be sufficiently inferred from the fact that she and her confederates fought 143 battles with one another in the course of twenty years. Then the league was dissolved. From 1842 to 1871 the government was in the hands of the creoles, who succeeded not only in maintaining order, but in engraving on the country some of the rudiments of civilization. But in 1871 the *ladinos*, or half-breeds, stirred up a revolution which resulted in the overthrow of the creoles, and the establishment in power of the mongrel race which still dominates Guatemala.

The champion of this race was Rufino Barrios, who soon made himself President, and remained tyrant of Guatemala, until killed by a beneficent bullet in 1885, in a fight with the Salvadorians. The atrocities committed by this human tiger equal any recorded of ancient Roman despots, or of Renaissance Eccelinos and Viscontis, or of modern Turks. He proposed to wipe out the creoles, who alone had given Guatemala a veneer of law and decency. He had hundreds of them arrested and cast into loathsome dungeons, where they were daily given fifty or a hundred lashes, until some died and others, mutilated for life, by confessing imaginary plots, implicated new victims. For his afternoon amusement, he caused many of his enemies to be publicly shot in the principal square of the capital; in three days, seventeen persons were thus destroyed. Not content with wreaking his ferocity on men, he had the wives and daughters of his enemies exposed stark naked in cages. He revived the old Spanish *mandamientos*, or decrees, which reduced the Indian population to slavery. Needless to say, he levied taxes and emptied the treasury for his personal enriching. Such was the "panther of San Marcos," as the Guatemalenses nicknamed him from his native village.

His nephew, Reina Barrios, the present President, began life as a street-sweeper; then was promoted by his uncle to superintend the flagellation of prisoners; then,

on the death of Rufino Barrios, fled the country, and was leading a dissolute life in what Sig. Caivano euphemistically calls an *appartement meublé* at Saratoga, when he was called back in 1892 to govern Guatemala. He is not charged with such inhuman crimes as his uncle, possibly because the latter's purging was so thorough as to render the creoles henceforth too weak to be persecuted; but his tyranny has been equally absolute. He makes and breaks the laws at will; he controls taxation; he grants and revokes concessions to monopolists; he sets aside the decisions of the courts. Every department of government, the judiciary, the bureaux of administration and police, are but organized blackmailing agencies; but the suitor who would be sure of satisfaction must bargain with the President himself. What a contemptible creature that President is, with his mixture of braggart and coward, Sig. Caivano describes with vivid strokes. The spectacle of the General-in-Chief of Guatemala needing a chair to mount his horse before reviewing his tattered demoralized army would draw a smile from even the fiercest Jingo.

Sig. Caivano closes his book with an account of the great "public works" which President Barrios and his satellites have been engaged in for several years in the hope of luring foreign capitalists to put more millions within their grasp. They promise before 1898 to complete a railroad between the capital and Puerto Barrios, on the Gulf of Mexico, which will bring the city of Guatemala within easy reach of tourists from the United States and Europe; but the line of this road has been surveyed through an almost impassable mountainous region, 150 miles across, which must not only make its construction enormously expensive (to the grief of the foreigners who are to provide the funds), but also preclude it from earning running expenses, should it ever be finished. At the capital, Guatemala, a city of 70,000 inhabitants, there is projected a park 368 hectares (about 1,000 acres) in extent, with artificial lakes, grottoes, and fountains, besides drives and walks, shrubberies, gardens, and a race-course; the whole connected with the town by a magnificent boulevard two miles and three-quarters long. In the city itself a grand hotel, with 300 splendid suites of rooms, a theatre, baths, etc., etc., is to make the astonished millionaire tourists of the United States and Europe forget Paris and New York. The ulterior motive of these grandiose schemers is to establish a gambling hell which shall eclipse that of Monte Carlo.

Sig. Caivano ironically contrasts this project, designed to dazzle foreign lenders of money, with the squalor and filth of Guatemala itself—a town which has no sewers nor drainage and very few cess-pools; which depends solely upon thousands of *zopilotes*, or buzzards, to rid it of the carrion, garbage, and ordure heaped in the streets and courtyards; a town in

which typhus fever and smallpox are endemic, and where assassins and robbers make going out after dark unsafe; a town where most of the houses are only one story high, and correspondingly primitive in their internal arrangements. This is the place which Barrios plans to transform into a resort for the rich, the fastidious, and the dissipated pleasure-seekers of two continents!

We have left no space for speaking of the other subjects which Sig. Caivano treats of, such as the beauty of the scenery, the manners and customs of the people, the difficulties of travel, the oppression of the Indians, etc., etc. He is an observant traveller and an entertaining writer; but at the present crisis his great merit, as we have remarked, lies in his furnishing us with a truthful picture of a Spanish-American government. Volumes of Jingo rhodomontade over "our sister republics" are powerless against a page of his facts. His book, which has recently been issued in Italian and in Spanish, ought to be translated into English, and widely read by those of our people who want to know what sort of cattle our Government is asked by the perverters of the Monroe Doctrine to go to war for.

THE REAL CONQUESTS OF SCIENCE.

THE extraordinary rapidity with which the Röntgen discovery has been taken up in a thousand laboratories all over the world, and eagerly tested in its various applications and possibilities, is one of the most striking things about it. It has clearly set the scientific as well as the popular imagination on fire. The routine work of hundreds of trained observers and experimenters has been dropped, and they are giving their days and nights to ardent exploration of the apparently illimitable new province opened before them in industry and medicine, as well as in higher physical theory.

By the very existence of so great a body of scientific minute-men, ready for skilled service in any quarter on short notice, we are enabled to measure the assured march and achievements of science. Its thorough organization and its successful use of the coöperative method now give to every new discovery the certainty of speedy investigation by expert hands, unlooked-for extensions, and the widest application. This goes far to make up for the dying out of great all-round naturalists. One of the addresses before the Ipswich meeting of the British Association lamented the disappearance of the type of scientific mind like Darwin's or Dana's, which, in addition to special researches and distinction in some branch or branches, possesses wide-ranging knowledge and enormous power of generalization. But many smaller minds intelligently coöperating can do the work of one great mind. It is as if the brain-cells were simply scattered through many heads, instead of being housed in a single skull. In this way

science holds her attainments and makes the future secure. The present revelation of the powerful and flexible instrument which she has at her disposal in the shape of trained investigators in all civilized lands, waiting only for a hint in order to surprise the world with new secrets of nature, must dispel all doubts of the permanency of scientific enthusiasm and of the services of science to mankind.

But vast as the practical benefits of the Röntgen photography promise to be, we are inclined to rate their indirect and what may be called their theoretic benefits higher. We mean their effect on the general attitude towards science and scientific methods. Utilitarian science is enormously valuable, is indispensable, but the scientific temper—the fronting of the universe with the calmness, the sobriety, the honesty of a scientific experimenter—is the great thing to aim at, and the utility of science is most useful when it promotes this. Leslie Stephen says with great truth and force:

"We may denounce, and very rightly, those coarse forms of utilitarianism which imply an excessive love of mere material advantages; but it is not to be forgotten that the prestige acquired by modern science depends in great measure upon its application to purposes of direct utility. Railways and telegraphs are not everything. Most true! but the prospect of bringing the ordinary creeds of mankind into harmony with scientific conclusions depends, in no small degree, upon the general respect for men of science; and that respect, again, depends materially upon the fact that men of science can point to such tangible results as railroads and telegraphs. We need not fear to admit that, if there is a greater chance now than formerly of the ablest intellects acquiring a definite supremacy, and resisting the constant tendency of mankind to lapse into superstition, it is in great degree because such conquests over the material world can be appreciated even by the ignorant, and reflect credit upon that system of thought with which they are associated."

It is this increasing power of science over the general imagination, this unperceived but sweeping change in the mental attitude of whole nations wrought by it, which makes it the great solvent and conqueror that it is. Its kingdom cometh without observation. There are no violent cataclysms, no fierce struggles, no one deadly contest from which dates a new way of looking at the world. By insensible gradations, by subconscious mental processes, the old passes away and the new is ushered in. Historians note with surprise, at one interval after another, that persistent superstitions lose their power—now the belief in witchcraft, now in the royal touch. Definite causes for their abandonment cannot be assigned; they seem silently to drop to the bottom of the stream of thought, by their own weight. All we know is, that one generation trembles before them, the next one flouts them. Such subtle changes it is the peculiar province of science to bring about; and the secondary effects in this direction of every great quickening of the life and imagination of science, like the happy accident of Prof. Röntgen, are certain to be great.

Dr. Johnson used to maintain in his

fine regal way that the study of external nature could never be "the great and frequent business of the human mind." The "moral and religious discrimination of right and wrong" was the great affair; and he had characteristic words of contempt for those troublesome "innovators" of his own day who thought that the growth of plants or the motions of the stars had anything to do with education. Futile and barren enough has that position been made by the flight of a hundred years. The discriminators between right and wrong are just about where they were in Johnson's time—except as social evolution and scientific advance have opened up entire kingdoms of morals then unknown. But the "innovators" have gone on watching plant and star, interrogating the heavens above and the earth beneath, until the whole material condition and mental outlook of the race has been changed.

We are far from asserting that all is now clear sailing. The stubborn power of ignorance to wrest every new scientific scripture to its own destruction is already beginning to display itself in connection with the wonderful Röntgen discovery. Quack doctors are quick to say, "Aha, this shows that our electric rings and mesmeric belts and psychic brushes and combs are just what we claim them to be." The mysterious cathode rays, invisible but powerful, will doubtless renew the faith of many a despairing brother who carries a potato in his pocket for rheumatism. What the theological apologists will argue from the apparent need of readjusting the theory of light, those of our readers who are skilled in their methods of reasoning can guess. The Mosaic authorship of the Pentateuch, the reasonableness of prayer for rain, the duty of instantly subscribing both to the creed and for the religious weekly of the able editor making the argument, will be among the very least of the things conclusively proved by the new photography. But even this folly, with which the gods themselves contend in vain, must yield in the end to the slow attrition of time, to the steady blowing of the wind by which science at last clears the densest minds of fog.

CONDÉ AND THE REVOCATION OF THE EDICT OF NANTES.

PARIS, January 29, 1896.

THE Duke d'Aumale has brought to the end he had marked for himself the 'History of the Princes de Condé.' He can say now his "Exegi monumentum." The last volume of his great work is quite worthy of the great hero whose actions he has taken so much trouble to describe minutely, and whom he represents spending the last years of a troubled life in the calm of Chantilly. It will interest all those who have visited Chantilly to read the pages descriptive of the life of the Prince de Condé ("le héros," as he was called by Mme. de Sévigné) in his splendid retreat.

There is a chapter which gives quite unknown details about Condé's conduct during the period of the revocation of the Edict of

Nantes. Speaking of this year 1685, which was marked by several considerable events in the life of Condé (the death of Cardinal de Retz, to whom Condé had become attached, the death of La Rochefoucauld, the death of Guitant, his great friend), the Duke d'Aumale adds:

"Why must this year also have been one of the shameful dates in the history of France and have witnessed a real mutilation of our country? The work of Henri IV. and of Richelieu was sacrificed to the scruples of a narrow and blind conscience, to the abstract conception of a power without limits, to the passion for uniformity which (even to our day) has always been confounded with unity by French minds; source of errors and of faults! Certain modern schools have preserved the brutal traditions of Louvois, the pitiless leveller. How many industries ceased to flourish! Some disappeared for ever; and it is by hundreds of thousands that we must reckon the Frenchmen, and some of the best among them, who were ruined, dispersed, destroyed! There are wounds which never heal."

The Duke d'Aumale found in his rich archives the letters of two regular correspondents of the Prince de Condé, who gave him exact accounts of what was going on, one in the west of France, the other in the south. Already in 1682—three years, therefore, before the final revocation of the Edict of Toleration—the intendants in the west were trying to put an end to the Reformed churches. M. de Morin, one of the correspondents, who writes from Poitou, tells of nothing but of churches shut, ministers arrested, women thrown into prison. Already all the inhabitants of Sables d'Olonne have emigrated; others are hindered by force from emigrating, and obliged to undergo conversion. Condé had among his friends a M. de Lussan, who had been wounded by his side in the wars; a brave officer, but an intolerant Catholic. Lussan is delighted when the dragoons are sent against the Protestants and lodged in their houses, "where they are the masters as in time of war." He writes to Condé in 1683: "Now is the time to finish these wretches and to destroy completely these Huguenots and their religion; the ministers think of nothing but flight, and their churches will be razed to the ground." From Languedoc Mlle. de Portès, a relation of Condé, writes to him that she is alarmed—the Huguenots are preparing for a struggle. But she is soon reassured; the times are past when Rohan conducted a long war in that province. Mlle. de Portès announces in later letters that Vivarais, one of the old strongholds of the Protestants, has made a complete submission.

The Edict of Revocation is proclaimed; its effects are terrific. Gourville, the old and sceptical friend of Condé, writes to him: "The Huguenots of Montpellier and of the diocese have been converted in a body; in three weeks there will not be a single Huguenot in Languedoc." The Prince receives similar news from Alais, from the Cévennes, from Sancerre, once an impregnable citadel of the Reformation. The Bishop of Autun writes to Condé that in Burgundy the conversions take place without the help of the dragoons; there is, however, here and there, some resistance. "No progress has been made with M. de Jaucourt (the Jaucourts have remained Protestants to this day), nor with Madame de Saint André Montbrun. This lady has declared that, at the age of seventy-two, people cannot change their religion." From Rouen, Condé received many letters from a certain Father Tixier, a Benedictine charged with the mission of caring for the last of the Longuevilles, who had lost his reason and who was living in the Abbey of Saint-Georges at Bocheville, near Rouen. Condé

was the uncle and guardian of this unfortunate young man. The letters which Father Tixier wrote regularly to Condé are, says the Duke d'Aumale, "more striking in their severe simplicity than the passionate accounts of the Protestants. Full of facts, free from declamation, they form a crushing indictment against the revocation of the Edict of Nantes." Father Tixier is perfectly sincere and truthful. He writes, for instance, that a poor shopkeeper of Rouen, who had to quarter and feed in his house four cuirassiers in order that the fear of ruin might induce him to be converted, said: "My life, as well as my fortune, belongs to the King; my conscience belongs to God." Father Tixier says also: "The new converts are greater Huguenots than they were before." Many poor people, frightened at first, became converted, but, after a while, torn with remorse, they forsook the mass and returned to the *prêche*; then they were proclaimed *relaps* and prosecuted, and if, on their death bed, they refused the sacraments, their property was confiscated.

It is easy to imagine what effect such incidents produced on the mind of Condé; he could not forget that his ancestors had been, in the heroic times of the Reformation, the great military leaders of the Huguenots, and that some of them had died for their cause on the battlefield. His father, to be sure, had been brought up a Catholic, and, after having for a time given some hopes to the Protestants, had finally turned against them with all the violence of a convert, had become their avowed enemy, the personal adversary of the Duke de Rohan, the last great military leader of the Huguenots. But Condé had never espoused the fervor of his father; he had been notorious in his youth for his infidelity; he had surrounded himself in his earlier years with men who were called *libertins*. Many of these had died in the wars; when Condé came back to Chantilly he kept in his household those who had survived. He had around him a number of gentlemen and domestics who were Protestants, and they lived in harmony and on a footing of perfect equality with the Jesuits whom Condé's father had established in Chantilly. The Edict of Revocation, therefore, touched Condé personally. He was eminently tolerant, whether deriving his tolerance from old traditions or from his philosophical views. He had studied Spinoza, he was a philosopher; he could not bring himself to obey the tyrannical proscriptions of the edict. He remained passive, and took no measures against the Protestants established for a long time in the barony of Montmorency, nor against those of Villiers-le-Bel and Écouen. An old servant at Chantilly, named Lafont, could not be induced to change his religion. He was at the time with his family at Verneuil. We read in a letter addressed to the Prince: "They put the grenadiers in his house; so he determined to follow M. de Verneuil to the chapel. He knelt before the altar; the curate read him the formula of what he had to believe; he rose without saying a word. The grenadiers left his house, and he returned to Chantilly." This conversion seemed a little summary, but Condé, judging that Lafont had conformed to the edict, ordered that he should be let alone.

We find, in the Duke d'Aumale's book, many dramatic episodes of the terrible persecution. We see, for instance, how much interest Condé took in the case of an old client of his house, M. de Morin, the son of a president of the Parlement of Guyenne, and of his brother, a councillor of the *chambre de l'Édit* at the same Parlement. The Councillor, having re-

solved not to renounce his religion, he hid himself in Paris; his wife found an asylum in the château of Chantilly. Morin had a child, whom he thought well hidden with him; but his son was taken from him, as the edict did not allow the obstinate Huguenots to keep their children. With much difficulty, Morin succeeded in having his child placed in the house of his tutor, M. de Mondion. He himself departed for Neuchâtel, where he was recommended by Condé to the authorities.

"Let us not forget," says the Duke d'Aumale, "that when Condé gave to Morin and to others the means of crossing the frontier of the kingdom, when he assured them by his recommendations an asylum in foreign parts as well as a livelihood, he performed an act of courageous humanity, an infraction of the orders of the King, which he was accustomed to respect so scrupulously; for the severest punishments were decreed against Huguenots who should attempt to fly, or those who should favor their flight. It was later that the King relaxed his severity on this point and tolerated the departure of so many unfortunates for whom the kingdom had been transformed into a prison; and then began the fatal exodus which deprived the country of so many good citizens, and filled foreign countries with irreconcilable enemies of France."

Morin did not remain long at Neuchâtel; he left for Holland, where the French Protestants had begun to group themselves round the Prince of Orange. They recognized as a sort of a chief a son of La Force, the marquis who had, many years before, followed Condé in exile and had never returned to France. In Holland, Morin continued to receive a pension from Condé.

Louis XIV. allowed only one Huguenot to leave France with a passport; it was the Marquis de Ruigny, who had long been the deputy-general of the Reformed churches of France at the court, a sort of ambassador near the King. Ruigny had played a great part in the times of the troubles, and was personally liked by the King, but he refused to conform to the Edict of Revocation. Before leaving France, Ruigny wished to give to Condé a public mark of his deference and of the gratitude of the Protestants who had experienced his kindness and his tolerance. He asked permission to stop on his way to exile at Chantilly with his family, and he spent there a day and a night. Ruigny recommended the Huguenots to Condé before departing. He was to see him no more; Condé was old, broken by the gout, and already thinking of putting "an interval between life and death," and meditating how he should make his own conversion before dying. He had never been in the habit of receiving the communion, he was what we to-day should call a free-thinker. The Jesuits who lived in his house had been carefully chosen among the most cultured and refined men of the order; they were treated as friends by Condé—they were not his spiritual guides. Nothing can be more interesting, for those who wish to penetrate the depths of the human soul, than the final chapter in which the Duke d'Aumale tells us in what manner Condé prepared himself for his latter end: what thoughts engaged him, what were his preoccupations before leaving the stage which he had filled with so much glory, and on which he had led such a checkered life.

Correspondence.

JEFFERSON'S DRAFTS OF THE KENTUCKY RESOLUTIONS OF 1798.

TO THE EDITOR OF THE NATION:

SIR: There is a certain absurdity in imagin-

ing that anything material on the doctrine of nullification can still be added to the elaborate discussions of nearly one hundred years, after the entire disappearance of the question as one of practical value in our politics. Yet in the whole of these discussions, both political and historical, no mention has been made of Jefferson's first or rough draft of the Kentucky Resolutions, though it throws important light on the completed fair copy so frequently quoted, and also on the resolutions as adopted by the Kentucky Legislature. There is a story to the effect that a minister troubled his deacons by unguarded speeches, and was accordingly waited on by them, with the request that he would be more careful. "Oh, brethren," he replied, "if you only knew what I didn't say!" What Jefferson said in his first draft and omitted in his second seems to me important if not essential.

In the first clause, after the claim—

"That to this compact each state acceded as a state, and is an integral party, its co-states forming, as to itself, the other party"—

Jefferson wrote the following clause, which he struck out in the rough draft:

"That the constitutional form of action for this commonwealth as a party with respect to any other party is by its organized powers & not by its citizens in a body."

Equally illustrating Jefferson's temporary want of faith in the people was an alteration in the eighth section; and how far his cooler judgment toned down the threat is most interesting in the comparison:

[ERASED CLAUSE.]

"But that however confident at other times this commonwealth would have been in the deliberate judgment of the co states and that but one opinion would be entertained on the unjustifiable character of the acts herein specified, yet it cannot be insensible that circumstances do exist, & that passions are at this time afloat which may give a bias to the judgment to be pronounced on this subject, that times of passion are peculiarly those when precedents of wrong are yielded to with the least caution, when encroachments of powers are most usually made & principles are least watched. That whether the coincidence of the occasion & the encroachment in the present case has been from accident or design, the right of the commonwealth to the government of itself in cases not [illegible] parted with, is too vitally important to be yielded from temporary or secondary considerations: that a fixed determination therefore to retain it, requires us in candor and without reserve to declare & to warn our co-states that considering the said acts to be so palpably against the constitution as to amount to an undisguised declaration that that compact is not meant to be the measure of the powers of the general gov-

[SUBSTITUTE CLAUSE.]

"But that they [the co states] will concur with this comm. in considering the said acts so palpably against the const. as to amount to an undisguised declatn. that that compact is not meant to be the measure of the powers of the genl. govt., but that it will proceed in the exercise over these states of all powers whatsoever, that they will view this as seizing the rights of the states & consolidating them in the hands of the genl. govt. with power assumed to bind the states (not merely in the cases made federal) but in all cases whatsoever, by laws made not with their consent but by others against their consent, that this would be to surrender the form of govt. we have chosen & to live under one deriving its powers from its own will and not from our authority, and that the co-states recurring to their natural right in cases not made federal will concur in declaring these acts void and of no force, & will each take measures of its own providing that neither these acts nor any others of the government not plainly and intentionally authorized by the country to the genl. govt. shall be exercised within their respective territories."

ernment, but that it is to proceed in the exercise over these states of any & all powers whatever, considering this as seizing the rights of the states & consolidating them in the hands of the general government, with power to bind the states (not merely in the cases made federal [*casus federalis*] but) in all cases whatsoever by laws not made with their consent, but by other states against their consent; considering all the consequences as nothing in comparison with that of yielding the form of government we have chosen & of living under one (*struck out*) deriving its powers from its own will and not from our authority, this commonwealth, as an integral party, does in that case protest against such opinions and exercises of undelegated & unauthorized power, and does declare that recurring to its natural right of judging & acting for itself, it will be constrained to take care of itself, & to provide by measures of its own that no power not plainly & intentionally delegated by the constitution to the general government, shall be exercised within the territory of this commonwealth."

These are the only material differences between the rough draft and the fair copy; but while on this subject, I wish to call attention to one hitherto unnoted fact. In the two Jefferson drafts the words "nullification" and "nullify" each occur once, close together, being the earliest-known use of the words in the political sense in which they were afterwards employed. The resolutions as voted by the Kentucky Legislature omitted these words, and only by the use of the word "nullification" in the supplementary resolutions of 1799 did that word pass into political literature. Many historians (Henry Adams, 'History of U. S.' i., 205; Schouler, i., 424; McMaster, ii., 422; and Hildreth, v., 275) state that this was a tempering of Jefferson's extreme plan of action by the more moderate legislative body, and Von Holst (i., 149) goes even further, stating:

"That Jefferson was not only an advocate, but the father, of the doctrine of nullification, is thus well established. It may be that Nicholas secured his assent to the striking out of these sentences, but no fact has as yet been discovered in support of this assumption. Still less is there any positive ground for the allegation that Jefferson had begun to doubt the position he had assumed. Various passages in his later letters point decidedly to the very opposite conclusion."

How far the "fair copy" on which these various writers based their statements was fair evidence always seemed to me questionable, since the mere existence of the paper in the Jefferson manuscripts was proof positive that it was not the copy given by Jefferson to Nicholas. Fortunately I have discovered a brief note from Jefferson to Nicholas, written after the resolutions had been put into his hands, to the following effect:

"The more I have reflected on the phrase in the paper you shewed me, the more strongly I think it should be altered. Suppose you were instead of the invitation to cooperate in the annulment of the acts, to make it an invitation 'to concur with this commonwealth in declaring, as it does hereby declare, that the said acts are, and were ab initio, null, void and of no force, or effect.' I should like it better. Health, happiness, and Adieu."

As the word "annulment" occurs nowhere in the Jefferson drafts, it is obvious that the striking out of the word "nullification" was done at Jefferson's request, and from the manner in which Nicholas utilized the suggested change, the inference is strong that the copy of the resolutions he had received from their author was radically different from the fair copy which has been so often quoted as representing Jefferson's final opinion.

PAUL LEICESTER FORD.

THE FACULTY OF THE UNIVERSITY OF HALLE.

TO THE EDITOR OF THE NATION:

SIR: The notice of the last livraison of Pauly's 'Real-Encyclopädie' in a recent number of the *Nation* assigns its editor-in-chief, Prof. Georg Wissowa, to the University of Marburg. It may be of interest to some of your readers to know that this eminent scholar and interesting lecturer has succeeded the late Prof. Kell at the University of Halle-Wittenberg, entering upon his duties last October. His accession to the faculty of Halle makes its corps of classical instructors again one of the strongest in Germany. The transfer of Prof. Blass from Kiel, a few years ago, and this latest appointment shows that it is the intention of the Prussian Ministry of Instruction to maintain at Halle the noble traditions that have made it one of the most notable centres of classical scholarship in Germany. Blass, Dittenberger, and Wissowa in classical philology, Robert in archaeology, Pischel in Sanskrit, and Eduard Meyer in ancient history, not to speak of the able younger men, are names that are sure to allure an increasing number of American students, especially those who wish to avoid the crowds of Americans, too often on pleasure rather than on study bent, who throng the lecture-halls and the *pensions* of the larger cities.

EDWARD CAPPS.

CHICAGO, February 10, 1896.

THE FIRST UNITARIAN CHURCH IN AMERICA.

TO THE EDITOR OF THE NATION:

SIR: Permit me to question a statement in the sketch of Dr. Furness in your issue of February 6, in which his church in Philadelphia, dating from 1796, is spoken of as "the first organized as such [Unitarian] in the United States." In the Unitarian church at Northumberland, Pa., of which I was for four years the pastor, there is a mural tablet to Dr. Priestley which states that the church was founded by him in 1794. The only point in question, for the settlement of which I believe no documents are extant, is whether it was organized "as a Unitarian Church." But when we remember that Priestley had already adopted the name, and that he was refused recognition by the other clergymen of Northumberland and the neighborhood, there would seem to be little room for doubt that the church he founded there in 1794 was a Unitarian church in name as well as in fact.

Respectfully yours,
EASTPORT, ME.

H. D. C.

[Our correspondent's inference seems to be valid. It is certainly an interesting fact that, whether in Northumberland or in Philadelphia, the first Unitarian church organized as such in America was organized by Dr. Priestley, the leading English Unitarian of the eighteenth century.—ED. NATION.]

THE AMERICAN SCHOOL IN ROME.

TO THE EDITOR OF THE NATION:

SIR: Permit me, through your columns, to correct an error that may otherwise lead to misapprehensions touching the resources of the new American School in Rome. In my just-printed annual report, for the sake of expressing my appreciation of the School and of com-

mending it to the public-spirited as deserving the most liberal pecuniary support, I referred to its organization and projected work. In reproducing, however, certain statements from a document issued by the Archaeological Institute of America, I inadvertently credited the Institute with two or three appropriations to the School in Rome when they had really been made to the School in Athens. I find no excuse for the oversight except that of inevitable haste at the time I wrote, and the fact that the school last named in the original document before the statements quoted was "the newly founded American School of Classical Studies in Rome." While I much regret the slip, it is with some sense of relief that I remember that this correction is likely to reach many hundreds more than the error, and that to all of these it will carry one more endorsement and commendation of a most worthy enterprise projected for the improvement of American scholarship.—Yours respectfully,

WILLIAM F. WARREN.

BOSTON UNIVERSITY, February 12, 1896.

"HIRED MAN."

TO THE EDITOR OF THE NATION:

SIR: Little as the fact of rendering service is thought to be derogatory, we often find it needful, in order that our fellow-sovereigns may live in perfect charity with us, to be particular how we style a person by whom service is rendered. Americans at large acquiescing, the *servant-man*, accompanied by his old-fashioned *master*, if he has not indeed gone the way of the dodo and the *dinotherium*, has, at least, retired on indefinite leave of absence, his substitute in office being the *hired man*.

Of this expression, a strange seeming one, its meaning considered, what is the history? Ordinarily, I believe, it is regarded as a euphemism; and such it now is, unquestionably. It appears, however, to have been, with us, originally, something quite different. Our cis-atlantic forefathers, even in the days when they were British subjects, had their *hired men*; and the following passage, extracted from a dissertation written in Pennsylvania in 1751, shows who were formerly thus designated:

"Why, then, will America purchase slaves? Because slaves may be kept as long as a man pleases, or has occasion for their labour; while *hired men* are continually leaving their master (often in the midst of his business) and setting up for themselves."

Male slaves being *unhired men*, the term *hired men*, if we bear in mind the circumstances under which it was employed, was strictly appropriate as distinguishing labourers or domestics who were not slaves. *Servant-men*, in its stead, since the appellation would have comprehended *bondmen*, would have failed in preciseness of description.

Was it the custom, prior to the War of Independence, to speak of *hired women*, *hired boys*, and *hired maids* or *girls*, as well as of *hired men*? Presumably it was. The point could be ascertained by turning over old records.

Our colonial grandfathers of course stressed the first syllable in *hired man*, while we make the phrase, in its altered acceptation, a spondee. And in so doing we observe analogy. Witness, for instance, *black-sheep*, 'reprobate,' like which we should, moreover, supplying a hyphen, write *hired-man*.

The quotation given above is taken from the volume of the *Annual Register* for 1760.

F. H.

MARLBOROUGH, ENGLAND, February 5, 1896.

HEINE'S SOLITUDE.

TO THE EDITOR OF THE NATION:

SIR: Your mention, among the autograph letters in the British Museum, of Washington's letter to the Earl of Buchan—it is in the first case to the left, as you enter from the Grenville Library—reminds me of another letter in the same collection written by Heine from Boulogne, under date of July 15, 1834; it is characteristic: "Depuis 10 jours je suis ici, jouissant d'une parfaite solitude, car je suis entouré de la mer, de bois, et d'Anglais, qui sont aussi muet que le bois—je ne veux pas dire aussi *hölzern*."—Yours very truly,

ROBERT H. MARR.

NEW ORLEANS, February 11, 1896.

Notes.

WHITE'S 'Natural History of Selborne' is to be edited, with an introduction and notes, by Prof. Edward S. Morse, for Ginn & Co.'s "Classics for Children" series.

D. C. Heath & Co., Boston, have nearly ready a translation, by Will S. Monroe, of Comenius's 'School of Infancy,' with portrait, introduction, notes, and bibliography.

Macmillan & Co. announce 'Art and Humanity in Homer,' by Prof. Wm. Cranston Lawton; a translation, by Dr. Alexander Bruce, of Thoma's 'Text-book of General Pathology and Pathological Anatomy'; and a collection of the traditional hymns of the Ancient Gaelic Church in Scotland, by Alexander Carmichael.

Henry Holt & Co. announce for speedy issue 'On Parody,' an essay on the art, with humorous selections from its masters, beginning with the Greeks and Romans, by Arthur Shadwell Martin.

Roberts Bros. have ready for immediate issue No. 3 of Prof. Todd's "Columbian Knowledge Series," entitled 'A Hand-book of Arctic Discoveries,' by Gen. A. W. Greely, U. S. Army, a compact volume, exhibiting such accomplished results as may answer the inquiries of the busy man who often wishes to know what, when, and where rather than how. Maps and bibliographies have not been neglected.

The first century of the French Institute is to be commemorated by Count de Franqueville, a member of that body, in two quarto volumes of elegant manufacture, 'Le Premier Siècle de l'Institut de France: 25 Octobre 1795-1895' (Paris: J. Rothschild; New York: Lemcke & Büchner). The history and biography of the Institute and its titular members form one division; in the second a like service is performed for the "membres libres," the foreign and non-resident associates, correspondents, etc., and it will contain lists of foundations, prizes, and the like. Rubricated initials and an abundance of photographic illustrations in the text adorn and elucidate the narrative.

The panorama of the year is unrolled as usual in the bound volume of *Harper's Weekly* for 1895. The war between China and Japan determines the illustrations at the beginning; the menace of war on account of Venezuela, at the end. Between these events comes the unlucky death of Secretary Gresham, whose portrait is succeeded by that of Secretary Olney, President Cleveland's *âme damnée* so far as we can now judge. This change of officers is certainly the most momentous event recorded in the *Weekly*, beside which the reversal of the income-tax decision counts for the merest trifle. There is a page of portraits of new

United States Senators, a choice assortment. For the rest, we pass in review the Lexow Committee, the Brooklyn strike, the grand combination Astor-Lenox-Tilden library of New York, the Boston Public and the Congressional Libraries with their respective decorations, the city shows, the yacht races, the Atlanta Exposition. Mr. Weyman's 'Red Cockade' is the chief serial, but the illustrations to Mr. Bangs's 'House-boat on the Styx' can be studied only here at their original scale and with full enjoyment of Mr. Newell's cleverness.

The twenty-eighth volume of *Harper's Bazar* furnishes data enough, with its bewildering array of feminine costumes, for the expert in such things to calculate the curve which sleeves and skirts are now following. From such mysteries we refrain, to note only the less technical contents: serial fiction provided by Maarten Maartens, Mrs. Rebecca Harding Davis, and Mr. Howells; notes on contemporary music; reproductions of contemporary art, with an occasional harking back to Gainsborough or Sir Joshua for types of female loveliness; "T. W. H.'s" column, "Women and Men," running through the year and covering things literary and moral in Mr. Higginson's well known style.

Mr. William Woodville Rockhill, the newly appointed First Assistant Secretary of State and one of the most distinguished of living Asiatic travellers, has given us an account of his second journey to Tibet, in the form of a 'Diary of a Journey through Mongolia and Tibet,' published by the Smithsonian Institution. The bulky volume will be of much value and interest to specialists, as the author, who speaks both Chinese and Tibetan, had great advantages over any rivals in the same region, and knew how to make the most of them. The public, however, will find the mass of uncouth names and minute geographical information rather formidable, and be more inclined to admire than to read. Although Mr. Rockhill did not succeed in following out his original plan of pushing through to India, but, like so many others, was forced to turn back, he went over much new ground, and has added materially to our knowledge of one of the least explored countries in the world.

'The Fifth Army Corps,' by Lieut.-Col. W. H. Powell, 11th U. S. Infantry (G. P. Putnam's Sons), is a book sure to be very attractive to the veterans of the civil war who were members of that corps organization in the Army of the Potomac. For the general reader, who naturally thinks that in a stout octavo he should find a complete history of the campaigns mentioned, it has the defect of being limited to the standpoint of a minor fraction of the army in Virginia. A more serious fault is that the author, in his laudation of McClellan as a commander, pays no attention to the definite criticisms of that general's campaigns which are based on the fuller knowledge gained since 1862, and especially upon the established fact that his army was greatly superior in numbers and equipment to the Confederates. He also shows a confusion of ideas with regard to the relations of the President, the Cabinet, and Congress to the army which is simply astonishing.

The importance of the aid of photography in modern science-teaching is admirably illustrated in 'An Atlas of the Fertilization and Karyokinesis of the Ovum,' by Edmund B. Wilson, Ph.D., with the coöperation of Edward Leaming, M.D. (New York: For the Columbia University Press by Macmillan & Co.). Subjects beyond the reach of any but the most ex-

pert microscopists and the best of apparatus are shown as they appeared in the most perfect results of long continued observations and in the most successful of many attempts at representation. The atlas exhibits forty stages, in maturation, fertilization, and cleavage, to the Blastula of sixteen cells, photographed directly from sections of minute eggs. The figures set forth the phenomena exactly as seen by original investigators, and are sufficiently numerous to trace the courses of reasoning by which accepted conclusions have been attained. The many diagrammatic figures corresponding to the phototypes reduce necessary textual explanations to the smallest compass. The technical terms are clearly defined. In the second part—that is, the Atlas proper—the natural order has been followed, but in the general introduction the sequence is fertilization, cleavage, maturation, and "fertilization, the cycle completed." This arrangement presents no difficulty for an embryologist, but in the case of a student beginning the study it leads to confusion which has no compensating excuse for its existence. It is a slight blemish in a work which in general is well adapted to the purpose for which it was constructed. The Atlas is worthy of a good reception.

To persons desiring a moderately comprehensive knowledge of animal life below the vertebrates, to teachers of high or grammar schools, or of such courses in zoölogy as do not include exhaustive special investigations, and to students under such instructors, Arthur E. Shipley's 'Zoölogy of the Invertebrata' (London: Black; New York: Macmillan) has much to recommend it. The material has been carefully selected, the arrangement is good, the text is clear and concise, and the abundant illustrations are of excellent quality. The author has laid particular stress on morphology, rather than on histology, embryology, or natural history. He has chosen an example of each of the larger groups, one typifying the whole group, for dissection, illustration, and discussion, and also has given special prominence to intermediate forms which by their affinities are placed between the larger groups. Absence of bibliographical references, commonly so numerous, and of the multitudinous footnotes ordinarily complicating the text and perplexing the inexperienced student, renders the matter more easy to grasp, and really makes the pages more attractive for the classes it is intended to reach. A work better suited to the needs of those for whom it was prepared is not easily found.

We are in the midst of an active period of production of German dictionaries. The fourth edition of Flügel's 'Universal English-German and German-English Dictionary' is only four years old, but already we have a namesake rival, Flügel-Schmidt-Tanger's 'Dictionary of the English and German Language for Home and School,' "with special reference" to the foregoing (Brunswick: George Westermann; New York: Lemcke & Büchner). The superficial differences are Flügel's three volumes as against the triumvirate's two, and fine and open type respectively. In this latter particular the newcomer should be decidedly welcomed. The gain in space lies in the English-German portion, and as this will be much less used than the German-English by an English-speaking buyer, he will be apt to prefer the triumvirate's one volume to Flügel's two. It is but fair to add, however, that the literary features of Flügel's English-German section, as shown in the illustrative quotations from a wide range of English sources, are wholly wanting in the newer work. Between the

German-English portions it is hard to choose, and we can only counsel the procuring of both if one's means permit. Neither deals at all in etymologies.

Whatever be here the choice, the more scholarly and philological dictionary-seeker will, on examination, decidedly wish to own also the new 'Deutsches Wörterbuch' of Prof. Hermann Paul, of which the first instalment (A—Gebühr) is to hand (Halle: Max Niemeyer; New York: Lemcke & Büchner). Its plan is sufficiently novel. It does not aim to furnish an exhaustive vocabulary or a complete series of definitions. It deals with the speech of the present day, and with the older only by way of comparison, to show the significant departures from classic usage in the eighteenth century and from the Biblical. Hence the references are principally to Goethe, Klopstock, Lessing, Luther, Pestalozzi, and Wieland. Take the word *billig* for an example of the author's treatment. He notes its MHG form of *billich*, and the prolongation of the ending *ch* into the seventeenth century; its root *bil-*; its synonymy with *recht*, but with an aspect not towards statutes but towards natural perception of right; its sense of 'cheap' ('not dearer than it should be'), originating in the last century. In this brief exposition there is a single (proverbial) illustration. *Ein* is discussed in two pages. The work will be complete in October. It is, as German books go, clearly printed in a handsome Gothic letter, but it would have been an immense condescension to a foreigner if the phrases and examples had been picked out (as in Heyne) in Roman characters. It will, however, find a ready welcome as it is.

Velhagen & Klasing, well known for their excellent series of popular illustrated books, have undertaken one of artists' monographs, the purpose of which is to give in popular form a scholarly history of classic and modern art. The series is under the direction of Prof. H. Knackfuss, author of the excellent 'Deutsche Kunstgeschichte' published by the same firm, and he has written many of the monographs himself. Thus far the series contains volumes on Raphael, Rubens, Rembrandt, Michelangelo, Dürer, Velasquez, Menzel, Teniers, A. v. Werner, Knaus, Murillo. They are all printed on good paper, handsomely bound, and, although arranged in a series, each volume is complete in itself. The price ranges from two to three marks, but a *Prachtausgabe*, limited to 100 copies and numbered, has been provided at twenty marks per volume. The volumes on Menzel, by Knackfuss, and on Werner, by Adolf Rosenberg, lie before us, and are indeed very attractive. They contain about 130 pages each, and the former has 141 reproductions from paintings and drawings, while the latter is ornamented with 125. Those from paintings cannot fail to be pleasing to every eye; those from drawings and from studies have a special value for artists.

Signor Angelo Lupatelli's 'Storia della Pittura in Perugia' (Foligno: F. Campitelli) will be of service to such students as have no access to libraries stocked with the numberless publications, old and new, on Italian art. Signor Lupatelli has compiled from good sources, and with a certain intelligence; but neither in his bibliography nor in his text do we find mention of Morelli's writings, so epoch-making in the study of Umbrian art. 'Le Petit Guide de Pérouse,' by the same author, can be safely recommended.

The *Observer* (Portland, Conn.: Bigelow) has been enlarged, and bids fair to be a very popular as well as valuable magazine for outdoor

recreation and education. The department of birds is under the care of Mr. John H. Sage, and will have series of articles by Florence A. Merriam and Olive Thorne Miller. The department of microscopy will be conducted by Miss M. A. Booth; that of astronomy by Miss Mary Proctor, daughter of the lately deceased astronomer; and that of botany by Miss C. A. Shepard. There will also be series of articles by Dr. Henry C. McCook, Anna Botsford Comstock, Elizabeth G. Britton, and Dr. Alfred C. Stokes. These are all experienced writers, and confidence may be felt in both their science and their English. It is to be hoped that it is not the editorial hand that is responsible for the announcement that practical microscopy "will take a high stand, worth more than double the price of the *Observer*."

An illustrated account of a recent visit to the Faroes opens an unusually interesting number of the *Geographical Journal* for January. This is followed by Capt. Vaughan's narrative of his journeys in central Persia, and a discussion by Col. Holdich of the origin of the Kafir of the Hindu-Kush. This interesting race, whose independence is now threatened by Afghanistan, claims to be of Greek descent, and their appearance is of a distinct Aryan type, with low forehead, prominent aquiline features, and a relatively fair complexion. While the most natural hypothesis is that they are the "modern representatives of a very mixed race, chiefly of Tajak origin," yet some curious facts are given which seem to show their connection with the legendary subjugation of India by Dionysus mentioned by Arrian. Some yet undeciphered inscriptions found in their valley "recall a Greek alphabet of archaic type," and a hymn to their war-god, of which a translation is given, is a Bacchic hymn, wanting only the "accessories of vine-leaves and ivy to make it entirely classical." A very creditable piece of exploration in the Canadian Rockies by a party of Yale students is described by one of their number, Mr. W. D. Wilcox. It is accompanied by two contour maps and some reproductions of photographs of Lake Louise and the neighboring mountains. A useful sketch map of British Guiana is given, so shaded as to show at a glance the territory not in dispute and the extreme claims of both Venezuela and Great Britain. The *Journal* for April, 1896, we will remind our readers, contains an admirably clear map of the whole region, indicating plainly the Schomburgk line, the gold districts, the various stations, settlements, and trails.

Among the articles of general interest in the *Annales de Géographie* for January is an account of the trade of Tripoli with the Sudan. There are three principal routes across the desert, and the caravans, starting generally in the autumn, carry out cloths, hardware, glass, arms, ammunition, sugar, and essences. They bring back gold, from Bornu and Damerghu, ostrich feathers, skins, ivory, gun, wax, and civet. The caravan-men are either part owners of the goods, or more frequently are hired by the merchants, receiving in payment a part of the proceeds. The attempts of the French and English to divert this trade to Algeria and the Niger have so far proved unsuccessful. Following this is a study of the little-known region to the west of the Nile affected by the Franco-Congo treaty of 1894, and a summing up of the results of the war between China and Japan. The writer believes that the harder terms of the first treaty of peace would have been in the end better for China, which has apparently sunk again into the lethargy that must end in the fall of the empire.

Since we noticed the forcible and not too amiable onslaught of M. Espinas on Rousseau's social "system" in the *Revue Internationale de l'Enseignement* of October 15 and November 15, 1895, we ought sooner to have called at least equal attention to the editorial reply of M. Éd. Dreyfus-Brisac in the number for December 15. It is a warm defence of Rousseau's veracity as well as of his consistency, and is fairly conclusive on the main point at which M. Espinas is controverted, namely, the divergences between the rough draft of the 'Contrat Social' and its definitive form in print. Indeed, M. Espinas is exposed to the charge of very careless if not grossly unfair comparison and use of these documents, and is roundly scored by M. Dreyfus-Brisac. The discussion over the "system" is perhaps not ended, but the question has, in our opinion, very little interest for the present generation. It were much to be wished that what is admirable, charming, and salutary in Rousseau's writings might be enjoyed without reference to his philosophy or his reputation.

M. Anatole France's recent address before the Association Générale des Étudiants deserves mention as being graced with one of the most beautiful tributes to Science that ever came from the lips of a man of letters. Some of the sentences are apothegms: "Elles ont notre curiosité; nous devons l'en aimer. Elle ne l'épuise pas; nous devons l'en aimer encore." "Elle fait leur [men's] vie moins brève, plus sûre, plus abondante et plus variée. Elle les abrite pour penser." Such homage, coming from the opposite camp, is beneficial at a time when so many minds the civilized world over are kept at a tension in adjusting the rival claims of the sciences and the letters.

Hitherto only the leisurely traveller through Italy has been acquainted with one of the most lovable creations of Italian genius, Moretto's Virgin, the most motherly of Madonnas, in the mountain shrine of Paitone, near Brescia. But recently this masterpiece has been photographed by Alinari Bros., who at the same time made reproductions of all Moretto's pictures at Brescia. This town, so rich in works by this master of delicate feeling and exquisite tone, is rich also in works by his splendid rival Romanino, and in the gallery are a number of fine canvases by the best known member of this school, the great portrait-painter Moroni. Among the other paintings at Brescia photographed by Alinari is the "Annunciation" by the rare and precious Jacopo Bellini, fascinating "Nativities" by Lotto and Savoldo, a "Salvator Mundi" by the young Raphael, and a fine head by his Urbinate master Timoteo Viti.

The students of the Slade School of Art, Oxford, England, are shortly to issue a new quarterly, the *Quarto*. By permission of Mr. Leopold de Rothschild, a photogravure reproduction of "A Holy Family," by Andrea del Sarto, will serve as frontispiece to the first number. A tempting feature of this new art magazine is to be a "collector's edition" of twenty copies, on Japanese paper and bound in vellum. With each of these copies there will be distributed, in addition to an original etching by Mr. Wm. Strang, "a small original autograph sketch, . . . no two alike," by one of the contributors. Among these appear the names of the late Lord Leighton, Mr. Geo. Fred. Watts, and Mr. Joseph Pennell.

It was not to be expected that the late Dr. William H. Furness of Philadelphia would fail to have a place in Mr. F. Gutekunst's photographic gallery of celebrities. The "imperial panel," in fact, of this eminent preacher is

among the most successful of the long array, and has the merit of being nearly if not quite "untouched." Thus all the fine lines of the skin combine with the usual marks, not only of age but of geniality and benevolence, to produce a speaking likeness which will be cherished by a large circle of Dr. Furness's friends and admirers.

—'American Book-Prices Current,' compiled from auctioneers' catalogues by Luther S. Livingston, and published by Dodd, Mead & Co., wisely adopts the form and style of the British 'Book-Prices Current,' of which the ninth volume is before us (London: Elliot Stock & Co.). In both these indispensable works the arrangement is by sales, preceded by a tabular list; the entries are progressively numbered (6,025 in the American, 6,748—a falling off—in the British); an index groups the scattered authors or anonymous works; and a preface reviews the features of the year's sales as to rarity, prices, etc. There is much food here for study and international comparison, the principle of inclusion (a pound value as a customary minimum) being about the same in both cases. We have roughly computed the number of separate entries in some two dozen instances, showing the respective American and British transactions in Almanacs, 10, 3; Bibles (printed), 78, 61; Boccaccio, 6, 10; Cervantes, 13, 16; Dibdin, 23, 6; Balzac, 8, 1. American interest in Borrow surpasses British, 5, 2; as in Browning, 30, 10; Dickens, 49, 34; Tennyson, 38, 23; Thackeray, 36, 21; and Walton, 31, 17. Even Cruikshank stands 33, 39, but Bewick only 5, 23. Bacon items are American 3, British 11. Matthew Arnold is tied, 4, 4. With American authors the disparity is great indeed: Audubon, 7, 1; Emerson, 31, 1; Hawthorne, 39, 1; Holmes, 26, 1; Longfellow (and this is singular), 49, 2 only; Lowell, 24, 0; and Whittier, 46, 1. But the rage for first editions has been catered to by Mr. Livingston in admitting sales below the five-dollar mark. It will be seen that with our American collectors the order of favoritism is Longfellow, Whittier, Hawthorne, Emerson, Holmes, Lowell. We should notice that the 'American Book-Prices Current' is handsomely printed from type in a limited edition of 400 copies, which must surely appreciate.

—At the suggestion of Dr. S. A. Green, and as an addendum to his 'List of Early American Imprints belonging to the Library of the Massachusetts Historical Society' recently noticed by us, Nathaniel Paine has prepared 'A List of Early American Imprints, 1640-1700, belonging to the Library of the American Antiquarian Society,' and printed two hundred copies. The books falling within the scope of this bibliography number three hundred, of which one-half, approximately, were already catalogued in the three hundred titles printed in Dr. Green's list, and are therefore not repeated here, only a mere reference to the fuller title being given. We thus have in the two works a list of four hundred and fifty separate issues of the early American presses, and, as not more than twenty-five were printed outside of Cambridge and Boston, a long step has been made towards a complete list of Massachusetts incunabula. Mr. Paine, indeed, goes so far as to say that "the two lists probably contain the titles of nearly all the known publications, now extant, issued from the press in British North America from 1640 to 1700 inclusive." In this we can hardly agree, for Haven's very imperfect list gives 607 titles for this period, and while copies of a

few of these are unknown, they are balanced five times over by the new discoveries of Mr. Hildeburn in Pennsylvania and New York imprints. Indeed, the Prince and Lewis collections of the Boston Public Library alone give nearly 100 additional titles, and the Lenox Library and the Historical Society of Pennsylvania could also supply many additions. Probably there are actually extant, at the present writing, about 1,000 issues of the Massachusetts press before 1701, and these are not more than two thirds of the actual issues. These facts, however, do not lessen the value of the present work. As in Dr. Green's list, the larger part of the titles fall among almanacs, laws, and the typical New England theologic political tracts, the most interesting being a copy of 'Gospel Ordinance Revived' (which played so curious a part in the attempt carried on by the Mathers to restrict the freedom of the press), with several of the broadside "Advertisements" and "Depositions" relating to the contest bound in; a copy of Cotton Mather's curious 'Rules for the Society of Negroes,' 1693, which ranks second in date of our slave literature; and a copy of the Bay Psalm Book, the earliest book of the Massachusetts press. The work has been carefully done, and is a most acceptable addition to the subject.

—When the ravages of the "downy mildew" were checked for the first time in American vineyards by means of the "Bordeaux mixture," spraying was hailed by orchardists and planters as a deliverer and a panacea. After wasting much hard work in spraying the right bugs at the wrong time, the farmers have thrown down the nozzle to learn from scientists and college men something about bugs and the fungous diseases of plants. Economic Entomology has come into existence to cope with the annual destroyers of one-tenth of all our agricultural products. "Watch and spray" is now the facetious war-cry of farmers and fruit-growers. The practical advice offered by the experiment stations to farmers is scattered in the deciduous literature of bulletins and newspapers. All this material has been sifted by a competent specialist in combination with his own experiments, and the result is a book of 400 pages of practical things arranged in the helpful form of a pocket dictionary, 'The Spraying of Plants,' by E. G. Lode-man, Instructor in Horticulture in Cornell University (Macmillan). It tells what to spray, when, and why. It can be consulted under vines and fig-trees, and offending objects can be compared with pictures. Nor are prescriptions lacking, together with seductive cuts of wonderful nozzles, pumps, and spraying paraphernalia. The familiar old cut of the codlin moth that has for half a century been an object of odious interest, at last gives way to a new engraving that is positively artistic by comparison, and of greater scientific accuracy. The early history of spraying is detailed in the painstaking manner of the investigator and contributor to science. These 238 pages of history and principles may be useful to those farmers only who are troubled with insomnia (if there be any such), and in future editions this matter could, as far as the farmer is concerned, be compressed into 200 less pages; but of the value of the specific directions for spraying cultivated plants there can be no doubt. It is a remarkable adaptation of science. There is nothing else on the subject so new, complete, accurate, and available.

—In 1870, at the age of thirty-five, Mr. Alfred Austin published a book entitled 'The

Poetry of the Period,' consisting of eight articles which had previously appeared in the *Temple Bar* magazine. The first of them is concerned with Mr. Austin's immediate predecessor in the office of Poet Laureate of England. Mr. Austin sets out with the announcement that he intends to expound, with a confidence not the growth of yesterday, but of long, deliberate, and ever-deepening conviction, the opinion that Tennyson has no sound pretensions to be called a great poet, and will of a certainty not be esteemed such by an un-biased posterity. He thinks it is high time that somebody should speak out; the conventional sense of the majority so overpowers the critical sense of the discriminating minority that, as a rule, no one ever expends his energy in the attempt to reverse an opinion which has once got itself accepted by a preponderance of voices. So has it been with Tennyson. His fame has steadily increased precisely as his genuine poetical power has steadily waned. Mr. Austin's proposition is, that Tennyson is not a great poet, unquestionably not a poet of the first rank, all but unquestionably not a poet of the second rank, and probably—though no contemporary perhaps can settle that—not even at the head of poets of the third rank, among whom he must ultimately take his place. Posterity will not hear him, save in little snatches or breaks of voice, as it still hears Cowley or Falconer. It will not allow the "Talking Oak" or "Locksley Hall" to die, but "In Memoriam" will assuredly be handed over to the dust. In the whole range of his poetry there is not to be found even a solitary instance of a sublime thought sublimely expressed. He is the poet crossed by the man of scientific thought and intelligence, and producing a species of metrical emulsion. Browning does not find more favor in Mr. Austin's eyes than Tennyson. The assertion that Browning is our great modern seer is the most astounding and ludicrous pretension ever put forward in literature. A passage from "Sordello" is pronounced to be not only not poetry, but detestable gibberish even as prose. Browning is the real *M. Jourdain*, who has been writing prose all his life without knowing it. He has no voice, and yet he wants to sing; he is not a poet, and yet he would fain write poetry. These choice specimens of Mr. Austin's critical acumen must suffice for the present purpose, but his whole volume may be profitably studied by the brood of youngsters who are deluging us with a shower of little four-by-six magazines in which every precious contribution of a hundred words is signed with its author's name. Mr. Austin, they will find, is just as "smart," and epigrammatic, and "fearless," and self-confident as they are.

—Were we to watch the labor of Sisyphus, we should probably be much interested the first time we saw him roll the stone up the slope, and grieve with him as it dashed down just before reaching the top. We should admire the perseverance with which he ran after it, and again puffed and tugged and pushed to wards the goal. But, after watching several of these failures, we should conclude either that Sisyphus had undertaken the impossible, or that he lacked the necessary strength and skill. A similar conclusion forces itself upon us as we review, year after year, the efforts of one scholar after another to translate the 'Divine Comedy' into English verse, and we believe that in this case failure must be charged to the task itself, and not to the incompetence of those who undertake it. The latest of these, Mr. George Musgrave, has produced a version

of the "Inferno" in Spenserian metre (Macmillan) which deserves the commendation due to good but futile intentions—and no more. Mr. Musgrave declares that the nine line stanza of the 'Faërie Queene' is the nearest equivalent to Dante's *terza rima*; a little while ago Mr. Lancelot Shadwell assured us that the metre of Marvell's great Horatian ode would alone serve; and before him how many others have taken different roads to failure! Dante's verse, we need hardly say, flows like a mighty unhindered river; to imagine that any stanzaic divisions can represent it, is like imagining that a canal, cut up into sections by regularly recurring locks, can represent the freedom, the sweep and variety and life of the river. Inevitably, therefore, before we have read a dozen of Mr. Musgrave's stanzas, we are obliged to admit that they do not reproduce, even faintly, the metrical effect made by Dante, and further testing merely confirms the suspicion that this version, so far as its form goes, has no justification as a possible equivalent of the 'Divine Comedy.' But perhaps, we think, Mr. Musgrave may have made a good English poem, whatever may be its inferiority to the Italian. We read again, with this in view, and again are disappointed. The "linked sweetness, long drawn out" of this stanza as used by Spenser nowhere appears; nor is there ought to suggest that Byron, Shelley, and Keats could, each in a different way, get many fine qualities out of it. To Mr. Musgrave's touch it is an instrument which is neither sweet, nor sonorous, nor fluent, nor emphatic. So we are driven to consider the translation simply as a *tour de force*, and from this standpoint it has its interest. That any one should be able, in a given number of syllables, to give the English equivalents of a given number of Italian words, is, however inadequate the general result may be, a scholarly pastime which may amuse the looker on. But after a while the ellisions and inversions of syntax, the strange words, and the unlimited license in rhymes tire us. What pleasure can any one get from such rhymes as "Italy," "lie," "I," and "wisfully"? What profit from having *conosciuto* translated "agnised," because Mr. Musgrave could not make "recognized" fit his metre? Doubtless, he had satisfaction in wrestling with difficulties which are indeed insuperable; but the best that can be said of his achievement is that we wonder that he has done as well as he has, and this is very far from saying that he has produced a work worth reading as a specimen of English poetry, or worth studying as means to a better knowledge of Dante.

—The second and concluding volume of Dr. Karl Heinemann's 'Goethe' (Leipzig: Seemann) begins with the publication of the first collective edition of the poet's works in 1787-90, and ends with his death, March 26, 1832, thus comprising the best forty-five years of his life. His sojourn in Italy from 1786 to 1788 had released him from the petty and prosy routine of official duties at Weimar, and, through the study of the antique, had perfected his taste by purging his mind from the last dregs of the storm-and-stress period and the morbid sentimentality of Wertherism, which could be only a passing episode in the development of a nature so robust. Dr. Heinemann gives an excellent appreciation of these influences as traceable in Goethe's writings, followed by a chapter entitled "House and Hearth," in which his relations to Christiane Vulpius are explained and extenuated, but by no means approved. At that time concubinage was neither foreign nor offensive to the "best society" in Weimar and

elsewhere in Germany. The unwonted clamor and malicious gossip excited by Goethe's similar transgression were due less to the moral sensitiveness than to the wounded vanity of the noble ladies of Weimar, and particularly to the fierce jealousy of Frau von Stein, who even wrote a play called "Dido" for the purpose of venting her wrath upon her former lover, and calumniating the "low creature" by whom she had been supplanted. According to our author, Goethe's reasons for not marrying Christianse at once were a deep-rooted aversion to the "fetters of matrimony," a strong antipathy to the outward forms of the Christian Church, and a "Julianic hatred" of the current teachings and tendencies of the Christian religion. In his own bitter experience he was made to feel the full force of the doctrine of retribution taught in Wilhelm Meister's *Lehrjahre*: "Denn alle Schuld rächt sich auf Erden." A valuable contribution to the literary history of the time is the section of 150 pages devoted to Schiller and other friends and contemporaries of Goethe. In the succeeding chapters we have a full account of Goethe's poetic productivity during the danger and distress caused by the French invasion, his rather questionable patriotism in the war of emancipation, and his later scientific researches. Although the reader may not always accept the author's conclusions, he will find in this biography a complete and impartial presentation of facts and citation of sources, upon which to base an independent judgment. It is written in an attractive style that renders it entertaining as well as instructive reading. The present volume contains more than a hundred illustrations and an excellent general index.

PURCELL'S CARDINAL MANNING.

Life of Cardinal Manning, Archbishop of Westminster. By Edmund Sheridan Purcell, Member of the Roman Academy of Letters. In two volumes. Macmillan & Co. 1896.

So far was Cardinal Manning from seeking to prevent the writing of his *Life* by taking that of Mr. Purcell that he chose him as his biographer, and put in his hands a mass of diaries, notes, and correspondence, of portentous bulk, and, moreover, poured himself out very freely in conversation, construing his own acts and those of his contemporaries in a manner satisfactory to himself. But seldom has a biography added to death a terror of such magnitude as Mr. Purcell's book will prove to persons of distinction who are contemplating some biographical extension of their high repute. The wiser of them will at once resolve that they will trust no one, however loyal and friendly he may vaunt himself, to do the difficult work, and go about to do it with their own hands. For Mr. Purcell's book could hardly be more damaging to Cardinal Manning's reputation if it had been written by one of the many who distrusted him or hated him when he was alive and would like to damn his memory. Froude's treatment of Carlyle was eulogistic in comparison with Mr. Purcell's of his distinguished friend. It is true that he says many fine things about him, from first to last, but they make no such impression on the reader as the scores and hundreds of derogatory and minimizing things. So often those glide swiftly into these that we get into the way of expecting something bad whenever there is something good.

The excuses are, perhaps, more damaging than the direct assaults. The writer is not by

any means unconscious of the line that he is taking or of the impression he is likely to create. Over and over again he announces his determination to tell the simple truth. Had not Manning approved this method, and the Pope also, instancing the New Testament frankness about Judas Iscariot as an example of it? Manning had not the art of making friends, but he had a few, and his executors have already denounced Mr. Purcell's book and pledged themselves to procure a worthier biography. The attempt, however, is not promising, in view of the fact that Mr. Purcell has been extremely careful to justify his inferences by direct quotations from Manning's journals and letters. At the same time it is true that he has not been content to let these speak for themselves, but has been careful to bring out their significance; and where Manning's recollections were at variance with the facts of his career, the difference is pointed out. Nor can it be denied that he seems to take a certain pleasure in putting Manning in an evil light. His damnable clauses are innumerable, and while some of them are frank enough, others are insinuated in a manner hard to understand in a biographer discharging a friendly office. For example, we read (vol. i., p. 294): "The judicious and venerable Archdeacon of Chichester had no sympathy with Ward or his book"; and, in a foot-note, that Ward said, "When I hear men called judicious I suspect them, but when they are called judicious and venerable they are scoundrels." Prudence, caution, tact, are the qualities which Mr. Purcell attributes to Manning with an iteration that is wearisome, with others lower in the moral scale.

His own character cannot be admirable if he had any idea at the outset how his biography would turn out and yet accepted the commission to write it from Manning's hands. We are bound to believe that, with all the documents in his possession, he became fascinated by the doubtful elements in Manning's character, and found himself impelled to make them as prominent in his book as he found them in the Cardinal's life. A different explanation suggests itself in the first volume, which deals exclusively with the Anglican period, while the second deals exclusively with the Roman. It is that Mr. Purcell is painting in a dark Anglican background for his picture of Manning's Roman virtues. This seems the more likely when, in 1847, Manning has a long sickness and takes to morbid self-examination, and imagines himself revolting from the secular ambitions which had recently possessed his soul. Moreover, Mr. Purcell writes as if he underwent some serious spiritual change, and we think we know what he is after—one of those contrasts of youthful levity and later saintliness in which the hagiography of the Roman Church so much abounds. But this promise to the eye is broken to our hope as we go on. Manning is much the same person after his recovery as before, and those aspects of his character which are most painful in his Anglican career are emphasized in the Roman Catholic churchman in a much grosser fashion.

Manning did not distinguish himself at Harrow, and hardly more at Oxford, except as a debater at the Union, where his successes stirred in him visions of a seat in Parliament and a political career. Destined for the Church by his father, he was not in the least attracted to it. A few years later, when the Tractarian Movement had begun, it might have been different. He had to do something for a living, his father's fortune having been suddenly wrecked, and he went into the Colonial Office. As com-

pared with his irksome duties there, the Church soon came to look inviting, the more naturally because the melancholy of a lover's disappointment persuaded him that he was getting more religious. Mr. Purcell's first difference with him is in regard to the relative amount of *Dichtung und Wahrheit* in his account of his motives for entering the ministry. The question is one that frequently recurs, and might much oftener if Manning had not deleted large portions of his diaries before handing them over. Notwithstanding this precaution, Mr. Purcell finds them much closer to the facts than Manning's idealizing notes and recollections in the last years of his life.

After a few months of theological study, Manning went to Lavington in Sussex as a curate of the Rev. John Sargent, and shortly married his daughter and succeeded him as rector of the parish. There he remained until he left the English Church in 1851, in 1841 being made Archdeacon of Chichester. By his marriage, says Mr. Purcell, "the designs of Providence in regard to the future Cardinal of the Holy Roman Church seemed to have been frustrated. But Providence has a long arm, and God in his wisdom took to himself in the fourth year of her marriage the wife of Henry Edward Manning, the cardinal priest to be." In all Manning's diaries and correspondence there is but one allusion to his marriage, and that, written in 1850, is a purely formal one. His love and sorrow were both very great, but "so effectually was the story of his marriage suppressed that on his death Catholics, with one or two exceptions, as well as the general public, knew nothing about his married life." The motive for this suppression was the fear of "an unpleasant impression derogatory to his high ecclesiastical dignity and position."

The interesting thing about Manning's secession from the English Church is that it was not an incident of the Tractarian Movement. It is astonishing how little that affected him. There are few traces of it in his letters when it was at the flood from 1833 to 1838. His original bent was strongly evangelical, and the Low Churchmen counted him as one of them against all comers. His first essay in controversy, 'The Rule of Faith' (1838), was about equally severe on popular Protestantism and Romanism, while avoiding the extremes of both the High and Dry and the Tractarian parties. But the Protestantism of his reproof was the loose jointed contemporary Dissent, not the historic movement of Luther. For some years his valiant stand for this marked him off from the Tractarians more definitely than anything else. They were always girding at the Reformation, he defending it. In his 'Rule of Faith,' Papal infallibility got some hard knocks. It is one of Mr. Purcell's innumerable insinuations that Manning's new departure reflected the temper of his new Bishop, Otter, in whose name the waggish found an omen of his opinions, "neither fish, flesh, nor fowl." The maledictions of the Low Church press and clergy made it easier for Manning to respond to the approaches of the Tractarians, who were disposed to make the most of his inclination to their side. But through all the inconsistencies of his Anglican career runs like a thread of steel his opposition to the encroachment of the civil power upon the Church, culminating in his opposition to the Gorham decision, which was his excuse, if not his reason, for secession. This opposition made him prominent in 1838, soon after his 'Rule of Faith,' and, while commending him to the Tractarians, condoned to some extent his late offence against the Evangelicals. A little later he went to Italy with

Gladstone, and found the sordidness of Roman worship as little attractive as Newman found it on his first visit. With serious breaks, Manning's friendship with Gladstone was the most lasting of his life, and Mr. Purcell's exhibition of their various relations is one of the most interesting features of his book. It is an exhibition much more creditable to the statesman than to the priest. In Rome they met Wiseman, and walked with him, Wiseman as little dreaming that Manning was the young Protestant who had recently impugned his veracity as that they would, in succession, be archbishops and cardinals of the reconstructed Roman hierarchy in England.

Great was the mortality of Manning's bishops, and, when Shuttleworth succeeded Otter, he at first looked upon Manning as "a Romanizer in disguise." Manning hastened to disabuse him, and succeeded so well that he was made Archdeacon of Chichester. Mrs. Shuttleworth seems to have been a kind of Mrs. Proudy, and "stormed like a fury" over the appointment, but to her also Manning soon made himself *persona grata*. "Manning was the last man to forget that he was now himself a Church dignitary, and bound as such to show reserve and moderation in his religious opinions." The publication of 'Tract 90' had got the Tractarians into deeper water than Manning dared attempt, such was "his habit, in part natural, in part acquired, of never committing himself, if he could help it, to an unpopular movement, or of taking his stand on the side of a falling cause." In a charge of 1841, and more positively in 1842, when the Tractarians were in worse repute, he cleared himself of all complicity with their Romanizing tendencies. "The blessed results of the Reformation" were the staple of his cry. He had dodged the test question of Isaac Williams's election as professor of poetry, but the misfortunes of the Tractarians demanded a more positive opposition if he was not going to be tainted with their ill odor. Hence his 'No Popery' sermon at Oxford on Guy Fawkes Day, 1843. Newman had already resigned St. Mary's and gone to Littlemore, and there Manning called on him the day after his ultra-Protestant manifesto. Newman, who could not reconcile this with Manning's steady approximations to him since 1838 in private correspondence, was "not at home," and such is the irony of circumstance that J. A. Froude brought Manning this rebuff, and, to soothe his feelings, walked half way back to Oxford with him before he discovered that he was without a hat. Mr. Purcell's imputation of the meanest motives to Manning at this juncture will seem excessive to many of his readers, seeing that at this time his faith in the English Church as Protestant and yet Catholic had not begun to fail.

Manning's own account of the years 1843 to 1846 is "Declension—secularity, vanity and anger." Full of ecclesiastical ambition, what he did not want was offered him, and what he wished, the preachingship of Lincoln's Inn, he could not get, though he had Gladstone to manage his canvass. From secular ambition he reacted to morbid self-examination, from which "a judicious spiritual director would have saved him," says Mr. Purcell. This became more intense in the course of a dreadful sickness and slow recovery in 1847. With remarkable inconsistency his biographer dates from this sickness a higher spiritual life, and then goes on to show by his correspondence with Robert Wilberforce that from this time forward he was a Roman Catholic in his mind and heart, while still he was stoutly in-

sisting in public that the Anglican had all the notes of a true church. It is strange that what has been so often charged against Newman in this respect, and proved untrue, should be proved against Manning, against whom it has never until now been charged. The Gorham judgment, which permitted an Anglican priest to deny the doctrine of baptismal regeneration, has always been assigned as the cause of Manning's change of base. According to Mr. Purcell, it was simply the last straw that broke the back of his prolonged duplicity. From this point of view we understand Manning's intense engrossment in Roman worship when he was abroad in 1848, and why he knelt in the street to Pius IX.—an act which was the germ of much ecclesiastical good fortune. Gladstone was completely deceived by the reticence of his friend, and imagined the Gorham judgment to be the true cause of his secession to the Roman camp. Meantime, says Mr. Purcell, his "touching, beautiful little sermons . . . did not express, and were not meant to express, his own belief. . . . Such exhortations were formal utterances which he considered it his duty as their spiritual director to address to his penitents."

The Gorham decision was fulminated in March, 1850, and in March, 1851, Manning entered the Roman Church, and in ten weeks, by the special grace of Cardinal Wiseman, he was again a priest. The old ambition soon awoke again, and with more violence than ever, but for several years he found himself, as he expressed it, "in the shallows," his founding of the Oblates of St. Charles at Bayswater being his most important work. But his intimacy with Cardinal Wiseman and Pius IX. steadily increased, and at the Papal court he had an invaluable friend in Mgr. Talbot, the Pope's private chamberlain. The atmosphere of these chapters is as hot and stifling as that of party politics. From the start, Manning was a Roman Catholic, not an English one, not a Gallic one, and before long a fight arose between him and the old English Catholics and Gallicans who were jealous of his growing influence. The first battle was over Wiseman's coadjutor, Errington, who had to be got rid of or he might come in for the succession. A more instructive chapter in ecclesiastical politics it would be hard to find than that relating to this business, or one more disabusive of the illusion that the Roman family is a happy one. Mr. Purcell does not hesitate to ascribe the victory to Manning's "somewhat unscrupulous methods"; but Pius IX. called it "a *coup d'état* of the Lord God." Mgr. Talbot could see the divine and human side at once. When the next battle was on, and the victory was Manning's succession to Wiseman as archbishop, Talbot, in a letter boasting of his successful working of the Pope, adds, "Nevertheless I believe your appointment was specially directed by the Holy Ghost." Manning was sometimes awkward in availing himself of the privileges of his intimacy with the Pope, and Mgr. Talbot found it necessary to instruct him that neither a solemn secret nor an oath was binding when the Pope was concerned.

Manning's relations to Newman are explicated at great length, and no doubt is left upon the reader's mind that in their bitter controversy Manning was "the worse spirit, color'd ill." In the letter which brought their correspondence to an end, Newman wrote, "I do not know whether I am on my head or heels when I have active relations with you." It is simply impossible to understand Manning's interpretation of Newman's wishes when the cardinalate was offered him. It has every

appearance of an attempt to hinder his advancement by downright dishonesty, but probably his wish was father to his thought—a common trick with men of his imperious will. Quoting entire Manning's eulogy on Newman, Mr. Purcell pronounces its claim of life-long friendship radically false. "Instead of friendship, there was life-long opposition." They had different ideals of Catholic development in England: Manning was fierce for the dogma of infallibility, Newman against it; but the trouble at bottom was that Newman found Manning "difficult to understand," his professions being contradicted by his acts.

In the Vatican council of 1870, Manning's part was so important that the Italians named him "Il Diavolo del Concilio." No other individual did so much to bring about the declaration of infallibility. It was not all that he wanted, his appetite for infallibility being almost as ravenous as W. G. Ward's, who wanted a papal bull for breakfast every morning with his *Times*. The decree was not a day too soon. The day following came the declaration of war between Germany and France. If Manning had not succeeded in averting diplomatic intervention, this event would have found the dogma still undeclared, and its indefinite postponement might have been for ever.

Mr. Purcell's volumes count 1,534 pages, and it is only a meagre summary of their contents that can be given in a brief review. There are great deductions from the reader's pleasure in them in the continual turning of Mr. Purcell's narrative upon itself, and in the absolute lack of any charm in Manning's diary and letters. He is better in his notes, in which, with intense self-consciousness, he poses as he would like to stand in history. His sympathy with the laboring poor, if not always well directed, is the most agreeable aspect of his life. For all his caution he was capable of extreme haste and rashness. If Mr. Purcell wishes us to admire his character, his laborious work cannot be considered a success. His praise, which sometimes is mere fustian, is perfunctory and unreal in comparison with his direct and carefully insinuated blame. The general impression that frees itself from the multitude of details is that of a man of hard and brilliant intellect, without imagination or insight, of great ambition and unbending will, sensitive to public opinion, loving the winning side, extremely engaging in his voice and manner, lively in conversation, eloquent in public speech, without spontaneous affection and making few friends, treating some of the best of these unhandsoinely, using others and then forgetting them alive or dead, arriving at length at an almost complete personal isolation, living in a world of tradition and logomachy unvisited by any breezes of the modern spirit; a figure dignified and imposing but most melancholy on its lonely height. There are modifications of this general impression, but they do not seriously affect its impact on the reader's mind.

Vera Barantsova. From the Russian of Sonya Kovalevsky. With an Introduction and a Memoir of the Author by Sergius Stepniak and William Westall. London: Ward & Downey. 1895. Pp. 281.

THIS novel of the gifted mathematician, Sonya Kovalevsky, which has been awaited with great interest by English-speaking people, will not disappoint expectation. It is hardly to be called a novel; it is rather a swift, incisive, dramatic sketch of Russian life at the moment of the emancipation of the serfs, and during

(and at the end of) the period of political calm which followed the Polish insurrection, Karakasoff's attempt to assassinate the Czar, and the banishment of Tchernyshevsky. The central figure of the scene, Vera Barantsova, was the youngest daughter in a family belonging to the nobility, and living with luxury and freedom from care upon a large estate; the emancipation of the serfs not only brought it to the verge of ruin financially, but turned its members into disappointed and irritable beings, with whom it was no pleasure to live. Vera was left wholly to herself, and grew up quite untamed and untrained, but with the seeds planted for a future life of devotion by the one book which was her constant study—the lives of the martyrs. Finally a university professor, forced to return to his estate for political reasons, took her education in charge, and taught her not only the learning of books, but also that it was not necessary to go to the ancient Romans or to China to find martyrs in holy causes.

With this preparation, a woman like Vera, with all the beauty and fiery spirit for which the Barantsova family had long been famous, and in a country which makes such strong claim upon its noble women for a life of forgetfulness of private weal and woe, was sure of the fate of many another Russian patriot. We shall not follow out the train of events which end with her departure for Siberia, not as a prisoner, but as the wife of the convicted leader of a little band of Nihilists. The reader has come to be fully in sympathy with Vera's last words:

"I saw my future life before me as on a map. I should live among the exiles, comfort and console them, and minister to their needs, and become the intermediary of their correspondence. . . . How strangely, and yet how simply, it has all come about! I am so happy, dear, so happy."

The simplicity of the *mise en scène*, the swiftness with which events move onward to the inevitable end, the single-mindedness of the heroine, combine to produce an effect of great truthfulness and power, and one cannot but lament the loss of a great novelist as well as a brilliant mathematician in the early death of Sonya Kovalevsky.

The novel is preceded by an account of the author, by Stepniak, which offers nothing new to those who have already read her life, recently reviewed in these columns. But the present condition of discussion in regard to her is interesting. None of the great Russian writers have been more generally admired or more sincerely mourned in their native land. After her death Russian literature was flooded with articles on her life, her personality, and her work, both as scientist and authoress. Very soon the radical opinions which she had held became known; her name became a watchword for the Liberal party, and an expression of sympathy with her work was equivalent to a declaration of liberal aspirations. So roundabout a way of proclaiming opinions, strange as it may appear in the countries of free speech, is merely a natural device in Russia, but in this instance it became a matter of such moment that, as we are told, the Government has deemed it expedient to issue a secret order to the press forbidding any further mention of Mme. Kovalevsky's name.

Twelve Hundred Miles in a Waggon. By Alice Blanche Balfour. With illustrations by the Author. New York: Edward Arnold. 1895. Pp. xix, 265. 8vo.

THIS sprightly narrative of a "trek" through

the territories of the British South Africa Company has a peculiar interest, for several reasons. The writer is the sister of the leader of the House of Commons and prospective prime minister of Great Britain. The mode of travelling, by ox-wagon, is fast disappearing before the steady advance of the railway; and the regions visited are just now dividing the attention of the civilized world with Armenia and Venezuela. Its literary merit consists in the simple and unpretentious way in which Miss Balfour tells her story. Avoiding all labored descriptions of scenery, and discussions of political, social, and ethnographical topics, she wisely confines herself to narrating the ordinary incidents of a singularly uneventful journey. Although she has no startling experiences with lions or Matabele, nor any mishap beyond the occasional breaking of a wagon pole, yet it would be difficult to find a more graphic account of life in an ox-wagon on the high veldt.

Cape Town was reached in April, 1894, and the next few weeks were spent in making various excursions by rail. One was to Basutoland, a Crown colony in which white settlement is prohibited. The natives are very numerous and apparently prosperous, many being "extremely rich" in cattle. Their land is suffering from the water-courses, which cut deep ravines (called dongas) in the soil. They intersect the plains in every direction and are rapidly increasing in size and number. The planting of trees would check them, but the natives dislike trees because of their attraction to doves and pigeons, who "congregate and multiply so enormously wherever there is any wood, that they almost destroy the neighboring crops." At Johannesburg Miss Balfour found there were "two absorbing topics of interest—gold-mining and politics." The latter, indeed, was then the most prominent, "the ever-smouldering irritation of the English at the inequality of treatment they suffer under the Boers being ready to burst into a blaze at the prospect of the commandeering for the war with the natives." The inability of this singular people to accommodate themselves to new ideas and circumstances is illustrated by the fact that many of them refuse to destroy locusts, "on the ground that, like the plagues of Egypt, they are the direct visitation of God." A resolution against their destruction, "on account of religious scruples," was carried in the Volksraad of the Orange Free State at the time of Miss Balfour's visit.

The wagons were taken at the terminus of the railroad which is to connect Cape Town with Mafabonaland, and the route lay through Khama's town to Bulawayo, the Chartered Company's headquarters. "I have Sir John Willoughby's room," writes Miss Balfour.

"This is a true and faithful description of it. It has mud walls, mud floor, thatched roof with no ceiling, doors made of two packing-case lids, and an unglazed window with shutter of rough boards. Furniture: a bedstead, one box upside down, some wooden shelves, a small strip of matting, an empty whiskey bottle doing duty as a candlestick, and (oh, luxury!) a table. Dr. Jameson's room, occupied by Mrs. Grey, is much the same, only it has a six-inch square looking-glass as well."

From Salisbury, the farthest northern point of the journey, the travellers turned eastward and reached the sea at Beira. Here a steamer was taken for Dar es Salaam, the capital of German East Africa.

"The town is a remarkable production to be the work of only three years, but somehow it looks more like a German watering-place than anything else; and in the European quarter there is hardly any sign of trade or business

going on. One cannot help contrasting it with such a place as Bulawayo, where you have a few mud huts, a few iron roofs, officials in shirt-sleeves, and a general air of bustle and 'go-aheadness.' Here, on the contrary, are many large buildings, concrete roads, ornamental gardens, officers in spotless uniforms, much clicking of heels and bowing, but nothing else. . . . It was also a shock to our English ideas to see numbers of native women working on the roads, and being driven to their work by a white man carrying a large raw-hide whip. I became daily more astonished at the number of convicts or prisoners. Everywhere you came upon gangs of four to eight—often women—chained together by the necks and hounded along by a black policeman or soldier. I should think there were fewer prisoners in all the Chartered Company's territories than in this one little town."

After this it will not be difficult to understand why Germany makes so little progress in Africa.

The attractions of the book, which is an admirable specimen of typography, are increased by numerous illustrations, from sketches by the author. There is an outline map to show the route, but no index.

The First Chapter of Norwegian Immigration, 1821-1840: Its Causes and Results. With an Introduction on the Services Rendered by the Scandinavians to the World and to America. By Rasmus B. Anderson, LL.D. Madison, Wis.: The Author. 1895.

THIS book was written to chronicle the first six Norwegian settlements in the United States. There is not a page in it but will be read with avidity by a certain class. Three-score pioneers, some of whom came on the first vessel, are here shown in "counterfeit presentments," while not one likeness of any *Mayflower* passenger has survived. Many Norse readers will be attracted by local and personal details far back of their own memories, and will ascertain genealogical minutiae otherwise beyond their reach. Each of the eight prominent leaders—each a man *sui generis*—is honored with a monograph. All who are interested in the American types of Scandinavian Christianity will here read concerning its vicissitudes what they would be sorry to miss. The introductory chapter would not have been inserted save by way of catering to Scandinavian race-pride. That section is a notable specimen of holding a button so near the eye that it hides the sun. As Douglas Campbell proves that we owe everything to Scotch-Irish or Scotch or Dutch—just as many before him had made the same claim for the English Puritan—and as Pascal traced all the world's culture to Rome, Athens, and Jerusalem, so Mr. Anderson's great first cause in world-history is the old Norse Viking or Berserker. Too many are now captivated by such a hemming into one single race of the legacies to which all races have contributed. This chapter accordingly befits the lecture-platform, where it has no doubt done yeoman service, rather than a sober history.

But to the general reader Prof. Anderson's book will be of interest and value for its accounts of the Norwegian settlements above enumerated, which were all that existed within the United States in 1840—a date up to which, according to the Census Commissioner, the Scandinavian immigration was "of no importance." To elucidate the genesis and exodus of these colonies—the first in Western New York (Orleans County), the second and third in Illinois (LaSalle County and Chicago), and the other three in southeastern Wisconsin—is the chronicler's end and aim. He felt that in these "seeds and weak beginnings" there lay visible in minia-

ture to a prophetic eye the occult forces which within seventy years have brought into our country a million and a quarter (p. 40) of immigrants from a region whose largest census never amounted to eight millions. This Scandinavian upheaval has been far more extensive in Norway than in Denmark or even in Sweden. Partly on this account, but still more as being himself the son of an early Norwegian emigrant, Prof. Anderson has limited himself to Norwegian settlements. Regarding these there is much of pith and validity in his book. Through his position as United States Minister to Denmark, through travel in Norway, through conversations with eight survivors of the pioneers on the first ship and correspondence with others, through personal familiarity with the colonial sites, through knowledge of whatever had been written on his theme—and thanks to Norwegian as half his own vernacular—he had become preeminently fitted for his task. Rather it is plain on every page that it was for him no task, but a labor of love.

The reasons for Scandinavian emigration are singularly similar to those which brought the first Puritans, Quakers, and Huguenots across the Atlantic, and so the children of all these religionists can claim descent from the noble army of martyrs. Though aware that history repeats itself, we read with surprise of a Norwegian imprisoned from 1804 to 1814 for "advocating the right of laymen to preach" (p. 48); of "people who had no voice in selecting their own pastors" (p. 308); of Quaker children baptized by force, and of yet more harsh persecutions (pp. 50, etc.). At length several Norwegian dissenters resolved on a new departure. They clubbed together, and, getting a favorable report from prospectors they had sent to America, in 1825 bought a sloop of forty-five tons, for which and a ballast of iron they paid \$1,800. Their leader was the man at whose house the first Quaker meeting had been held. On this small craft fifty-two persons were crowded, only two of them seamen. They embarked and were driven south to the Azores, picking up a pipe of wine on the way. On the ninth of October, 1825, after a passage of fourteen weeks, they arrived in New York, and were welcomed by Quakers. Through Quaker kindness, transportation at six dollars a head was paid for them on the canal, opened that same year, to Rochester, as well as cheap lands on long credit in that neighborhood. These colonists bettered their condition, but kept the noiseless tenor of their way, and it was eleven years before any other emigrant ship followed on their track. The notices of the first Norwegian arrival in contemporary American newspapers, among them the *New York Evening Post* (p. 76), oddly enough Prof. Anderson found of service in determining several points in his narrative. But in 1835, when the first of their number returned to Norway, he was received by the simple folk as one alive from the dead. He spoke of high wages to men whose yearly wage, in addition to food and clothing, was five dollars; of land for all land-lovers to those who despaired of such a boon where no more than one acre in 121 is arable, and where primogeniture doubled hopelessness. A stampede filling two brigades at once ensued. Good mechanics gladly bound themselves to pay two years' service for the ocean transit.

Before the second party arrived it was learned that in Illinois better land could be had for ten shillings, and often for four, than had cost five dollars in Kendall where the pioneers had settled. Hence the newcomers and some of the old ones swarmed to La

Salle. Thence, many of them, and other new arrivals, in hopes to escape the "chills" and afterward cholera epidemic in 1849-50, set their faces towards Wisconsin. By 1840 three Norwegian hamlets had there been formed, which in half a century have grown to a population of 65,096 surviving Norwegian immigrants in 1890. In 1895 the combined number of native Norwegians and Swedes, according to the State census, was 106,468. But in 1890 the native Swedes numbered 20,157, so that the total of Norwegian-born Wisconsians cannot be more than 86,311, even if there has been no increase whatever of native-born Swedes. The census, however, of Norwegians in Wisconsin, as given by our author, is 130,737 (p. 42). By this number he cannot mean the total of Wisconsin Norwegians and their children, for he sets that multitude down as no less than 596,131 in 1894. Both statements are specimens of those exaggerations to which Norsemen, in extolling their own people, are rather prone. In point of fact, between 1880 and 1890 the Wisconsin percentage of increase in Swedish immigrants was 248 per cent., and that of Norwegians was less than 14 per cent. The truth is that the census of native Norwegians in that State has reached its maximum. Immigrants long ago passed it by for Minnesota, and then for the Dakotas, where farms could be secured at cheaper rates. Such a trans-Wisconsin movement has been most prevalent among Norwegians because more of them proportionally are tillers of the soil than can be found among any other nationalities. Hence, their percentage is small in New York and Illinois, where they first planted, and smaller in Wisconsin than in newer States beyond. In 1890, Wisconsin native Norwegians were one twenty-fifth of the population; in the Dakotas they were one-eleventh. The quality of Norwegian immigrants is on the whole so excellent that their quantity cannot be too great. We see them to be so good that we would gladly believe them as multitudinous as Prof. Anderson reckons them. In our judgment they will become so.

The Natural History of Plants: Their Forms, Growth, Reproduction, and Distribution. From the German of Anton Kerner von Marilaun, Professor of Botany in the University of Vienna, by F. W. Oliver, M.A., Quain Professor of Botany in University College, London, with the assistance of Marion Busk, B.Sc., and Mary Ewart, B.Sc. Half volumes 8 and 4. Henry Holt & Co. 1895.

WHEN we noticed the first two half-volumes a short time ago, we hardly dared to hope for the immediate completion of this translation. We feared that its publication would drag, and that interest in the first parts would flag before the second and concluding portions should appear. In this we have been happily disappointed. The final volume is now in hand, and its character makes it in every way a fitting companion to the first. The author evidently planned at the outset to take every attractive feature of plants of all grades, and place these attractive features in the very best light. For this purpose he has skillfully employed a brilliant style of exposition, and he has not hesitated to use illustrations in black and in color with the freest hand. The purpose has been attained. He has succeeded in constructing a popular work on the phenomena of vegetation which is practically without any rival. The German edition has been accepted from the first as a useful treatise for the in-

struction of the public; in fact, some of its illustrations have been taken bodily from the volumes by museum curators, to enrich exhibition cases designed for the people. With two exceptions, the full-page colored plates leave little to be desired, and might well find a place in every public museum in which botany has a share. Most of the minor engravings are unexceptionable. They are clear, and are almost wholly free from distracting details which render worthless so many illustrations in popular works on natural history. Prof. Kerner's style in German is seldom obscure—it is what one might fairly call easy reading; but it is no disparagement to him and his style to state that the translation is clearer than the original throughout. Many a long sentence in the original has been broken into small and readily handled fragments, with strict regard to English and not to German usage and idiom. We repeat what was said in the notice of the earlier volumes, that the translators have been unusually successful in every part of their task.

In the first two issues, the author was engaged chiefly with the study of the structure of the plant and its adaptation to its surroundings. In this concluding volume he considers the plant from the point of view of its relations to others. Therefore he begins with a full and absorbingly interesting account of reproduction in the vegetable kingdom, and then passes to an examination of species. Under this head he takes up in succession the nature of species and alterations in the form of species, opening up the grave questions of inheritance, mutilation, and the genesis of new forms. This prepares the way for the subject of derivation of existing species and their relations to one another. At this most natural point the author deals, in a manner partly original and wholly suggestive, with the classification of plants of all degrees. After this comes the distribution of species by offshoots, by fruits and seeds, and there follows then an examination of the limits of distribution. Just here special stress is laid on the possibility of defining plant communities and floras, which, having been done to the author's satisfaction, leaves the matter of floras themselves to be dealt with on a climatic and genetic basis. On this basis he defines thirty-five floras, of which we, in our geographical limits, have the following: Canadian and Columbian, just south of the Arctic flora; Mississippi, Missouri, Pacific, Texas, Mexican, and Antilles. But our author would willingly admit, no doubt, that these divisions are rather arbitrary and provisional, being, in fact, mere makeshifts. As he says, "There is nothing for it, therefore, for the present but to grope along with the help of the little that has been ascertained."

The closing chapter, on the extinction of species, is one of the most suggestive in the whole work. It attacks certain problems which belong partly to the domain of geology and partly to the field of biology, making allowable use of facts which have been acquired by the observation of glacial advance and recession. It would be most unfair to omit speaking of the excellent glossary and the copious index. With these the work becomes a most convenient and trustworthy treasury of material for teachers of elementary botany, and a handbook for ready reference by all who desire to know something about vegetation. A very learned teacher of botany used to tell his classes that he did not want the old saying to be applicable to them, namely, that "one-half the world does not know how the other half lives." With this book, there is no excuse for even busy

people to be ignorant of how the other half, the plant-half, lives.

Records of the Clan and Name of Fergusson, Ferguson, and Fergus. Edited for the Clan Fergus(s)on Society by James Ferguson and Robert Mensies Fergusson. Edinburgh: David Douglas. 1895.

THE aim of the editors of this sumptuous volume is best stated in their own words. "As originally contemplated," they say in their prefatory note, "the publication did not propose to supply a full and detailed history of the various families of the name, but rather to place on record materials yet preserved in the recollection of individuals, or in MSS., which might otherwise disappear; to collect scattered notices of the name, and to give a general view of the fortunes of the clan in different districts of Scotland and elsewhere." Unexpected abundance of material has carried the undertaking beyond the limits at first intended; but it may be said at once that the result is a book which, notwithstanding some obvious defects, is likely to be of permanent value to both the historian and the genealogist.

It is with Fergus Mor MacEarca, who came to Scotland from Ireland in the year 498, rather than with the mythical King Fergus, that the clan and name of Ferguson are to be connected. Throughout the early history of Scotland and the Scottish church the name, under one form or another, is of frequent occurrence. But the early families scattered widely over Scotland, and between these families "no definite link of proved relationship can be established," although "interesting traditions and customs suggest that all may originally have come from a common source." Tradition assigns to the Fergusons a prominent part in the battle of Bannockburn, and connects the Athole clan with the fortunes of Robert Bruce. Athole was the chief seat of the Highland Fergusons, who were described in 1587 as an "unruly clan"; they were probably among the followers of Montrose, and "formed the original nucleus" of the Cavalier army; later they were involved in the struggles of 1745.

The absence of assured historical connection between the various families of Fergusons in the early period is probably the reason which led the editors to group the members of the clan by districts; and they have been successful in bringing together a large amount of interesting and valuable material, drawn partly from official records, partly from family papers and personal recollections. Perhaps this arrangement is the best that could have been adopted under the circumstances; but in this case, at least, the arrangement emphasizes the diversity of origin at the same time that it increases the difficulty of tracing such connection as actually exists between Fergusons of different districts. Fortunately for those who will use the book, there is a good index. In the accounts of the more prominent members of the clan the note of praise is of course not wanting, and repetitions are inevitable; but the grouping of material is on the whole orderly, and personal claims to distinction are not unduly pressed. Considerable, but hardly disproportionate, space is naturally given to those bearers of the Ferguson name who have become widely known: Adam Ferguson, professor of natural philosophy at Edinburgh, secretary to the commission sent out in 1778 to negotiate with the American colonies, and who dropped the second *s* from his name "on the ground that it was unnecessary, and therefore

unworthy of a philosopher"; Sir Adam Ferguson, eldest son of the professor, dubbed by Scott "the merry Knight," and Col. James Ferguson, with whom Scott drank "rather a cheerful glass"; Robert Ferguson, the physician; James Ferguson, Lord Pitfour, one of the most popular lawyers of his day; Robert Ferguson, the poet; James Ferguson, the astronomer, and James Ferguson, the architect. Scott, as is well known, was on intimate terms with several of the Fergusons, especially those at Huntlyburn; and their intercourse is the subject of several interesting contributions.

A chapter is devoted to Fergusons in Ireland, another to Fergusons in England, and a third to those in Holland, Poland, and Ceylon. There are several references to Fergusons in America, but apparently no attempt was made to trace in detail the history of the clan representatives in this country. The father of Dr. Robert Ferguson was born in America, where his father had settled, and was with the British army until 1782, being for a time "clerk of issues" in the commissary department. Captain James Ferguson was in command of a frigate of thirty-two guns during the early part of the Revolutionary War, and was especially commended by Lord Howe for his "ability testified in the direction of many difficult and fatiguing services" in the operations about New York. There is an interesting account of the services of Col. W. O. Ferguson in South America under Gen. Bolivar. In the case of James Frederick Ferguson, the Irish antiquary, son of Jacques Frédéric (not Jaques Frederic, as at p. 470) Jaquemain, it would seem to have been worth while to mention the fact of his birth in South Carolina, as well as his great work of indexing the Irish Exchequer records.

About fifty pages are devoted to a bibliography of writings by and about Fergusons, prepared, the editors say, "after a careful examination of the catalogues of the leading libraries, and in several cases with the personal assistance of the authors." It is to be regretted that the work at this point could not have been better done: the editors were plainly on unfamiliar ground, and the result is a list whose accuracy cannot be depended on. We note a few instances only. "Seven editions" of Adam Ferguson's 'Essay on the History of Civil Society' are spoken of (p. 518); an eighth edition was published in Philadelphia in 1819; there are also translations in French and German. In the body of the work (p. 145), this book is said to have been published in 1766; the bibliography gives the date as 1767. Brewster's edition of James Ferguson's 'Astronomy explained upon Sir Isaac Newton's Principles' is omitted. There was another edition of Robert M. Ferguson's 'Electricity' in 1878. Rev. David Ferguson's 'Answer to Ane Epistle' was reprinted in 1860 by the Bannatyne Club; but the fact is not noted, although the volume containing the reprint is duly entered. The titles of early printed books are not always accurately given: it is a bibliographical commonplace that if the original spelling and punctuation are to be followed at all, they should be followed consistently and exactly. A curious instance of abbreviated title occurs in the body of the work (p. 310), where what appears to be the full title of David Ferguson's 'Epithalamium Mysticum Solomonis Regis sive Analysis,' etc., is given, but with the words "Solomonis Regis" omitted; in the bibliography the name appears as Ferguson, and the title is given as 'Analysis Critico-Practica Cantici Canticorum.' In some cases it is to be feared

that titles have been taken bodily, without verification, from "the catalogues of leading libraries": on page 542, for example, is the entry, 'On the Antiquity of the Kille, or Boomerang. (In V. 19.) 1841.' What "in V. 19" means does not appear from anything in the text; "catalogues of leading libraries" indicate a reference to the publications of the Royal Irish Academy, which are noted in connection with another title on the succeeding page.

There is a valuable chapter on Ferguson heraldry. The colored heraldic plates are extremely well done. The full-page illustrations, most of them from portraits, are creditable; but the smaller ones are as a rule inferior.

Essays in Taxation. By Edwin R. A. Seligman. Macmillan & Co. 1895. 8vo, pp. x, 434.

DURING the past five years, Prof. Seligman has been publishing in various economic periodicals articles upon taxation, especially upon American taxation, whose solidity, vigor, and accuracy have challenged admiration. A number of these articles, revised and brought down to date, are now reprinted in a handsome volume. The chapters are entitled: The Development of Taxation, the General Property Tax, the Single Tax, Double Taxation, the Inheritance Tax, the Taxation of Corporations (three chapters), the Classification of Public Revenues, Recent Reforms in Taxation, the Betterment Tax, Recent European Literature in Taxation, and American Reports on Taxation. These thirteen essays, though nominally disconnected, are so uniform in treatment and so interpenetrated by well-matured convictions, that they may almost be said to constitute a treatise on taxation. They do not form, to be sure, a comprehensive treatise, since many subjects of prime importance—e. g., customs duties and other indirect taxes upon business and consumption, the income tax, progressive taxation, the shifting of taxes, tax administration, and the relation of various taxes to one another—receive but incidental discussion. Indeed, to speak in terms of our own tax system, the whole subject of federal taxation is almost ignored. Within their field, however, the 'Essays' are far superior to the tax-commission reports which, in their original or in some vamped form, have served heretofore as our chief sources of information—and misinformation—concerning taxation in American States and cities.

Throughout Prof. Seligman's book his wide acquaintance with the literature of finance is evident. He knows the Germans, but he is not their slave. Their influence never misleads him, as it did Bastable, into the use of un-English terms like "subject of taxation" and "object of taxation" for tax-bearer and thing taxed, nor yet into elucidating the expression "political sciences" by a parenthesized "(*Staatswissenschaften*)."

Mr. Seligman, on the contrary, has really mastered Wagner and Cohn and Schäffle. His grasp upon the economic and upon the legal principles exhibited in the field of taxation is strengthened thereby, while he still exercises independent judgment, and does not mistake analogies from Continental conditions for descriptions of American or even of English taxation. Against such misapprehensions there could, indeed, be no better bar than the frequent investigations which he has made into the history of our own taxes. The facts thus brought out give the reader greater confidence in the author's conclusions than could even the most rigid deduction from such unverified assumptions as lie at the basis of much "economic thought."

The introductory essay emphasizes "the slow and laborious growth of standards of justice in taxation, and the attempt on the part of the community as a whole to realize this justice." This growth involves a progressive recognition of ability to pay and of benefit received as bases, each in its place, for the distribution of taxation. It involves also a gradual transition, due to the development of novel sorts of intangible property, from position to acquisition—that is, from property to income—as the only adequate index of ability to pay. In the second essay the history of the general property tax is sketched. That history in Rome, France, Germany, England, and America is the same:

"As soon as the idea of direct taxation has forced itself into recognition, it assumes the practical shape of the land tax. This soon develops into the tax on general property, which [meaning property, not the tax] long remains the index of ability to pay. But as soon as the mass of property splits up, the property tax becomes an anachronism. The various kinds of personality escape, until finally the general property tax completes the cycle of its development and reverts to its original form in the real property tax."

England, and Continental Europe generally, long ago recognized the injustice of the general property tax as the sole or even the chief means of raising revenue, and frankly turned it into a land tax, supplemented by taxes on persons, on business, on house-rent, on incomes, etc. Only in the advanced democracies does the old property tax still survive, in Switzerland, Australia, and the United States. In these countries, too, its imperfections have finally been realized, and each is gradually developing the supplementary taxes most obviously workable under its conditions—the United States first introducing corporation taxes, and afterwards adding the inheritance taxes with which the Australian colonies began, while the Swiss cantons first of all developed the income tax, a late-comer in Australia, and are now beginning to follow our example in taxing corporations. To this same question of the taxation of corporations more than a quarter of Prof. Seligman's book is devoted, and nowhere, so far as we know, are the economic aspects of this complicated and difficult subject treated with such fulness of knowledge and such keenness of analysis as here. On the law of corporation taxes an enormous amount has been written; but, after all, it is the economic rather than the legal factor which must ultimately determine their fate.

Not the least interesting chapter is that on recent reforms in taxation, especially in English, Dutch, and Prussian taxation. Alike in Sir William Harcourt's famous "democratic budget" of 1894, in the reforms of Mr. N. G. Pierson and in those of Dr. Miquel, "the same tendency is unmistakable, the trend to greater justice in taxation." The Prussian reform of 1891-1893 is further notable for bringing about a segregation of source between state and local revenues—a policy earnestly recommended to our own commonwealths.

We pass to mention a few points from which it is possible to dissent. Unquestionably some personal property escapes taxation for want of uniformity in the laws determining its situs. Pending interstate agreement upon this point, "it may be possible," says Prof. Seligman (p. 114), "to reach intangible personality through some form of national taxation, the general Government then to apportion the proceeds to the States." Not only is this remedy, as Prof. Seligman recognizes, impracticable, in view

of the last income-tax decision, but to many people it will seem distinctly worse than the disease. We hope never again to see the States the fiscal beneficiaries, even in appearance, of the federal Treasury. Again, we cannot help thinking Prof. Seligman ill-advised in his use of the assertion that the "single tax" cannot raise wages. If real wages, and not mere money wages, are intended, the assertion may very plausibly be disputed; at any rate, his cogent and convincing arguments against the single tax do not need the assertion even if it is true, while they suffer from it if it be false. Finally, in the highly technical chapter entitled "The Classification of Public Revenues," the discussion with Bastable runs into a style which reminds us of the beginnings of a German "Professorenzank," a kind of squabble which we may well leave to the universities of the Fatherland. In spite of occasional blemishes, however, Prof. Seligman's book is capable of holding its own with the best writing on taxation in the better known languages—a book, too, which legislator and citizen alike may read with alternate complacency and mortification, but with uniform profit.

Labor in its Relations to Law. By F. J. Stimson. Charles Scribner's Sons. 1895.

THIS little book consists of four lectures delivered at the Plymouth School of Ethics, and it is quite probable that the character of the audience addressed had its influence on the treatment. Presumptively Mr. Stimson's hearers were neither economists nor lawyers, and the task of instruction and conversion must have been far from easy; but it has been performed with great skill and judgment. Some unpalatable truths had to be administered, but they have been so dexterously concealed in a vehicle of persuasive argument as to leave no bitter taste behind. By frankly professing sympathy with laborers, Mr. Stimson disarms opposition, and, having complied with the first maxim of the forum—to create a favorable impression towards the speaker in the minds of his hearers—he leads them gently away from the lotus groves of sentimentalism to the sober realms of reason and common sense.

Occasionally, however, Mr. Stimson is himself quite too mild. The barbarous legislation which prohibits the inmates of prisons from productive labor draws from him only the feeble complaint that "our sentimental altruism" should not carry us so far as to object to the employment of our criminals in healthy outside work. Why should it carry us so far as to object to their employment in healthy inside work? And why should Mr. Stimson particularly recommend their employment in enterprises which private capital avoids as unremunerative? Must not the convicts be somehow supported? And if they are not to be supported by their own labor, must it not be by the labor of free citizens? Here was an opportunity missed to administer a wholesome corrective to our sentimental altruism.

The statement of the law relating to the contracts between master and servant, and to such special episodes as strikes and boycotts, is very lucid and succinct. In fact, the book will serve very well as a manual of what is called labor legislation. The policy of many of these laws is well meant, and receives suitable commendation from Mr. Stimson, while the futility and unconstitutionality of a considerable class of statutes are plainly exposed. He looks forward to the attainment of peace in the industrial world, or at least of progress toward peace, through the development of the

trade-unions. Doubtless the members of these unions, if they combine with their masters, can secure many things for both parties, but the fate of the outside laborers, who are, even in England, probably nine-tenths of the whole number, deserves some consideration. A combination of this kind may create an invincible monopoly, which is something that no believer in freedom can look forward to with gladness.

Socrates, and Athenian Society in his Day: A Biographical Sketch. By A. D. Godley, M.A., Fellow of Magdalen College, Oxford. Macmillan & Co. 1896. Pp. vi, 232.

THIS book is not intended, its author tells us, "for classical scholars or professed Platonists, but rather for the large and increasing class of students who do not wish to be debarred altogether from an acquaintance with Greek literature by their ignorance of the Greek language." In other words, it is another of the many attempts to begin an acquaintance with those productions which are preëminently the masterpieces of form and beauty, by casting away the beautiful form itself; to learn what the Greeks said, leaving out how they said it—that is, to learn Greek without Greek.

Mr. Godley proposes to effect this object by a series of passages translated chiefly from Plato, partly from Aristophanes and Xenophon, accompanied by some account from other sources of the position of Athens and the Athenians during the life-time of Socrates. His versions are spirited and accurate, and may be compared with those of Jowett, not at all to the advantage of the latter; which is remarkable in the work of an Oxonian. The principle of selection is not so commendable. There is far too much space given to the myths; the Atlantis and the story of Er, however striking in themselves and necessary for a knowledge of Plato, take up much space in a Life of Socrates which had far better be given to the 'Crito,' the 'Phædrus,' and the 'Theætetus.' It may not be easy to decide the exact ratio of Plato's intimacy with Socrates to that of Xenophon; but Mr. Godley seems yet in the fetters of the English traditional belief that because Plato's Socrates has much greater literary charm and richness of thought than Xenophon's, therefore it is more correct as a picture.

The material of the book has been so long before the world, and been so thoroughly thrashed over, that there is not much chance for original research; but the author has made one discovery, namely, that the attack on Socrates in the "Clouds" is just such scandal as arises in any small town, e. g., Tennyson's Lincolnshire village. Considering the position Athens occupied in the civilized world in 423 B. C., and the crowds that were likely to assemble at the city Dionysia, all eager to see the comedies to which the truce was admitting them for the first time in eight years, such a reduction of Athens to the level of Chichester or Medicine Lodge is indeed novel. There are some points in Athenian society which all classical scholars know can never be explained to readers of English; and Mr. Godley's reserved paraphrases are as unsuccessful as his predecessors'. We also are favored with the repetition of the favorite English blunder, as follows: "In a large society, abstention from politics is a matter of choice. No one is seriously blamed for being what Americans call a 'Mugwump.'" A Mugwump, Mr. Godley is respectfully informed, is anything but an abstinent from politics.

The book is extremely elegant in all points of outward dress, and is generally correct in printing; but on page 198 there is a bad misprint of *labens* for *labem* in the quotation of Virgil's 'Æneid,' vi., 746.

Old Chester: Etched and described by H. Hovell Crickmore. Charles Scribner's Sons. 1895. Pp. 133.

THE city of Chester, with its well-preserved ancient walls, its interesting cathedral, and its admirable old houses, is one of the most attractive places in England to American travelers. It is proportionally attractive to Englishmen, and has been the subject of many publications, some of them of value. The present work is a chatty and discursive account of old buildings and of the two neighboring country houses, Eaton Hall and Harwarden Castle, the seats of the Duke of Westminster and Mr. Gladstone, respectively. It is illustrated by eleven etchings and twenty reproduced pen-drawings, not very masterly considered as renderings of architecture, although two or three of the etchings are much superior (in this respect and also in value as a record) to the other etchings and the pen-drawings. The chapter on "Bridge St. and Lower Bridge St." shows evidence of a

considerable personal knowledge of the old houses which are as yet unmarred by restoration, and the few words given to the cathedral and to St. John's Church are much to the purpose and argue a lively sense of essential differences in architecture. Much the greater part of the text is given to a semi-jocose treatment of the legends and partly historical traditions connected with the buildings of the city and the city itself. The constant use of exclamation marks, combined with the little exclamatory clauses, "Oh, dear!" "Ah well!" and the rest, emphasizes the extremely modern language employed in many of the pages. Popular slang and funny writing need the exclamation points, as also do the bits of sentiment which are freely applied to the sad records of the past, and both are used in this presentation of ancient adventures and ancient miseries to modern readers. In spite of much bad taste, the book is readable and an aid to the understanding of history.

WALTER BAKER & CO., LIMITED, DORCHESTER, MASS., the well-known manufacturers of Breakfast Cocoa and other Cocoa and Chocolate preparations have an extraordinary collection of medals and diplomas awarded at the great international and other exhibitions in Europe and America. The house has had uninterrupted prosperity for nearly a century and a quarter, and is now not only the oldest, but the largest establishment of the kind on this continent. The high degree of perfection which the Company has attained in its manufactured products is the result of long experience combined with an intelligent use of the new forces which are constantly being introduced to increase the power and improve the quality of production, and cheapen the cost to the consumer.

The full strength and the exquisite natural flavor of the raw material are preserved unimpaired in all of WALTER BAKER & COMPANY'S preparations; so that their products may truly be said to form the standard for purity and excellence.

In view of the many imitations of the name, labels, and wrappers on their goods consumers should ask for and be sure that they get the genuine articles made at DORCHESTER, MASS.

Do me the favor to ask your wine-merchant, or Park & Tilford (wholesale agents), for my "Picarillo" natural sherry, and "Manzanilla Pasada."

The Cid Campeador.

A HISTORICAL ROMANCE.

By D. ANTONIO DE TRUEBA Y LA QUINTANA.
Translated from the Spanish by HENRY J. GILL, M.A., T.C.D. Crown 8vo, cloth, pp. viii, 387, \$2.00.

"The 'Cid Campeador' has been for centuries the great popular hero of Spain. He takes the same place in that country as King Arthur does in England, Roland, or Rolando, in France, and William Tell in Switzerland; and, like them, his life and exploits are, to a great extent, founded on popular traditions. In English-speaking countries there is very little known respecting him, and the translator ventures to place before the public a work which is considered by Spaniards to be one of the best historical romances in their literature. It is founded on a large number of ballads and other poetical pieces, extant in Spain for centuries, and on a very old work named 'The Chronicle of the Cid.'—*Extract from Preface.*

IMPORTANT FORTHCOMING BOOKS

Ready February 25th

A NEW BOOK BY ANTHONY HOPE

(COPYRIGHTED)

COMEDIES OF COURTSHIP

By ANTHONY HOPE. 12mo. Uniform with Robert Grant's "The Bachelor's Christmas." \$1.50.

Anthony Hope has been called by George Meredith a "master of modern dialogue," and this estimate finds amazing and delightful confirmation in this new volume of stories. They are varied in scene and incident, but possess a common characteristic—a light, romantic spirit. The following are their titles: "The Wheel of Love," "The Lady of the Pool," "A Three-Volume Novel," "The Philosopher in the Apple Orchard," "The Curate of Poltons," and "The Decree of Duke Deodonato."

THE JEWISH SCRIPTURES

The Story of their Origin and History in the Light of the Latest Criticism. By AMOS K. FISKE. Crown 8vo, \$1.50.

A distinctly popular account of the books of the Old Testament considered as history and literature. The standpoint of the writer is radical and in accord with what has been called the higher criticism. The book summarizes in terse and luminous style the results of the study of Hebrew scholars, and the general reader has in it a thoughtful, complete, and interesting handbook on the subject.

THE INTERNATIONAL CRITICAL COMMENTARY

MARK. By Prof. E. P. GOULD, D.D. 8vo, \$2.50 net.

Prof. Gould's work is the latest volume in this new commentary, issued under the editorship of Prof. C. A. BRIGGS in America, and Prof. S. R. DRIVER and Rev. ALFRED PLUMMER in Great Britain. Three volumes have previously been issued—Deuteronomy, by Prof. DRIVER, Judges, by Rev. GEORGE MOORE of Andover, and Romans, by Rev. WILLIAM SANDAY and Rev. A. C. HEADLAM of Oxford. Each vol., 8vo, \$3.00 net.

"A decided advance on all other commentaries."—*The Outlook*.

THE EVOLUTION OF CHURCH MUSIC

By the Rev. FRANK LONDON HUMPHREYS. With a Preface by Bishop POTTER of New York. 12mo, \$2.00 net.

Ready March 7th

A NEW NOVEL BY MRS. BURNETT

A LADY OF QUALITY

Being a Most Curious, hitherto Unknown History, related by Mr. Isaac Bickerstaff, but not presented to the World of Fashion through the pages of the *Tattler*, and now for the first time written down by FRANCES HODGSON BURNETT. 12mo, \$1.50.

This new novel of Mrs. Burnett's is sure to prove a genuine surprise to all, so complete and marked a departure is it from any work that has hitherto appeared from her pen. The story is laid in the age of Queen Anne, presenting a vivid and frank picture of the time, and, like "Henry Esmond," is written in the language of the period. The *Lady of Quality* is a unique character in fiction, and her life is full of moving and dramatic incidents, which Mrs. Burnett relates with great power, and in a manner absolutely new to her readers.

The Nation.

NEW YORK, THURSDAY, FEBRUARY 27, 1896.

The Week.

THE resolutions adopted at the meeting in this city last week to promote international arbitration do not commit anybody to any particular *modus operandi*, but merely to "some wise method of arbitration." By avoiding the plan, which is favored by some, of a permanent high court of arbitration, the coöperation may be secured of all persons who favor the settlement of international disputes by peaceful means, leaving the method to future negotiations and adjustment. There are serious obstacles to a permanent high court of arbitration, the chief of which is, that a court must act under rules, and that rules for its guidance cannot be fixed in advance of the disputes which have to be adjusted. For example, the rules applicable to the Geneva arbitration (*Alabama* claims) would not have answered for the Paris arbitration on the Bering Sea question, while neither of these would have fitted the Venezuelan boundary dispute. Therefore the only practicable and safe approach to an agreement for arbitration as a rule of national life is to treat each case as it arises. The important thing is to get the nation, and eventually the world, into a habit of mind—that of regarding international differences as things to be settled in some other way than by fighting. Fortunately much has been done to bring us to that state of mind by the two great examples mentioned—those of Geneva and of Paris. The former especially was an affair of immense importance, settling, as it did, a most irritating question at a cost of only two or three days' expenses of a modern war.

The meeting on Washington's Birthday in Independence Hall, for the same object, was a great success, and its tone and spirit, together with the influence of many similar meetings held on the same day in different cities, will contribute much towards making the projected arbitration convention at Washington a true demonstration of national sentiment. Kipling's recent story, "How the Ship Found Herself," makes the first use of the steamer's true voice to exclaim, "What a fool I have been!" That is practically the confession which this country is making, by the mouth of these eminent jurists, clergymen, educators, and military men, who unite in a public protest against the needlessness and barbarity of a resort to war to settle international disputes, and in a demand for a "permanent system of judicial arbitration" between America and England. Bishop Potter justly said that the miserable Venezuelan imbroglio would

be worth all it cost if it led to "a truly great and widespread movement for some common basis of understanding and action that shall minimize to the utmost possible extent the possibilities—between the two peoples that more than any other in all the world hold in their hands the future of a higher civilization—of the madness, the savagery, the brutality of war." President Cleveland's expression of his "heartly sympathy with any movement that tends to the establishment of peaceful agencies for the adjustment of international disputes," was certainly all that could have been expected, and we are not disposed to scrutinize too narrowly the phraseology by which this distinguished convert gives in his adhesion.

A very striking and encouraging evidence of a healthy change in public sentiment in this State towards war was seen in the action of the Assembly at Albany on Monday evening. A resolution was pending before it urging Congress to increase the navy, construct elaborate coast defences, form a closer alliance with other republics on this continent, and "acquire Cuba, preferably by purchase." When this came up for consideration, Mr. Kempner offered as a substitute a series of resolutions saying that the true grandeur of nations lay in the arts of civilization rather than in the wasteful, bitter violence of war, declaring that the Legislature earnestly desires Congress and the President to make permanent provisions for some wise method of international arbitration, and requesting the Governor to forward a copy of the resolutions to the Governors of other States in the Union asking them to coöperate in the movement for a national conference upon the subject at Washington. This substitute was adopted with only one dissenting vote, that of the author of the first resolution. Members of both parties thus went upon the record against jingoism, and their action gives unmistakable evidence that the "war party" in this State is a very insignificant minority.

During the past week a plan of settlement of the Venezuelan controversy, called "the Smalley plan," has made its appearance in the columns of the *London Times*, Mr. Smalley being the New York correspondent of that paper. That the *Times* should have a plan of its own naturally irritates other papers, especially the *Chronicle*. Moreover, the *Times* correspondent, probably shrinking from this resentment, says the plan is not his, but one prepared by the American Government for submission at the proper time. But our State Department, doubtless foreseeing the consequences of an admission that it has told more to the *Times* than to the

Chronicle, the *Globe*, or the *St. James's*, stoutly maintains that Mr. Smalley is in error, and that it has neither prepared nor proposed any plan. There is only one way out of this imbroglio, and that is the communication to more newspapers—say twelve—of the real secret of the negotiations. Delays are proverbially dangerous. In the multitude of newspapers there is safety, and no plan which has only one newspaper behind it can command the confidence of a great people.

The venerable Jules Simon has a striking letter on arbitration in the February *Cosmopolis*. He says that war was never so likely as at the present moment, and yet never so impossible—never so likely, on account of the many *casus belli* piling up in various parts of the world; never so impossible, on account of the fearful nature of any great war and of its inevitable results. The improvements in the art of war are such as to make it as fatal to victors as to vanquished, to neutrals as to belligerents. The dread of war's enormous catastrophes no doubt stays many a rash hand, and is, in a sense, of itself a guarantee of peace. But, as M. Simon says, is living in this state of armed apprehension a tolerable way for civilized nations to live? If all profess, as all do, a love of peace and a horror of war, why not take prompt steps to make peace all but certain? That is the question which the advocates of international arbitration are asking to-day with redoubled emphasis, and the only answer they get from the Jingoos is that war is a glorious spectacle, and a sport worthy to be named even above the prize-fighting which they love and praise almost equally. There can be no doubt that in this country, as in England and France, the mass of the people are ready to accept arbitration more swiftly and completely than are their rulers. In this situation, as M. Simon asserts, "If diplomacy stumbles at technicalities in the presence of such perils, let public opinion force its hand."

The laurels gathered by Mr. Hannis Taylor in the field of diplomacy have not attracted general admiration heretofore, and his latest exploit will not add much to his fame or that of the United States. A Spanish naval officer read a paper before the Geographical Society of Madrid, in which he expressed certain opinions, sufficiently absurd, no doubt, of this country and its inhabitants. Among other things he had observed here was a company of young ladies drilling for military service, from which he drew the inference that the future defenders of the republic were to be of the female sex—the men, perhaps, supporting themselves by needlework or taking in washing. He

had probably seen some school-girls practising the Delsarte system, and reached that extraordinary conclusion. No matter how he came by them, his comments are not more extraordinary than some that we are accustomed to see in the gravest French publications. Minister Taylor was ruffled by this communication to the Madrid geographers, and addressed a note to the Spanish Minister of Foreign Affairs. There are various accounts in the newspapers of the import and tenor of this note. It is not important to anybody except Mr. Taylor himself what he said, but that he should have taken any notice at all of a paper read at a private gathering ought to be mortifying to American pride, and would be were we not so accustomed to the *gaucheries* of our representatives abroad and so hardened by them. It appears that Capt. Concas, the offender of Taylor, was not attached in an official capacity to the Spanish visitors to the Columbian Exposition.

Senator Morgan "went gunning" for Spain in the Senate on Thursday, in company with Lodge of Massachusetts. After they had finished there was not much to choose between them and Capt. Concas on the score of good manners. Morgan said that Spain was daily committing outrages on humanity itself by its treatment of prisoners taken in Cuba. "Spain fills to repletion her prison in Africa," he said, "with persons captured out of the army of the rebels. . . . Spain inflicts upon them penalties, under the name of law, which their crimes would not deserve even if they were individuals engaged separate and apart, or in little squads, in insurrection against the Government of Spain." Morgan wanted to have belligerent rights accorded to them by our Government. Lodge went farther. "I should like to see some more positive action taken than that," he said. What more positive action could we take unless we should interfere in Cuban affairs by force—that is, make war against Spain? We refer to these speeches merely to point out the insignificance of the offence which called out Mr. Taylor's note to the Spanish Minister of Foreign Affairs in comparison with the affronts publicly put upon a friendly government by some of the highest officials of our own.

All expectation of passing the tariff bill in the Senate has been abandoned, and it is now said that the free-coinage bill that was sent by the Senate to the House (as a substitute for the bond bill of the latter) will not receive the compliment of a conference committee. This is a satisfactory disposition of both measures. Senator Smith said the other day, with keen discernment and retrospection, that the best thing Congress could do would be to adjourn. This sentiment was heartily applauded by the country, but since Congress will not take the hint and adjourn

immediately, the next best thing is for the House to reject all the Senate bills and the Senate to reject all the House bills except the regular appropriations. The special appropriations, of which there is a formidable mass looming up, such as bills for new battle-ships, coast fortifications, the Nicaragua Canal, the Pittsburgh and Lake Erie ship-canal, etc., ought to be solemnly knocked in the head as fast as they show themselves. It would be a saving of time if all these measures were given the *coup de grâce* in the House first, but the probability is that they will first see the light in the Senate as amendments to ordinary appropriation bills, in which case we hope that Speaker Reed will have a long knife whetted and ready for each of them.

Against the protests of the chairman of the House committee on agriculture, and apparently in defiance of a rule of the House which provides that no amendment to an appropriation bill shall change existing law, the agricultural bill was passed last week, with a clause making it mandatory upon Secretary Morton to buy and distribute \$150,000 worth of seeds. The existing statute requires that such seeds must be "rare and uncommon," but this is now explicitly repealed—whether legally or not, it may yet be for the Attorney-General and the courts to decide. But there was at least debate enough to make the unblushing nature of the performance perfectly clear. The arguments for the Government's going into the seed business were just three. Secretary Morton is against silver, and we'll make him distribute seeds whether he wants to or not, law or no law. Secondly, Wall Street and the gold-bugs have corrupted this Congress and bought so many favors from it that we must make a show of doing something for the farmer, whether it is what he wants or not. Thirdly, those seeds are ours, and we are going to have them allotted to us personally; and no usurper shall be allowed to override the majestic and inalienable privilege of every Congressman to have thirteen packages of turnip seed go with his seat. In the name of Jehovah and the Continental Congress, seeds!

The discussion in the House last week over the question of the proper pay of five Indian inspectors concerned a petty matter, so far as the amount of money at issue went, but it involved the whole matter of economy in appropriations. The point was whether the salary of these five men should be made a few hundred dollars apiece larger than it has been, but the chairman of the appropriations committee and other prominent Republicans treated it as a test of party policy on the question of economy. Mr. Grosvenor of Ohio, for example, said:

"I stand here for one to make a record that will show to mankind that in this year, in the great depression of business, in a time when everybody is suffering, and appeals are coming

to Congress from every direction, I will not vote to increase salaries at a ratio of 25 per cent., or nearly that amount, in an appropriation. I warn you, gentlemen of the House of Representatives on both sides, that the people of this country have their eye on this particular Congress, and one of the things they are looking to is to see whether we are willing to create new offices and give exaggerated salaries to existing officers."

Despite such appeals, however, enough Republicans joined with the Democrats to carry the increase. The Democrats, of course, think it "good politics" to have another "billion-dollar Congress" for a campaign argument against the Republicans, if they can get it, and there are a good many Republicans who do not seem to be afraid to run the risk.

Fortunately, Speaker Reed is conceded by everybody to stand firm on this question, and while there are signs of revolt against him, his influence is still tremendous and may prove decisive on more important issues than the one decided last week. The welcome announcement is made, on what seems to be good authority, that the Republican managers of the House will not let down the bars even for the sake of appropriating large sums for new war-ships. The Jingo element has urged that the money for new ships need not be appropriated this year, but all that will be necessary will be for the House to sanction their building and appropriate the money to start the work. The House leaders reply that such legislation would be in the nature of a promise to pay, and that although the money in bulk should not be appropriated this year, this Congress would be held responsible for the legislation and the spending of the money. Mr. Dingley, chairman of the ways and means, maintains that the Republican leaders are doing the best they can, for both the country and the party, when they take this stand, and he is quite right. So far as Speaker Reed is concerned, economy is undoubtedly the best card that he can play in the game for the Republican nomination.

A petition addressed to members of Congress has been sent out for signature by the President of the Woman's Christian Temperance Union, at Mansfield, O. It is in these terms:

"The introduction of any measure in your honorable body looking towards military training in the public schools of this country is sincerely regretted. We believe it will prove one of the mistakes of the century just closing to utilize in any way our cherished educational system for war necessities. We earnestly ask you to work and vote against all bills and resolutions that aim to accomplish such a purpose."

We do not believe any such petition unaccompanied by argument will produce any effect on any member of Congress. We are in the midst of an attempt, long prepared, to convert this into a military nation, with hostility to foreigners as the leading motive in its politics and in the education of its youth. This attempt was begun, and is continued, mainly as a

support to high-tariff legislation. As long as the leading party in the country makes the enactment of high tariff its main concern, to the neglect of nearly every other governmental interest, this motive will continue to be cherished in every way possible, including military drill in the schools. Nor will the drill be taught as a means of physical culture. It will be taught as a preparation for war, that is, for the slaughter of certain people—particularly the British—and the destruction of their houses and ships. Every canvass in promotion of the tariff will consist largely in abuse of foreigners, and exposures of their designs against our peace, prosperity, and security, and out of this will come constant preparations for defence against attacks by them on our coasts and navy. Therefore, there is, in our opinion, little use in trying to cure the war fever without attacking it at its source, which is the protectionist mania.

Twenty-five Republican Congressmen from Pennsylvania, "having seen mention in the newspapers" of the fact that Matt Quay might possibly be a candidate for the Republican Presidential nomination, have "taken this opportunity" to request him to be one, and to assure him that "from the numerous expressions of sentiment in our respective districts by leading Republicans the mention of your candidacy is received with great favor and that you will obtain their support." They remark that it is some time since Pennsylvania had a candidate for the Presidency, but they hold that "there is no reason why our great Republican State should longer be ignored, and we believe that the man and the occasion unite in making your candidacy available at the present time." In reply, Mr. Quay informs his correspondents that some days before, "in deference to friends whose wishes could not be disregarded," he had signified his willingness that his name should go before the Republicans of the country "in the high connection you mention," and that the "kind coincidence" of the Congressmen in this suggestion was "exceedingly gratifying." He concluded, "Believing that they and you are equally sincere, I remit my candidacy in all good faith to the wisdom of the delegates who will assemble at St. Louis on the 16th of June next." Being asked by a correspondent of the *Philadelphia Press* what his "campaign slogan" would be, Mr. Quay replied "without hesitation": "More protection, more money, more public improvements, and municipal reform."

The first effect of all this was to take away the breath of the editor of the *Press*, and make him "stand dumb," and dumb he has remained in his own paper. In this city he was heard to say that "of course the purpose of Mr. Quay's candidacy was to hold and solidify the Pennsylvania delegation."

He seemed to have no views to express about the possible shame which a delegation solidified for a candidate of such character might bring upon the State. No candidacy quite equal to this in cynical defiance of the moral sentiment of the country has ever been put forward in either party, backed as this is by the apparently solid support of a great State. Senator Gorman's candidacy in 1892 came nearest to it, but he had only a small State behind him, and was morally Quay's superior.

How much of the money paid over for the late Government loan has come from home reserves, and how much from foreign markets? At least \$67,000,000 has been paid on bond subscriptions. Now there has been imported, since the opening of the year, exclusive of coin in transit, not more than \$15,000,000 gold. This sum must represent the maximum of the bond subscriptions which up to date have been actually drawn from European money reserves. In other words, ignoring all payments left on deposit with the banks, at least \$50,000,000 has, since the 8th of February, been withdrawn from the domestic market and absolutely locked up from public use. Now let us see what has been the effect on the market of this withdrawal. In the opening week of January, when the bond issue was announced, call money rose in New York to 35 per cent. Two weeks later, 6 per cent. was virtually the lowest, and time loans brought as high as 12. This clearly arose from uncertainty as to how much money was being withheld by lenders in view of a possible genuine and heavy over-subscription to the bonds. That the extreme high rates were caused by this, and not by misgivings over the actual withdrawal of \$111,000,000 in five months, was proved after the bond allotments, when all the money markets promptly receded, until the present rates for two-months' loans are down to 4 per cent., with call loans correspondingly easy. A similar result has for a fortnight past been perceptible in other domestic money markets.

One of the odd things, to the American eye, in English journalism, is the enormous hospitality accorded to the views of Mr. Moreton Frewen on American affairs, especially on American money and finance. If any one here on the spot, where his tales can be verified, attaches any importance to them, we have yet to hear of him. And yet they reach the *London Times* in ceaseless stream. It now appears that he has been seeking support from the eminent Lodge, and Lodge feeds him in a letter from which Mr. Frewen makes the following extract:

"I see Balfour comments on the astonishing outburst of feeling against England here. The bottom of it, in recent times, is England's attitude on the money question, and the way in which she has snubbed all our efforts to do anything for silver. Do you not see that gold,

which you have been fighting for for years, is really at the bottom of all this business? I quite agree that we are not going to be made prosperous by borrowing; but we can check the outflow of gold by prudent legislation."

Now it is, of course, a great shame for Massachusetts that she should have a man like Lodge sitting in the chair of Daniel Webster and Edward Everett. There is no covering that up. But Mr. Frewen, when he quotes Lodge to the English public, fails to mention that he has no financial authority whatever; that nobody minds what he says about currency, or gold, or silver; that he is a "friend of silver" simply because he is a demagogue, and thought for a while that his party was rushing into the silver slough. He clamors for silver or bimetallism just as he clamors for war with England about Venezuela, or for a big navy or for coast fortifications.

That the troubles of Prince Ferdinand of Bulgaria will be brought to an end by the "conversion" of his infant son, Prince Boris, and baptism in the Holy Orthodox Church, is a consummation which that prince may desire, one would think, rather than confidently expect. The difficulties which have beset Prince Ferdinand since his accession to power have been of many sorts, and they seem to have weighed upon him almost in inverse ratio to their real gravity. The downfall and murder of Stambuloff he bore (if indeed he did not plan) with a light heart; while the later disturbances, domestic and political, which have arisen over the baptism of his son seem to have thrown him into great perplexity. He had, to be sure, promised at the time of his marriage that his children should be brought up in the Roman Catholic faith; but such promises are not always kept, especially in royal households. Prince Ferdinand desired to conciliate the Czar, and, perhaps even more, to smooth away the prejudices of his own people, and make more solid the foundations of his dynasty by conforming it to the national religion. Hot discussions at once sprang up inside and outside his palace. His most earnest opponents were those of his own household. Then he took the unwise course of endeavoring to obtain the Pope's consent to the carrying out of his wishes. Very queer dispensations have at one time or another been granted at Rome, but the Holy Father evidently thought this an extreme case, and also perhaps "bad politics," and refused his sanction. Since then Prince Ferdinand has been letting "I dare not" wait upon "I would," until at last he has come to a feeble and hesitating decision, and the baptism of the Prince has taken place. When Henry IV. made up his mind that Paris was worth a mass, we may be sure that he did not consult the Huguenot ministers on the question, or send the Dauphin as a proxy to assist at mass, instead of going himself.

A DISGUISED REVOLUTION.

THE latest Platt performances at Albany and in this city serve a useful purpose in illustrating the nature of the very great change which is now going on in the government of a good many of the States, and notably and especially of this. This change would excite more alarm and apprehension if it were not disguised under the old forms. But it is in this State so great that, as a shrewd observer remarked to us the other day, the description of the working of a State government contained in Tocqueville or Bryce is here to-day a veritable political romance. There is no set of facts in existence corresponding to this description. Nothing remains of the old government except the power of the voters to transfer the offices from one set of rulers to another, somewhat after the manner of a Central American revolution. This transfer can still be made at the polls whenever the voter pleases, but, having made it, he is *functus officio*. He has literally no influence on legislation or administration. His approval or disapproval has lost all force.

It has been a favorite theory of publicists for the last fifty years that the silent, unperceived modifications which in former days so often changed democracies into oligarchies or dictatorships, as in Greece, Rome, Venice, and other Italian states, were no longer possible, owing to the vigilance and activity of the modern press. But this, in the States of New York and Pennsylvania at least, is proving a complete delusion. The press in both these States is almost wholly controlled by promoters of the revolution. Outside of New York city there are only two Republican newspapers in the State opposed to Platt. The rest of the party's editors are in some way in his employ, and print the matter which he sends them as submissively as if he exercised military rule. Except in this city and in Buffalo, no citizen throughout the State could find means of expressing dissatisfaction with the new régime except through a pamphlet. Open discussion of public measures or men has ceased in the interior. The simulacrum of it which exists, closely resembles that which prevailed in France in the early days of the Second Empire. It differs in that there were many French editors at that time who would have spoken out if they had dared, while there are apparently no Platt editors who would do differently even if they could. The most alarming thing about them, too, is the facility with which they have succumbed. An editor who quails before military force can still retain his self-respect; but to close one's mouth and repeat a master's words solely for a little office or a small loan, is too much for human dignity.

The legislative situation is a counterpart to that of the press. There is no more connection between the public and the great majority of the legislators than between the public and the newspapers.

Here again the parallel between our plight and that of the French between 1851-60, jumps into our faces. There were, during most of that period, five men in the French Chambers who opposed or criticised the Government, but they were themselves well aware, as was everybody else, that their talk was mere parade. No one paid attention to them or answered them. Their presence simply enabled the ministers to say that freedom of speech still existed. There is, in like manner, a small minority at Albany which professes independence and says what it pleases, and keeps up a pretence of debate, but its words are quite idle. It influences no votes, and does not modify the plans of the Boss.

The power, too, which the Boss possesses to prescribe, promise, and even sell legislation, not on any particular class of subjects, but on all subjects whatever which lie within State jurisdiction, is absolutely novel in the sphere of parliamentary government. A similar power, undoubtedly, is possessed by the British minister, and was grossly abused through a large part of the last century, but the minister was a member of Parliament and was a recognized functionary of the state. The peculiarity of our condition is, that our Legislature and press are controlled by a private person, unknown to the law or the Government, who does not defend his schemes or answer charges, and whom there is no legal way of calling to account. We are here giving a description of the state of things in New York. But this description would be true also of Pennsylvania, where the reigning Boss has just been invited to become a candidate for the Presidency by his admirers in Congress. This is a striking illustration of the rapidity and depth of the descent which we have been trying to portray.

The cause of this descent is not difficult to explain. Our nominating system, which started into existence seventy years ago only, has in two generations been converted into a machine which threatens the destruction of popular government in two more. Nothing seemed more harmless, sensible, and even satisfactory in the beginning than a convention of elected delegates to select candidates for the party. But the contrivance unhappily came into use just as the popular vote was assuming enormous proportions. The bringing of it to the polls soon became a task of great difficulty, making work for professionals, and developing a peculiar kind of talent, although not of the highest order. The more difficult it became to organize the nominating convention, the more powerful became the organizers, the more necessary their favor to any one wishing to enter public life. When once this was perceived, their progress towards complete possession of the Government was very rapid. There is only one check to-day on their control of it, and that is the possibility of putting the other party in power; but as the other party has a Boss

also, the situation cannot be really changed by an election. There is a change of persons, but not of system. Platt is substituted for Croker, or Croker for Platt, but the people do not recover possession of their administrative machinery. In other words, our nominating system has swallowed up the very thing for which the nominating system was created. It no longer selects candidates only: it selects officers. Nor does its activity cease when the election is over. It takes possession of the officer after he is elected, and prescribes his duties, whether legislative or administrative. It is permanent, while the officer is transient. Platt and Croker live and rule through many Legislatures, while every legislator comes to them every year to ask for a continuance in public life.

We have no substitute to propose for this system. We point out simply that, whatever its original merit or convenience, it is now rapidly destroying American government as imagined and framed by its founders, so that change of some kind is not a matter of choice, but of necessity, and out of the necessity we must believe that some substitute will emerge. Of the collateral effects of Bossism on the character of public men, on the condition of public life, on the credit of legislative bodies, and on the quality of legislation, we say nothing to-day. What these things will be, any intelligent man may work out for himself with a pencil and bit of paper in half an hour. The progress of the evil within two or three years has been startling indeed. As we saw in this city recently, the Bosses no longer have the decency to elect the delegates to the conventions honestly. They used to content themselves by securing the choice of their henchmen; they now do not even take the trouble to have votes cast for them. They throw in bogus ballots, and say that this will do well enough for the "Presidential year," which is rapidly becoming the appointed season for licensed political villainy. The matter, therefore, cannot be let alone. We invite to it the attention of all men who love their country and believe in the future of popular government.

THE FAILURE OF REPUBLICAN MORALITY.

EVERY observer must be struck by the similarity between the political situation in this State to-day and that which existed in 1892. There was then, as now, a Boss with a powerful following, in control of the Governor and the Legislature. He then, as now, shaped, hindered, or sold legislation. Then, as now, the chief city and State officers either held office at his mercy or were very much afraid of him. Then, as now, he either levied, or was believed to levy, blackmail on corporations and rich men as the price of protection from some sort of confiscation or annoyance. Then, as now, the charters of the leading cities were treated as instruments with which the legislative majority could

amuse themselves by altering at pleasure, vacating or abolishing the offices to suit the Boss's convenience or profit. Then, as now, there was a small minority of the Boss's party which protested against the Boss's doings, which defied his power, exposed his frauds, and asked judgment on him from the party conscience.

But here the parallel ceases. The Democratic minority who were disgusted by Hill's and Croker's fraud and corruption, broke with them absolutely. They refused all compromise. They stopped dining with them and "harmonizing" with them. They did everything that was necessary to be done to convince the public and the party that they were in earnest; that their fight was not a sham battle. They did not admit, or allow any one to suppose, that they considered "the Presidential year" a year in which fraud should be condoned, and thimblerriggers feasted, and open enemies of the American form of government treated as patriots and statesmen. The Boss had all the delegates to the national convention and the whole party machine in the State, and in truth as fine a "lay-out" as any cheat or criminal could desire. Nothing was wanting to make the reform movement seem to the ordinary politician a thoroughly visionary, crack-brained scheme, the only palpable result of which would be the loss of the State at the Presidential election. But the reformers carried out their programme with what used to be considered Republican firmness and integrity. They made a new enrolment; they called another State convention; they went to the national convention strong, not in numbers, but in truthfulness, honesty, and decency, and they made such an impression that their candidate was nominated, and was overwhelmingly elected, and received in this State a majority of nearly 45,000! The battle, as Patrick Henry said, is not always to the strong alone; it is to the active, the vigilant, the brave. "True Americanism," true patriotism, does not consist solely in fighting England. It consists mainly in fighting the domestic thieves, runagates, impostors, and blatherskites who are constantly trying to take possession of the government.

The State Republicans are face to face to-day with a crisis exactly resembling that with which the Democrats had to deal in 1892. They are, too, if we are to believe their newspapers and their clergymen, equipped for it as the Democrats have not been in forty years. They are supposed to include most of the virtue and intelligence of the community in their ranks. The Christian people, and the temperance people, and the law-abiding people, are all supposed to be on their side. Theirs mainly is public conscience and theirs are the high standards. It is they who must govern the State and nation if America is to fulfil her high mission. "Música, música," as the Spaniards say. There is no sign of any such

Republican party among us. There is no sign of a single reformer with the courage or high principle of a Fairchild or Shepard. Far from putting the Boss away from them, they feast him. Far from declaring war on him, they coddle and cajole him and keep up friendly relations with him. Nay, they tremble before him. Far from treating the Presidential year as the year of all years for the display of the highest American morality, for lifting the government into the air and light of pure reason, they treat it as a peculiarly appropriate season for the condonation of fraud, for the passage of pinchbeck money, for serving up stale fish and putrid mutton, and giving thieves the run of the public offices.

One thing alone in which the Republican Boss imitates the Democratic Boss ought to shut him out of the houses of honest men, good citizens, and sincere Christians. It is no worse for Croker to levy blackmail on corporations and individuals and sell legislation than for Platt. It is no worse indication in Croker than in Platt. The men who condone or overlook it or make light of it, are far worse enemies of the United States than those foreign foes on whom the Senate has its eye. The place where "supine submission to wrong, injustice, and consequent loss to national self-respect and honor," is going on, is not, begging the President's pardon, the banks of the Essequibo or of the Orinoco, but in or about 49 Broadway. It is not in tropical pampas or forests that our ruin is being worked, but in express offices and bar-rooms and hotel parlors. Our most dangerous foes are not great monarchs or famous generals, but a ragged army of shabby hypocrites and adventurers, who live on our weakness and cowardice.

Some of the Republican reformers excuse their Plattism by assuring us that Platt, unlike Croker, keeps none of his blackmail for himself. Oh my, no. The good man uses it all for the benefit of "the party"—that is, for buying up editors and relieving impecunious legislators. But what do they know about it? In what other branch of human activity would any one venture to tell us that a man who receives money freely and renders no accounts, retains none of it for his own use? Should we not laugh in the face of any one, lay or clerical, who in any business, civil or ecclesiastical, charitable or commercial, asked us to trust him with a large income without even telling us what he does with the money? Is it not the oddest incident of American politics to-day that a small lot of adventurers, without financial standing or public character, should claim exemption, under extremely suspicious circumstances, from the accountability which we impose upon every man, no matter how long-tried or how much respected, in every calling? It would be odd even if they made a show of using the money for the support of crippled children. It is absurd when they de-

cline to describe a single item in their expenditure. Every one, no matter what his professions, who helps in the maintenance of this system, either by acquiescence, silence, harmony, or coöperation, shares its guilt and is an enemy of his country.

RECOGNIZING BELLIGERENCY.

THE 'Recognition of Cuban Belligerency' is the title of a pamphlet by Prof. J. H. Beale, jr., of the Harvard Law School, reprinted from the *Law Review*. It contains a review of the action of our Government in its dealings with foreign governments, as to insurrectionary movements within their borders, and points out that the right to recognize belligerency rests upon two circumstances—the existence in fact of what in international law is regarded as legal war, and the necessity on the part of the nation which acts of recognizing the existence of the fact. The first is really the cause of the second. When an insurrectionary movement is carried on, as ours was during the Revolution, by a regular government having a definite territorial extent, and with a military and political organization, with a legislature, courts, an executive, etc., it becomes a necessity for nations having commercial relations with the inhabitants of the portion of the country in insurrection to recognize the facts of the case. It is impossible to go on treating as robbers or pirates people who have for the time being created an independent military and political society. We tried the experiment at the time of the Rebellion, and insisted upon it for two or three years that Jefferson Davis and all the whites in the South were robbers and murderers, and that the officers and crew of the *Alabama* and other rebel cruisers were pirates; that England should not have recognized the belligerency of the South, and that the South was not a belligerent. Nevertheless we ultimately had to abandon this position, admit the fact of belligerency and legal war, and abandon all idea of hanging Davis and his co-conspirators, simply because the facts were against us. We still clung to the point that England had been overhasty in recognizing the belligerency of the Southern States; but this was merely raising the question as to when belligerency became established—another question simply of fact.

The reason why it is never for the interest on the part of a neutral or friendly nation to recognize belligerency when it does not exist is, that, just as long as the insurrection remains an insurrection, the government risen against (in this case Spain) is responsible for all injury which lawlessness may produce affecting the interests of the citizens of the friendly state (in this case the United States). It is only when the insurrectionary party form a *de facto* state that this responsibility disappears, and when this responsibility

is no longer of any value it must be recognized. If Gomez and Maceo were to drive General Weyler and his troops into the sea, and organize Cuba as an independent state, it would be of no use to go on pretending that Spain was in control. We should, for our own interests, need to rely on the responsibility of those actually in control.

To apply these remarks to the present situation of affairs is not difficult. The insurrection has neither regular army, nor navy, nor courts, nor legislature, nor executive. Its seat is said to be on top of a remote and inaccessible mountain, and the reason why we hear of its "operations" near the capital is that its forces are marauding bands "operating" in the way Rob Roy used to operate in the Highlands. Any point where there are negroes or white patriots out of work, and where there is anything to lay hands on, becomes a centre of insurrection, a centre which, the moment the booty is "touched," fades away.

The favorite argument with the newspapers seems to be that because the Spaniards are cruel, therefore we ought to recognize the belligerency of the Cubans. No amount of cruelty on the part of the Spaniards, however, will produce belligerency if none exists. What those who are indignant at the Spanish cruelty want is not a recognition of belligerency, but intervention, and this, as Mr. Beale points out, is a totally different matter. When we have made up our minds, if we come to such a conclusion, that the interests of humanity demand intervention, then our course is plain enough. We warn Spain off, of course taking the risk of war. We also should, if our cry is humanity, carefully consider how much better off Cuba would be free than under Spanish dominion, whether there exist any materials for self-government on the island, and whether we desire to have the races which inhabit it as fellow-citizens. Forcible intervention is an intelligible policy; but what we or any one else should gain by pretending that the Cubans are belligerents when they are not, is what no one has explained. The length of time during which lawlessness exists has little or nothing to do with it. The last insurrection in Cuba lasted ten years. There have been at various times parts of Italy entirely in the hands of banditti, against whom the Government has been able to do nothing; but it never occurred to any one to recognize them as belligerents. Yet all banditti are in favor of freedom and foes of governmental interference.

Still another reason has been advanced for recognizing Cuban belligerency. Some one has unearthed a doctrine of international law that no government is responsible for not giving protection if it is physically impossible to do so, and the argument for the recognition of belligerency then proceeds as follows: Parts of the island are in insurrection, and the property of American citizens is at the mercy

of the revolutionists; the Spanish commander cannot protect this property; therefore we must abandon any claim for indemnity against Spain, and look to Maceo and Gomez. Such is said to be the reasoning of the House committee on foreign affairs, who feel that it removes the last argument against the recognition of Cuban belligerency. We take the liberty of doubting that Spain has ever announced its intention not to protect foreign citizens. The trouble with the House committee is that it feeds too exclusively upon doctrines and principles of law—a windy diet—to the oversight of facts.

PIGEON-HOLED KNOWLEDGE.

HAZLITT told the story of West, the painter, that, when asked if he had ever been in Greece, he replied: "No, but I have read a descriptive catalogue of the principal objects in that country, and I believe I am as well conversant with them as if I had visited it." This suggests one of the most terrible intellectual temptations of our day, one which has a fatal power over many minds. We mean the temptation to make of one's head nothing but a ledger, in which all one's knowledge must be neatly and precisely classified and written up every night. It is peculiarly a besetting sin of critics, especially of literary critics, who must reduce all the literature of a given age, no matter how miscellaneous and refractory, to one "movement," group all the writers of any one period into a "school" or schools, and, in short, make literary criticism into a sort of old-fashioned desk, with little parcels of opinions, nicely labelled and docketed, stowed away in the pigeon-holes.

Classification is, of course, the beginning of wisdom in many branches of science, but it must be a classification into which the facts fall easily and magically, not one into which they have to be forced maimed and bleeding. In what is so essentially free and elastic a process as the intellectual development of a generation, or the evolution of a national literature throughout a century, the insistence upon exact and rigid classification easily runs into confusion and absurdity. Taine's 'English Literature' illustrates the madness that lies this way, and a recent address of Brunetière's on "The Renaissance of Idealism" seems to us another example of it. The schedules are too hard-and-fast, the labels too confidently stuck on, the accounts too accurately footed up, and the balance too miraculously correct. M. Brunetière compresses the whole field of intellectual activity into his formula, and makes science, music, art, literature, religion, and government alike bear testimony to the progress of the age away from materialism, naturalism, realism, or whatever you call it, into idealism—whatever you mean by *that*, and Brunetière expressly refused to be bound by a "too strict" definition.

Now, the human mind, not of the Dryadust order, instinctively rebels at this. One might acknowledge the science, or the music, or the religion separately; but all of them at once, with art and literature thrown in, and each and all ticketed "Renaissance of Idealism"—this is too much. If it were all as clear and true as this, there would surely be no need of delivering an eloquent "conference" about it, for everybody would be convinced of it on sight. It would be easy, moreover, to show more than one detail in which Brunetière is far from making out his case. Science, for example, he says, has become idealistic because "the promises which savants have publicly made in its name" have failed of fulfilment. But when you ask what savants, he admits that he does not mean the authorized exponents of science, the Darwins, the Pasteurs, the Helmholtzes, but the second or third-rate men, the very charlatans of science. The retort is obvious that if science has gone "bankrupt," in Brunetière's famous phrase, idealism has not likewise gone so only because all it promises to pay fall due in the new heavens and the new earth which it is yet to create. And when the lecturer finds his proof of the coming of political idealism in the spread of Socialism, one can only wonder how he would discriminate idealism from fanaticism or the most rabid doctrinaireism.

But it is not so much on details like these that we intended to dwell as on the perils of the mania for classifying which they exemplify. One cannot go through an age labelling and pigeon-holing knowledge in this way. Mark Pattison denied that it was possible to do so even in a past century; much less in one whose records are not yet made up. By falling back on our little lists and schedules we all the while increase the danger of taking our eyes off the stubborn facts to let them rest on our graceful classifications. Rousseau tells us how he felt this danger, and how he finally surmounted it by determining, instead of squeezing all he read into his own pet formulas, to open his mind freely, as "a magazine of ideas," and let the classification come later as best it might. In this way he certainly saved himself from the reproach that has been brought against Guizot, that he had all knowledge reduced to a beautiful *catalogue raisonné*, but was not a whit the wiser for it.

The way things are actually done—literature actually produced, for example—is often ludicrously unlike the theory of the way they are done. When a modern novelist falls to work, does he say to himself, "Now I am a realist, a symbolist, a *décadent*, an idealist, or what not, and must live up to my 'school,' so as not to baffle the critics"? Hardly. If he did, he would not get on much faster than Bismarck said he should if he did everything "on principle"—"principles" being, he affirmed, like a long pole held crosswise in your teeth when you wanted

to run along a narrow path in the dense forest. Wordsworth, it is true, wrote some poems to illustrate his poetical theories, as Blair preached sermons built on the strictest principles of the rhetorical art; but the poems rivalled the sermons in wooden and deadly dulness. Dr. Johnson gave his idea of this kind of literary classification when asked if the sermons of Dr. Dodd were not "addressed to the passions." "Sir," he replied, "they are nothing, be they addressed to what they may." What novelists write for may roughly be set down as (1) money, (2) reputation, principally as a means to more money, (3) recognition and good will of contemporaries, (4) dim and dubious hope of posthumous fame. All the rest is vanity; the anxieties and embarrassments of pigeon-hole critics over the question of what category to put them in, vanity of vanities.

THE THIRTY-FIFTH ANNIVERSARY OF CARDUCCI'S PROFESSORSHIP.

BOLOGNA, February 9, 1896.

RARELY, if ever, since Petrarch's time has a living poet received such overwhelming tokens of love and reverence as Carducci has to day on this thirty-fifth anniversary of his first lecture as professor of *belle lettere* in the University of Bologna. The homage rendered by all Italy is to the noble genius of the poet who has never stooped to flatter princes or people, who has said to Italy, to her rulers, to her parties, the hardest, bluntest things that can well be imagined, and at the same time has kept the plebs informed that squalor and misery alone do not give them a title to the world's commiseration. The special homage of Bologna, however, is to the professor who has educated several generations in the worship of intellectual greatness and civic virtue. The idea originated with one of his present pupils, a Sicilian, Rodolico, who proposed to present an album with the names of all the students who have frequented Carducci's classes from 1861 till now, with the photographs of as many as were obtainable; and this family festival took place on February 2, the real "first day." Then the Syndic of the city, very proud of the fact that Carducci in the communal elections had polled more votes than any born Bolognese, bethought himself of a municipal commemoration. Carducci's colleagues could not be left out in the cold, nor his publishers, the brothers Zanichelli, be neglected. King Humbert, who, your readers will remember, came with the Queen and heir apparent to listen to his commemoration of the fifth centenary of the University of Bologna, sent him the medal as Commendatore of the Order of S. Maurizio e Lazzaro with a really hearty letter, praying "that the poet may be spared for many years to the studious youth who cherish him with love and gratitude." Both the King and Queen sent telegrams which were read by the Syndic dall'Ollo with great gusto in the reading-room of the Arriginnasio, where some five hundred of the *filii* of Bologna were assembled, one row being reserved for the lady students who throng his lectures. The Syndic spoke from his heart:

"Even before the communal decree that conferred on you the rights of citizenship, we considered you as our own son; and if we have sought out the best possible way of conferring on you the greatest imaginable honors, it is because you have given us such proofs of love

and devotion to our city by refusing the high position which other cities wished you to accept [in allusion to the Dante chair at Rome, which Carducci refused in order to remain faithful to Bologna], that the city opens its maternal arms to embrace the son beloved who has so loved and honored his mother. You came to us, when you were quite young, from gentle Tuscany, just when Bologna had thrown off the double yoke of priest and foreigner; and though you possessed the qualities that insure fame—lofty genius, profound and multi-form knowledge, a thirst for all high and noble things—fame was not yet assured to you. Your fame dates from Bologna, and, as it grew and expanded, the name of our city was ever associated with it. Nor did fame come suddenly as a gift from heaven; on the contrary you won it gradually, and never to any one was it given so grudgingly. The first songs of 'Enotrio Romano' were a challenge flung down to the academical softnesses in which Italian poetry delighted. The public and the critics, accustomed to linger in the pleasant paths of the garden of the Muses, were frightened at a poet who forcibly drew them up the steepest of mountain paths; and protested and blamed the audacious pioneer who led them away from beaten tracks, trusting that anathemas would silence the importunate voice. But the voice, which was the lofty, solemn voice of poetry, was not silenced; silence it could not keep, and it was from Bologna that 'Enotrio' no more, but Giosuè Carducci, continued his courageous work of innovation. Still the critics censured, but they were no longer listened to; the public, subdued, joyfully yielded to the resistless fascination; began by forgiving the poet his conquest, then from day to day loved him more passionately, and would have him not only loved but acclaimed in this city, which had been faithful to him in his struggles, and is now witness and sharer in his glory."

The Syndic next devoted his remarks to Giosuè as professor, showing the influence he has had in leading his disciples to real love, appreciation, and reverence for their great ancient writers, to the worship of classical tradition tempered by an acute sense of present modern life (this is the keynote to Carducci's originality), and in interpreting history, of which he is indeed a master. At this point he presented Carducci with a magnificent gold medal, with his portrait on one side and a Latin inscription on the other, ending with an invocation to Italy the beloved—Italy as she was, not as she is to-day. Then Prof. Bertolino, in the name of the University and the Minister of Public Instruction, gave him the welcome of the *Alma Mater studiorum*—the frank, hearty salutations of his colleagues,

"who, thanks to you, with joyful hearts, see again one of the days of the Renaissance, when the religion of genius and of science had the divine virtue of disarming enemies, of burying hatreds which in the past had made them foes. Such a day as this was seen in Rome in 1341, when the Roman people, forgetting civic battles, crowded round Francis Petrarch, bringing him crowns of flowers, and the Orsini and the Colonnas imposed on their animosities the truce of God in order together to garland the brow of the grand poet whom you hailed as the poet of the Renaissance. . . . But whereas the old Renaissance could not prevent liberty from being exiled, while the literature inspired by it inflicted cruel wounds on the principle of morality, the Renaissance to which you lead our country has its foundations in reason and in liberty, and draws its prime inspiration from a moral principle."

After Bertolino came the illustrious Latinist, the genial, *simpatico* Gandino, who, after a brief, bright speech, recited an eulogium in musical Latin. "You see," he said to the public, "that besides our reverence, appreciation, gratitude, we all so love this Giosuè Carducci. Perhaps the aureole that surrounds his brow dazes some, but to his colleagues he appears in all the brightness of a sunny day:

"Scindit se nubes,
claraque in luce refuget."

Gandino continued truly:

"Your method of teaching proves the truth of the saying of the Greek poet, that the Muses possess the science of things universal, so that if to each one is assigned a special part—here poetry, there history, there again other arts—all form Apollo's chorus, all are united in close bonds of sisterhood. So in your school the severe examination of the philosopher is admirably united with the divine spirit of the poet, the diligent research of the historian, the rapid intuition of the artist."

So hearty were Gandino's encomiums that poor Carducci, who before the ceremony had said to us, "Of course I feel much honored, but it's a fearful ordeal to go through," never once lifted his eyes. When it was ended, they kissed and hugged each other just like two schoolboys.

Very short and simple was the speech of Cosimo Filippi, Syndic of Pietrasanta, the poet's birthplace. "Pietrasanta, which had the good fortune to give thee birth, sends this [a splendid parchment] as a token of gratitude to the son who has illuminated the obscurity of our village." After this, Count Pier Desiderio Pasolini, who is ever certain to be seen when Carducci can be honored, sprang up from some corner and gave him a spray of laurel.

"Child of ancient Ravenna," he said reverently, "I bring to thee, Giosuè Carducci, this branch of laurel which grew close to the tomb of Dante Alighieri, thy teacher, thy father. Without him thy fame would not be so great, and perhaps we should not be here to manifest such loving and cordial reverence to thee. This laurel branch is all that now can come from him to thee; receive it with affection and keep it with reverence."

And I noticed that when we went home with his wife and daughter, who were intensely moved, Carducci's first care, on going into his study, was, not to look at his medals or presents, but to place the laurel sprig in the tunic of Dante's bust which stands in the centre of his bookshelves—the sad Mazzini looking down life-size from above.

Carducci's thanks commenced in a voice so low and broken that we asked, "Will even he break down?" But after a few minutes the clarion tones rang out, and every word could be heard all over the hall.

"I thank you reverently. Your benevolence has made of me something that exists in your idea, not in my reality. But whatever I am (and indeed I wish I were like your portrait), every bit of me belongs to this city and to this University. To your city I came with Italy and with unity; I came as a youth, poor, obscure, and with trepidation. The city received me with encouragement; the University, in the shadow of its glory, aided and protected me. In the University I found first fathers, then brothers, who taught me by example and both facilitated and bettered my teaching. In the city I found wise and warm friends, who now spurred me on, now restrained me, and I found what your grand escutcheon promises—*Libertas*! Yes, the liberty of solitude and of study; liberty in the flight and aim of my thoughts, liberty of ideas, independence upon all narrow little pinching, sharp-angled circumstances which fetter the healthy progress of a writer. Yes, and here let me say to the Syndic of Pietrasanta, on the beautiful coast which runs 'twixt sea and mountain, which gave me birth and noble traditions, and whence, alas, I was taken all too young, and whose memory I revere and love—here in Bologna I found a second country. Here, although I hold that we can serve our country in all times and places by wholly giving ourselves to her and claiming nothing in return for this privilege of giving—nevertheless here service was made easy for me, here the heartiness of the citizens helped me, the glories of Aldrovandus, of Zanotti, of Galvani inspired me. At this moment I recall the past and forefeel the future. I remember, and these honors showered on me almost excite remorse; I want to ask the pardon of those holy shades

—those great masters of our fatherland—who passed away unknown, neglected, who grew old in sad poverty, or were extinguished in the desolation of exile. I remember the divine wisdom of Vico, the human omniscience of Romagnosi, the poetic radiance of Ugo Foscolo. Those were times of Italian servitude. Now, oh youths! see what prizes country and liberty are offering to those who strive after intellectual good. This shows that Italian renovation, even in ideal and moral arts, is maturing. Prepare the way for the Lord who cometh; for the genius of Italy, great, free, just, good, useful to humanity; for the genius of whose wings I hear the fluttering. In that time, which we hope is near, the holy, pure age of the Italy of the future, the glory of Bologna will grow ever brighter, the glory of this mother of study, this loving inspirer of the studious. Let her gather the flowers and the fruits of the happy time, and, in the words of the poet,

"E trovi uom degno poi che si l'onora."

When he had finished, Carducci was swept away by the tumult of loving welcomes that surrounded him. Then we crowded to look at the gifts. His publishers presented him with an exquisite illuminated edition of Petrarch's sonnets of the fourteenth century. The missives of the municipality of Bologna and Pietrasanta are real works of art. The portrait of the poet on the gold medal is like him, but still more resembles the Roman emperors.

If I were to narrate the tales told by his students (many now professors), I should never end. One Pascoli interested me most. He was wretchedly poor, as his father had been murdered and his eldest brother had to bring up a family of nine. He thought this one had genius, so sent him with a few francs to Bologna to compete for the six scholarships the generous city accords. When the lad heard he was to be examined by Carducci, all his courage waned, as Father Donati, who kept the poet's picture in his cell, had told him he was "the greatest and noblest and highest being on earth." He fumbled and stumbled in his answers, and in his written theme felt he had not done his best; but the poet saw what was in him, and, with the consent of the faculty, his name came out first of the six. "Carducci smiled," he said; "just an instant his smile rested on me, and I would not change that memory for any other in this world."

J. W. M.

Correspondence.

THE GOOD NAME OF GUATEMALA.

TO THE EDITOR OF THE NATION:

SIR: My attention has been called to an article which, under the heading "A Specimen Spanish-American Republic," appeared on the editorial page of your valued paper of the 20th inst., which article contains statements derogatory and false with respect to the government and country which I have the honor to represent at this port.

In view of the statements therein made, it becomes my duty to inform you and cause to be known that the assertions of the author of the book 'Il Guatemala,' who, it is said, is named "Tommaso Caivano," are, in their entirety, inaccurate and advanced solely to gratify selfish motives. On June 20, 1895, Mr. Caivano presented himself at the office of this Consulate-General soliciting financial aid that he publish a book in favor of Guatemala and its Government, and on such financial aid being denied him he took offence, became very excited, and stated that he would publish the

book, not, however, in favor of my country, but decidedly against it. Consequently, the publication compiled by Mr. Caivano is the result of actual spite and for revenge in not having obtained the money he solicited.

I appeal, therefore, Mr. Editor, to your impartiality that you give equal prominence to the publication of this letter in the columns of your valued paper, so that the sensible public may judge as to the merit which can attach to the book published by Mr. Caivano.

Believe me, sir, with the highest consideration, very respectfully yours,

DR. JOAQUIN YELA, JR.,
Acting Consul-General.

NEW YORK, February 21, 1896.

[We have received also the following communication from a gentleman who knew Guatemala well under the elder Barrios. We ought to add that such personal knowledge as we had of Sig. Caivano was wholly favorable to his character and credibility; and that the Italian edition of his work, on which we commented, was already printed (but not published), and was read by us, before Sig. Caivano's arrival in this country in June last.—ED. NATION.]

"Barrios was bad enough in fact, without resorting to fiction and misrepresentation. Some persons were put in the Penitenciarío and thrashed to death—perhaps a dozen all told; not more. Barrundia (who was afterwards shot on board an American vessel) was really the author, as he was the perpetrator, of these outrages. Two friends of mine were among the victims.

"It is altogether a myth about Barrios wanting to wipe out what Sig. Caivano calls the creoles. There is no such class. There are a few old families who pride themselves on their blue blood, all reactionaries of a Bourbon stripe; but they do not meddle with politics, and I don't believe one of them was shot by Barrios.

"The story of his exposing the wives and daughters of his enemies stark naked in cages is an astounding legend, founded on the report that Barrios ordered two ladies of some of the old families, suspected of making clothing for the rebels during the first revolution in his time, to be put in a large net which is much in use in that part of the country, and swung to the ceiling of his room until they told all they knew; but they were fully dressed, as no man in Guatemala, of any kind, would expose a woman stark naked. This reputed action of Barrios's was never authenticated, and although I knew one of the ladies, she would never admit its truth.

"This author is equally given to exaggeration in saying that Barrios had men shot for his amusement. For a very long time no President in that country had so few of his enemies shot at all. He did, however, finally resort to this method of punishment, but I think an impartial investigation would show that as few persons were shot in his time as in that of any other ruler there, except Cerna perhaps. His successor, Barillas, did quite as many brutal things, and had three very dear old friends of mine shot under very brutal circumstances. Summary shooting has been the most convenient way of quelling revolutionary movements ever since Spanish America was freed from Spanish rule, and the rebels themselves are usually more sanguinary than the Government, as is actually the case in Cuba.

"As to Reyna Barrios, he is since my time. He lived in New York many years, and is married to an American lady. My friends report him a good man of business, a good President, and a man of moderate ideas.

"But the name Republic applied to any of these countries is a gross libel on the word. It is a one-man power, and the one man is always more or less brutal, and always surrounds himself with people fit for the particular work he wants done. They do not all get rich. Carrera, after being President for nearly twenty years, died (on the same day President Lincoln was

shot) a comparatively poor man. His successor, Cerna, after being President for six years, retired absolutely poor, and his ministers were poorer than himself. Barrios stole and blackmailed right and left, and in thirteen years saved about as many million dollars. Barillas did the same kind of thing and is now wealthy. The first two and their ministers belonged to and represented the Conservative or Church party; the latter two called themselves Liberals."

WHERE WAR SHOULD ELEVATE.

TO THE EDITOR OF THE NATION:

SIR: Not enough pains have been taken by the advocates of war as a means of ennobling the character to set forth its advantages as they deserve. The case can be put in a stronger and more convincing light than it has been. Possibly something is held in reserve, but so far the argument has not been illustrated as it should be; it has not been adequately and variously presented.

I am inclined to believe that the theory is capable of application in many agricultural communities, and of undisputed application in all thinly settled districts. There are usually fair opportunities for moral and intellectual culture in the cities and large towns of the East—it is astonishing that anybody there should want to fight; but in some of the Western States the situation is quite different, and this is especially true of the semi-arid regions of Kansas, Nebraska, and other States where the widely scattered stockmen and farmers make slow progress, whether material or ethical. The fine virtues need more encouragement than they receive. There are no great libraries, no handsome opera-houses, no collections of sacred art, no beautiful church architecture. All these things are lacking. But could not such deprivations be made tolerable—hardly missed, indeed, as agencies of moral inspiration—if the inhabitants had sufficient discernment to fight occasionally among themselves? Why don't the men go to war? How quickly the sense of justice and honor, the feeling of gentleness and pity, would revive. No matter if they have no grievance against each other. The purpose is something nobler than the redress of wrongs; it is the elevation of the character.

Such compensations as war offers for the lack of other advantages, or as an addition to them, have not been duly considered. They are within easy reach of many whose hard lot we are sometimes weakly disposed to commiserate.

H. D.

LAWRENCE, KAN., February 17, 1896.

THE FIRST UNITARIAN CHURCH IN AMERICA.

TO THE EDITOR OF THE NATION:

SIR: There is, of course, no doubt that the church at Northumberland, Pa., was organized by Dr. Priestley before that in Philadelphia. But your correspondent, "H. D. C.," assumes the point at issue, namely, whether it took the Unitarian name. As that fact does not appear on the mural tablet referred to, and as the church records do not exist to show it, it is by no means certain that the name, then so odious, was adopted by the Society.

When the Philadelphia church was founded, there was correspondence over this very point between its members and some of the Eastern churches which had become Unitarian in fact—or, at least, with the most notable of these, King's Chapel in Boston; and the rector of the latter strongly advised the Philadelphians

against taking the Unitarian name. I give this on the authority of Dr. Furness, who took much pride in the fact that the advice was not heeded, and that the founders of his church planted themselves openly upon the unpopular position. He always claimed that the Philadelphia church was thus the first "organized as Unitarian" in the country.

I have heard a statement that a company of persons in New York, at an earlier date, called their society Unitarian, but I have not been able to verify it. If it is true, the movement probably came to nothing.

It may be interesting to some of your readers to know that, at the approaching centennial celebration of the Philadelphia church, a bust of Priestley will be placed upon the noble monument erected to him there, some years ago, by the Unitarians of America. J. M.

PHILADELPHIA, February 21, 1896.

"CARRY."

TO THE EDITOR OF THE NATION:

SIR: In a recent English review of an American work, the critic asked: "What can be the meaning of a 'carry,' which is certainly not found in any accepted author?" That an Englishman should be unfamiliar with a word which is found only in books (whether by British or by American writers) dealing with explorations or with outdoor life in America, is not surprising; but it is of course well known among us that, in navigating rivers and streams in America, obstructions are often encountered which render it necessary to take the canoe or bateau out of the water and "carry" round the obstruction, or to another stream or lake near by. Several terms have been employed to designate the place thus carried over, but chiefly these three: *Carry*, *carrying-place*, and *portage*. Of these, the second has been in use since early in the eighteenth century, the third for certainly a century and a half, while *carry* seems to have originated in Maine about sixty years ago. Attention was first called to the term by Lowell in the *Atlantic Monthly* for November, 1850; but the only examples which seem to have been yet adduced are from *All the Year Round* (1860) and T. W. Higginson (1884) in the 'Oxford Dictionary'; from J. C. Abbott (1860), in De Vere's 'Americanisms'; and from T. G. Appleton (1878) in the 'Standard Dictionary.' Those which follow are of an earlier date:

"Having determined to visit Moosehead Lake, before proceeding to the St. John waters, I continued up the west branch to the lower carry into that lake. . . . The upper carry is about eight miles above the lower, and between them are rapids and falls." 1838, J. T. Hodge, in C. T. Jackson's *Second Report on the Geology of the Public Lands of Massachusetts and Maine*, 53, 54.

"This portage probably followed the trail of an ancient Indian carry round these falls." 1848, H. D. Thoreau, *Maine Woods* (1894), 89.

"The end of the Carry was reached at last. The birch, it seems, was strained at the Carry." 1853, J. R. Lowell, *A Moosehead Journal, Prose Works* (1890), I, 30, 35.

"The fourth morning you will make the carry of two miles to Mud Pond (Allegash Water)—and a very wet carry it is—and reach Chamberlain Lake by noon, and Heron Lake, perhaps, that night, after a couple of short carries at the outlet of Chamberlain." 1858, H. D. Thoreau, in *Familiar Letters* (1894), 382.

Since 1860 the term has been in frequent use, but, so far as the writer is aware, it is confined to New England and the Adirondack region.

ALBERT MATTHEWS.

Boston, February 30, 1896.

"HIRED GIRLS."

TO THE EDITOR OF THE NATION:

SIR: Your correspondent "F. H." inquires, "Was it the custom, prior to the War of Independence, to speak of *hired women*, *hired boys*, and *hired maids* or *girls*, as well as of *hired men*?" What may have been the custom so long ago I cannot say, but in eastern Vermont and the contiguous part of New Hampshire, so long as I lived there, up to 1860, it was practically the universal usage to speak of young women engaged in domestic service as "hired girls." We read about servants in books, but never saw them.

In most cases the hired girl was the daughter of a farmer of small means. She often took her meals with the family, and mingled with them on terms of equality. The species is now pretty much extinct. I do not suppose the custom was by any means confined to that region. It is my impression that it prevailed in a place in eastern New York where I once spent a winter; but my memory is not definite on that point.

W. L. WORCESTER.

ASTLEN STATION, MASS., February 24, 1896.

Notes.

D. APPLETON & Co.'s immediate announcements include 'A History of the Warfare of Science with Theology in Christendom,' by Andrew D. White; 'Teaching the Language Arts,' by B. A. Hinsdale; 'Greenland Ice-fields, and Life in the North Atlantic,' by Prof. G. Frederick Wright and Warren Upham; 'Voice-Building and Tone-Placing,' by H. Holbrook Curtis, M.D.; and 'The Reds of the Midi,' by Félix Gras.

A series of handbooks in classical archaeology and antiquities, beginning with 'Greek Sculpture,' by Ernest A. Gardner; an annotated edition of Hood's *Poems* by Canon Ainger; 'Browning and the Christian Faith,' by Dr. Edward Berdoe; 'The Coming Individualism,' by A. Egmont Hake; and 'The Pilgrim, and Other Poems,' by "Ellen Burroughs" (Miss Sophie Jewett), are further spring announcements by Macmillan & Co.

Frederick Warne & Co. have nearly ready 'The Right Hon. Joseph Chamberlain,' by S. H. Jeyes, editor of the "Public Men of Today" series, and 'Sport in Ashanti; or, Melinda the Caboccer,' a tale of the Gold Coast, by J. A. Skertchly.

'Studies in Historical Method,' by Mary Sheldon Barnes, of Leland Stanford Junior University, is in the press of D. C. Heath & Co., Boston.

Way & Williams will issue 'The Lamp of Gold,' a sequence of forty-nine sonnets in seven parts, by Miss Florence L. Snow, president of the Kansas Academy of Language and Literature; a reprint, worked over, of William Sharp's *Portfolio* monograph, 'Fair Women'; and a new Irish novel, 'The Wood of the Brambles,' by Frank Mathew, grand-nephew of Father Mathew, the "Apostle of Temperance."

'The Story of Turkey and Armenia' is to be published, with illustrations, by the H. Woodward Co. of Baltimore.

Benziger Bros., No. 36 Barclay Street, are the American agents for the costly folio 'Vie de Notre Seigneur Jésus-Christ,' consisting of 365 compositions (aquarelles) by J. J. Tissot, based on the four evangels (Tours: Alfred Mame & Fils). The artist's work represents the labor of ten years. Each of the first twen-

ty copies, on Japan paper, is priced at \$1,000; \$300 will secure a copy on vellum paper.

Roberts Bros., Boston, have republished 'Cavalry in the Waterloo Campaign,' by General Sir Evelyn Wood, V.C. This little book is a contribution to the argument in favor of the use of cavalry even in the changed conditions of modern warfare brought about by improvements in infantry arms. The cavalry for which he argues is the true horseman, armed with sword or lance, manoeuvred in an open country, and depending upon the weight of the shock, charging home against footmen. Besides its technical interest, the book is a lively sketch of the Waterloo campaign, and of the previous career of the noted cavalry leaders of the different nations who met on the famous field.

A novel work has just made its appearance in Germany under the title of 'Fürstliche Schriftsteller des neunzehnten Jahrhunderts,' by Georg Zimmermann. Selections from the writings of thirty-six royal personages, with a biography of each, are presented. The book is richly illustrated and handsomely bound. Emperor William's 'Sang an Aegir' is the first selection, and after his name come the others in alphabetical order. Among those who have won especial renown in letters may be mentioned Prince George of Prussia, Princess Therese of Bavaria, and Duke Elimar of Oldenburg; Alexander III. of Russia, too, has made a very promising beginning.

'Die Geschichte des Erstlingewerkes' (Berlin: Concordia Verlag) is a series of autobiographical essays describing the circumstances attending the production of the first really important work of several of the leading contemporary writers of Germany. These essays have been coming out from time to time in *Deutsche Dichtung*, and now appear in book form, edited and supplied with an introduction by Karl Emil Franzos, editor of that periodical. The authors here represented are Baumbach, Dahn, Ebers, Ebner-Eschenbach, Eckstein, Fontane, Franzos, Fulda, Heyse, Hopfen, Jensen, Lingg, Meyer, Schubert, Spielhagen, Sudermann, Voss, Wichert, and Wolff. Each essay is accompanied by a portrait of the author as he appeared about the time of his first important production; in the case of Lingg, Meyer, Jensen, and Franzos, however, one of a later period had to be used, as an early one was not to be had. Similar essays are still being continued in *Deutsche Dichtung*, and they will probably furnish material for a future volume.

Moulin-Eckart's 'Bayern unter dem Ministerium Montgelas,' recently published in Munich, is an excellent historical work, though hardly of world-wide interest, and we mention it merely on account of the author's statement that he was obliged to make his researches in Berlin and Paris, because in the Bavarian State Archives no one is permitted to examine any political document of the nineteenth century. As Montgelas died in 1838, the sources of information concerning the most important part of his life were rendered inaccessible by this illiberal bureaucratic regulation. It is just such a measure, however, as might have originated with the narrow-minded and reactionary Montgelas himself.

During the last five months of 1895 some sixty persons were condemned to imprisonment in Germany for lese-majesty, without counting those who were tried for the same offence and acquitted. Nearly every speech of the Emperor is followed by a large increase of criminal suits instituted for the protection of his royal and imperial dignity. Thus, his de-

nunciation of the Socialists as a "rabble unworthy to be called Germans," on account of their attitude towards the Sedan festivities, led to numerous prosecutions in November, twenty-six of which resulted in the condemnation of the accused. The courts wrest the letter of the law to secure conviction, as, for example, when the judge admitted that in Liebknecht's criticism of certain views there was no direct allusion to the utterances of the Emperor, but added that some persons in the audience might have interpreted his words as referring to his Imperial Majesty, and therefore found him guilty and sentenced him to imprisonment. Dr. Förster, a man of excellent character, and editor of a journal devoted to ethical culture, was also condemned to incarceration in a fortress for asserting that the Socialists are not all a wretched rabble, but that there are many good and patriotic men among them, who act with the Socialists as a protest against the tyranny of the police in suppressing free discussion. The insult to William II. consisted in daring to doubt his infallibility. Prof. Delbrück expressed in the October number of the *Preussische Jahrbücher* the same opinion, but, as he is a man of high position and considerable influence, the Government deemed it best to withdraw the indictment preferred against him.

No. 3 of the second series of "Rhode Island Historical Tracts" (Providence: Sidney S. Rider) has for its theme 'A Century of Lotteries in Rhode Island, 1744-1844,' and for author John H. Stiness. It is one of the most curious and valuable of the series, being a chapter in the evolution of morals; and, as all classes, professions, learned and religious and philanthropic institutions (along with many purely secular enterprises) were implicated as beneficiaries or chance-takers in the lottery till it was made unlawful and therefore suddenly became "wrong" or "sinful," the story well repays reading. It is illustrated by a great number of facsimiles of lottery tickets; and the names and autograph signatures of owners and officers among the first families in Rhode Island give this part of the tract a high genealogical interest.

Mr. A. P. C. Griffin's 'Bibliography of the Historical Publications issued by the New England States' is satisfactorily minute as far as it goes, but is too limited in its scope. The title to the contrary, the republished "records" of each State only are included; even the original issues of the various "journals" or "votes" are passed over as if they did not exist. A list such as the title led us to expect is a distinct need. The careful table of contents of each work described is the valuable part of the present work. We do not see why Slade's 'Vermont State Papers' and the 'Connecticut Military Record' were not included, for they certainly fall within the narrow class included in the bibliography.

The eighth report of Mr. Robert T. Swan, Massachusetts Commissioner of Public Records, recurs to the still discreditable condition of these records in the State at large, and proposes the establishment of a public-record office, after the pattern of the English, to which all the records to a fixed date shall be sent. On the subject of the neglected Proprietors' records, he speaks of the confusion caused by the names of plantations (which were not continued as the town name) having been adopted for other towns, and prints a useful list of changes from the original designation, in two alphabets. He also suggests anew an act to provide for the custody of church records after a society has ceased to hold religious meetings,

which was reported by the judiciary committee in 1894, but defeated, and urges the passage of a bill regulating the returning and recording of births, marriages, and deaths now before the General Court. Mr. Swan states incidentally that still-born children are recorded either as births, deaths, or both, "as the clerk considers most sensible."

The laborious task of reducing to order the chaos of stored public documents at Washington; of checking wasteful publications; of supplying the designated depositories; of completing collections by exchange; of filling cash orders; of cataloguing current documents and of working backward in this department—is going on under the new law creating a Superintendent of Documents with headquarters at the Government Printing-Office. The progress made is evidenced by three pamphlets: the Superintendent's first annual report; the report of Mr. John G. Ames, clerk in charge of documents, Interior Department, regarding the receipt, distribution, and sale of public documents by that department on the Government's behalf; and the second edition of Mr. Ames's 'Check-list,' enumerating the volumes which constitute the set of Congressional documents from the Fifteenth to the Fifty-third Congresses, inclusive. Mr. Ames has had the happy thought to number these documents consecutively, thus greatly abbreviating the trouble of describing when ordering. Mr. F. A. Crandall, the Superintendent of Documents, has added some valuable features, as, lists of explorations and surveys, of Government catalogues and indexes, of the parts and plates of the Rebellion-Record Atlas, etc.

On February 10th the past and present editors of the *Harvard Lampoon* celebrated the twentieth anniversary of the founding of that comic journal. The event seems worthy of record, not only because the *Lampoon* was the earliest and has steadily been the best of illustrated student publications, but also because it is older than any other surviving periodical of the kind in America. It preceded *Puck*; and *Life* was, in a way, its offshoot. Of the originators and early editors of the *Lampoon*, J. T. Wheelwright, Robert Grant, F. J. Stimson, and E. S. Martin have long been well known among the younger school of American wits; and a survey of the entire list of editors would show the names of other men who have already won distinction in letters or in art.

In the February number of the *Geographical Journal* the Rev. W. Weston describes the Japanese Alps, a most attractive region on the west coast of the main island, very rarely visited by travellers. It is now one of the few places in the empire almost uninfluenced by modern ideas, and the account of the mountaineers' customs and superstitious rites, now fast dying out, is therefore peculiarly interesting. Mr. H. S. Cowper gives some notes on a journey in the hill country of Tripoli, remarkable for the numerous Phœnician and Roman ruins which it contains. Both of these papers have route-maps and illustrations. The conclusion of Captain Vaughan's account of his travels in Persia contains a description of the Daria-i-Nimak, "a solid sheet of rock salt of varying, but in places doubtless immense, thickness. Its area we estimated at 440 square miles, and its elevation was 2,700 feet."

The difference between English and American ways of looking at the same subject is strikingly shown in two articles in the Boston *Youth's Companion* on "The Bar as a Profession." The Lord Chief Justice, Lord Russell of Killowen, describes in a singularly clear and attractive manner the qualities, love of the

profession, industrious patience, common sense, and high aims, which are essential, not for the winning of great wealth, of which "the bar does not hold out promise," but of honorable success. To this he regards "university culture as almost indispensable," closing a very stimulating paper with a noble appeal to the young lawyer to remember "that he is engaged in a profession which may well engage the noblest faculties of heart and of mind," and that there are higher interests than those of his client to be fought for, "the interests of truth and of honor." The main point of the article by Judge O. W. Holmes, of the Supreme Judicial Court of Massachusetts, is to show that for a "fighting success" a university education is not essential—there is almost a hint that it may be an impediment; but that if a young man can afford "two or even three" years in a law school he "will not regret a month of it when he comes to practice." There can be no doubt of the truth of this assertion in view of the following significant figures: Of the 287 lawyers in Congress not one-half have been through college—129 only are college graduates; 50 have spent some time at a college or a professional school; 108 have received only a common-school education.

—It becomes evident that the question of the hour at both Oxford and Cambridge is the admission of women to degrees. At Oxford a memorial in favor of the movement is backed by the Vice Chancellor, the president of Magdalen College, and one of the two proctors, and has been largely signed by resident graduates. Among the signers are the masters of Balliol and University Colleges; the principals of Jesus and Brasenose Colleges and of St. Mary's Hall; the censor of non collegiate students; Bodley's Librarian; the keepers of the Ashmolean and University Museums; the Radcliffe Librarian and Observer; and Profs. Dicey, Legge, Max Müller, Pollock, York Powell, Burden-Sanderson, Poulton, Wallace, Green, and Elliott. At Cambridge a similar memorial has received the signatures of no less than 2,200 members of the Senate, including seventy professors, readers, and university lecturers and more than one hundred M.A.'s in residence. The Cambridge promoters have also circulated the memorial among "persons of distinction" outside the university, and some of those who have signed are the Right Hon. Arthur J. Balfour, Gerald Balfour, Chief Secretary for Ireland; the Bishops of Manchester, Sodor and Man, Gloucester and Bristol, Barrow in Furness, and Argyll; Sir Walter Besant, Sir Edward Thornton, Sir Robert Ball; Mr. Justice Kennedy and Mr. Justice Barnes. The opponents of the measure have so far done nothing except to protest against the wording of the memorial, which, they say, assumes that the admission of women is a foregone conclusion. But it has been pointed out that the wording is really happy, because, taken together with the number and the character of the signers, it will give the council a better idea of the state of public opinion than they could otherwise have obtained. Graduates of Cambridge in the opposition are reminded that, during the fifteen years since women were first admitted by that university to its honor examinations, 659 women have been classed in the honor lists, securing distinction in such varied lines of study as mathematics, classics, natural and moral sciences, theology, law, history, and Oriental, mediæval, and modern languages.

—Until a few years ago, Murray's 'Handbook for Travellers in Japan' (New York: Scrib-

ners) as written by Satow and Hawes, not only was by far the best work of its kind, but was tolerably up to date. The gradual growth of the railway system, by changing the routes of travel, made it, however, antiquated. The publishers, in this emergency, were so wise—and lucky—as to secure the services of Prof. Chamberlain and Mr. W. B. Mason for the task of revising it. The new edition, combining the labors of four experts, was a model book, for which there was such a brisk demand that the editors felt impelled to go over the ground once more and complete what was left undone before. As a result the fourth edition (1896) is a work which must make any one who visited Japan a few years ago sigh that he could not have had such a guide in hand when he was there. The new edition has about seventy pages more than the third, with fifteen new routes, in which the whole empire is, for the first time, included. The modest preface does not call special attention to all the improvements, but they are apparent at a glance. This is especially true of the maps and plans, some of which are printed on the thin Japanese paper which ought to be used for all guide-books, to reduce bulk. The general map of the empire shows that the main railway is now completed north to Aomori, thus making Yezo more accessible than heretofore. Among the new plans is one of the tombs and temples of Nikko, another of the Matsushima islands, while a third, specially valuable one gives a bird's-eye view of Tokyo, colored, showing the canals, bridges, parks, public buildings, hotels, etc.—a map which every tourist will specially welcome in this vast and most confusing city. Altogether there are nine new maps and plans. The guide is printed in Japan, and its English origin is emphasized by a new introductory chapter beginning with the words that "the shortest and most enjoyable way from Europe to Japan is by the Canadian Pacific Railway Line," of which a seven-page itinerary is added.

—'The Mediterranean Trip,' by Noah Brooks (Scribners), is, as it professes to be, a "short guide to the principal points on the shores of the western Mediterranean and the Levant." It is obviously intended for tourists on the excursion steamers from New York, and for such other travellers as mean to visit several places without remaining long in any, and are too lazy to spend more than fifteen minutes in reading up about each. As books of its sort go, it is fairly satisfactory, for it has much simple information succinctly put. This information is usually correct, but on page 126 we find the following sentences: "During the Crusades, the power of the Byzantine empire having greatly decayed, the throne was occupied by a Frank, and the region was overrun by Genoese, Venetians, and Flemings. After a half-century of great turbulence, the Seljukian Turks, who had gradually developed their power in Asia Minor, captured the city in May, 1453, when Constantine XI., the last of the emperors of the East, perished in the final fight, and Mohammed II. (the great conqueror) established in Constantinople the seat of Osmanli power. Most of the important works of modern Constantinople date from the era of the conqueror and his immediate successors—Mustapha II., Bayezid II., Soliman the Magnificent, and Achmet I." It is hardly worth pointing out that "the throne was occupied by a Frank" (after the storming of the city by the French and Venetians) in 1204, and that the Greeks recovered Constantinople in 1261, which is rather more than half a century

before 1453, when it was captured by Mohammed II., Sultan of the Ottoman (not the Seljukian) Turks. Mustapha II. was not the immediate successor of Mohammed II., but reigned from 1695-1703. We may remark, too, that Jerusalem was taken by the Crusaders in 1099, which is hardly the *middle* of the eleventh century (p. 110), that the remark about the battle of Platea would seem to suggest that Aristides commanded the Persians there (p. 142), and that the statements, "The kingdom of Naples was separated from Sicily by Charles of Anjou, in 1272, and the city became the capital. The kingdom was ruled by the Spanish Bourbons, with occasional stormy intervals, until the unification of Italy took place, in very recent years" (p. 186), are, to say the least, misleading.

—The recent request made by Harvard University to the municipality of Ravenna for permission to make a photographic reproduction of the famous manuscript of Aristophanes, recalls a little history which was published by Mr. W. G. Clark more than twenty years ago. It is not quite so romantic as the story of the Sinaiticus, but it affords a curious illustration of vagabond fortunes and of the slender chances by which such treasures are preserved for us. The handwriting of the Ravenna MS. resembles the minuscule of the Florentine *Æschylus* and *Demosthenes*. Bekker dates it as of the eleventh century; but other excellent experts refer it to the tenth. It is quite likely that it was a copy made for some rich monastery under the patronage of the later Basilian dynasty of Constantinople, at a time when classical learning was fashionable, and when the monasteries were, as Finlay says, rather like clubs for the accommodation of younger sons of noble families than the lodging-place of ascetics. Such a club of luxurious bachelors might naturally interest itself in the comedies of Aristophanes. The municipality of Ravenna received the manuscript from the monastery of Classe, within the walls, when the monastery was dissolved by the French and the edifice and library were made over to the city. The library was founded, probably before 1600, by Cardinal Giulio della Rovere, Archbishop of Ravenna. The manuscript of Aristophanes may have been acquired by a certain Padre Canneli, who flourished in the beginning of the last century, and is said in the annals of the Camaldolite order to have enriched the library "*selectis et copiosisimis codicibus*." The exact date and manner in which this manuscript was added there is no record to show; but there is a tradition handed down by the librarians that it was bought for a very small sum at a book-stall in Rome.

—How came so precious a manuscript to be such a vagrant? There is practically no doubt that a little later than the year 1500 it was in the library of the Duke of Urbino, Guidobaldo I. It was not made use of by Aldus in his *editio princeps*, printed in 1498. That edition does not contain the "*Lysistrata*" or the "*Theomophoriazusæ*," both of which are given in the Ravenna MS.; nor does it appear that Aldus had ever heard of the latter comedy. But in 1515 Bernard Junta published at Florence the second edition, which contains only the nine Aldine plays, and in the preface to it he promised the other two. This promise he fulfilled next year in an edition of the "*Lysistrata*" and the "*Theomophoriazusæ*," which appeared January 28, 1516. In the preface he mentions that he has availed himself of a manuscript from the li-

brary of Urbino, "*antiquissimum Aristophanis exemplar*." That this MS. was identical with the Ravenna can hardly be doubted from Mr. Clark's report, who, in carefully examining the Ravenna, observed faint pencil marks drawn across the text and corresponding with the pagination of the Juntine edition. These were evidently for the convenience of the printer. The manuscript, once borrowed, was probably never restored to the library of the Duke, but wandered off to be recaptured later for the monastery of Classe. The reason of such oversight is easily discovered. On the 30th of May the troops of Pope Leo invaded the Duchy; on August 18 Lorenzo, the Pope's nephew, was made Duke in place of the deposed Francesco Maria. In the midst of these changes and troubles the MS. was probably neither reclaimed nor returned. At any rate it was not one of the 165 Greek MSS. which were in the library of Urbino when it was transferred to the Vatican by Alexander VII. in 1658.

—'The Journal of a Spy in Paris during the Reign of Terror, January-July, 1794,' by Raoul Heudin (Harpers), presents internal evidence of its authenticity, but the editor has omitted to state in his preface how he came into possession of the manuscript, or where the manuscript is preserved. It is possible for an expert in the history of the French Revolution to make out a case for the non-authenticity of the Journal on the strength of a few passages here and there, and the editor could blame no critic for doing this, since he has deliberately withheld his own name and all information about the manuscript. It would take, however, too much space here to balance the pros and cons. If the Journal proves to be a *supercherie littéraire*, it has certainly been made up with considerable skill, and the author deserves to be complimented for his ingenuity. Apart from its suspected origin, it contains no information of importance for students of the French Revolution. No new light is thrown upon the characters of the members of the great Committee of Public Safety or upon the methods employed in the government of France during the Terror. The condition of things in Paris, however, is reflected with considerable fidelity, and the scarcity of food in particular is well illustrated. The editor's notes show a competent knowledge of recent books on the French Revolution, but he is rather hard on Brissot, whom he terms a prig, in a note on page 29, and there is no excuse for his bringing into the same note an allusion to the late Prof. Freeman's famous "Perish India" remark, which has nothing whatever to do with the subject, and which Freeman to the last day of his life always avowed had been misinterpreted.

—Perhaps the most curious manifestation of the current Napoleon craze is the publication of 'A Metrical History of the Life and Times of Napoleon Bonaparte,' by William J. Hillis (G. P. Putnam's Sons). The compiler is an enthusiastic but badly informed admirer of Napoleon and all his works, and his admiration has led him to collect as much verse as possible, good, bad, and indifferent, relating to events in the life and career of his chosen hero. A perusal of the balderdash which Mr. Hillis has collected together is sufficient proof that the most dramatic subjects do not necessarily produce dramatic poetry. There are, of course, in this collection a few famous poems, such as "The Burial of Sir John Moore," Campbell's "Battle of Hohenlinden," Byron's

stanzas on Waterloo from "Childe Harold," mixed with translations from Béranger, Victor Hugo, Körner, and Arndt; but the vast majority of the so-called poems were not worth drawing from obscurity, and it is depressing even to glance at the feeble productions of Southey, Croly, Huddesford, and the irrepressible "Mr. Anon." It is curious to note that the one poem which of all poems best represents the feelings of the veterans of the "Grande Armée" for the general who had so often led them to victory, Heine's "Two Grenadiers," is omitted, and that Thackeray's "Chronicle of the Drum" finds no place in Mr. Hillis's anthology. Of the editor's introductory remarks prefixed to the different poems, it is only necessary to say that for the earlier periods dealing with the French Revolution they exhibit a stupendous ignorance of the subject, and that for the later period they are marked by an ill-informed hero-worship which is rather amusing and wholly ridiculous.

LONGMANS' GAZETTEER.

Longmans' Gazetteer of the World. Edited by George G. Chisholm. London and New York: Longmans, Green & Co. 1895.

THERE is no department of knowledge the presentation of which becomes more rapidly antiquated than that of geography, and the appearance of a new and comprehensive cyclopædia of geography, containing the latest information, must at all times be regarded as a subject of gratulation. Such a work we have before us in 'Longmans' Gazetteer of the World.' It forms a ponderous volume of 1,796 pages, containing on an average about 57 titles, so that the total number of notices is about 100,000, or about three-fourths as many as in 'Lippincott's Gazetteer.' Makers of cyclopædias depend so largely upon what their predecessors in the same field have wrought that the structure is generally weighted down with a prodigious amount of dead matter carried to meet imaginary requirements. Every cyclopædia is defective for want of space, and yet most cyclopædias are senselessly prodigal with the space at their command. No end of worthless information is heaped up about insignificant places and administrative subdivisions in accordance with a scheme dictated by custom instead of by intelligent needs. 'Longmans' Gazetteer of the World,' on the whole, is constructed on broad and independent lines and on a high plane of scientific treatment. It is conspicuous for its vigorous presentation of topics and for the freshness of its information, as well as for its enlightened emancipation from traditional methods, as manifested especially in the exclusion of that mass of insignificant details to which we have referred. A great deal of trained scholarship has been brought to bear upon the work, and a wise economy of space has made it possible to deal generously even with the less important subjects. We need only point to the full descriptions of the governmental divisions of Russia and the Prussian provinces. Unfortunately, the many shortcomings which obtrude themselves even upon a not hypercritical eye show that much of the matter has been assigned to incompetent hands, and that the individual topics have not been subjected to that rigid editorial scrutiny without which every cyclopædia is bound to be faulty.

A high standard of execution is by no means apparent in many even of the most important articles. Thus, the masterly delineation of

the physical contours of France is in strange contrast with the absence of orographic details presented by the article on Italy, or the dry enumeration of the geographical features of the German Empire. The fine lines which mark the description of the Carpathians are absent in that of the Alps, whose picturesque and physiographic aspects (lakes, glaciers, etc.) are sadly neglected, although the article is a scholarly presentation in other respects. Nor is the description of the Nile as full as it should be even within the limited scope of such a work. There is a lack of consistency with regard to the range of the topics discussed under similar heads. Thus, the subject of emigration is treated under *Italy* and ignored under *German Empire*. The former article has a considerable section devoted to education, while in the latter the author has not found space for an enumeration of the universities. Our sense of proportion is not unfrequently shocked, as, for instance, by the inordinate amount of space in the description of Italy taken up with the subject of malaria.

The volume bears throughout the appearance of being up to date; the character of the articles, the statistical matter, and the frequent references to geographical magazines showing that recourse has been had to the latest sources of information. Especial attention has been bestowed in many cases upon parts of the globe respecting which our knowledge has been recently enlarged, or which have become prominent in our day in connection with the colonial policy of European states, as may be seen by turning to such titles as *Pamirs*, *Tongking*, and *South African Republic*. Geology claims a share which has not been accorded to it in similar publications, and indeed it is in places perhaps too prominent at the expense of more pragmatic features. The natural resources and industries of the various countries are minutely discussed, and foreign commerce receives special attention, the salient facts being given without recourse to formal statistical tables. A most attractive feature of this gazetteer is the amount of precise climatological information which it affords, concerning not only regions, but also individual cities. In the case of important towns as well as of countries the statistics of population at various censuses are introduced. Thus, we are informed what the population of Frankfort-on-the-Main was in 1817, 1871, 1880, and 1890; that of Vienna in 1754, 1820, 1840, 1880, and 1890; of Berlin in 1648, 1688, 1788, 1850, 1870, 1880, and 1890; of Boston in 1790, 1820, 1850, 1870, and 1890; and of Paris according to twelve enumerations or estimates reaching back to 1292.

In its descriptions of cities the work before us is far from satisfactory. The notice of Berlin, for example, is beneath criticism. Florence is rudely treated by the side of Venice. We cannot approve of the omission, in the article on Philadelphia, of the national mint and Independence Hall. The statement that Philadelphia has a greater area than any other city in America is erroneous and is contradicted under Chicago. The city is not situated 108 miles from the mouth of the Delaware, geographers not having agreed to regard Delaware Bay as part of the course of that river. It is ridiculous to assert that in 1830 Philadelphia ranked after Baltimore in point of population, after both Baltimore and New Orleans in 1840, and after Boston in 1850, without the qualifying statement that at each of these census enumerations the actual population, including those who resided without the limits of the municipality as then constituted, but

within the present limits, far exceeded that of any city (including suburbs) in the Union except New York. In the article on Paris the latitude and longitude have been overlooked, and there is no mention of the famous observatory. The latitude and longitude of Amsterdam are likewise omitted. In the description of Frankfort-on-the-Main the new railway station, the largest in the world, is ignored.

In a gazetteer, every topic should as far as possible be treated individually under its own head. The substitution of cross-references to general articles for separate notices, if too freely indulged in, is sure to lead to serious inadequacies and omissions. This fault is conspicuous in the work before us. Thus *Matterhorn* and *Jungfrau* are referred to *Alps*, in which article the reader finds only a mere mention of these peaks. Again, the plan of this gazetteer embraces the description of peoples as well as of places, but there appear to be many serious omissions in this department. Thus while we find Slovaks, Slovenes, Wends, Bashkirs, Ostyaks, etc., we fail to discover Czechs, Wallachs, Letts, Livs, Cumans, or Tekke-Turkomans. A valuable feature might, in our judgment, have been added to this volume by the insertion (as separate titles) of the Latin names, mediæval as well as classical, of modern towns, with a reference or explanation, such names being frequently encountered on title-pages, documents, medals, and coins. The laudable example set in this respect by Guibert's 'Dictionnaire Géographique' about half a century ago has been ignored by the English and American gazetteers and cyclopædias.

In the field of history (a feature which, we allow, may be regarded as a very minor one in a gazetteer) the volume before us is very defective and untrustworthy. Under *Marathon* we read of the victory of Miltiades over the army of "Xerxes." The massacre of the British at Khurd-Kabul did not take place in 1841, but in January, 1842, and they were not retreating from Jalalabad to Kabul, but the reverse. Calais was not recovered from the French in 1557, but in 1558. Under *Plassey* there is no allusion to Clive's victory other than the statement that the place is a "battle-field." Under *Wahlstatt* we find a singularly lame mention of the battle which arrested the tide of Mongol invasion in Europe, and Szigetvár figures without the Leonidas of Hungary. Attila and his Huns should still receive a mention under *Châlons-sur-Marne* even if modern scholarship is disposed to doubt whether the great battle was fought in the immediate vicinity. The "historical notes" with which the articles on the principal countries close are often as full as the generous lines on which the work is planned would appear to demand. In the case of Turkey the historical sketch is strangely inadequate. In the survey of the territorial development of France no mention is made of the acquisition of Provence in 1481. The history of Courland and Livonia is ignored, although these interesting corners of Europe deserve to have some light thrown upon their past even in the prosaic pages of a gazetteer. The few words given under *Sicily* and *Naples* on the subject will not satisfy the reader who asks to be enlightened as to the precise meaning and the origin of the designation "Two Sicilies." The writer of the notice *Calabrie* forgets to state that the Calabria of the Romans designated the heel and not the toe of Italy.

Special prominence has been given in this volume to the United States, the criterion of inclusion adopted being such that the reader is enabled to locate all but the very smallest

places. There is a mass of such entries as *Bridger's Pass*, *Bridger Basin*, *Death Valley*, *San Felipe Sink*, *Manafeld*, *Marcy*, *Twin Lakes*, *Tyndall Mountain*, and *Erie Canal*. The American portion would, however, have borne a much more careful handling than has been given it, as may be seen by an inspection of such notices as *Hudson* (the name Highlands not mentioned in speaking of the scenery), *Palisades* (location vaguely defined), *Adirondacks* (the lacustrine feature almost ignored), *Catskills* (no allusion to the Cloves), *German-town* and *Dorchester* (entirely inadequate), *Governor's Island* (described as a "fortified port, U. S., in New York Harbour"), *Baltimore* (no mention of the archbishopric), *Chesapeake Bay* (no idea given of its length), and *Lake Superior* (only 13 lines).

It is unfortunate that the pages of a work so well conceived as the one under review and containing such a wealth of excellent matter should be marred by an unpardonable number of blemishes of all kinds, including the most inexcusable misprints. We have space to point out only a few. By a typographical error the latitude of Philadelphia is given as 30 degrees in place of 39. Williamstown is stated to be forty-five miles from the north-west corner of Massachusetts instead of four miles. Lake George is entered as *George Lake* without a comma. The central plain of Chile is stated, through an obvious misprint, to have a mean width of 308 miles. Under the head of *America* we read that Lake Superior is the largest body of fresh water on the globe, with an area of 31,200 miles, a statement which is contradicted under *Victoria Nyanza* (32,167 miles), where, however, the area of the islands is perhaps included. The location of *Lusatia* is falsely described ("S." standing for "E.," and the Brandenburg portion being ignored). Under the head of *Bermuda* we find "Cape Hatteras, in S. Carolina." In the account of the metric system in the article *France* by a curious slip (the non-correction of which in proof is unpardonable) the *are* is stated to be equivalent to one square metre instead of 100 square metres. In the enumeration of the French forts *Briançon* (department of *Haute-Alpes*) is included among those in the northeastern part of the country. In one part of the article *Rhine* it is stated that *Mainz* is at the head of steam navigation, and in another part that steamboats ascend as far as *Mannheim*. The information regarding glaciers in the article *Alps* is misleading in the absence of any statement regarding the *Grindelwald*, which descends much lower than the *Aletsch*. The *Mississippi* does not transport 3,637,200,000 tons of sedimentary matter yearly to the Gulf of Mexico, but only one-tenth of that amount (the estimated volume of the deposit, which is correctly stated, being erroneously converted into tons). *Monaco* figures without *Monte Carlo*, *Brie* without its cheese, and *Dauphiné* without its English name. The cross-reference *Blue Mountains* is not justified. The reader is referred from *Cheronea* to *Lebadeia* and from *Lebadeia* to *Levadeia*, but under *Levadeia* not a word is said about *Cheronea*. We search in vain for the *Mer de Glace*, and for *Moabit*, one of Berlin's well-known suburbs.

In the matter of orthography we note a marked deviation from ordinary usage in the substitution of *ch* for *tsch* in Russian names. This may be well, but it is a mistake to have omitted cross references under *Tsch*. There should also have been references under *Yek* to Russian names entered under *Ek*. The editor has adopted several new characters into the al-

phabet in the spelling of names belonging to languages not using the Roman alphabet. The Spanish *ñ* is introduced in such Russian names as *Kazañ* and *Ryazañ*, and *ö* and *ü* are employed in the transliteration of Oriental names. It is a pity that a modified *l* has not been provided to meet such cases as are presented in Russian names ending in *pol*. The editing has been extremely careless in the matter of French and Spanish accents, the most telling example being afforded by the French names beginning with accented *E*, some of which are printed with the accent and some without. This is not a pronouncing gazetteer, although occasionally the pronunciation is indicated where it is strikingly at variance with the orthography. We cannot find fault with the publishers for not having attempted what is a practically impossible task, in spite of the very commendable measure of success achieved in this direction by 'Lippincott's Pronouncing Gazetteer.'

With all its shortcomings 'Longmans' Gazetteer of the World,' as a treasury of geographical information, derived from the latest sources—information much of which is not easily accessible—must be regarded as a valuable addition to encyclopædic literature, and deserves a place on the shelves of every library.

RECENT FICTION.

Dorothy, and Other Italian Stories. By Constance Fenimore Woolson. Harper & Bros.

The Life of Nancy, and Other Tales. By Sarah Orne Jewett. Houghton, Mifflin & Co.

The Cup of Trembling, and Other Stories. By Mary Hallock Foote. Houghton, Mifflin & Co.

The Days of Auld Lang Syne. By Ian Mac-laren. Dodd, Mead & Co.

The King of Andaman, a Saviour of Society. By J. Maclaren Cobban. D. Appleton & Co.

A Monk of Fife: A Romance of the Days of Jeanne d'Arc. By Andrew Lang. Longmans, Green & Co.

The Watter's Mow. By Bram Stoker. D. Appleton & Co.

A COMPARISON between a number of our current short tales and novels shows that the great stream of fiction has been cleft in two, and that the branches are as sharply defined and essentially different as are the *fabliaux* of the Middle Ages and the *Romances of Chivalry*. While the novelists are rivalling the denunciatory prophets, running them close in gloom if not in power, the story-tellers cultivate a gracious intention to entertain, and an

amiable desire to give pleasure rather than pain. The novel has become a criticism (not often illuminative) of the vexed and unhappy problems of life, but the story remains a narration of incidents not limited to the unpleasant or offensive; an imaginative transcription of bits of life not necessarily saturated with woe; and an illustration of sentiment and passions not exclusively hopeless or vicious. The novelists have generally discarded the imaginative and finely ideal, believing such qualities to be frivolous and unholy; but the story-tellers flaunt these ancient and discredited banners of their calling, and may come to be considered as the best poets of our generation. As craftsmen they are far more skilful than their serious and discursive brethren. Appearing to know what they want to do, they make steady way to their foreseen conclusion, and convey a clear impression of their meaning. They have, as a rule, grasped the principles of concentration and economy of attention, and many show an admirable talent for observing the characteristic and for inventing or adopting the phrase that reveals a chapter.

Among those who have brought their agreeable art nearly to perfection are several women, who should be highly prized as compensation for the preponderance of their sex in the ranks of the amazing novelists. Their work, with the exception perhaps of Miss Murfree's, is distinctively feminine, not in the way of being sentimental, or didactic, or squeamish, but for its decency, grace, and refinement. If they have ever had any temptation to dally with impurities for the sake of notoriety, they have resisted it, perceiving that there are certain subjects which, if a woman sinks to, she sinks with. In the whole of Miss Woolson's work, for instance, though there is no shirking of physical passion and the dire complications for which it may be responsible, there is not a hint of coarse sensuality or a touch of grossness. On the other hand, her lovers do not become phantasma through attenuation of the force of physical attraction. In 'Dorothy,' the second volume of Italian tales and her last work, most of her lovers are fervent and persistent rather than fiery. The scene of the love-making is usually the terraced garden of an Italian villa temporarily occupied by a wealthy American widow and her charming daughter or niece. The lover may belong to any nation, but he is always, as it were, on the wing: at the slightest tiff with his adored one he takes the first express, and, prodigal of railway fares, exhausts his ire in an inconsequent whirl over Europe. These stories, even as the life from which they are drawn, are more pleasing than exciting, and depend for charm on the congeniality between scene and temperament. They express ripe social experience and an eye keen to observe significant trifles, but have neither the vigor nor depth of the author's tales of Americans seen in a land where they do not conspicuously dawdle about terraces, jesting with pretty women and drinking copiously of tea.

Miss Jewett is content, and most heartily contents us, with the American at home, almost restricted to the New Englander working his unproductive farm, fishing on the more responsive sea, and gossiping up and down the village streets. The incidents in the volume entitled 'The Life of Nancy' are simple almost to bareness, but they are exalted by a sympathetic revelation of human nature and by an exquisite literary representation. The fussy old maids, kind or cross, the unconsciously humorous and self-complacent seafaring men, the taciturn husbands and loquacious,

irrelevant widows, all are in a way characteristically of New England, but Miss Jewett goes deep enough to link them with a wider world and to insure them greeting as kin, irrespective of geographical limitation and local accident. When a thing is perfectly well done, it is profitless to try to explain how and why. Nature's special endowments defy analysis, and those curious about seemingly wonderful achievements are restricted to guessing what has been added by care and industry to the original, inexplicable faculty, the unknown and incalculable quantity. What Miss Jewett appears to have gained by her sincere and loving application to letters is facility of expression which shows neither haste nor waste, and a classic beauty of form and serenity of manner. She has certainly proclaimed that beauty and truth are not antagonistic, and that the real and the ideal are inextricably woven in the warp of human life.

Mrs. Foote's talent is smaller and less mysterious than Miss Jewett's, and it is easier to discern the increase from cultivation. She gives us the appearance, the effect, and leaves us to infer the true inwardness or to give it up. Her stories are drawn from the mountains, plains, and cañons of the very far West—places where, when anything happens, it startles, terrifies, frequently kills somebody. The event has great self-reliance and speaks for itself, indifferent to the character of the people implicated. It loves a tragic mask and identifies itself with nature's vastness and desolation. In the tale of "Maverick" the lasting impression is not that of pity for a young girl flying from life made intolerable by the blackguardism of male relations and the too great solicitude of an ugly lover, but of horror of the Black Lava fields eager to grant death to any who enter their hideous solitudes. So, in the title story, no great compassion is felt for the fate that overtook a very frail woman, but a penetrating realization of the awfulness of the avalanche bidding its time to hurl God's judgment upon the sinful. The sentiment of the dreary isolation of miners on the mountain slopes when work has stopped and winter closed in, is vividly rendered in the same story, and the author's phrase has a sad, poetic quality very inspiring to imagination. The local element in Mrs. Foote's stories is all supplied by the event and scene. With the natives she does not concern herself, perhaps because there are none, except a lone Skitwish Indian, an unmanageable being. At all events, her people have always come from somewhere else, and one feels sure that, if they are permitted to live long enough, they will go home again.

Miss Murfree, on the contrary, is rigidly local. Her Tennessee mountains are purpler, bluer, and yellower than any other; they are at times more remote and forbidding, at times more close and tender, than the peaks and summits of other ranges; their moon is distinctly superior, and, unlike other moons, constant. Their inhabitants bear little resemblance to the natives of other altitudes and gorges, but they make up for variation from the type by close family likeness. The occasional stranger who invades these fastnesses is a revenue officer, a bailiff, or a handsome adventurer seeking game, gold, or health. If he is handy with his pistol, he has a chance to get away and repent of his rashness, but he frequently meets one who is handier, and his bones bleach in the eternal moonlight. We do not mean to disparage Miss Murfree for an inaccurate observation of mountains, moon, and natives, but rather to admire her creative power. Her

brilliant dramatic imagination is naturally accompanied by a tendency to reckless, picturesque statement, and it is through the strength and the defects of these qualities that her stories always appear more like the work of a man than of a woman. "The Mystery of Witch-Face Mountain" is full of weird, fantastic touches and description that excites but does not describe. The tale is not well held together, and suffers in interest by opening with an event so dramatic that all the rest seems tame. The second story, which describes the competition for the Blue Ribbon offered to the best rider at the Kildeer County fair, goes splendidly, and is as good as anything in Miss Murfree's first famous volume. By his tender unselfishness Justus Hoxon, in "The Casting Vote," is doomed to failure as a mountaineer. The terrestrial globe, in fact, is but a poor place for such a noble spirit. His sacrifices for his "family," his pride in its progress, and his betrayal by the best loved brother, make a sequence of miseries intolerable to follow were it not for the comic interludes which mitigate the pathos without jarring it too roughly. The robustness of Miss Murfree's comedy has, like her imagination, a noticeably masculine quality, and she is the only woman who has been able to give expression to that grim, ironical humor which is as abundant as ozone in outlandish America.

Bret Harte has used up a good deal of it, but not all, for it smiles all through the volume "Red Men and White," by Mr. Owen Wister, a new-comer in fiction. These stories are about adventurers, soldiers, and Indians, and describe what they were all doing west of the Missouri a quarter of a century ago. They were generally doing what they should not have done, except the soldiers, who went astray only when acting under direct orders from the gentlemen of the War Office in Washington. "Specimen Jones," who appears in several of the tales, is a most attractive vagabond, with a reserve of sentiment uttering itself at odd moments through the medium of old English songs. Full of expedients as well as of strange oaths, army discipline represses his impulsiveness without quenching his ingenuity. The trick by which he effects "The Second Missouri Compromise" is as clever as it is unexpected. This tale of a deadlock between the Governor of Idaho and his Legislature is indeed delightful. The situation is most serious, but the attendant circumstances are so humorous that even the Governor and his treasurer must have been spared the bare horror of impending death. Barring a slight defect in construction (a superfluous scene between the captain, his wife, and the surgeon), "The Second Missouri Compromise" is as good a frontier tale as has ever been written, and, apart from the general excellence of the other stories, makes the volume memorable.

In the story of "Clarence," which is neither short nor very long, the veteran sponsor for the pioneers, Bret Harte, goes back to the days that tried men's souls and women's faith. Several old friends reappear on the scene—Clarence Brant, who gives the tale a name; Jim Hooker, dirty, swaggering, and dishonest as of old; and Colonel Starbottle, still extravagant in shirt ruffles and rhetoric. The story turns on the implication of Brant in the plots of his Southern wife, an inveterate conspirator. The first part, which narrates the gathering and dispersal of the conspirators in San Francisco, is swift, clear, and dramatic; the second wavers and drags, with such confusion of signals, disguises, and other paraphernalia of the spy business, such a mixing up of a haughty

Southern girl, a mysterious mulatto, and Mrs. Brant, that President Lincoln's unravelling is more confirmatory of his astuteness than any anecdote that his biographers have been able to provide. The President is reported to have said to Brant, "In Illinois we wouldn't hang a yellow dog on the evidence before the department"—which is creditable to the administration of justice in Illinois, but we feel that the State would stand within its rights in declining to examine such evidence even if the alternative were the hanging of a thousand yellow dogs.

Local color again and a Sam Slick personality, quaint, shrewd, eccentric, sententious, and ungrammatical, are among the expectations awakened by the title of Mr. Mitchell's tale, "Amos Judd." The editor of *Life* may be accused of deliberately misleading the public, but not of disappointing it. Cold is the imagination that cannot forget the improbability of the incident in appreciation of its romantic beauty, and dull the mind untouched by the surprising contrast between the manner and the matter, the clever adaptation of a light, neat, pointed, modern style to the narration of circumstances including both the mystic and the wonderful. What these circumstances are nobody should tell, but every one should read. Criticism of bold experiments in literature, as in life, is silenced by unequivocal success. To our mind there is but one flaw in Mr. Mitchell's story, and that is the means employed to bring about the inevitable end. His expedient here is too literally actual. We can bear to let Amos Judd go because we must; but the manner of his going adds to the pang of sorrow an emotion of resentful horror, throwing us back for consolation on the reflection that, after all, it is only a story, therefore we must pluck up courage to go about our business, and, after a decent interval, smile again.

No easier way could be tried for determining the differences between original and imitative fiction than that of reading, after "Amos Judd," "The Gypsy Christ, and Other Tales." No other reason for commending Mr. Sharp's volume occurs to us. The title story echoes Edgar Allan Poe—a disorderly, intoxicated echo; "Madge o' the Pool" brings back to us modernized, brutalized in unromantic nakedness, Dickens's Bird of Prey and Lizzie Hexham; "The Coward" is the sort of thing Pierre Loti might do without the aid of his temperament, and every one can imagine how valuable that sort of thing would be; "The Lady in Hosea" is as old as the story of another Biblical dame, Potiphar's wife, but it has a novel touch at the end with which Mr. Sharp must be credited, assuming that he means to be quite savagely sarcastic. Parallels for the remaining tales abound, and all their labored obscurity and artificiality cannot disguise the antiquity of their origin.

Mr. Cram, the author of "Black Spirits and White," is as careful as Mr. Sharp in guarding us from the agitation of hearing new things. His originality, however, asserts itself by the discarding of the author's preface (endured to us by time and custom) and the substitution of a postscript. Here he disclaims ownership of the germs of the things we have been reading, and defines these things as "norms," telling us that he is more than content if he has succeeded in clothing the norms in new vesture. A reviewer of fiction must pass the germs and norms, knowing that his opinions on these sacred objects would justly excite contempt, if not derision. Again, having in mind the little wherewith Mr. Cram may be contented, a humane reviewer must desist even from scanning

the "vesture" too closely. But, standing well off and giving heed only to the general effect of this vesture, there cannot be much harm in saying that its novelty is not dazzling, that its ornament is out of proportion to its utility, and that it is almost voluminous enough effectually to conceal the elusive norm.

Miss Guiney furnishes 'Lovers' Saint Ruth's' with a preface about as modest as Mr. Cram's postscript, but less mystical. The title tale is a sort of mediæval norm built into an ecclesiastical ruin which is described by a soulful curate as a "darling bit of early decorated." Miss Guiney says that she dreamed this tale and publishes it with reluctance, appearing to have been urged thereto by friends. In the question of publishing a book, it is safer to take counsel with enemies than with friends, because a little animosity is often more productive of critical taste than is a cordial affection. Nothing in the volume makes us feel that Miss Guiney is wise in deserting verse for prose. Her way of telling things is either tedious and involved or melodramatic, and the good qualities, showing chiefly in descriptions of nature, are those which most brightly shine in poetry. The sad episode of "the provider" is almost the same as the suicide of Father Time—a very ghastly incident in 'Jude the Obscure.' Miss Guiney says it was written several years ago, and founded on an actual occurrence. Her unhappy child is much more human than Mr. Hardy's, and the management of the narrative is less inapt than that of the preceding tales. The blundering phonetic Irish, however, detracts from intrinsic strength and pathos.

'His Father's Son' is a sad dog. Not a touch of mirth or frivolous fancy is permitted by Mr. Matthews to disturb the serious record of his ignominious existence. "This," the author seems to say, "is life, not fooling. Let us treat our awful subject awfully." The fidelity to fact of the representation of the father, Ezra Pierce, need not be questioned. Almost any one who reads the newspapers could rattle off a recognizable description of a mighty potentate of Wall Street with a fair criticism of his methods, also conveying an impression of his character, derived from the daily press, very similar to that given by Mr. Matthews and not a bit more engaging. The son, Winslow, his wife and mother, are presumably equally true to life, but rarer. The impotence of the whole three before the most familiar problems, the utter inadequacy of the women to stretch out a saving hand to a boy whom they love and who is rapidly going down to death, betray a hopeless stupidity which Mr. Matthews never could have imagined, and the observation of which must have given him many unhappy hours. It is a pity that he prolonged this pain by writing down in detail the ineptitudes of those incompetent women; admiration of his courage is lost in an overwhelming sense of its uselessness for either instruction or reproof. Besides, the result of the labor (probably contrary to the author's intention) is to move us to pity the weak-headed Winslow, and to understand perfectly the temptations offered by a volatile and expensive Daisy Postells. The dreariness of these people has weighed on Mr. Matthews's style, and we wish he would consent to throw truth to the winds and take on once more the gay irresponsibility of a writer of plain, uncompromising fiction.

The tide of popular favor for English fiction which is chiefly Scotch appears still to rest conveniently at flood, and the authors, plentifully endowed with national canniness, are not

backward in working an advantageous circumstance for all it is worth. A sober, reticent Scot must be deeply perplexed by the wild interest apparently taken in all that he does, says, and thinks, and considerably irritated by the publicity thrust upon him. It is not altogether a flattering fame, and he doubtless sees clearly that the authors are not so much concerned about proclaiming his virtues as they are eager to expose his eccentricities and make capital of his harmless peculiarities. No one is a more reckless invader of parish privacy than the minister who writes over the name Ian Maclaren. It is true that his exhaustive disclosures of stinginess, bigotry, and trivial pugnacity are offset by tributes to sturdy honesty and deep feeling. Nevertheless, we anticipate the day when exasperated elders will undertake to discipline garrulous literary Paul Prys masquerading as ministers. In characterization the volume entitled 'The Days of Auld Lang Syne' is more vague and shallower than the author's preceding work, and that sentiment which captured so many readers degenerates into sentimentality—indeed, comes perilously near to twaddle.

'The King of Andaman,' a long, romantic novel, very loosely constructed, involves much larger issues than are leases, rous, and bickerings between the Establishment and the Free. The scene is in a Scotch community of weavers just after the hapless Chartist movement and before the general introduction of machinery. The "Maister of Hutocheon" hardly strikes us as real and substantial; but as a large hearted possibility, capable of seeing visions of perfection, he is well conceived. The French manufacturer and the Irish scalawag are more credible figures and naturally much less admirable. All the detail of the times and conditions is interesting and well presented, and the use of uncouth dialect is discreetly limited.

In 'A Monk of Fife' Mr. Lang shrewdly utilizes two fashions, the acceptability of Scotch character and the revived interest in Jeanne d'Arc. His tale assumes to be a translation of a fifteenth century MS. We frankly avow complete ignorance of the *Liber Plutarchensis*, but know enough about Mr. Lang to feel sure that, wherever he may have got his facts, he is responsible for the fiction, and that the fiction much exceeds the facts. Since he must have a Scot, we are glad he has resisted the fascinations of the weaver and farmer, and has chosen a fighter, a free-lance, one who had the foresight to learn the "Southron's tongue" at his mother's knee. The adventures of Norman Leslie, in spite of his proclivity for receiving deadly wounds and swooning away at a critical moment, are stirring, and the mystic maid is not absolutely removed from human comprehension and sympathy. Mr. Lang has taken a great deal of pains with the descriptions of historic battles and sieges—pains that are perhaps wasted, for the shades of difference in the actual events escape the most faithful narrator, and to the reader who is not a boy it seems as if one as a sample would have done for all. But the book is a boy's book, and it will slake his thirst for blood and slaughter without vitiating his mind or impairing his morals.

There is only one rational excuse for the use of dialect in stories, and that is when the dialect helps out the story—when, in fact, you couldn't have the story without it. No such limitation has embarrassed the mind of the author of 'The Watter's Mou.' The smuggler's daughter, her father and brothers and friends, would be just as theatrical and conventional in English as they are in inter-

mittent Aberdeenshire Scotch. The central incident has a thrill in its heart which loses force by the author's artificial treatment, and never have sky, sea, and wind lowered, raged, and roared with more amazing spectacular effect, not only o'erstepping, but quite putting to shame, the modesty of nature.

Reconstruction during the Civil War in the United States of America. By Eben Greenough Scott. Houghton, Mifflin & Co. 1895. Pp. 482.

We have here a work which is said by its author to be preliminary to a political history of the period of Reconstruction, which he intends to write. Such a history might be a very instructive and valuable book, but its value will largely depend on the standpoint of the writer. This preliminary volume is useful as enunciating the author's interpretation of the Constitution and applying his principles to the civil war itself.

When Jefferson Davis devoted a large part of his book on the Confederate States to an elaborate argument that the South had the right under the Constitution to secede, and that the United States had no constitutional power to put down the rebellion, all the world laughed. If the first part of his contention had any force, and secession was a fact, he and all who believed with him were completely estopped from claiming anything from that Constitution in either the conduct of the war or the terms insisted on afterward. They had repudiated the Constitution. Feeling the force of this, apparently, Mr. Scott carefully avoids committing himself to the constitutionality of secession. He argues the case, rather, from the standpoint of the "Northern man with Southern principles" who could oppose the prosecution of the war as unlawful, the abolition of slavery as revolutionary, and the imposition of any terms at the close of the war as tyranny.

The first half of the book is an elaborate effort to read into the history of the country the fundamental principle that "separateness" was the vital (or mortal) element dominant in all its development from Plymouth Rock and Jamestown onward. Union was abhorrent to the American nature, and the separate sovereignty of colony and State was so radical a law of the country's growth that, whether the States and people formed a "perpetual union" in 1777, or a still "more perfect union" in 1787, they must be understood to have meant only the twisting of a rope of sand which could bind nobody if any member of the Union chose to practise disunion. Our author therefore finds it unnecessary to discuss the affirmative right to secede, or the sufficiency of reasons given for secession. It is quite enough to affirm the complete absence of power to prevent it. He seems wholly unconscious that a majority of the people of the country will regard his conclusion as self-destructive. They will say, Your conclusion that the United States had not power to put down an insurrection, proves that either your premises, or your logic, or both, are wrong. The absurdity of your result shows that another interpretation of constitutional power is the true one.

Education of the public mind has made progress with time, and intelligent men do not now shrink from clear formulation of principles which they did not care to discuss in 1861. It is characteristic of political discussion to seek methods of conciliating supporters, and to avoid statements, however sound, that may

offend those whose votes may possibly be obtained. Mr. Scott will find that such questions as that of the right to coerce a State give little trouble nowadays. The wonder is that they ever troubled anybody. The truth is, that the Constitution provides for the same means of coercing a State that violates its obligations that it does for a single citizen. The third article provides for making a State either a plaintiff or a defendant in controversies before the courts of the United States. Judgment and execution are coercion. The principle established, the rest is only a question of form. The willingness to avoid unnecessary issues led to distinguishing between the coercion of a citizen and coercion of a State, but the logic of events taught that there was no need of making even a sentimental distinction, and that a State in insurrection should be coerced as well as a collection of individuals. The State is one of the political corporations within the national Union and owing many important obligations to it. Either the State or its citizens or both may be guilty of violating those obligations, and may be compelled to perform them or made to bear the penalty.

It was always part of the elementary law that there are matters in which a party wronged may redress his own injury. If I am assaulted, I am not limited in redress to suing for damages: I may repel force with force. To say that this power is less in the nation than in a private person is to expose the ridiculousness of the assertion. These are principles of interpretation which the terrible lessons of the civil war taught so cogently that the old doctrine of impotence is scouted. It never was held except as a logic-chopping method of upholding the institution of slavery, and efforts to revive its discredited and discreditable sophistries will be utterly futile. Mr. Scott says the letter of the Constitution remains to show how far the people have been swept from their moorings. The answer is that no such thing was ever found in the letter. It was read into it by partisans of a wrong, as implied interpretations for which no solid basis was ever shown, contrary to the natural meaning of the instrument. They precipitated upon us an unparalleled civil war in their endeavor to enforce such a theory of the fundamental law, and the appeal to arms was decided against them, as was the appeal to reason. It is difficult to characterize properly the fatuity of a fresh attempt to write history with the discarded doctrine as a standard.

The subordinate propositions are as transparently weak as the leading ones. In regard to Reconstruction measures we are told that it was an "untenable position that, though these States were still members of the Federal Union, and their citizens had not ceased to be citizens of the United States, these citizens had become incapable of exercising political privileges." So far from being untenable, it describes one of the commonest things in the world. Loss of political privileges as a consequence of unlawful acts meets us at every turn. We see it in the case of every counterfeiter of the coin. He is still a citizen of one of the States, but the United States puts him in prison, where his "political privileges" are denied him. Or does Mr. Scott suppose that the inmates of penitentiaries regularly "go home to vote"? In certain classes of offences the deprivation of political privileges is specifically made part of the punishment. Now, strange as it seems to appear to Mr. Scott, a resort to war is a method of enforcing rights and of imposing penalties for wrongs. It is a court of last resort when peaceful means shall fail. It has its

recognized methods of procedure and of enforcing its penalties. These penalties may affect States as corporate bodies, or their citizens, or both. Those who engage in insurrections incur the well-understood risk of all these results. They know also full well that there is no other method of trial in which the penalty is so largely discretionary with the party whom victory has made the judge.

It is the unique glory of the United States that, when victory left the late insurgents at its mercy, the nation did not raise the cry of *Vae victis!* Having fully established the principle of national sovereignty, and vindicated both its right and its power, its leniency astonished the world. It gave the lie to all the prophecies of cruelty, and proved that the discretion which it exercised as conqueror was a law of reason and conciliation to itself. The columns of this journal during the Reconstruction period show how ardent Unionists urged that it was not in the interest of good government to exclude from participation in it those who represented the capital and the intelligence of the South. Such counsels prevailed more quickly than was to be expected, and of penalties there were practically none.

During the progress of Reconstruction there were disputes between the departments of the Government which well deserve careful study and judicial analysis. There were examples of misgovernment under the so-called "carpet-bag rule" which were deplorable. A history of these from the standpoint of a thorough Unionist who could appreciate the difficulties of the situation, would be most valuable and full of political instruction. To have it written by one who condemns the whole war as wicked on the part of the United States, who can see nothing in Mr. Lincoln but a usurping dictator, who can find nothing lawful or right that Congress could do, promises, we fear, but little profit. A historian should have the faculty of throwing himself sufficiently into the position of parties to comprehend their views. He should be able to judge them, not wholly by his own political creed, but by theirs. He should know that to them there would be some theory of consistency by which their policy would have some unity of purpose. He should be above the vulgar assumption that all who oppose him are scoundrels, and all who disagree with him are liars.

If Mr. Scott were able to assume the rôle of the judicious critic and the judicial historian, the vigor and clearness of his style, with the evident industry of his reading, should insure a noteworthy book. But the doctrines of this preliminary work give little hope of a valuable result. From the pen of one who affects to believe that nothing would have been right but immediate, unqualified, and unconditional restoration, we cannot look for impartial narrative or appreciative criticism.

Russia and the English Church during the Last Fifty Years. Edited by W. J. Birkbeck, M.A., F.S.A. Vol. I. Published for the Eastern Church Association. London: Rivington, Percival & Co.

For the many who take an interest in the much discussed question of church unity, and in the theological reading in general, the volume which Mr. Birkbeck has edited will be a timely contribution. It consists of the correspondence—or, rather, a portion of the correspondence—between Mr. William Palmer and Alexei S. Khomiakoff. It forms a valuable sequel to Mr. Palmer's 'Notes of a Visit to the Russian Church,' which Cardinal Newman edited after

Mr. Palmer's death. In that work Mr. Palmer narrated his experiences during a two-years' visit to Russia, which he made with the express object of being received into communion with the Russian Church, not as a convert, but on the ground that, if the Anglican and Russian churches were, in reality, "catholic," as they profess to be, a member of one is, necessarily, a member of the other. His discussions with the Russian ecclesiastics and ordinary members of high educated society on the different points of dogma and on the interpretation of the creeds are very fully reported. To a certain extent the failure of his attempt to establish church unity in that particular direction, and the arguments for and against it, are finally summed up in that volume. But the present volume is, in no sense, a repetition of the former, though it treats of the same theme, viz., the assumption that the Anglican, Roman, and Russian churches are simply local forms of "the Church."

After his return to England from his Russian journey, Mr. Palmer came into correspondence with a remarkable Russian who has had an incalculable influence on the religious life of his fellow-countrymen, and even on the Church itself, as Mr. Birkbeck explains in his "Introduction." Alexei Khomiakoff was a layman, of noble, not of priestly, birth; an ex-officer in the Guards, whose chief interest and pleasure in life were his Church and theology. The extent of his influence can be accurately judged only by those who, in addition to knowing the facts which Mr. Birkbeck sets forth, have had the opportunity of hearing his contemporaries speak of his personality and of the book by which he is chiefly known at home and abroad—so far as he is known at all abroad—'L'Église Latine et le Protestantisme au point de vue de l'Église de l'Orient.' Several of his sayings therein have become part of the current language-coin of the country, such as his famous retort to the Protestant accusation that the *ikóns*, or sacred pictures, are fetishes and are worshipped as such: "The Protestants have a true fetish of their own, the Bible; they adore it but do not read it." There is nothing of this sort in the letters which Mr. Birkbeck collected in Moscow and St. Petersburg, neither is there much to show us Khomiakoff in his character of universal genius, practical man of business, and clear-headed reasoner in many other departments besides theology. He appears, mainly, as the gentle, devout, persuasive reasoner.

The religious movement in which he played so prominent a part was, as his editor rightly explains, different from the English Tractarian Movement in that it represented the religious and national movements in combination. "The great work of Khomiakoff's life was undoubtedly the definite direction which he gave to the Slavophile movement in Russia in its relation to the Orthodox Church. It is not an exaggeration to say that his theological writings have given a logical form to the idea of the Church which, although it has never received the sanction of an Œcumenical Council, nor even of a general council of the Eastern churches, nevertheless undoubtedly underlies the teaching of the Orthodox Church wherever she is to be met with," says Mr. Birkbeck, and he adds: "If any one wishes to estimate what Khomiakoff has done for Orthodox theology, let him first read Mr. Palmer's 'Notes' and compare the results of the schools of theology which existed before Khomiakoff, as set forth in those discussions, and then 'let him go to Russia and study the Church as she exists there at the present day. He will not be

long in realizing how completely the channel into which the Slavophiles led contemporary Russia in theological thought corresponds with actual facts."

It will be perceived at once that discussions between men of such exceptional qualifications on both sides cannot fail to be of the highest interest. But that which particularly impresses us is the change which has taken place, and is still taking place, during the course of this correspondence, in Mr. Palmer's mind. When he set out on his Russian trip ('Notes, etc.'), he seemed, on the whole, to be satisfied with the Anglican Church, and did not even accept the Russian symbol of faith as possible. Apparently, he returned home in the same frame of mind. Later on, after a lapse of years, he came to believe that the Creed without the *filioque* clause was the only one possible, and that it included the other, as many eminent theologians now admit. While in this mood, he made a long visit to Athens, which is recorded at length in this volume, and tried to be received into the Greek Church. But, at that time, the Greek Church required that converts should be rebaptized, though the Russian Church did not. Although he had refused to enter the Russian communion otherwise than unconditionally, he was now willing to enter the Greek Church by baptism, provided that the baptism should be administered to him conditionally "in case the former baptism should be declared invalid," which he did not believe, as he held that the rite could be performed and received only once. But the Greek ecclesiastical authorities, as was natural, refused to administer any other than unconditional baptism, and Mr. Palmer gave up that attempt also. He printed some Dissertations, and writes to Khomiakoff that he has sent copies thereof to Russia; if a Russian translation is permitted unaltered, or altered only in such measure as will not affect the theological completeness (which he does not at all expect), he might then seek admission to the communion of the Russian Church. It will be seen that he had now reached the point where he had made up his mind not to remain in the Anglican communion, but was unwilling to enter any other where he would not be allowed to discuss freely and publicly matters which were of essential importance to religion. He has repeatedly expressed irreconcilable non-concurrence with the dogmas and practices of the Roman Church, yet he has, by this time, become so unsettled that he announces to Khomiakoff: "After, then, I have done all I can towards the Russian as well as the Greek Church, I should probably, as I have said, go to Rome, with the hope of learning something there to enable me to change my mind and submit to her claims, since I can no longer defend the Anglican nor find a satisfactory entrance into the Eastern Church."

Now, while there is not the slightest doubt that Mr. Palmer was thoroughly sincere in his unhappy search for truth, and in his conscientious splitting of the theological hairs "'twixt south and southwest side," the upshot of it all, at the end of this volume (which breaks off at the epoch of the Crimean war as a natural division), is decidedly startling:

"Having arrived at Rome," he writes, "and having been persuaded by some very enthusiastic friends of mine to make a retreat, I came into connection with a very distinguished theologian, Father Passaglia, who informed me of an 'opinion' which I had never thought of, and which served to facilitate my conviction—namely, that having, as I had, Greek rather than Latin convictions upon certain important points of controversy, I could all the same be

received into the Roman Catholic communion by merely suspending my private judgment, and making up my mind to affirm nothing contrary to the known dogmas of the Roman Church, nor to entertain by preference any such thoughts. Accordingly I followed his advice . . . I have obtained from the step which I have resolved upon a real peace, and a religious position which I am able to defend; but, as for my intellectual position, it has remained almost without change; only, in respect to the Roman See, and, in general, in respect to general arguments favorable to the pretensions of Catholicism, I find it much more agreeable to be on the side of the stronger rather than on that of the less strong."

How this frank confession can be reconciled with the stern intellectual honesty which has seemed, up to this point, to be Mr. Palmer's distinguishing trait, it is very difficult to see. The whole book furnishes a curious psychological as well as theological study.

Mr. Birkbeck has performed his task extremely well, and his foot-notes are very helpful not only to the understanding of this correspondence, but also to that of the subject in general. There are one or two trifling errors which it would be well to correct on p. xix: "The deliverance of the Church and State from the attack of the Gauls and of the twenty nations which accompanied them," should read "twelve nations." The error arises from misunderstanding the unusual word, *dvunadesyat*. On p. liv, "throw away doubt" should read "throw any doubt." There are one or two other mistakes which it is not worth while to chronicle here.

Anima Poeta: From the Unpublished Notebooks of Samuel Taylor Coleridge. Edited by Ernest Hartley Coleridge. Boston: Houghton, Mifflin & Co. 1895.

THE editing of this volume is by the same careful hand that edited for us recently the 'Letters of Samuel Taylor Coleridge.' Much labor must have gone to the preparation of it, but the outcome is its ample justification and reward. There is nothing better here, nothing more characteristic, than we have had heretofore in the 'Table Talk' and 'Friend' and 'Biographia Literaria,' but there is a fresh instalment of what attracted us in those delightful books, good in itself and calculated to send one acquainted with those books back to them for the renewal of his pleasure in them and to win for themselves new appreciation. From 1795 to 1832 Coleridge filled more than fifty pocket notebooks with his observations and lucubrations on a very great variety of material and spiritual things. Scanty use has hitherto been made of this great accumulation of material. Mr. Coleridge gives a careful list of the various drafts that have been made upon it, ending with "a few quotations from diaries of tours in the Lake Country and on the Continent" that appear in the foot-notes of the 'Letters.' At the risk of injuring his collection, Mr. Coleridge has omitted from it what has been used already. But the aim of the editor is something more than to give a selection of admirable sentences and aphorisms. He would "enable the reader to form some estimate of those strange self-communings to which Coleridge devoted so much of his intellectual energies, and by means of which he hoped to pass through the mists and shadows of words and thoughts to a steadier contemplation, to the apprehension if not the comprehension of the mysteries of Truth and Being." Mr. Coleridge has made it easy for the reader to find what he seeks and to skip what he doesn't care for by a series of marginal notes, many of them brief quotations

from Coleridge and other poets, the whole succession being very happily conceived.

The selections made could all without much violence, if any, be brought under four heads: observations of nature; comments upon friends; self-criticism; approaches to things ethical, religious, theosophical. The observations upon nature are occasionally scientific, but generally æsthetic. For one so introverted as Coleridge they show a remarkable intensity of engagement with things visible and tangible. Shelley is generally regarded as *par excellence* our meteorological poet, but Coleridge's predilection for the lovely mysteries of the weather does not seem to have been less pronounced. Reading many of these observations, it is evident that the atmospheric felicities of 'The Ancient Mariner' were not evolved entirely from his inner consciousness; that if he did not write with his eye on the object, he did write remembering his emotion in tranquillity. The precious sonnet, "Fancy in Nubibus," is evidently a genuine report of doings to which Coleridge was much addicted, but in most of the examples given here of his dealings with cloud land he is content with the actual appearance; only there must be something of mysterious fascination in it to attract and hold him. In many of these observations we are very near to that region of the poet's mind out of which came the skyscape of the ode "Dejection" and the loveliest of all the marginal readings of 'The Ancient Mariner'—that about "the Journeying Moon and the stars that still sojourn and still move onward." For example:

"A most remarkable sky! The moon, now waned to a perfect ostrich egg, hangs over our house almost, only so much beyond it, gardenward, that I can see it, holding my head out of the smaller study window. The sky is covered with whitish and with dingy cloudage, their dingiest scud close under the moon, and one side of it moving, all else moveless; but there are two great breaks of blue sky: the one stretches over our house and away towards Castlerigg, and this is speckled and blotched with white cloud; the other hangs over the road, in the line of the road, in the shape of an ellipse or shuttle, I do not know what to call it—this is unspeckled, all blue, three stars in it—more in the former break, all unmoving. The water, leaden white, even as the gray gleam of water is in latest twilight. Now while I have been writing this and gazing between whiles (it is forty minutes past two) the break over the road is swallowed up, and the stars gone; the break over the house is narrowed into a rude circle, and on the edge of its circumference one very bright star. See! already the white mass, thinning at its edge, *flights* with its brilliance. See! it has bedimmed it, and now it is gone, and the moon is gone."

Of the comments upon friends, those upon Wordsworth are the most interesting and valuable. But not all his readers will agree with Coleridge's disparagement of Wordsworth's shorter poems as compared with "The Prelude":

"In those little poems his own corrections, coming of necessity so often, wore him out, difference of opinion with his best friends irritated him, and he wrote, at times, too much with a sectarian spirit, with a sort of bravado. But now he is at the helm of a nobler bark; now he sails right onward; it is all open ocean and a steady breeze, and he drives right before it, unfretted by short tacks, reefing and unreefing the sails, hauling and disentangling the ropes. His only disease is in having been out of his element; his return to it is food to famine; it is both the specific remedy and the condition of health."

This lofty praise, however, is shortly followed by this harsh disparagement:

"But surely always to look at the superficialities of objects for the purpose of taking delight in their beauty, and sympathy with their real or imagined life, is as deleterious to the health

of manhood as always to be peering and unravelling contrivance may be to the simplicity of the affections and the grandeur and unity of the imagination."

The occasion of this comment was "a most unpleasant dispute with Wordsworth and Hazlitt" on teleology. Hazlitt is punished even more severely than Wordsworth for speaking "so irreverently, so malignantly of the Divine Wisdom." But for the capitals we might think Coleridge's wisdom was intended.

"Hazlitt, how easily raised to rage and hatred self-projected! but who shall find the force that can drag him out of the depths into one expression of kindness, into the showing of one gleam of the light of love on his countenance?"

There is more of this and worse, but the next day we find him sitting to Hazlitt for his portrait, which, let us trust, was more flattering than his portrait of Hazlitt. His own he sketches many times, and there is a strange mingling in this self-portraiture of abject humility and unconscious pride. But sometimes the note of self-esteem is as frank as possible. Thus:

"There are two sorts of talkative fellows whom it would be injurious to confound. The first sort is those who use five hundred more words than needs to express an idea. That is not my case. Few men, I will be bold to say, put more into their words than I, or choose them more deliberately and discriminately."

His own trouble is that he has five hundred times too many ideas for his words. There is much insistence on his need of the sympathy and support of others, and this without miscalculation. His evil habit is barely touched upon, but there are passages that seem to indicate its way. We find him studious of his dreams and of the half-light between sleep and waking. The essence of his character is nowhere more apparent than in a passage where he makes God in his own image: "Something inherently mean in action! Even the creation of the universe disturbs my idea of the Almighty's greatness—would do so but that I perceive that Thought with him creates." "A time will come when passiveness will attain the dignity of worthy activity," when men will be "proud of having remained in a state of deep, tranquil emotion."

There are many incidental touches of great

beauty, admirable criticisms upon men and books, verbal felicities of surprising force and charm. He is vexed that "he must admire, ay, greatly admire, Richardson. His mind is so very vile a mind, so cozy, hypocritical, praise-mad, canting, envious, concupiscent." He contemplates a poem on bells and sets down several hints for it, but with no word about Schiller's "Song of the Bell," of which he probably knew and was unconsciously reminiscent. The attempts at humor are duller than the leaden bell which Froude imagined that he heard in Browning's verse. The religious parts are generally impressive so long as they are predominantly ethical. When they are merely speculative they are flimsy and intangible, but will undoubtedly commend themselves to those who thrill to an idea in proportion to its incomprehensibility. There is a noble passage upon immortality (pp. 170, 171), in the course of which occurs a remarkable anticipation of the idea that was central to Prof. Huxley's anti-supernaturalist position: "If a miracle merely means an event before inexperienced, it proves only itself and the inexperience of mankind." Huxley's statement of the matter was that a day-fly had more reason to think a thunder-storm supernatural than we to think so the most exceptional thing we can imagine.

BOOKS OF THE WEEK.

Alden's Living Topics Cyclopaedia. Abb-Boy. J. B. Alden.
Allen, Charles. Papier Mâché. Edward Arnold.
Andrews, J. De W. The Works of James Wilson. 2 vols. Chicago: Callaghan & Co.

HATCHARDS,

Booksellers to the Queen,

187 PICCADILLY, LONDON.

"One of the greatest historical novels ever written."—*DIAL*.

Ekkehard,

A Tale of the Tenth Century.

By JOSEPH VIKTOR VON SCHEFFEL. With photogravure illustrations. Two vols., 16mo, gilt top, \$2.50; half calf, \$4.50.

Good judges of literature do not hesitate to put Von Scheffel's "Ekkehard" in the very forefront of historical novels. Accurate descriptions of tenth-century manners and customs and wonderful knowledge of human nature are lavished on this splendid story, which has gone on increasing in popularity, till now nearly 150 editions have been published. The translation has been carefully revised and practically made anew. All the notes of the 138th edition have been added, and a series of illustrations by famous German artists reproduced, thereby adding greatly to its interest and value.

For sale by all booksellers, or sent, postpaid, on receipt of price.

The Nation.

NEW YORK, THURSDAY, MARCH 5, 1896.

The Week.

ONE has only to read the debate in the Senate of February 27 to see how absolutely in the dark the whole blundering belligerency work was done. Senator Sherman gravely introduced as his first evidence a pamphlet written by a representative of the Cuban insurgents. This *ex parte* document "seems to be fairly and frankly written," said Mr. Sherman, and hence the Senate could implicitly accept all its statements. But even these statements, thus guaranteed, had nothing to say about the actual situation of the insurrection, or whether the fact of belligerency existed. Senator Morgan here interposed to strengthen the case by reading a letter just received "from a gentleman with whom I have no acquaintance whatever." The writer was ready to make oath that "57,000 Cubans bit the dust" in the last insurrection, and what other evidence could be demanded, Senator Morgan would like to know, that the insurgents in the present insurrection had all the recognized marks of belligerents? Senator Sherman went on to refer to a mysterious book in Spanish. He was sorry he had not had time to get it from the Library to awe the Senate with, but perhaps it did not matter, as he could not read Spanish anyhow. Luckily, extracts from it had been translated "by one of the great journals," and those he would read. They showed a horrible state of things in 1870, and who could doubt that conditions were even worse in 1896? To make the case absolutely complete, Lodge interposed to read "the last proclamation of Gen. Weyler." What he really read was a newspaper guess at what a proclamation was going to be—so stated on its face, and a guess promptly belied, at that. There has been no such proclamation. Lodge must have known this at the time, but it would be a poor sort of Massachusetts Senator who would not stretch the truth a little in order to help bring on a glorious war for the improvement of our decaying morals. With no surer facts to go upon than this collection of guesses and irrelevances, the Senate rushed blindfold on to what might be war.

No better was the performance of the House on Monday. In the speech by which Mr. Hitt (the chairman of the House committee on foreign relations, be it remembered) introduced the resolutions, we look in vain for evidence of insurgent belligerency in the shape of official reports, or other testimony equally good, showing what territory the insurgents hold, the seat of their Government,

and the points of the coast at which foreign Powers can communicate with them, the nature of their Government, and their armament on land and sea. These are the facts which constitute belligerency. Of these facts Mr. Hitt had not a particle of proof. What he said was that belligerency was proved "not by the newspaper reports alone, but by the reports of the United States consuls." Nothing of the sort has appeared in any published consular report or in any newspaper. Cuban belligerency, in the sense in which the term is used in diplomacy, is an invention of his own. He fortified himself by alleging on his own authority that Spaniards held only one-third of the island, that 125,000 troops had been sent to Cuba, that the Captain-General had issued two long proclamations which "had been read with horror," that guerilla warfare had proved too much for the French in Spain, under Napoleon, of which the Spaniards are very proud, and that the belligerency of the Confederacy had been recognized by Spain three months after the war broke out, as if belligerency were a question of time and not of circumstances.

We presume no American who is proud of his country, and has any acquaintance with the part she has played in building up the code of international morals which now prevails in Christendom, has read the debate which ensued, without a good deal of humiliation, or without, under all the circumstances, much gratitude to the gentlemen, Messrs. Turner, Boutelle, McCall, and Tucker, who treated the House to a few doses of law and common sense. From most of the supporters of the resolutions nobody expected anything but what they supplied. Talking international law or usage to them would be like talking it to a chamber of anarchists. But Mr. Hitt is a graduate of Yale College and has been Assistant Secretary of State. Of neither experience was there the slightest trace in his speech. For all that appeared in that effort, he might have been bred in some vast wilderness, where rumors of successful or unsuccessful war reached him only through primers. The most striking thing in his speech was the assurance he gathered from the Spanish Minister's apology for the Barcelona mob, that his own resolutions would cause no trouble. This brings out what is really the most alarming trait in Jingo performances. It will have been observed that whenever Jingoism indulges in violent language which imperils peaceful relations, and the Power to which it is addressed answers with astonished politeness, and shows anxiety to avoid a quarrel, the Jingo always sets it down to fear, turns calmly to his followers, and says: "You see; I told you there would be no war. That is the way to talk to these suckers. They

understand now how we feel, and what a big country this is, and they won't forget it soon either."

The difficulty of hammering even elementary notions of international law into the heads of some of the inland sages was well illustrated in the debate on the Senate resolution in recognition of Cuban belligerency between Senator Gray and Senator Vest of Missouri. Senator Gray was contending for the elementary proposition "that recognition of the independence of a people is the recognition of a fact." Is Cuba independent or not? The reason for thinking she is not is that the Cubans have no ports, no fixed territorial area, no regular government, no organized army. What difference does that make? said Mr. Vest. "Will the Senator from Delaware permit me to ask him whether the cause of the American colonies was not more desperate than that of Cuba to-day when France recognized our independence?" When the French recognized the independence of the United States, the rebels had had through the whole contest thirteen regularly organized colonial governments. They had had the leading port of the Union in their possession for two years before the French recognition. Boston was surrendered to Washington March 17, 1776. French recognition came on February 6, 1778. But what is more important than all is that the leading British army in the field, that of Gen. Burgoyne, surrendered to the rebels October 17, 1777, which was really the determining cause of the French alliance.

The discussion of the silver question in the Senate on Wednesday week served still further to clear the air. For many years the managers of the Republican party have been playing what Mr. Teller of Colorado rightly styled a "bunco game" on the silver States. This policy was inaugurated in 1888, when Mr. McKinley, as chairman of the committee on resolutions in the Republican national convention, reported the now famous plank "condemning the Democratic Administration for its efforts to demonetize silver." What the Democratic Administration had done in this matter from 1895 to 1898 was simply to urge the same policy that its Republican predecessor had urged from 1881 to 1885. We place side by side the final recommendation on this subject of President Arthur in 1884 and the first recommendation of President Cleveland in 1895:

I concur with the Secretary of the Treasury in recommending the immediate suspension of the coinage of silver dollars and of the issuance of silver certificates. — President Arthur, December 1, 1884.

I recommend the suspension of the compulsory coinage of silver dollars directed by the law passed in February, 1878. — President Cleveland, December 6, 1895.

The McKinley resolution was intended to mean, and could mean, only that the Republican party, if restored to power, would turn its back upon its consistent record up to 1885, and show more favor to the silverites. This pledge was redeemed by the taking at the first opportunity of that "long step towards free coinage," as the Indiana Republicans styled the silver-purchase act of 1890—an act urged by Mr. McKinley, as leader of the House, on the ground that "it does what the present law has not done: it takes every dollar of silver bullion that is produced in the United States and places it at the disposal of the people as money"; and that "we cannot have free coinage now except in the manner as provided in the bill." The attempt to play the bunco game was continued in the national platform of 1892, with its declaration in favor of "bimetallism," which Mr. Teller and Mr. Jones of Nevada were assured meant what the silverites wanted. Mr. Carter, Mr. Teller, and the other Republican Senators from the silver States who stand with them, are rendering a national service in exposing this whole policy of deception upon which the Republican managers entered in 1888, and in insisting that no more of these McKinley games shall be played. For an organization that used to pride itself upon being the party of moral ideas, the record of the Republicans on the silver question during the last eight years has been most contemptible. McKinley himself is apparently ready to continue the policy of evasion and deception, but Carter, Teller, and their associates have rendered this impossible.

The multiplying signs that free silver is going to cut through both parties and make itself the controlling issue in the next Presidential election, will give general satisfaction—they certainly will to the friends of sound money. The great peril now is, two-faced platforms and doughface candidates. The silver Republicans are apparently prepared to fight, and the sound-money Democrats are also stripping for the contest—none too soon. Secretary Carlisle boldly said last week that the conflict was now an irrepressible one, and the issue of a kind that could not be avoided even by trimmers, and would not be by men of character. A silver party, pure and simple, is by all means to be desired. If all the 16-to-1 men and the international-agreement men and the straddlers and dodgers in either party could be forced to go off with the Populists, where they belong, the country would first rise up and call them blessed, and then rise up and smite them hip and thigh. It seems almost too much to hope for such a result, but we may, for the present, hope for it with fear and trembling.

Speaker Reed's obstinate silence, in the face of a threatened and probable split

in his party, is highly inopportune, as he has before philosophized a great deal about such matters. In his Old Orchard speech of August 25, 1894, he explained how the Democratic party was destined to fail because, unlike the Republican party, it "had no underlying principle on which it was united from one end of the country to the other." The present delightful harmony of the Republicans on the currency, from one end of the country to the other, would be most profitable for reproof and instruction if commented upon by such a philosopher. While about it, he could also discourse solidly on the way in which his own aphorisms upon another matter have come home to roost. He said that the Democrats could keep up a semblance of being a party when in opposition, but that when "they endeavor to combine and to take positive action themselves," we at once see "the tremendous diversity of opinion which was masked under seeming unanimity." Would the Speaker admit that Republican *Hamlet* and *Laertes* have since exchanged rapiers?

The public debt statement for March shows the receipts and expenditures for eight months of the fiscal year. The deficit was only \$17,500,000. During the same period of the previous year it was \$36,300,000, showing a gain of nearly \$19,000,000. At this rate of progress it is a reasonable anticipation that in the next fiscal year, beginning July, 1896, the receipts will equal the expenditures. The only thing that can prevent this is the continual beating of war-drums at Washington. If Congress would adjourn, or would take up its proper business and stop meddling with foreign affairs and getting us into unnecessary broils, there would be a period of renewed prosperity in all parts of the country, the effects of which would be immediately perceptible in the public revenues. The maintenance of the gold standard is now assured, not only by the accumulation of that metal in the Treasury, but still more by the purpose shown by the public in the recent bond sale to furnish all that may be needed for that purpose hereafter. The only cloud upon the business horizon is that which has been wantonly created by reckless politicians.

Attention should be called to the figures issued by the Bureau of Statistics for the calendar years 1891 to 1895 on the subject of wool. The period covered is practically four years under the tariff act of 1890 and one year under that of 1894. In 1892, which was the year of largest imports of woollen manufactures under the McKinley tariff, the amount of duties collected was \$36,560,539 on a valuation of imports of \$37,557,037. This was equivalent to an ad valorem of 97.36 per cent. In 1895 the duty collected was \$28,102,648 on a value

of imports of \$61,018,579—the equivalent ad valorem being 46 per cent. This shows that with the rate of duty reduced more than one-half, the revenue was reduced only 23 per cent. It is an impudent demand to ask Congress to reimpose the high duties on raw wools to gain a revenue of six or seven millions of dollars, and to increase to an even greater degree the duties on manufactures of wool for a similar sum. At the end of February the deficit in the national account was only \$900,000 more than it was at the end of November. The Government is, therefore, very nearly paying its expenses out of current revenue, and there is no reasonable ground for tinkering with the tariff, and least of all in the direction of higher duties on raw wools and manufactures of wool, where the consumer loses two dollars every time the Government gains one.

A meeting was held at Cooper Institute on Friday evening, under the call of the Central Labor Union, to protest against the introduction of militarism as a governing force in this country. The meeting was a great success in point of numbers and enthusiasm. The speeches were made by plain-talking men, who knew exactly what they wanted, and the resolutions were of the most decisive character, declaring that the participants would vote against every man, in either house of Congress, who should support the pending bills to add to the permanent military force of the nation by fortifications or otherwise. The *Tribune*, in its mendacious account of this meeting, suppresses all the ideas presented by the speakers except one. It suppresses the resolutions also. The one idea which it allows to go before its readers is that the proposed fortifications and the increased army are intended to put down strikes rather than to fight foreign enemies. The truth is that the meeting was a protest against war and all its belongings, the facilities for dealing with domestic insurrection being one of several reasons for opposing this new development of "Americanism." The idea oftenest put forward by the speakers was that war means bloodshed and penury for the laboring classes, the glory and the profits being monopolized by a few officers and contractors. Is not this true of all wars? Another idea prominently presented was that the taxes to pay for this military equipment must be paid chiefly by laboring men, which is true also.

The ordering of ships to Corinto by Secretary Olney, to protect Americans while the usual revolution is going on, will puzzle the international lawyers a good deal. They were told by Mr. Olney last July that "our fiat is law" on this continent. This they of course believed, for they didn't want their heads blown off for doubting it. But how much mystified

they will be now to see men-of-war resorted to when a simple "flat" could do the business so easily. Your true "flat" is self-executing. When the Creator said, "Fiat lux," there was no need of casting about for some means of producing light, but immediately "there was light." This is the way Secretary Olney should have proceeded. He, too, should have shown that he could speak and it was done, he could command and it stood fast. Instead of a war-ship, a cablegram should have been sufficient. Addressed to "Dagoes, Corinto, via Galveston," it would have needed only to say, "My flat is peace. Olney." Instantly the machetes would have been beaten into ploughshares, and a vast and lucrative trade have been built up with this country. But cumbrous ships and guns instead of this swift King-Canute method! Fie on that kind of a flat!

Mr. Sanger has introduced in the New York Assembly what seems to be a desirable measure supplementary to our inadequate corrupt-practice law. It provides for the filing, within ten days after election, of itemized accounts of all receipts and expenditures by candidates, committees, agents, corporations, associations, and everybody else who has paid, or advanced, or promised to pay money to aid in an election. We wish we could say that there is hope of this or some similar measure becoming a law. The Republicans were pledged in favor of it when they came into power, and Gov. Morton sought to hold them to their pledge in his first message. The last Legislature refused to pay any attention either to him or to the pledge, and this year he neglected to say anything whatever on the subject. Of course the rigid enforcement of such a law would be the destruction of Platt, for it would expose his entire system of machine control by revealing the sources of his income and the uses which he made of it. Not only would the amount of each corporation's contribution be revealed, but the share each candidate received to aid him in his election, or the price for which he sold himself to the boss, would also be exposed. This would be an appalling catastrophe to the boss system, and we look for a very chilling legislative reception to Mr. Sanger's proposal.

Echoes of the income-tax agitation are growing fainter in the South. The action of the Kentucky Legislature in adopting a resolution looking towards a constitutional amendment under which such a tax could be assessed is more than offset by the rejection in the South Carolina House of a specific income-tax bill, which commanded the votes of only about one-third of the Representatives. Many who voted in opposition were influenced by the argument that an income tax, while a good thing when applied to the whole

country, might, when confined to a single State, be disastrous by its effect in driving out capital. The offering of such a reason may be accepted as evidence that even the Populists are learning not only that capital is very useful, but also that its rights must be given some consideration. When a Legislature whose members applaud Tillman's tirade takes this position on the income tax, that proposal may be considered to be as dead as Dingley's tariff bill.

The verdict of the jury in South Carolina acquitting of murder last week the lynchers of an old colored woman is symptomatic of a lower stage of humanity than prevailed in the old slavery days. A Charleston correspondent of the *Evening Post*, in a recent letter relating the outrage for which these men were tried, pointed out that, even before the war, white men were sentenced to death in that State for killing negroes when the negroes were nothing but chattels in the eye of the law. The lynchers just acquitted dragged a negro, his wife, and mother from their house at night, and beat them so terribly that the man and his mother were found dead the next morning. One of these lynchers was a prominent physician of the neighborhood. The defence relied almost entirely on the evidence of a doctor who testified that the old woman (for whose murder this trial was held) died from asphyxiation—that is, was drowned in water not a foot deep, and not from the effects of the beating received. The prosecution seems to have been in earnest to secure the conviction, and this "medical testimony" was torn all to pieces on cross-examination; but the modern South Carolina jury seems incapable of punishing a white man when a negro is his victim. The accused are still to be tried for the murder of the negro man, and it is encouraging to hear that the Judge, after their acquittal, refused to admit them to bail.

The literary output of 1895, as footed up in the *Publishers' Weekly*, shows a total of 5,469 new books and new editions (368 of the latter), as against 4,484 in 1894. The greatest increase was in fiction (385), with lesser gains in law, theology, education, and nearly every category except political and social science; as to the falling off in the latter department, theorists may well be excused for waiting for practice to catch up. Some light is thrown by the statistics on the working of the copyright law. It appears that there were 3,396 books by American authors manufactured in the United States, as compared with 847 books by English and other foreign authors, while 1,226 books were imported, in sheets or bound. The American novelist shows up badly. He produced but 287 volumes to 589 by poorer foreign authors, manufactured in this country, and 238 imported. As it was

American fiction that the simultaneous publication and American-manufacture clauses of the copyright law were going especially to protect and develop gloriously, it looks as if Mr. M. D. Conway had some ground for asserting that, from a financial point of view, the act of 1891 was the most disastrous thing that ever befell American authors. We, of course, have no patience with those cynics who maintain that the fault is not in our copyright stars, but in our fiction itself, that it is an underling.

Measured on a scale of the scornful laughter which reference to them in Parliament produces, bimetallism, protection, the Tory social programme, and the Post Laureate would rank in about the order named. Rosebery in the Lords vied with Harcourt in the Commons in jests about "the favorite remedy of the First Lord of the Treasury, which that right honorable gentleman, as First Lord of the Treasury, finds himself precluded from applying—bimetallism," and Olympian laughter followed in either house. A similar tribute was paid to every mention of protection; and when Lord Rosebery alluded to the way the Duke of Devonshire had gone round during the recess "as a universal refrigerator," to turn an icy spray upon every bud or blossom of hope of social legislation by the Tories, the Lords had to look to their waistcoat buttons. Poor Mr. Austin must have thought his laurel had been inadvertently taken from a thorn-tree. His eulogistic verse on the Jameson raid convinced Lord Rosebery that the laureateship was not only, as he always thought, an obsolete office, but also a dangerous one. Hard-hitting Sir William Harcourt, when referring to the attitude which sober-minded Englishmen should observe towards lawless compromisers of the English name, like Jameson, remarked with huge disdain: "I am not speaking of music-halls or of poets laureate." The cheers and roars of laughter that followed were enough to suggest that the next official poem should begin: "Who would not be jeered at for England?"

As anti-Semitism goes down in Berlin it goes up in Vienna. That pious Jew-baiter, Dr. Stöcker, is in disgrace, repudiated by his erstwhile enthusiastic admirer, the Emperor, and reduced to a practical nullity politically. But in Vienna the new Municipal Council is more sweepingly anti-Semite than the last one, which the Emperor had to dissolve in November. It will doubtless elect its chosen agitator, Dr. Lueger, Burgomaster again, and bring on a fresh contest with the Crown. Stormy times are presaged for Austrian politics, not only by this insensate race prejudice, but by the socialistic and labor agitation as well, which is already leading to scenes of unprecedented violence in the Diet.

MILITARISM IN A REPUBLIC.

THE embroilment with Spain has come upon the commercial world, as the President's Venezuela message did, like thunder out of a clear sky. The former is one of the indirect consequences of the latter. Congress was so dumfounded and demoralized by the tone of that message that it has had no steadiness or stamina since. It was panic-stricken with the idea that Mr. Cleveland and his party would gain an advantage by being greater Jingoos than the Republicans. The latter, through their leading politicians and newspapers, had been demanding a "vigorous foreign policy," and when Mr. Cleveland gave them rather more of it than they wanted or expected, they felt compelled to "stand behind him." This was a situation they had never contemplated. They have ever since been trying to get in front. They first tried to rally under the banner of Armenia, and for this purpose they passed a resolution lecturing the Powers of Europe for not carrying out the Treaty of Berlin—a treaty to which we were not a party. This was rather ridiculous, besides which Armenia was too far away. The rebellion in Cuba was near at hand, and was the only other thing that offered a chance of getting in front of Cleveland instead of bringing up the rear. This is the reason why the business world was plunged into fresh trouble last Friday, and why it is to be harassed for an indefinite time to come. This is the reason why an excitable people on the other side of the water are mobbing American consulates in their chief cities, and why the American Minister is protected against insult or perhaps violence only by a strong police force at Madrid.

All these doings are wicked, and they point to a reign of militarism the end of which no man can foresee. They will give rise to a new demand for forts, battle-ships, big guns, war material, and all the things that go to make a hell upon earth. Because we shake our fists at Spain, and a mob in consequence pulls down our flag at Barcelona, it is made plausible to say that our seacoast is defenceless, and that any third-rate Power can come into our harbors and lay our cities under contribution. A great many catchwords can be constructed out of such rotten material, yet the whole argument for forts and battle-ships rests upon the false assumption that foreign Powers (third-rate Powers, forsooth) are going to attack us without provocation. Such a wild, nonsensical assumption does not deceive any human being who stops to think. The United States of America unarmed is, for all purposes of self-defence, the strongest Power in the world to-day—strong in resources, strong in intelligence, strong in distance from other Powers, and strongest of all in moral greatness if it chooses to exercise its strength that way. No nation will ever attack us unless first provoked by us. The object and purpose of forts and battle-ships is to enable us to give such provoca-

tion or to become aggressors. But we cannot do this without changing our character and entering the lists with other military nations.

What we shall become in the course of another hundred years after we have got ourselves in readiness "to meet the world in arms," as the blatherskites are always saying, we may dimly infer from the antics of the present Congress. This collection of demagogues, the most dangerous we have had since the civil war, and rapidly becoming the most odious, has been in session three months, and during that time has put itself in fighting attitude three times. Although we have no army, no navy, no fortifications, although we have a Treasury deficit and have been near to suspension and the silver standard, this Congress has "stood behind Cleveland" in his unnecessary quarrel with Great Britain, has threatened Turkey and denounced Europe for not dismembering her, and is now threatening Spain about a matter which does not concern us, under pretence of a regard for humanity. If all this is done in the green tree, what shall be done in the dry? If this is the measure of our common sense when we have neither soldiers, ships, forts, nor money, what will happen when we have all of them?

Of one thing we may be sure—militarism, if we adopt it, will have a profound influence on the national character, and the effect will be less wholesome than it is among the military nations of the Old World, where each is under the restraints imposed by strong neighbors. The balance of power exists expressly to prevent any one of them from playing the part of a bully toward the others. We have no strong neighbors, and accordingly we are under the temptation to drop good manners in our dealings with other countries. We have had some recent specimens of such insolence which lead us to apprehend more. Unfortunately we can say things as a nation which, if said by one European Power to another, would cause armies to be mobilized. This is a misfortune to us because it deteriorates the national character, multiplies bad manners in private circles, and creates lawlessness at home, of which we already have an over-supply. It is impossible to say what would be the course of the national life if we were once armed as strongly as we might be, but it would be something different from its present course. We know what happened to the Roman republic when it became all-powerful. Rome was forced to be a military republic in the first instance. That was the condition of her life; for in ancient times, says Mommsen, it was necessary to be either the hammer or the anvil. So long as Rome had strong rivals, she kept her ancient discipline and preserved the boon of liberty regulated by law. When she no longer had rivals to engage her strength, her militarism engulfed her. One civil war followed another, until she found relief in a monarchy

which gave her peace in exchange for liberty. The military republic which grew out of the French Revolution ran nearly the same course, except that the monarch took away the nation's liberty without giving her peace.

We are told, as though it were something important, that there is no intention to use these new implements for any other purpose than self-defence. The intention of the promoters is of no consequence. What Senator Lodge is looking for is the votes of unreflecting persons and the applause of other Jingoos like himself. The question is not what is intended by these preparations, but what they are adapted for. They will stay after Mr. Lodge is gone. He will disappear like an *ignis fatuus* in due time. The Roman legions were not recruited and drilled to butcher their own citizens, but they were found well suited to that purpose when they had no foreign foe to exercise their weapons upon. We do not apprehend anything of that kind here. We dread the reflex influence of militarism upon the national character, the transformation of a peace-loving people into a nation of swaggerers ever ready to take offence, prone to create difficulties, eager to shed blood, and taking all sorts of occasions to bring the Christian religion to shame under pretence of vindicating the rights of humanity in some other country. Depend upon it, this means putting the United States on a new pathway and altering the national character for the worse. Three months ago, nobody could have imagined such an outlook, and if anybody had predicted it, he would have been considered mad.

GOOD AMERICAN SALVATION.

MR. DEWEY, who has a remarkable gift for putting the gist of a complicated subject into a few terse, graphic words, says of the troubles in the Salvation Army:

"Americans want to get their salvation by way of Bunker Hill and Faneuil Hall and the old gun at Lexington, instead of by way of London. If they can't get it that way, they'd just run their chances of getting to heaven."

It is well that this should be said "right here" before the controversy over Ballington Booth's withdrawal from the Army goes any further, for it brings our thinkers face to face with the question, "Do we want English salvation or American salvation?" That is the fundamental issue in the controversy. Certain persons, who are prone to take an un-American view of every international complication which arises between us and Great Britain, have been trying to shift the issue by saying that the real question is whether or not Ballington Booth is guilty of insubordination in refusing to relinquish command of the American branch of the Salvation Army and return to England for orders. It is not worth while to pay much attention to persons of this calibre. Anybody who will hold that discipline is of

more importance in a Salvation Army than patriotism, is not a good American, whatever else he may be. He would prefer to have his Salvation by way of London rather than through the old gun at Lexington, and the American republic has no use for him.

It is the utter failure of Gen. Booth, the head at once of the Booth family and the Salvation Army, to comprehend the American view which has precipitated the present troubles. Ballington Booth, as Commander of the American branch of the Army, has cut away from British usages in Salvation campaigning and has Americanized his force. His British censors make this the ground of their demand for his removal. He has raised the Army here from poverty to such affluence that it has paid off thousands of dollars of debt and has sent thousands of dollars to other branches of the Army in Europe. He and his family not only live comfortably in their own house, but many of his subordinate officers have been acquiring homes of their own on the instalment plan, others have been courting luxuriously about on bicycles, either owned or hired, and one has been riding from post to post with a horse and buggy owned by himself. Furthermore, Commander Booth has induced many wealthy persons to become interested in the Army to such an extent that they have become "Auxiliaries"—that is, persons outside of its ranks who contribute regularly to its support. These have been so generous that the Army has been able to erect a fine building as headquarters in this city, and one of the demands on Commander Booth is that he shall turn this property over to the Army on relinquishing his American command. This demand, coming upon the heels of demands for the giving up of homes, and bicycles, and the horse and buggy, has started a wave of true American feeling which may lead to the establishment of an Independent American Salvation Army. Alarm about this has reached England, leading the *London Daily News* to remark that "America may yet have a Salvation Army Fourth of July."

It is pointed out by the most intense Americans who have given thought to this matter, that the usual British traits are discernible in this effort to oust Ballington Booth. These say that the other members of the Booth family, and there are many of them, who have Army posts in various parts of pauper-ridden Europe, have discovered that Ballington has a particularly "soft thing" of it here, and, being truly British in their instincts, they are trying to "grab it." Not content with taking thousands of dollars in good American money which he has raised and sent to them, they wish to get possession of his office and its property and run the American Army in British interests. These keen-eyed critics assure us that the most liberal of the Auxiliaries are "on to" this, and are not going to allow it. They quote

an Auxiliary as saying that their money was contributed "solely with the idea of carrying on the work in this country, not in Kamtchatka or New Zealand"; that the "donors intended that it should be spent right here in the United States"; that they "will not consent to a transfer to British control of the property which their money has bought," and that "if a refusal to transfer means a split in the Army, let's have the split. Let's have a pure, unadulterated American Army, with Mr. and Mrs. Ballington Booth at its head."

It must be admitted that this is a good American case. We are surely entitled to have only American Salvation secured with our own American money. We have our own tariff system, our own monetary system, our own boss system, and our own journalism; why should we not have our own Salvation system? We will stand no British meddling, or dictation, or grabbing in reference to our other systems and institutions; why should we in this? It is claimed by the British Booths that Ballington has departed from the original and fundamental idea of the Army's work, which was to carry religion and salvation to those classes of society which the churches and charitable organizations never reach. How British that is! Because they have pauper labor, the outcome of British free trade, in England, with all the misery and poverty which accompany it, they think we have the same thing here. They do not know the blessings of McKinleyism, and the comparative luxury which has ensued to all classes of Americans. Here Salvation and comfort can go hand in hand with no harm to the cause. Our lowliest classes can be exhorted from a buggy or a bicycle as effectively as from the pavement, and we can have great Salvation meetings in Carnegie Hall, with millionaires thickly congregated on the platform and well distributed through the audience, and Chauncy M. Depew as presiding officer and chief exhorter. This is clearly an American brand of Salvation, and it should be embodied in a genuine American Army.

PLATT'S LEGAL POSITION.

No excuse is needed for criticizing the social as well as political recognition of Thomas C. Platt by the leading members of the Republican party in this State, including high officers of the State Government. He is, in fact, treated habitually by such officers as an important public personage, whose advice is desirable, if not necessary, not only with regard to party policy, but with regard to State and municipal legislation. That he himself has been cheated into some such view of his position, is shown by an excuse he sent the other day for non-attendance at a public dinner in Detroit. He said:

"I have not married a wife or bought a yoke of oxen, but I have made an ass of myself by assuming certain political burdens which I must carry out at that time."

He evidently believes himself to be—and

it is not an unnatural belief for a man of his mental and moral calibre under all the circumstances—a person exercising important and legitimate functions of a quasi-legal character, who is legitimately and reasonably summoned into consultation by high State officers touching matters of public concern.

It is not to be disputed that the treatment accorded to individuals by men occupying conspicuous public positions, whether in the professions or in political offices—that is, by all men whose conduct the public has a right to criticize, or from whom it has a right to seek lessons in morals and propriety, and whose examples or standards are likely to influence young people, or ignorant people, or to encourage or discourage vice—is a matter of great importance in any community governed by universal suffrage. The company kept by any public officer, or any prominent judge or lawyer or minister, or any conspicuous person whose name in the popular eye stands for a good cause, or is closely connected with some great public interest, is therefore a matter of serious and legitimate public concern. It means to the world at large approval or disapproval of some course of action or line of life, and, as such, is likely to have marked though unseen effects on popular morals, both in politics and society.

Thomas C. Platt follows a trade of which no one of whom we have yet heard denies the criminality. If it were proposed at a constitutional convention to create a State office charged with the work he does, it would be received with either laughter or indignation. It would rank with a proposal to have a State Receiver of Stolen Goods, or a State Inspector of Brothels, or a State Abortionist. For what are these "political burdens" which he says he has taken on himself? Are they not the collection from rich men and corporations of money, by way of blackmail, for protection against "striking" legislation, or in aid of corrupt legislation—that is, either for protection from extortion or assistance in evading lawful obligations? And is not this money used systematically to corrupt legislators, by causing them to violate their oaths and cheat their constituents by voting, not in obedience to their consciences, but in obedience to another will than their own for ends which they dare not avow?

If this were a lawful calling, it might be carried on as openly as the collection of taxes. Platt might have his office hours for the reception of blackmail, and the officers of the corporations could send their checks to him and get their receipts just as they send them to the Receiver of Taxes. Moreover, he might, and probably would, either publish his accounts, or at all events keep them open for the inspection of any citizen who cared to examine them. The mere fact that although the effect of the business on public affairs is great and far-reaching, touching nearly every department of our social activity,

notably our chief municipal concerns, the business is kept strictly secret, combined with the fact that it is unknown to the law, is *prima-facie* evidence of criminality. Platt is just as careful to conceal his receipts as his customers are their payments. They know they are employing him in an unlawful and disreputable business, highly injurious to public and private morals, and he knows that he would no more dare publish the particulars of his business than if he kept a brothel or a gambling-house. Both of them rely for immunity on the fact that it is impossible to furnish legal proof of his guilt, because it is impossible to show the direct effect of his blackmail on legislation, and he is not a public officer. The Penal Code contains several provisions which would cover Platt's career if he were a public officer, or could be taken *flagrante delicto*. Section 552 defines extortion as "obtaining of property from another, with his consent, induced by a wrongful use of force or fear." Platt does not do this exactly, but he plays on the fear which he knows exists, and, though not in office, puts himself forward as the representative of the persons who have excited the fear, so that the moral guilt is plain though the legal guilt be not provable.

Now we hold that nothing is so necessary to the success and stability of republican institutions as the exaltation and perpetuation, by all known means, of the art of persuasion as a political force. It is by this we must stand or fall. In so far as elections are affected and legislation produced by other influences or instrumentalities than the voice and pen, so far is the permanence of popular government endangered. For some years past this open persuasion has ceased in this State to have any serious influence on legislation. Bills are framed and passed by agencies of which the public knows nothing, and often in defiance of public opinion. Unless all human experience is at fault, the man who introduces and maintains such a system in a democratic state, is a far worse enemy of the Government than if he rose in arms against it as they do in Central America. Now Platt is a man who has done and is doing this very thing. And he does not do it as a "bold bad man," or as a demagogue who, by open distribution of largess, or by winning ways, or a reckless eloquence, cheats the people into forgetfulness of the conditions of political success. He does it by secret methods, which every man in the community acknowledges to be dangerous and corrupt, and therefore criminal. The very fact that his methods are secret, and that there is no possibility of bringing him to criminal justice, should make every one who loves his country and cares for pure government, all the more eager to use every other means of discountenancing him, of bringing him into disrepute, of impressing the children in the schools and the young men in the stores and offices

with horror of his ways, with the danger to American institutions of the system of government which he is establishing among us.

As long as he is not only recognized as a law-abiding citizen, but treated with honor as a person exercising a legitimate influence on public affairs, and not avoided as a public criminal, there will not be much use in teaching government in the schools, or lecturing on "Civics," or preaching Thanksgiving sermons on love of country. His success, his currency, his impudence, shall we say? are doing to our political system what all the armies and navies in the world would be powerless to effect. They are shaking popular faith in the manly political arts, in public eloquence, in reason, in law, in all the agencies which work on the human mind and the human conscience, as distinguished from human greed, covetousness, and cunning. Would it be possible to find a young man in the State who has caught from Platt's career one generous impulse, one noble aspiration, whose standard of public duty has not been lowered by watching him bribing legislators to despise public opinion?

THE BRITISH IN THE TRANSVAAL.

M. PIERRE LEROY-BEAULIEU, brother of the more celebrated Paul, has an article in the last number of the *Revue des Deux Mondes* on the late events in the Transvaal, which is the first account we have seen from a competent and impartial observer. He reached the Transvaal from Australia early in December, in company with 250 emigrants rushing to the gold fields, and at Capetown met 500 more coming from England on the same errand. Johannesburg by train is fifty hours from Capetown, a distance of about 1,000 miles. What struck him first was the extraordinary solidity of the buildings, which, there being little or no wood in the country, have had to be constructed of stone or brick—a fact which has rather increased the alarm of the Boers, who, in the beginning, were in hopes that the mining excitement would speedily die out and the Uitlanders pass away. The population he estimates at 2,000 to 3,000 Dutchmen, who hold most of the offices; 6,000 to 12,000 Americans; 20,000 Germans, probably an exaggeration; a few hundred Russian Jews, and a few of nearly every race and nation under heaven. There were 9,000 British in 1890, but the number has more than quadrupled since then. The English and Americans do most of the mining. The Germans keep stores, and the Jews creep into the little crevices left by the other races, while the Boers stick to their cattle-raising.

What is most interesting in his narrative is, however, his account of the events preceding Jameson's raid, of which he was an eye-witness. Certain important facts he brings out clearly for the first time, as far as we know. The Uitlanders

have a "Mining Chamber," or exchange, in Johannesburg, at the opening of which in November last the President, a Mr. Phillips, delivered a violent harangue, threatening the Boer Government with insurrection unless it made immediate reforms; and he was supported by the British press. M. Leroy-Beaulieu found three parties or sets in the field at this moment: revolutionaries, with the financiers at their head, mainly English and Jews, who wished to annex the Transvaal to Capetown, and were very hostile to the Boers; moderates, mainly Americans, Africans, and Johannesburg shopkeepers, who wanted peaceful reform, headed by Brown; and lastly all other foreigners who wanted to have nothing to do with any agitation.

By the 27th of December a proclamation was issued by the "National Union" demanding a whole string of radical reforms, and calling on the people to say how they should be secured. A local journal pronounced this appeal too "moderate." On the following day, the 28th, the women and children began to leave Johannesburg, and the crowds of men of the non-combatant sort began to follow them. On the 30th, business ceased at Johannesburg, and the "Reform Committee," composed of twenty-five persons, including Leonard Rhodes, the brother of Cecil, sitting at the headquarters of the "Consolidated Gold Fields Company," took charge of the government of the town, began to distribute rifles, and produced three Maxim guns, which had been previously concealed. The working miners were compelled to take these arms or be discharged. Some negotiation with President Krüger was started at the same time, but the concessions he agreed to make were pronounced insufficient.

Regular corps then began to appear in arms for drill, each with a cockade of its own. There was even a corps of cavalry, with fine horses, which caracoled about the streets showing the fine "hunting seats" of the riders. The women formed a band of hospital nurses and appeared clad in white. Every day, notices appeared in the newspapers, saying all was ready, and that all "the measures which strategy and the military art could suggest had been taken." On the 30th of December, things being in this position, the news came that Jameson, with 700 trained troops of the Chartered Company, was entering the Transvaal. It was then generally believed at Johannesburg that this settled the matter. To the question whether the Boers would not resist, the answer was that "the Boers had degenerated; that they were no longer the men they were fifteen years ago; besides, they were surprised and would not fight, and that, anyhow, the chiefs had been bought up." A crowd stood in the street in front of the Gold Fields office, hearing telegrams with news of Jameson's progress read out from the windows. On the 1st of January he was twenty miles from Johannesburg, the

Boers having tried in vain to stop him. He was to be in the town on the morrow. On the morrow the place was *en fête*, women sitting in the balconies in full dress to welcome him, and soup being kept hot for his men when they arrived. People with glasses at last began to see him on the hills outside the town, and men went out in landaus to meet him. A little after twelve came the news that the Boers had captured him with arms and baggage.

What happened was that he was so confident of settling everything by a forced march and a *coup de main* that he started without provisions and without reserves of ammunition. The Boers were taken somewhat by surprise, but they followed their usual tactics with their usual Dutch phlegm. They joined their colors in small parties, as they got notice on their outlying farms. These small parties hung on the enemy's flank, following him closely and watching him. As the numbers increased, they began to sting him, and when they reached the position chosen to fight in, they began to play on him, their fire increasing every minute by the arrival of fresh men. When they first came into touch with Jameson they had only 400 men to his 700. The next day they were more than his match. One of Jameson's officers, who escaped, told M. Leroy-Beaulieu that the day of the fight they did not see a single enemy. The only sign of him was puffs of smoke coming out of crevices in the rocks. "The minute the white flag was hoisted, men seemed to swarm out of the ground like ants." The English lost 65 killed, 37 wounded, and 23 missing.

The scenes in Johannesburg on the arrival of the news were somewhat comic. At the first moment the mob were disposed to lynch the Reform Committee for not marching to Jameson's assistance. But the Committee sneaked away, after having told a good many lies, just like any ordinary Jingo who has been "hollering" for war. The Cornish miners who had left the town before the fight, with "Cowards' Van" posted on their wagons by the enraged Jingoos, now got the laugh on the warriors. The smart cavalry disappeared; so did the hospital nurses. M. Leroy-Beaulieu's summing up is this:

"The events which accompanied and followed the attempt at revolution show clearly that it was not the result of a popular movement, but that of an agitation set up by the great financial houses of Johannesburg to seize the government of the Transvaal and establish an English protectorate—an object which they dared not avow, lest they should alienate not only the foreigners, other than Anglo Saxons, who had always been opposed to the movement, but also the Americans and Africans, who were afraid of falling into the hands of the Chartered Company. That Mr Rhodes knew, approved, and helped to prepare Dr. Jameson's expedition is generally admitted by the public in spite of the diplomatic denials."

He gives various corroborative proofs of the correctness of this belief, and suggests, as the explanation of the insufficiency of Jameson's preparations, the deception practised on Rhodes by the Johannesburg financiers touching both the

corruptibility of the Boers and their military value.

THE CARIBS OF GUIANA.

GEORGETOWN, February 8, 1896.

IN fixing the boundaries of English, French, and Spanish possessions in North America, regard was shown to the alliances which those nations respectively had with their neighboring Indians. Thus it was that the St. Mary's River became the dividing line between the colony of Georgia and the Spaniards, in 1786 (Bancroft's 'History of the United States,' 1876, vol. ii., pp. 571-72). In like manner, the alliances with the natives of Guiana extended or restricted the spheres of dominion of the several European nations that made settlements in that region of South America. The notes following will show that the Caribs, the dominating race of aborigines in Guiana, were independent of the Spaniards, were enemies of the Spaniards, and were allies of the Dutch. It was one consequence of these several relations that the Spaniards never got a foothold on the coast of Guiana between the Corentyne River and the Amacura, while the Dutch were able to settle at several places within that area, even up to the Barima district, and to exercise dominion over it.

In 1768 a New England colonist named Bancroft, a medical man, was living in the Dutch settlements of Demerara and Essequibo, in the practice of his profession. He wrote letters during his residence. These were published in London in 1769. How very slight was the foothold of the Spaniards in Guiana at that time can be realized from the following statement made by the New Englander:

"Several revolutions have happened in the property of Guiana, since its discovery; but it is now divided between the Spaniards, Dutch, French, and Portuguese; the Spaniards, however, have no other possessions in this country, except their settlements on the Eastern side of the river Oronoque, near the confines of its limits, and therefore can hardly be included among the proprietors of Guiana."—*Natural History of Guiana* (p. 8).

Of the Caribs, of their chief stronghold on the coast between the Essequibo and the Orinoco, and of their lingering tradition of Sir Walter Raleigh, our New Englander wrote thus:

"The Caribbees are the most numerous, brave, warlike, and industrious of all the known tribes inhabiting Guiana. They reside chiefly on the seacoast between Essequibo and the Great River Oronoque" (pp. 253, 254).

"The Caribbee Indians are at perpetual variance with the Spaniards, and frequently commit hostilities on their settlements at the River Oronoque. They retain a tradition of an English chief who many years since landed amongst them, and encouraged them to persevere in enmity to the Spaniards, promising to return and settle amongst them and afford them assistance, and it is said that they still preserve an English Jack, which he left them that they might distinguish his countrymen. This was undoubtedly Sir Walter Raleigh, who, in the year 1595, made a descent on the coast of Guiana in search of the fabulous older city of Manoa del Dorado, and conquered Fort Joseph [in the island of Trinidad], on the River Oronoque" (pp. 254, 255).

So far, therefore, from the Spaniards being in possession, in 1768, of the territory between the Essequibo and the Orinoco, that region was then independent of them, and the Caribs, who inhabited it along with the Dutch, were "at perpetual variance with the Spaniards, and frequently committed hostilities on their settlements at the River Oronoque."

That Bancroft wrote truly is amply certified by what has been published to the world by Spanish and Venezuelan authorities. Under the title of 'Venezuelan International Law—British Boundaries of Guayana,' by Señor Rafael Seijas, the Venezuelan Government has issued a statement of its case with regard to its boundary dispute with Great Britain. In this bulky volume of 588 pages, there are numerous facts illustrating the complete independence of the Caribs of the Guiana, and their undying enmity to the Spaniards. There are also indications in some of those statements of the alliance that existed between the Caribs and the Dutch; but upon that point a high Spanish authority shall now be quoted.

In 1786-89 was published in Spanish 'The Geographical and Historical Dictionary of America and the West Indies,' by Colonel Don Antonio Alcedo, a member of the Academy of History. This work was translated into English, and published in London in 1812-15. It is from the English translation that the following quotations have been taken. They are set forth below in their alphabetical order. The italics are not used in the originals:

"*ARUACAS*, a barbarous nation of Indians who inhabit the s. e. of the River Orinoco, descendants of the Charibbes. They are very numerous, and inhabit the country between the river Berbice and the mountains of Guayana: they have no fixed habitations, and therefore wander about those mountains: they are the friends and allies of the Dutch of the colonies of Berbice, Essequibo, and Surinam."

"*CARIBES*, a barbarous and ferocious nation of Indians, who are cannibals, inhabiting the province which by them is called Caribana. They are divided under the titles of the Maritimos and Mediterraneos: the former live in plains and upon the Coast of the Atlantic, are contiguous to the Dutch and French colonies, and follow the laws and customs of the former, with whom they carry on a commerce. They are the most cruel of any that infest the settlements of the missions of the river Orinoco, and are the same as those called Galibis. The Mediterraneos, who inhabit the s. side of the source of the river Caroni, are of a more pacific nature, and began to be reduced to the faith by the regular order of the abolished society of the Jesuits in 1738. The name of Caribes is given not only to these and other Indians of the Antilles, but to all such as are cannibals" (Vol. I., p. 317).

Mark the precise statement of Alcedo, that the Caribs "follow the laws and customs" of the Dutch!

"*CARIBANA*. . . . It takes its name from the Caribes Indians, who inhabit it, and who are very fierce and cruel, although upon amicable terms with the Dutch. . . . The coast, inhabited by Europeans, forms the greater part of this tract of country, of which an account will be found under the respective articles" (Vol. I., p. 318).

"*CUYUM*, or Cuyuni, a large river of the province of Guayana and Government of Cumana. Its origin is not known for certain; but, from the account of the Caribes Indians, it is somewhere near the lake Parime, in the interior of the province, and to the n. e. of the said lake. It runs nearly due from n. to s. making several turnings, until it enters the Essequibo. By this river the Dutch merchants of this colony, assisted by the Caribes, go to entrap the Indians, to make them labor in the estates; and they have built two forts on either side of the mouth of the river."

It should be noted that *sub voce* PARIME, Alcedo says: "On the n. n. e. the Cuyuni rises from this lake, and leaves the territory of the Dutch Colonies, and afterwards unites itself with the Essequibo" (vol. iv., p. 57).

"*MAZARONI*, Mazaruni, or Ataparan, a large and abundant river of the province of Guayana and government of Cumana. It rises in the interior of the province, and runs nearly from s. to n. until it enters the Essequibo just close to

where this runs into the sea. *The Dutch, protected by the Caribes, navigate this river to pillage the Indians of the province, whom they make slaves to work in their estates; nor are there any stratagems which avarice and tyranny can invent that are not adopted for the purpose of entrapping those unhappy wretches. It is from this policy that the Dutch are in alliance and friendship with the Caribes.*"

Alcedo's work was translated into English by A. G. Thompson, who, in consequence, was familiarly known as "Alcedo" Thompson. Besides translating Alcedo's own work, Thompson, in his edition, added materially to it, making his own quite an up-to-date publication. As the British Dutch case is a very complete one, its party can afford to draw the attention of the advocates of Venezuelan claims to Thompson's own statement—not Alcedo's, be it noted—that the boundary between the Spanish and the then recently acquired British possessions was the Essequibo River, "according to the Treaty" of 1814. Of course, the Treaty did not say anything about boundaries, and Alcedo himself flatly contradicted Thompson by giving the boundary at the River Pomeroon. Here are the Spanish author's own words:

"POMEROON, a river of the province of Guayana, in the part called Dutch Guayana. It rises in the *serrania* of Inataca, runs n. e. and enters the sea 107 miles from the mouth Grande or de Haos Navios of the Orinoco. It is the boundary of Dutch Guayana, is at its mouth half a league wide, and the territory of its shores is low and covered with trees. . . . The e. point which it forms is the Cape of Nassau, and at six leagues from hence the Dutch built upon its shore a fort with the name of Nueva Zelanda; and a little higher up is the settlement of New Middleburg, surrounded with plantations and cultivated lands. The mouth of this river is in lat. 70 deg. 84 min. n., long 58 deg. 47 min. w" (Vol. IV., p. 316).

Having said thus much of "Alcedo" Thompson, and having shown that he cannot in any wise be considered as having harbored any hostile spirit against the Spaniards, let us quote his testimony upon the value of Spanish "claims" to the territory lying between the Orinoco and Cape Nassau, near the Pomeroon. His statements bear internal evidence of being founded mainly upon Spanish authorities. Under the heading *Guayana*, Thompson says:

"Surinam, Essequibo, and Demerara, though now belonging to the English (having been taken in the present war), were Dutch settlements, and were bounded to the e. by the sea, to the s. by the river Maroni, to the n. by the river Essequibo, according to the treaty (though they have since made Cape Nassau the n. boundary), and to the w. by Spanish Guayana.

"What remains of Guayana for the Spaniards is bounded on the e. by the sea, from Cape Nassau to the mouth of the Orinoco, which are 80 leagues distant from each other.

"The missionaries charged with bringing the Indians to a social life by means of Christianity, began their work by this part of Guayana. Twenty-seven villages built to the e. of the river Caroni bespeak the success of the Colonial Capuchin fathers. They have not, however, approached the coast by above 80 leagues; because it is inhabited by the Caribes, the most ferocious and courageous of all the Indians, who have invariably made martyrs of the apostles who have endeavoured to convert them to Christianity. It is true that the ferocity of the Caribes would have been softened by the morality of the missionaries, if the Dutch of Surinam, wishing to extend their trade to Spanish Guiana, had not made it a part of their politics to protect the vagabond life of the Caribes, who prevent the Spaniards approaching their coast. It is certain that Spanish Guayana appears upon the maps to occupy 80 leagues of coast from the mouth of the Orinoco to

Cape Nassau, but might in reality be said not to occupy an inch; for the natives have defended their independence so well that they have never been converted, reduced, nor conquered; and are, in fact, as free as they were before the discovery of America. It is lamentable that the barbarous use they make of their liberty obliges the philosopher to wish rather that they should lose than that they should preserve it."

"The most considerable of the Indian Nations of Guayana are the Caribes, the Aravaques, the Yaos, and the Galibis. These are well proportioned, for the most part, are swarthy, and go naked. The Caribes are enterprising, and so cautious of surprise that they post out-guards and sentinels with as much care and art as the Europeans. The Caribes of Guayana still fondly cherish the tradition of Sir Walter Raleigh's alliance, and to this day preserve the English colors which he left with them at parting, above 300 years since.

"The Dutch have been thought to be much more vigilant and solicitous about the protection of their settlements in this quarter than the Spaniards; for the latter have no advanced posts on the frontiers of the former, whilst the Dutch have on the coast a body of guards, and occupy a fort called the Old Castle, at the junction of the river Marurimi with the Essequibo; they also keep an advanced guard of twenty-five men upon the river Cuyuni.

"By means of these precautions, they are not only respected on their own territory, but they overrun with safety all the neighboring Spanish possessions. They remove their limits whenever their interest invites them, and maintain their usurpation by force.

"The natural result of this is that the Spaniards and Dutch live at Guayana not like very good neighbors. They reproach each other with injuries, some of which are very serious. The Spaniards pretend that the Dutch constantly encroach upon their territory, and respect no limits; that they destroy the Spanish trade to Guayana by the contraband goods they introduce; that they continually excite the Caribes against them, and prevent their subjection by the advice they give them and the arms with which they furnish them. The Dutch, on their part, impute to the Spaniards the desertion of their slaves, who meet at Guayana with a hospitable reception, with their liberty and the protection of the government. It is true that the Spaniards have for a long time protected, more from a principle of vengeance than of humanity, all the slaves of Surinam who have sought an asylum among them. They have even peopled with these fugitives two very considerable villages upon the banks of the river Caura, where they receive likewise the Indians who are forced by the Caribes to fly from the slavery of the Dutch.

"In one of the treaties between the Dutch and Spaniards, previously to the taking of Dutch Guayana by the English, it was stipulated on the part of the Spaniards to give up to the Dutch all the slaves who might have retired into the Spanish territory, or to pay their value, and indeed, if this condition was always as faithfully fulfilled as it was latterly, it would re-establish between the two countries a harmony most decidedly in favour of the Spaniards; in as much as this is undoubtedly the weaker party."

The concluding paragraph describes the Spaniards of Guiana as undoubtedly "the weaker party." There could, indeed, be no comparison between the grip the Dutch held of Guiana—from the Maroni to the Amacura—and the feeble foothold of the Spaniards. According to the New Englander Bancroft, already quoted, the Spaniards had no other possessions in Guiana, "except their settlements on the Eastern side of the river Oronoque, near the confines of its limits, and therefore, can hardly be included among the proprietors of Guiana."

This is not the occasion to speak of the English connection with Guiana. It will be noted, however, that both Bancroft and "Alcedo" Thompson make mention of the tradition preserved among the Caribs of the coming to Guiana of Sir Walter Raleigh and of the flag he left with them. There is, in the Public

Record Office, London, an official letter from Captain Thompson of the Royal Navy, who governed the colonies when they were taken from the Dutch in 1781, in which he reported to Lord George Germain, then a principal secretary of state, about the newly captured settlements. Therein Captain Thompson said that Sir Walter Raleigh, "in his expedition up the Oroonoko after the city Manon del Dorado and the golden lake of Parima, got by some creek into Cajonie [Cuyuni] and Essequibo Rivers, where he stimulated the Carribes Indians against the Spaniards, exchanged with them presents and a flag, assuring them he would return—which flag and tradition the Indians retain to this day, as well as their unconquerable aversion to the Spaniards." Mark the concluding statement, here italicised.

The foregoing authorities testify to the fact that, when Great Britain came into possession of the Dutch settlements to the east of the Orinoco, Spain did not occupy—had not occupied—any part of the lands where the Caribs dwelt, and did not exercise any dominion over that region. It is clear that the rules of international law quoted by Dr. Seijas on page 183 of the 'Statement of Venezuela's Case' apply forcibly to the case of the Carib allies of Holland. Were there not the rights of possession, occupation, and the exercise of dominion? Surely the following should, in view of the historical facts above set forth, be enough to justify the title of Holland and of Great Britain in succession to the lands of Guiana between the Moruca and the Amacura:

"Now, as regards the Indians of this Continent, it is a well known fact that no European nation has ever looked upon them as a State, and for this reason there was no obstacle to occupying the lands which they possessed. Even as regards the United States, who were in the habit of buying them, the most modern publicists are of opinion that they have a legitimate and indisputable right of dominion over all lands occupied by the Indian tribes situated on the frontiers of the thirteen States that established the Republic. . . .

"It is necessary furthermore to bear in mind that all things included in a country belong to the nation, and as only she or the person in whom she has deposited her rights is authorized to dispose of these things, if places uncultivated or deserted have been left in the country, no one has the right to take possession of them without the consent of the nation. Although she may not actually use them these places are none the less her property; it is her interest to preserve them for future use, and she is responsible to no one for the manner in which she may use her property" ('Venezuelan International Law,' p. 182.)

N. DARNELL DAVIS.

GRUCKER'S LESSING.

PARIS, February 13, 1896.

FOREIGN literature cannot be said to be neglected at the present moment in France; English novels are translated; we hear constantly of Ibsen, of Annunzio. But since the war of 1870, little has been heard of Germany and of German literature. We have become Wagnerian, but it seems as if the domain of music had no frontiers. The German language is taught in our colleges, but very few German books are read or translated. In our universities (I ought rather to say our faculties) there are a few eminent men who give lectures on German literature, but they give them before a very sparse public. Nancy, the capital of Lorraine, has such a *Faculté*, whose lectures on foreign literature are given by M. Grucker, a native of Alsace, who emigrated after the war from Strasbourg to Nancy. M. Grucker pub-

ished in 1883 an important volume under the title of 'History of Literary and Aesthetic Doctrines in Germany,' which extended from the seventeenth to the middle of the eighteenth century. M. Grucker described with minute details the various phases of the struggle between Göttsched and the Swiss writers, and showed how the latter provoked the movement of literary emancipation and opposition to the absolutism of Göttsched.

We have now before us another volume by M. Grucker, on Lessing. All the efforts made in various directions before him were wanting in unity, in directness; they were isolated and fragmentary:

"It was necessary," says M. Grucker, "that a man superior by his intellect, his science, and his character, a master of criticism, should take in hand the interests of the German mind, to deliver it from all that stopped its march and paralyzed its action; to give it its full liberty; to make it free and at the same time to discipline it, to assure everywhere the triumph of criticism and free thought; to lay down new laws for poetry and the drama; and thus to prepare the advent of a national literature. Lessing was that man; the work of reform and emancipation was his work."

Lessing was, above all, a critic. Criticism, in the highest sense of the word, was in him a natural function; and his activity covered all branches of literature—art, the theatre, philosophy, theology. It is interesting to note how his mental activity changed its sphere of action according to the changes which took place in his private life; and thus his biography is intimately connected with the development of his critical work.

Lessing was born at Camenz in the province of Upper Lusatia January 23, 1729, one of the twelve children of a Lutheran minister. He was allowed to enter, at the age of thirteen, the Fürstenschule of Saint-Afra at Meissen, one of three schools which the Elector Maurice of Saxony had founded with the funds of the suppressed convents. This school was celebrated as a centre of rising theologians and writers, and preserved something conventual in its organization. Lessing finished his studies at the University of Leipzig, which was already one of the most important cities of Germany, and a sort of capital (Goethe calls it a little Paris, in the tavern scene in "Faust"). Leipzig had a good theatre, where the young student spent much of his time, so much that his father became alarmed, and justly so, as Lessing had lent money to some of the actors and become enamoured of a young actress. He consented to go to Wittenberg, the cradle of Luther's Reformation, which had then a university, but there he became ill, and, feeling that he could not remain in such a dead place, he started one day for Berlin, leaving all his books and clothes behind him.

He was only nineteen years old, he had not taken any academic degree, his studies were incomplete, he had no private means; still, he confided in his own energy; he was determined to be neither a theologian, nor a doctor, nor a professor, nor a functionary—any kind of official servitude was repugnant to him. His poor father sent him a little money to buy new clothes, and he was so fortunate as to be introduced by one of his former professors to one of the principal booksellers of Berlin, Rüdiger, who edited the most important newspaper in Prussia, the *Berlinische Privilegierte Staats- und Gelehrter-Zeitung*. He wrote for the paper and made translations from French and Spanish authors. He began at the same time some comedies. He left Berlin for a short space to return to Wittenberg, but only in order to ob-

tain his degree of *Magister Artium*, whereupon he immediately went back to Berlin, which became for about twenty years the centre of his activity. This period, which was interrupted by a sojourn of some duration in Leipzig, was characterized by the publication of the 'Letters on Recent Literature.' I cite this capital work as representative of this first period, as it would be almost impossible to analyze all the writings of that Berlinian phase of Lessing's development. These "Briefe die neueste Litteratur betreffend" appeared from 1759 to 1765, and form twenty-three volumes. (There were collaborators, but Lessing's part is predominant.) They were supposed to be written to an officer of the Prussian army, wounded at the battle of Zorndorf (August 25, 1758), by a friend who wished to divert him:

"These letters," says M. Grucker, "modestly profess merely to pronounce judgment in all liberty and frankness on the literary productions of the period of the Seven Years' War. But, in connection with works which are judged, the author lets us perceive the ideas and principles which guide him; we see a new spirit, a new form of literary criticism. We are not so much interested by the object as by the manner of the judgment. The critic becomes more important than the writers criticised. We are struck by the independence of thought, the disinterested and (so to speak) impersonal manner."

Lessing says of himself: "What I have to say to people I say to their faces, even if they split with rage (*von Zorn bersten*)." Was it because Lessing was found too trenchant, too unyielding, that he left Berlin for Breslau and accepted there the modest post of secretary of the Prussian Government under Gen. von Tauensien, who was commander-in-chief of the town? We do not know for a certainty what his reasons were; but he was naturally fond of a change; he liked new faces, new people, and at Breslau he was in an entirely new scene, in a camp, at the most critical moment of a long war. His administrative correspondence took half of his time; the other half was reserved for his literary work. In his new life, among the officers who had become his companions, he found time to collect the materials not only for his "Minna von Barnhelm" (the first truly original German play, says M. Grucker, which was to deliver the national stage from too servile imitation of the foreign stage), but also of the famous 'Laokoon,' in which he fixed the domain of poetry, its limits, its laws, and its rights. At Breslau we see him, after an evening spent in passionately playing cards, reading Spinoza and the fathers of the primitive church. The 'Laokoon' is still considered as a standard work in Germany. Hugo Blümner published in 1880 at Berlin a volume on it in which he gave a sort of commentary on the aesthetic, historical, bibliographical questions capable of throwing light on all parts of the work. Lessing gave in the 'Laokoon' his views and theories not only on poetry, but on the plastic arts; he explained the differences which distinguish them, and traced the limits which separate them. The 'Laokoon' is the first systematic treatise on what we call to-day aesthetics.

Lessing was incessantly tormented by the need of money. He had hoped for a moment to be appointed librarian to the King. The place had been offered first to Winkelmann, who was then in Rome; but he asked for a very large salary, and besides he did not like to leave Rome. Frederick did not choose Lessing, partly because he was determined to have a Frenchman, and partly because he remembered Lessing's quarrels with Voltaire. Lessing

was invited to help in the creation of a new theatre in Hamburg. He writes to a friend (quoting Juvenal):

"Quod non dant proceres, dabit histrio."

He became the literary adviser, the official critic of the new theatre, with a salary of 3,200 marks, an important sum at the time. Of all the cities of Germany, Hamburg was the best chosen for the establishment of a national and permanent theatre. Lessing always had a predilection for the theatrical art; he sketched an enormous number of plays and finished a few. This period of his life is chiefly marked by the production of "Minna von Barnhelm" and of "Emilia Galotti," and by the publication of the 'Dramaturgie,' his capital work as a dramatic critic.

The 'Dramaturgie' has not the form, the dogmatic tone of a treatise of dramatic aesthetics. It is polemical, sometimes humorous, always unconstrained and capricious. At the same time, it must not be compared with our modern analysis of new plays. Lessing rises constantly above the works of which he is giving an account; they are to him a mere theme, and he makes long digressions on points of history or of erudition. Lessing was not an ordinary theatrical reporter, he had too philosophical a mind, and the more he advances in his 'Dramaturgie' the more he shows his growing contempt for the drama of the day and for the *dramatis personae*. He is writing, in fact, for posterity more than for his contemporaries; and posterity has found in his 'Dramaturgie' the elements of a dramatic school. Posterity has not agreed with all his judgments; we do not admire the plays of Diderot as Lessing did; we place Corneille higher than he did; but we share his admiration for Shakespeare, and we all feel like him towards Voltaire as a dramatist. "Emilia Galotti" is the example after the precept. It is a tragedy such as Lessing wishes it to be, a model tragedy; different from the French tragedy, as well as from the more modern drama. The subject is the story of the Roman Virginia transported to a vague Italian principality, which might as well be a German principality.

Lessing's nature was eminently elastic and ubiquitous; the theatrical critic and the playwright had not quite killed in him the theologian; the list of his theological writings is long. In 1760, tired of the theatre at Hamburg, and always in money difficulties, he accepted the post of librarian of the Ducal Library of Wolfenbüttel. The hereditary prince of the Duchy of Brunswick, nephew of the great Frederick, had distinguished himself in the Seven Years' War; he was fond of art and of literature. In 1771 we find Lessing at his post. His life at Wolfenbüttel, we may easily conceive, was very dull. "Ich verträume mein Leben," he wrote to a friend. He had become ill; he found his only solace in his literary work. In October, 1776, he married Madame Eva König, his old friend, "a distinguished mind and a stout heart," says M. Grucker, "with a very practical sense, loving without sentimentality; quite the woman he needed, and worthy to associate her life with his." Twelve months afterwards they had a child, who died in twenty-four hours, and a fortnight afterwards the poor mother died also. It is no wonder if, in this dark end of his life at Wolfenbüttel, Lessing devoted himself more to religious and theological preoccupations. His latter years were occupied with philosophical works and with great theological discussions. On the 8d of February, 1781, he was stricken with apoplexy at Brun-

wick. He died on February 15, at the age of fifty-two years.

Correspondence.

THE PRESENT COTTON CROP.

TO THE EDITOR OF THE NATION:

SIR: The cotton year begins at about the time the cotton is ready to be picked. Instead of starting in January, it begins September 1. The present cotton crop has been gathered, and is now out of the growers' hands; therefore its effect on the locality where it was grown can be estimated.

For twenty-five years or more the planter's method of raising cotton has been to buy on credit everything he used, and devote all his energies to the crop alone. So successful has he been that in recent years he has made cotton greatly in excess of the world's wants. The price has fallen accordingly. The last crop-year saw cotton selling on the plantation at 4½ cents—a price below the cost of production. Those who still continued to grow cotton did so with a view to selling it the next year at five cents. Only those could plant at this figure for a profit who made at home everything they used. With them cotton was to be a surplus crop. If it brought nothing, they would not starve. Cotton is the best surplus crop to grow. It is not perishable as are fruits and vegetables. The planter can take it to his nearest town and sell it immediately for its market value. He does not, as in the case of vegetables, have to ship and await the returns from the market with the usual discounts deducted on the account sales for decay. As a result of the method necessary for growing the present crop, there has been a shortage in the number of bales amounting to about 88½ per cent compared with the previous year.

The business of the country stores has been on the wane for three years. Only a minimum amount of dry goods, clothing, boots, and shoes has been sold; what business there was, being principally in staple groceries. Many people, especially the negroes, were nearly naked and bare-footed. "Free silver" was discussed in the shade of fence corners while in the field. The value of cotton, it was decided, depended not so much on supply and demand as on the price of silver. "Silver and cotton were wedded" and went hand in hand in price. Cotton opened up the season at eight cents, a figure nearly twice as large as the grower expected to realize. The people had done little "trading" for three years. With their first cotton money, they swarmed to the country stores like a consuming cloud of locusts. They swept the counters clean. The wholesale houses of the cities worked day and night and yet fell many days behind their orders. Business held its extraordinary proportions until late in November, when it fell off, although still remaining very large. "Free silver," instead of being the absorbing topic, almost entirely vanished. The deposits of the country banks doubled and often trebled. Rents rose and lands increased in value.

Many people fear the South will go back to the old system of "all cotton," and that the immediate benefits caused by the low price of cotton, viz., diversification of crops and growing home supplies, will be forgotten. The large sales of mules and agricultural implements, and the renting of lands that have been lying out, strengthen the opinion that a very large cotton acreage is to be planted. Others be-

lieve, and I think rightly, that the "all cotton" system is gone for ever. These persons hold that the very large sales of mules were caused by the fact that, during the past three years, an enormous number of liens have been foreclosed on mules. Now is the first time the people have had the money to replace them, and this they have done. As to agricultural implements, every one for at least three years has, as far as possible, abstained from purchasing them. As a consequence, all have come in the market to buy together.

In expectation of the planting of an enormous crop, the price has declined sharply. This will help to reduce the acreage. The South, however, because of abundant home-grown meat, meal, and molasses, is able to make an extraordinarily cheap crop. The American Cotton Growers' Protective Association is a powerful agency against the return to the "all cotton" system. In their recent convention at Memphis, the central idea was, "Let the people plant all the cotton they will; but also let them grow the supplies at home to do it. Let cotton be a surplus crop." There can be no more philosophical or effective way than this for reducing the cotton crop. The planters are imbued with the idea of cotton as a surplus crop. This will make cotton growing profitable, almost irrespective of price.

The South's future was never so bright. Never has there been so much "home money" seeking investment. The outlet is obviously in manufacturing—to take advantage of the South's cheapness of effective labor, her cheap fuel and raw material, and of their nearness to each other.

W. COLLIER ESTES.

MEMPHIS, TENN., February 29, 1896.

LORD LEIGHTON.

TO THE EDITOR OF THE NATION:

SIR: The Chicago *Tribune* of February 16 contains a paragraph suggesting that "the late Lord Leighton must have been very extravagant" to have left so little of this world's goods "when we consider the vast sums he must have received for his works." Firstly, I doubt if Leighton ever received "vast sums" for his works. Those halcyon days are limited to the Athenian, not to the nineteenth-century, period of art. Secondly, it is due to the memory of Leighton, and upon the authority of a life-long friend, to state that more than half of his annual income was devoted to his less prosperous brethren in art. No artist ever appealed in vain to Lord Leighton for aid. Well do I remember that, so long ago as 1853, when Leighton was making his studies in Rome for his picture of Cimabue and Giotto, and before fortune had in any way smiled upon him, his name was synonymous with helpfulness and kindness to those less fortunate than himself. And so it was to the end. It was enough for Leighton to know that others were in greater want than himself—and his purse was theirs; and it was this ever-kindliness and generosity of heart—this first quality—which endeared him to his friends, and which excited their admiration far more than even his most brilliant achievements.

HARRIET G. HOSMER.

CHICAGO, February 25, 1896.

A TRANSATLANTIC PLAGIARIST.

TO THE EDITOR OF THE NATION:

SIR: A bold case of plagiarism has come under my notice, which demands public censure. There has lately appeared 'A Hand-

book of the Drama, its Philosophy and Teaching,' by P. J. Cooke, Lecturer in Elocution and the Drama to the Battersea Polytechnic, the London College of Music, Science, and Art, Highbury Institute, etc., etc. In the preface the "author" makes a general acknowledgment to the work of his American predecessor, Mr. Hennequin's 'Art of Playwriting,' published by Houghton, Mifflin & Co., in the following words: "The author is indebted for much valuable information contained in 'Hennequin's Playwriting,' and other works of a similar nature, which he now comprehensively acknowledges." Another reference to Hennequin is contained in the index: "Hennequin, his definition of a play, p. 119," and on the latter, or rather on p. 120, the only reference reads: "In the broader sense, according to Hennequin, a play is . . ."

What is our surprise to discover that all the matter from page 117-131 is bodily stolen from Mr. Hennequin's work, with here and there the addition of a word. The last sentence is characteristic:

HENNEQUIN.

Others, and by far the greatest number, must be absolutely reconstructed, the characters altered and re-named, the minor incidents invented anew, the whole play denationalized and worked over on the American plan.

COOKE.

Others, and by far the greatest number, must be absolutely reconstructed, the characters altered and re-named, the minor incidents created anew, the whole play denationalised and worked over on the British plan.

Thus, with the exception of a page and a half, the whole of the chapter on "Playwriting" is bodily taken from Hennequin. It would not at all surprise us to discover that even the rest of the book has been similarly pilfered, for does not the author make the same "comprehensive acknowledgment" to unnamed authors as to Hennequin? And to this dishonest compilation the "author" had the courage to prefix his photograph, that we might the better know him, and he had the further courage to dedicate it to Sir Henry Irving.

LEO WIENER.

NEW ENGLAND CONSERVATORY OF MUSIC,
BOSTON, February 25, 1896.

THE COLLEGE TERM.

TO THE EDITOR OF THE NATION:

SIR: Does not President Eliot's latest annual report suggest a possible solution of a problem which is at present furnishing much trouble to the Harvard Faculty? It appears there (page 271) that the average age of the students entering the freshman class in 1865 was about 18½ years, while in 1895 it was only 18½, with a marked decreasing tendency during the last eight years—and this in spite of very much increased requirements for admission since 1865.

This showing is evidently brought about by better work on the part of schools. But, according to competent critics such as Prof. Goodwin, our American schools do not now accomplish anything like what foreign schools of the same nominal rank do. Cannot, then, better schools make it possible for a student to be prepared for college at an earlier age than at present, or to be admitted to advanced standing, and thus take an uncheapered bachelor's degree seasonably enough not to entrench upon the time that should be devoted to purely professional study? Even at present, under favorable circumstances, a student may be ready to begin the practice of a profession at from twenty-three to twenty-five. That, surely, is

as young as the public cares to have its doctors and lawyers. G. W. LATHAM.

AUSURN, N. Y., February 29, 1896.

"CARRY," AS A NOUN.

TO THE EDITOR OF THE NATION:

SIR: I happen just now to be working upon the MSS. of one Alexander Henry, Jr., a fur-trader of the N. W. Co., whose journal extends from 1799 to 1814. *Portage* and its equivalents occur so incessantly in this narrative that I am sometimes put to it for synonyms to vary the monotony of these locutions. The same will be found the case with all the narratives of voyaging on the old trade routes in British America, where the highways were invariably waterways, usually with repeated interruptions to canoe navigation. I think it most probable that *portage*, as a French word for any place where the canoe and its load had to be taken out of the water, and for the act of such land-transportation, was used by the voyageurs from the very beginning of finding the obstructions and doing the thing; and that it passed into English unchanged as soon as it fell upon English ears. Also, that it could not have been long before *carrying-place* suggested itself spontaneously as an English translation of the word. *Carrying-place* soon appeared as a phrase, *Carrying Place*, capitalized as a locative geographical term. It was so common as to be often abbreviated C. P. in itineraries; C. P. being of frequent occurrence, for example, in the inedited MSS. of David Thompson, before and after 1799. *Carry*, verb, translated *portager* from the start; and *carry*, noun, would be likely to assert itself immediately, for both the place and the act. The 'Century Dictionary' rightly gives *carry*, n., for the place and for the act, without remark; but enters no *carrying-place*. I have not hesitated to use also *carriage*, for the act.

Those old voyageurs had a full French vocabulary of their business, and all the terms got English translations in their special senses, in the H. B. Co., N. W. Co., X. Y. Co., and other associations of fur-traders. One of the most special is *discharge*, from *F. décharge*, as distinguished from *carry=portage*. The *discharge* was a carry where only a part of the freight had to be unloaded, the rest of the cargo and the canoe being floated through; also, the act of so doing was a *discharge*. If the thus lightened canoe had to be let down rapids with a rope, it was said to be *handed down*; to pull it up with a rope was to *track*—what we call *cordelling*, out West, though I do not think I have found to *cordel* among the writers in English who were so closely associated with the French voyageurs. Those people went so constantly by water that they had a number of terms we consider applicable only to land-travel. Thus, they *marched* when they paddled their canoes, and extra good time was made *à la trot*. But I have occupied too much space already for some samples of a curious vocabulary which could be displayed to advantage only in several columns of the *Nation*.

ELLIOTT COUES.

WASHINGTON, February 27, 1896.

"HIRED MEN AND WOMEN."

TO THE EDITOR OF THE NATION:

SIR: To inquire into the origin and use of the terms "hired girls" and "hired men" seems to me like inquiring into the origin of the English language! As soon as men and

women are "hired," of course the term would be used. It can be found in old wills, contracts, and in the early town and church records of Maine, Massachusetts, and New Hampshire. I have found it in old family letters and the earliest almanacs, and considered it so inevitable that I should not remember it if it were not associated with some misdemeanor. From the earliest times, there were "apprentices" and "hired men," and later, "slaves."

I cannot here quote papers, but I remember that Harlakenden Symonds of Ipswich, son of the Deputy Governor of Massachusetts, born, I think, in 1623 (who was once up before the authorities for some such heinous offence as driving his "ox or his ass" to pasture on Sunday), made use in a letter elsewhere quoted of the phrase "hired man" in connection with that event. There were "hired men" and "hired women" on my grandfather's farm in Kensington, N. H., long before the Revolution, and probably would be to-day if men could be "hired" on any terms to go into a "far country."

CAROLINE H. DALL.

WASHINGTON, D. C., Feb. 27, 1896.

Notes.

THE Robert Clarke Co., Cincinnati, have in press the fourth volume of 'Sketches of War History, 1861-65,' edited by W. H. Chamberlin for the Ohio Commandery of the Loyal Legion; and 'Queen Mōo and the Egyptian Sphinx,' by Dr. Augustus Le Plongeon.

The Levytype Co., Philadelphia, will publish this month 'Cuba and the Cubans,' translated by Laura Guiteras from the eighth edition of Raimundo Cabrera's 'Cuba y sus Jueces,' with numerous illustrations and a map of the island.

A. Blanck, No. 4 West Twenty-eighth Street, will publish immediately 'Sarah Bernhardt, Artist and Woman,' by A. L. Renner, with numerous illustrations.

A volume of Verses by Miss Mary Wright Plummer, of Brooklyn, N. Y., is on the point of being issued in an edition of 300 copies by Messrs. Paul Lempert, F. A. Hilliard, and Frank E. Hopkins—associates as widely separated in residence as Cleveland and New York. Orders may be sent to Mr. Hopkins at the De Vinne Press, 19 Lafayette Place, where the volume will be manufactured.

Among the attractive serial reprints we note the progress of Balzac's "Comédie Humaine," edited by George Saintsbury, with two volumes, 'Ursule Mirouët' and 'The Quest of the Absolute' (London: Dent; New York: Macmillan); the "Temple Shakspeare," with 'Coriolanus' and 'Trollius and Cressida' (same publishers); and Kingale's stories, with 'Water Babies' (Macmillan).

After an interval of seven years, Drs. Lindley and Widney have prepared a renovated (third) edition of their 'California of the South' (Appletons). In this period the lower part of the State has undergone great changes, with marked progress, in spite of "booms" that collapsed; Los Angeles, for example, has increased its population from 50,000 to 80,000, equal to that of Boston sixty years ago. New settlements have sprung up demanding recognition for the sake of tourist, invalid, and investor. In every way, in short, the old information needed to be corrected and supplemented, and this has been done by rewriting and not by simple patching of stereotype plates.

With much labor and accurate historical in-

vestigation, Mr. William S. Appleton of Boston has recovered the names of the 848 Senators in the first fifty Congresses, and conveniently displayed them in folded tables entitled 'A Century of the Senate of the United States' (Boston: Little, Brown & Co.; New York: Putnam). It appears that the first half-century is a closed book, as no Senator of that period is now living, or indeed of the next decade, except that three Senators of the Thirtieth Congress survive; and these with four others are the only ones who sat in the Senate before March 4, 1861. Benton's term of fifteen Congresses has not been equalled. The great majority of the names are now quite forgotten, and this tradition is notoriously in a fair way to be maintained. Ten Senators and one Senator-elect (Garfield) were also Presidents; fourteen were Presidents *in petto* and defeated candidates. The end of each term is marked by a star, and deaths, resignations, expulsions, and unseatings are also indicated. If each State had received a number to be repeated in each column, reference would have been greatly facilitated; and we are even so unreasonable as to wish that the blank space in the chart had been employed for an alphabetical list of the 848, with full name and with State affixed.

The 'Catalogue of the Fossil Fishes in the British Museum (Natural History), Part III,' by Arthur Smith Woodward, F.G.S., F.Z.S., is one of the most important scientific publications of the year just elapsed. It is indispensable to all paleontologists or geologists who have to do with the fossils of these vertebrates. It includes the Actinopterygian Teleostomi of the orders Chondrostei (concluded), Protospondyli, Aethospondyli, and Isospondyli (in part). According to the preface, it carries us through the great series of the Actinopterygian Fishes of the Chondrosteian type, and completes the Catalogue to the end of the Jurassic series, including also some of the later survivors of these older forms. In approximation to the natural order, it traces the phases of development and the variations of these Mesozoic fishes at the time of their dominance, and as they were gradually replaced in the Cretaceous by advances toward modern teleostean types. The work is not merely a catalogue; it contains a great amount of important new matter, resulting from the author's researches during the four years that have passed since the appearance of Part II. Besides those in the plates there are numerous illustrations in the text. The book is of the class that does most to render science available, and the many students whose labors are lightened by its aid will rejoice at its author's success.

The Annual Report of the New York Forest Commission for the year 1894, just published, is well calculated to win sympathy and encouragement for the Commission under its new title. It is a volume of 268 pages and about 25 plates, with shapes and growths of trees, logging processes, forest scenes, camps in the woods, etc. Altogether it forms a valuable treatise on forestry. Besides pointing out the best directions for efforts in preservation of the forests, it indicates the most judicious methods of treatment for purposes of income. In connection with reports on the destruction by fires in the State, the needs of legislative precautions are vividly brought forward by means of accounts of the terrible effects of the fires in Minnesota, Wisconsin, Michigan, and elsewhere during the latter part of 1894, by which so many lives were lost and such a vast amount of property blotted out of existence. The laws relating to matters in the province of the Commission are included. On April 25,

1895, this Commission was consolidated with the Fish and Game Commission under the present name, Fisheries, Game, and Forest Commission.

The sixteenth annual report of the U. S. Geological Survey for 1894-'95, Part III. 'Mineral Resources of the United States; Metallic Products' (David T. Day, geologist in charge), has for its object to show the use made of the mineral deposits of the United States, and particularly the amount of each useful mineral produced and its value. It also summarizes the additions made to the known mineral deposits of the United States. As is shown by the titles of the various papers, not only have the resources of this country been considered, but much valuable information has been collected from other countries, by which interesting comparisons can be made. The different papers have been prepared by specialists of recognized standing in their respective fields, and, in connection with the statistics, form a valuable addition to our mining literature. Full bibliographies accompany several of the papers. In accordance with a recent act of Congress, the former nominal charge for this report is no longer made. The edition is now distributed to such as may desire copies through the Senators and Representatives in Congress.

The eighth part of Mr. William C. Harris's 'Fishes of North America' (New York: The Harris Publishing Co.) continues its description of the sucker tribe, with the aid of ten illustrations in the text. The large plates, colored from life, which accompany each part, are in this instance the Bluefish and the Long-mouthed Black Bass. The editor has a good word for the gamey qualities of some at least of the suckers.

When all is said and done, nothing could have justified the recent sensitiveness of this country regarding the confines of Venezuela but a thorough knowledge of and lively interest in the facts of the case. It is not too late now for Senators and Representatives to cram with a view to a show of knowledge whenever what remains of the dispute comes before them; nevertheless we do not expect to see them pester their librarian, Mr. Spofford, with calls for books, charts, or magazine articles. That another portion of the public may like (or ought to wish) to be instructed, was evidently the thought of Mr. William E. Foster, head of the Public Library of Providence, R. I., when he devoted the 26th reference list of his Monthly Bulletin (January, 1896) to "Venezuela and its Boundaries." Nine pages are thus occupied, with copious annotations, and one finds itemized not only the ill starred Address of the English men of letters, Mr. Watson's cabled verse to the "towering daughter, Titan of the West," but also the origin of the term Jingo, in "the song sung in [London] music-halls by McDermott"—"We don't want to fight," etc.

Mr. James Means's *Aeronautical Annual* for 1896 (Boston: W. B. Clarke & Co.), "devoted to the advancement of the neglected science," contains a large amount of interesting matter well illustrated, beginning with that persevering and progressive man flyer, Otto Lilienthal, who describes and pictures his own aims and achievements in mid-air. Mr. Maxim too is heard from again respecting his machine, and records incidentally some very interesting and original observations on the flight of birds as well as on the movement of the atmosphere. Kite-flying is another leading topic of the *Annual*.

The Calendar of the Imperial University of

Japan in Tokyo for 1894-'95 shows depth and strength in the older faculties and departments and bright promise in those that are newer. In December, 1894, there were 1,468 students in the various colleges of Law, Medicine, Engineering, Literature, Science, and Agriculture. Taking the year 1878 as that in which the previously existing school reached the grade of a European university, we find that 281 graduates in full course (not counting 153 deceased persons) have gone into active life well prepared for varied usefulness. The evident thoroughness of the curricula in the newer departments of science and agriculture, and the happy combination of the theoretical and practical, are striking facts in the higher education as here given. The eighteen pages which set forth the titles and contents of scientific monographs, mostly by native authors and investigators, are also very suggestive. Almost every department of human knowledge, with its appropriate apparatus of books, instruments, laboratories, and observing stations, is organized in this *Teikoku Daigaku* (Imperial University of Japan). To study this modest pamphlet in the perspective of the past quarter of a century is to understand largely the secret of Japan's life and power on the threshold of the year 1896.

The question of university reform in France, and more especially of the substitution of a certificate of maturity for the bachelor's degree, is discussed with great warmth by M. F. Brunetiere in the *Revue des Deux Mondes* for February 1. This threatened innovation would, in the writer's opinion, be a serious blow to the free (i. e., non-state) secondary schools, in which he sees, in the present juncture, the "last bulwark" of classical studies. The complete equivalence of "modern" and of classical instruction would be a further consequence, much to be dreaded on account of the "gross utilitarianism" of the former. This writer also argues strongly in favor of a more heterogeneous membership of the Superior Council of Public Instruction.

The latest step in the liberalization of British educational institutions is the decision of the authorities of the Royal Irish University to throw open the scholarships and prizes at Belfast, Cork, and Galway to students of both sexes. A recent M.A. graduate (with honors in political economy) of this Irish University, Miss Rita Oldham, has been awarded the Joseph Hume scholarship of £60 at University College, London; this scholarship is open to students of either sex who have attended for at least one session the lectures on political economy.
